Whereas, It now appears from bills introduced in the Legislature that there is a possibility of a law being enacted which will prohibit towns from granting liquor licenses and thus deprive them of a source of revenue heretofore obtainable; and

Whereas, The law now limits the power of taxation to two and one-half mills unless authorized by a vote of the people at a special election, in which event the tax levy shall not exceed five mills; and

Whereas, The revenue derived from such tax levy is insufficient to meet the necessary expenses incident to the indebtedness of a town corporation; therefore be it

Resolved, That we favor that in the pending legislation upon the liquor question there shall be no distinction in the powers and privileges to cities of any class and those granted to towns; and be it further

Resolved, Because of the insufficiency of the revenue derived by towns because of the small rate of tax levy as now prescribed by law, and the necessity being apparent for the authority to levy a higher rate of tax, that we favor an amendment to the present town charter empowering towns to levy a tax to the amount of one per cent of all assessable property within the town; and that upon a majority vote of the qualified taxpayers at a special election called to vote upon the question, the authority be conferred to levy an additional tax not to exceed five mills, or one-half of one per cent.

Among the speakers were James Anderson, "Good, Cheap and Economical Roadway;" Dr. A. N. Hanscock, "Sanitation and Public Health;" Joseph Ulmer, "Sewage and Sewage Disposition;" G. W. Goats, "Water Systems;" W. W. Wilson, "Sprinkling of Roads;" H. C. Maughan, "Municipal Lighting;" Salina was selected as the 1912 meeting place and the following officers were elected: Mayor H. F. Jorgenson, Salina, president; W. D. Kuhre, Sandy, first vice-president; Mayor P. Bentz, Murray, second vice-president, and Mayor Heber Christensen, of Richfield, third vice-president.

The American Society for Testing Materials.—Announcement is made concerning the letter ballot on the manner of the organization of technical committees of the American Society for Testing Materials. The proposal that the chairman of such committees should be selected from representatives of consuming interests and unattached experts was carried by a vote of 189 to 67. The minority favored no restriction on this matter, so that producers as well as consumers and unattached experts might be eligible to committee chairmanships.

There has been some sentiment in favor of holding the annual meeting of the society at a farther Western point, but it was decided not to change this year, and the annual meeting will therefore be held at Atlantic City in the last week of June, 1911. As far as possible papers and committee reports will be printed in advance of the meeting. One of the features of the program already scheduled is a symposium on hardness tests.

Preparations will soon be started for the Sixth Congress of the International Association for Testing Materials, which will be held in New York in 1912. A nucleus for the Committee on Organization has been constituted in the Executive Committee of the American Society and the officers of its standing committees. They will hold their first meeting in New York in February. The American membership in the International Association is now 450, out of a total membership in the American Society of 1,325. It is expected that the American representation will be very considerably increased before next year.

New England Street Cleaning Conference.—The second annual meeting will be held in Springfield, Mass., during the second week in May. Among those who are to speak are Le Grand Powers, Chief Statistician, Census Bureau, Washington; Dr. Soper, President Metropolitan Sewerage Commission, New York; Edward T. Hartman, Boston, Secretary, Massachusetts Civic League, and Prof. Carl Aronovici, Bonn University, Providence, R. I. The subjects to be considered will include the following: "The Relation of Pavement to Street Cleaning," "Proper Sanitary Regulations for Refuse Disposal," "Accounting in Street Cleaning Work," "The Relation Between Street Cleaning and Other City Departments," "The City Slums and Clean Streets," "Dust Particles in the Air as Related to Street Pavements," "Efficiency of the Street Patrol System," and "Labor Questions in Street Cleaning Work." The conference will be open to the public, and in the evening there is to be an illustrated lecture by City Engineer F. L. Ford, of this city, on "Municipal Improvements in European Cities."

International Association of Chiefs of Police.—The president of the body has set out the following call: "Beginning on February 11, 1911, the International Police Association will hold its eighteenth annual convention in Rochester, N. Y., to continue five days. This association includes in its membership nearly 300 units of police forces of the United States and Canada, and its aims and purposes are to elevate the standard of police institutions generally, to improve the status of the police officer, to insure co-operation among the police organizations of the world, to make generally effective the modes of criminal investigation, to secure expeditious action on the part of the police generally, to devise reciprocity proceedings and to introduce modern facilities in the conduct of the service everywhere. In exchange of opinions, presentation of existing conditions, reading of police reports and discussions following the same we have all proved valuable heretofore, and it is proposed to extend the same work by enlisting commissioners of police, chiefs of police, superintendents of police and high constables to attend this convention.

You, or a representative of your department, are most earnestly and respectfully invited to attend, and if you do not do so to prepare and forward to the president of the association such views as you may be inclined to impart for the good of all on any topic of importance of the police work of the world. The principles of this organization, as set forth by its presiding officers, are to secure a closer official and personal relationship among police officials at home and abroad; to secure unity of action in police matters; to elevate the standard of police institutions by urging the elimination of police from their conduct; a tenure of office for those employed in the service; the maintenance of honorable men and women in the transaction of police business; the general adoption of pension and relief laws; the adoption of humane methods in the enforcement of laws; the provision of temporary relief for its worthy members and their families in certain emergencies; the advancement along all lines pertaining to the prevention and detection of crime and the reformation and treatment of prisoners."

Connecticut Society of Civil Engineers.—The 27th annual meeting will be held at New London, Conn., Feb. 14-15. Papers to be presented are as follows: Feb. 14—"The Catskill Water Works for New York," Alfred D. Allen, Department Engineer, New York Board of Water Supply; "Some features of Baltimore's \$10,000,000 Sewerage System," H. M. Knight, formerly Engineer with the Baltimore Sewerage Commission; "The Congress Street Bridge," R. F. Stoddard, Feb. 15—"Testing Water Wheels After Installation," Prof. Charles M. Allen, Worcester Polytechnic Institute; "The Relation of Weather and Forestation to Stream Flow," W. L. Moore, Chief of U. S. Weather Bureau; "Actual Field of a Typical Connecticut Watershed," R. A. Cairns, City Engineer of Waterbury, Conn.

International Association of Fire Engineers.—Secretary James McFall has issued the following notice: Every fire chief is invited to meet with us in Milwaukee. This will be the most interesting meeting for a fire chief. Many subjects of interest to the fire service will be discussed. Much apparatus will be on exhibition, the latest both in auto

and horse drawn will be there. Can the secretary help you in interesting your officials in having them authorize your attending this meeting and making an appropriation covering your expenses? If so, say the word; give me their names for we want to see you in Milwaukee.

Carolina Municipal Association.—The Legislative Committee, meeting at Raleigh, N. C., January 24, drew up a bill to present to the Legislature regarding the commission form of government.

South Dakota Association of Engineers and Surveyors.—At the meeting, Pierre, January 27, the following officers were elected: President, S. B. Powell, Sioux Falls; Vice-President, B. E. Lovejoy, Redfield; Secretary-Treasurer, R. E. Easton, Aberdeen. These three, with L. K. Mathers, of Mitchell, and B. H. Townsend, of Fort Pierre, make up the Executive Board.

Kansas Engineering Society.—The first annual meeting was held at the Commercial Club, Topeka, January 20-21. About one hundred members were in attendance. Governor W. R. Stubbs in his address of welcome spoke in favor of the construction of reservoirs as a means of preventing floods. Prof. W. C. Hoad, University of Kansas, responded. He also presented the report of the Committee on Stream Pollution and Sewerage. Speakers in the closing session were: N. T. Veatch, of the State University, who spoke on "The Improved State Fish Hatchery at Pratt"; V. R. Parkhurst, Topeka, "Drainage and Food Production"; Myron C. Bowerman, "Shop System of the Capital Iron Works"; E. F. A. Kenisch, "Tree Planting on Highways"; R. V. Leeson, Topeka, "Legislation."

Calendar of Meetings

- February 15-17. Iowa Engineering Society.—Annual Meeting, Des Moines, Ia.—S. M. Woodward, Secretary, Iowa City, Ia.
- February 16. Fourth Annual Chicago Cement Show, Coliseum, Chicago, Ill.
- February 16-18. Idaho Society of Engineers.—Second Annual Meeting, Twin Falls.—Gordon C. Smith, Secretary, Boise, Idaho.
- February 21-22. Illinois Water Supply Association.—Annual Meeting, University of Illinois, Urbana, Ill.—E. Barton, Secretary, Urbana, Ill.
- February 28-March 1. Northwestern Cement Products Association, West Hotel, Minneapolis, Minn.—Henry B. Smith, Secretary, 834 Security Bank Building, Minneapolis, Minn.
- March 1-3. Engineering Society of Wisconsin.—Annual Meeting, Madison, Wis.—W. G. Kirchoffer, Secretary, Vrooman Building, Madison, Wis.
- March 6-11. Canadian Cement and Concrete Association.—Annual Convention, Toronto, Ont.—Wm. Sneath, Secretary, 57 Adelaide street East, Toronto, Ont.
- May. City Commission Congress.—Meeting, Galveston, Tex.—Mayor Lewis Fisher, Chairman of Committee, Galveston, Tex.
- May 29-June 3. National Electric Light Association.—Annual Convention, Engineering Societies Building, New York, N. Y.
- June 6-10. American Water Works Association.—Thirty-first Annual Convention, Powers Hotel, Rochester, N. Y.—John M. Diven, Secretary, 14 George street, Charleston, S. C.
- June 11-16. International Association of Chiefs of Police.—Eighteenth Annual Convention, Rochester, N. Y.—Major Richard Sylvester, Superintendent of Police, Washington, D. C., President.
- June 13-18. New York State Association of Chiefs of Police.—Annual Convention, Rochester, N. Y.

PERSONALS

BACHELOR, W. L., Mayor of Hastings, Fla., was knocked down by a runaway team and seriously injured.

FANNING, JAMES J., Secretary to the Mayor of Dallas, Tex., has resigned to become associated with the Dallas Crosetted Pine Block Co.

FOSTER, HARRY E., chief engineer of Medford, Ore., will resign and devote himself to general work. S. E. Semon, assistant engineer, will probably be appointed to fill the vacancy.

FULTON, W. S., has resigned his position as chief engineer, Topeka, Kan., and will become engineering head of the Kaw Paving Co., a local concern.

GALBRAITH, J. L., has been elected Mayor of Henderson, Tenn.

GOVERN, EDWARD J., Rochester, N. Y., has been appointed by State Engineer Benschel division engineer for the western division; salary \$4,200.

GREBAUGH, RALPH W., has been appointed to take charge of the water and electric light plants, streets and sewers of Atlantic Highlands, N. J.

HODGE, H. W., of New York, with M. J. Butler, general manager of the Dominion Iron & Steel Company, has been chosen to settle the differences of opinion among the board of engineers in charge of the construction of the Quebec bridge as to the adoption of a design.

KINNICUTT, LEONARD P., a recognized authority on sewage disposal and water supply, died at Worcester, Mass., Feb. 6, aged fifty-six years.

MARSH, C. L., Cleveland, O., has been chosen to fill the position of city engineer. Gadsden, Ala., vacated by Wilburn Hill.

MCGRATH, GEO. B., is now representing the U. S. Wood Preserving Co. in New England.

MILHEIM, JOHN, of the Niagara Hose Company, succeeds Charles McCormick as Fire Chief at Tonawanda, N. Y.

MILLS, GEORGE C., of Rochester, has received appointment from State Engineer Benschel as resident engineer; salary \$3,000.

MORRIS, FRANK E., Cincinnati, has resigned the position of Assistant City Engineer and will engage in private business.

PANTON, JOHN W., of Norfolk, Va., has been appointed superintendent of the Street Cleaning Department of Washington, D. C.

SCHALK, OTTO B., succeeds James A. Rowe on the board of health, Newark, N. J.

STANLEY, ORRIN E., formerly City Engineer of Pierre, S. D., has opened an office for the practice of municipal, railway and topographical engineering in the Chamber of Commerce Building, Portland, Ore.

STEVENS, COL. EDWIN A., Hoboken, N. J., has been appointed Commissioner of Public Roads of New Jersey, succeeding Frederick Gilykson, whose term expired recently. He is an alumnus of Stevens Institute, founded by one of his ancestors, and is also an alumnus of Princeton University in the same class with Governor Wilson.

TRAMMELL, J. D., Fort Worth, Tex., has resigned his position as City Engineer to become chairman of the board to supervise construction of the new city reservoir. Frank J. vonZuber, assistant engineer, becomes acting chief engineer.

WOHLIUTER, A. F., succeeds W. C. Mitchell as chief of the fire department, Albert Lea, Minn.

ZACHARY, I. L., Atlanta, Ga., has been appointed City Engineer of Brunswick, Ga.

TRADE NOTES

Cast-Iron Pipe.—Chicago—January bookings were better than for January of last year and better than the average for that month. Quotations: 4-inch, \$25; 6 to 12-inch, \$24; 16-inch and up, \$23.50. Birmingham—Tonnage recently placed with Southern producers is large and prospects are considered very good. Prices have been advanced. Quotations: 4 to 6-inch, \$21; 8 to 12-inch, \$20; over 12-inch, average, \$19.

New York—Eastern foundries have much work booked for the spring months. Quotations: 6-inch, carload, \$21.50 to \$22.

Lead—Lead is easy. Quotations: New York, 4.45c.; St. Louis, 4.30c.

Vitrified Sewer Pipe.—The general quotation on first-class vitrified standard sewer pipe and fittings, 3 to 24 in., in carload lots, f. o. b. factory, is 88 per cent discount. The demand is comparatively light and the market is not very strong, owing to competition and a desire to move stocks.

Bitumens in Road Construction.—The Good Roads Improvement Company, Cincinnati, O., whose product—Asphaltoiene—is sold by Alden Spere's Sons Company, No. 253 Broadway, New York, publish a handsome booklet describing their product and explaining in a general way its manufacture and the scientific reason why it is better than asphalts which are merely byproducts of other processes. Asphaltoiene is distilled directly and primarily for road work. It is a straight-run material, so-called. That is to say, the distilling process is so conducted as to give the maximum of the grades of bitumen most valuable in road work. This is contrasted with a product of distillation where the main object is to obtain bitumen for other purposes, such as gas light oils and lubricating oils. Such products are too hard and are cut back with light oils. Both the very hard and the very light bitumens are unstable, the former chemically and the latter physically, as compared with the medium grade bitumens needed for road work.

Asphaltoiene is made in three grades—A, B and C, graded according to gravity, and each suited for a different method of application. A is applied at atmosphere temperature, B requires heating and C should be mixed with heated stone. The pamphlet contains illustrations and evidence going to prove the correctness of the theoretical argument in favor of Asphaltoiene.

Granite Blocks.—The Harris Granite Quarries Co., of Salisbury, N. C., has recently developed an extensive business in granite paving blocks, although originally it had no intention of entering this field. The company's stone dresses to unusually close joints, and this fact led a street railway company to suggest making blocks for use in street tracks. Other traction companies found the blocks satisfactory and the company is now prepared to furnish them for general paving purposes. The properties of the stone and some of the advantages of granite block pavements are explained in a pamphlet which also contains illustrations.

Concrete Dumping Car.—J. L. Blaker, Blaker Mills, W. Va., has placed on the market a combined bottom dumping bucket and car. The bucket forms the body of the car and rests upon cradles attached to the steel frame of the truck. The bucket dumps either directly down or on the side.

Electric Protection Company.—The New York Board of Estimate has granted a franchise to the Electric Protection Company to operate an automatic fire and burglar alarm service in the city. The matter has been before the Board for some time, and the Franchise Committee, which is composed of Mayor Gaynor, Controller Prendergast and President Mitchel, of the Aldermen, after investigating the new system, decided to allow its installation.

It was said that Daniel G. Reid, of Rock Island and Tin Plate fame, holds the controlling interest in the new company.

The Goodrich Picture.—The B. F. Goodrich Company is now sending out its annual souvenir picture, a portrait by Carroll Beckwith. This year the Goodrich girl's name is Beatrix. Her coming was announced by a note from the lady, accompanied by her miniature. The 1911 annual souvenir is the twenty-third issued by the company, the first one having been given out in 1880.

Troy Wagons.—The Troy Wagon Works Company, Troy, O., announce that their dumping wagons and boxes are now handled by the J. I. Case Threshing Machine Company, Racine, Wis. The Troy wagon is always easily recognized by the shaft placed along the outside of the box, by means of which the doors are raised and lowered. The shaft carries spiral drums around which the door lifting chains are wound. It is a simple, strong and effective device.

Construction Exhibit.—The trustees of Columbia University, New York City, announce an exhibition of illustrated books and prints showing the development of construction and transportation from the fifteenth to the nineteenth century, loaned by William Barclay Parsons, in the library of the university, February 1 to 25, from 2 until 5 each week day afternoon.

Technical Data.—A new publication called Data has recently been started by the Technical Data & Appliance Company, 92 La Salle street, Chicago, Ill. This magazine, which is published monthly, is devoted exclusively to engineering data and is intended to supplement the regular engineers' pocketbook by providing information on various subjects which can be readily filed either in a card index file or a small loose leaf pocket note book. With this object in view, the engineering data presented is in tabloid form, being printed on leaves measuring 3 x 5 inches, which can be readily detached from the binder for filing. A sample of one of the pages is shown herewith.

Chicago, November, 1910.

DATA

Sheet No. 67

Long Handled Concrete Tools.—The Arrowsmith Concrete Tool Company, Arrowsmith, Ill., at their third annual exhibit at the Chicago Cement Show circulated a pamphlet in which the merits of their long handled concrete tools are condensed into five definite claims as follows:

1. The connections fasten right on the trowel blade.

2. The tools are adjustable to any position.

3. The tools are perfectly tight. There is no leverage to wear and get loose, and there is absolutely no danger of digging in the mortar.

4. The tools can be adjusted with the handle perfectly flat with the trowel or they can be adjusted with the handle at right angles or at any intermediate angle.

5. In making concrete sidewalks it is necessary to trowel float. To do this it is necessary to run the trowel across the walk perfectly flat, thereby causing a suction and drawing up the water. Then run the trowel back over it with the edge raised to prevent digging in mortar. Hence rigidity of the handle is necessary.

Sewer Pipe.—In his annual report to the stockholders of the American Sewer Pipe Company President George R. Hill has this to say: "Our efforts have been concentrated on increasing the physical value of our plants, operating them to the fullest capacity thereby enabling us to produce material at minimum cost, notwithstanding the deplorable conditions existing in the trade the past year—the low prices which prevailed—as well as the large increase in the cost of raw material and advance in wages. The physical condition of the properties has been kept up to the fullest extent during the past year by the expenditure of over \$170,000 for maintenance. We have also added approximately \$32,000 in permanent improvements by the purchase of additional real estate. The management has made a number of beneficial changes and is continuing to do so. We are doubling the capacity of our factory located at Brazil, Ind. so as to enable us to reach the Canadian markets; also changing one of the plants into a face brick factory for which material there is a large demand; and transforming one of the idle plants into a paving brick factory. The demand for brick pavements—both city and country—is rapidly increasing and we anticipate larger sales of this material in the immediate future. The company's balance sheet for the past year shows a profit of \$51,925.63.

THE WEEK'S CONTRACT NEWS

Relating to Municipal and Public Work—Street Improvements—Paving, Road Making, Cleaning and Sprinkling—Sewerage, Water Supply and Public Lighting—Fire Equipment and Supplies—Bridges and Concrete Work—Sanitation, Garbage and Waste Disposal—Police, Parks and Miscellaneous—Proposals and Awards

To be of value this matter must be printed in the number immediately following its receipt, which makes it impossible for us to verify it all. Our sources of information are believed to be reliable, but we cannot guarantee the correctness of all items. Parties in charge of proposed work are requested to send us information concerning it as early as possible; also corrections of any errors discovered

BIDS ASKED FOR

STATE	CITY	RECEIVED UNTIL	NATURE OF WORK	ADDRESS INQUIRIES TO
STREET IMPROVEMENTS				
Massachusetts...	Westfield.....	Feb. 17, 2 p.m.....	Repaving streets, including recutting and laying on concrete foundation about 11,647 sq. yd. old granite block and furn and lay 4,185 sq. yd. new	James R. Bryan, Chm. Com.
Massachusetts...	Boston.....	Feb. 17.....	Furn. crushed stone and stone dust for year ending Feb. 1, 1912	J. Edw. Mullen, Supt. Supplies.
Illiana.....	Franklin.....	Feb. 18, 1 p.m.....	Grad. gravel and otherwise improve highway	Wm. B. Jennings, County Auditor.
West Virginia.....	Huntington.....	Feb. 20, 1 p.m.....	Paving two alleys	John Coon, Comr. of Streets.
Ohio.....	Defiance.....	Feb. 20.....	Stoning 1½ mile road, approximate cost, \$5,000	County Auditor
Massachusetts...	Boston.....	Feb. 20, 1 p.m.....	Constr. roads, walks, drains, etc. at Ft. Andrews	Capt. A. M. Miller, Constr. Q.M.
Michigan.....	Ludington.....	Feb. 20, 4 p.m.....	Pave various streets	Dean Thompson, City Clerk.
New York.....	Mineola.....	Feb. 20, 10:30 a.m.....	Constr. and impr. two county roads	W. E. Luyster, Clk. Bd. of Supvrs.
Washington.....	Adna.....	Feb. 20.....	Macad. about 16,000 ft. road	H. H. Swofford, County Auditor.
Ohio.....	Corning.....	Feb. 20, 8 p.m.....	Curb, repair, grade and pave various streets	City Clerk.
Ohio.....	Columbus.....	Feb. 23.....	Grade and gravel road	F. M. Sayre, County Auditor.
Illinois.....	Portland.....	Feb. 23.....	Constructing pavement on Jersey st	J. W. Morris, City Engineer.
Illinois.....	St. Johns.....	Feb. 23.....	Constructing several hard service streets	A. M. Esson, City Representative.
Ohio.....	Cincinnati.....	Feb. 24, noon.....	Resurf. Independence st., also culvert and fill on Mt. Alverno rd	Fred Dreihls, Clk. Co. Comrs.
New York.....	Buffalo.....	Feb. 24, 11 a.m.....	Paving various streets	Dept. of Pub. Works.
Ohio.....	Cincinnati.....	Feb. 24, noon.....	Impr. Loveland and Madeira road	Fred Dreihls, Clk. Bd. Co. Comrs.
Ohio.....	Wapakoneta.....	Feb. 25.....	Improv. Mechanic street	Fred A. Klipfel, Village Clerk.
Ohio.....	Lakewood.....	Feb. 27, noon.....	Pave Summit and repair brick pave. in other streets	B. M. Cook, Village Clerk.
New Jersey.....	Atlantic City.....	Feb. 27.....	Pave two streets	E. D. Rightmire, City Engr.
New York.....	Fort Niagara.....	Feb. 28.....	Construct coner. walks and macad. and clay roads	Lieut. E. H. Wagner, 29th Inf. U.S.A
New York.....	Sackett's Harbor.....	Mar. 1, 2 p.m.....	Constr. approx. 28,800 sq. ft. macad. road. and 800 sq. ft. coner. walk at Madison Barracks	Constructing Q.M.
Minnesota.....	Winnipeg.....	Mar. 1, 11 a.m.....	Supply 1,000 to 1,500 tons asphalt for paving	M. Peterson, Secy. B.1. of Control.
Illiana.....	Portland.....	Mar. 1, noon.....	Improving certain highways	W. Lea Smith, County Auditor.
Illiana.....	Sweetwater.....	Mar. 4.....	Constr. about 22,000 sq. yd. macad-asph. pave	L. S. Polk, Secy.
New Jersey.....	Plainfield.....	Mar. 6.....	Furnish crushed stone, culverts, etc.	City Clerk.
Virginia.....	Savannah.....	Mar. 9, noon.....	Furn. 5,000 cu. yd. cem. gravel or like material for imp. pub. rds.	County Commissioners
Mississippi.....	Jackson.....	Mar. 9.....	Constr. gravel and sand roads. \$100,000 bonds issued	Mayes Cooper, Hwy. Engr.
Minnesota.....	Worthington.....	Mar. 13, 2 p.m.....	Grade approx. 10,066 yards	E. C. Fannell, Co. Aud.
SEWERAGE				
West Virginia.....	Huntington.....	Feb. 20, 1 p.m.....	Laying sewers in various streets	John Coon, Comr. of Streets.
North Carolina.....	Charleston.....	Feb. 20, noon.....	Constr. pump pits and appurtenances for sewer system	J. H. Dingle, City Engr.
Ohio.....	Mt. Vernon.....	Feb. 21, 4 p.m.....	Constr. 7½ mile sanitary sewer, 6 to 15 in., pipe, with septic tank and filter beds	Wm. E. Gamble, Town Clerk
Ohio.....	Clarinda.....	Feb. 21.....	Furn. one mile of 6-in. sanitary sewer	C. W. Stuart, City Clerk.
Ohio.....	Clinton.....	Feb. 21, 8 p.m.....	Constr. 26,000 ft. of 8-in. lateral sewers, vit. pipe, with man-holes, lampholes, etc.	C. C. Smith, City Clerk.
Minnesota.....	Melrose.....	Feb. 21.....	Constr. sewerage system	F. J. Weisser, City Clerk.
Minnesota.....	Paris.....	Feb. 23, 2:30 p.m.....	Furn. and lay approx. 710 ft. 36-in. and 3,834 ft. of 60 in. reinf. concrete or brick sewers	Granville Jenkins, Chm. Sewer. Com
Maryland.....	Baltimore.....	Feb. 23.....	Construct Pratt St. Trunk Sewer	J. Sewell Thomas, City Reg.
New York.....	Hastings-on-Hud.....	Feb. 24.....	Construct sewers in various streets. About 16,000 feet	Jos. E. Murphy, Clerk Bd. Trust.
Ohio.....	Lakewood.....	Feb. 27, noon.....	Construct sewer main in Riverside road	B. M. Cook, Village Clerk
Ohio.....	Cleveland.....	Feb. 28, noon.....	Construct sewers in Cleveland Heights	H. H. Canfield, 309 Beckman Bldg
Arizona.....	Parker.....	Mar. 1, 2 p.m.....	Construct sewer at Colorado River School	Comr. Ind. Affairs, Wash'n., D. C.
New York.....	Watertown.....	Mar. 3, 8 p.m.....	Constr. sanitary sewer, requiring approx. 1,800 ft. 20-in. tile; 300 ft. 18-in. tile; 300 ft. 15-in. tile; 1,200 ft. 12-in. tile; 1,200 ft. 10-in. tile	Board of Public Works.
Virginia.....	Atlanta.....	Mar. 14.....	Constr. intercepting sewer and disp. plant	City Council.
New York.....	San Jose.....	July 3.....	Construct septic tank for County hospital	City Clerk.
WATER SUPPLY				
Ohio.....	Nottingham.....	Feb. 17, noon.....	Constr. water mains in various streets	J. C. Steinicke, Village Clerk.
Wisconsin.....	North Bend.....	Feb. 17, 8 p.m.....	Install pumping sta. includ. wells, pipes, engines, etc.	Frank D. Howe, City Clerk.
California.....	Madera.....	Feb. 20, 8 p.m.....	Constr. water system	City Clerk.
Minnesota.....	Fergus Falls.....	Feb. 20.....	Furn. 1,200 ft. of 6-in. and 500 ft. of 4-in. c.i. pipe, c.i. T's, etc.	S. E. Loverson, City Clerk.
Quebec, Can.....	Mont. Laurier.....	(P.O. Rapide de L'Original).	Construct water supply	Anthime Dubreuil, Mayor.
Ohio.....	Marshalltown.....	Feb. 20, noon.....	Install waterwheels, pumps, etc. at dam	F. B. Wiley, City Clerk.
New York.....	Albany.....	Feb. 20, 2 p.m.....	Furn. c. i. water pipe, tapping sleeves, oil, etc.	Isidor Wachsmann, Secy. B. C. & S
Washington.....	Colville.....	Feb. 21.....	Constructing 3,200 ft. of 10 in. wood pipe	City Clerk.
Ohio.....	Coshocton.....	Feb. 21.....	Furn. 4,000,000 gal. pump, eng. and two centrif. pump. units of 15,000,000 gal. capy. per day	City Clerk.
West Virginia.....	Parkersburg.....	Feb. 23, 8 p.m.....	Constr. water supply system incl. steel stand pipe	Frank Good, City Aud.
Wisconsin.....	Wymore.....	Feb. 23.....	Constr. water and elec. light plant, approx. cost \$57,000	Henry Hohl, City Engr.
Ohio.....	Euclid.....	Feb. 27, noon.....	Construct 6-in. water main	F. H. Shoff, Village Clerk.

Winslow Contracting Co.; District No. 8, Roxbury, North and South End, to Edward A. Janse; District No. 10, North and West Ends and Back Bay, to B. E. Grant.

Buffalo, N. Y.—Rebuilding and enlarging city refuse utilization plant on Hamburg Canal strip; recommended for contracts: Masonry, Eastern Concrete Steel Co., \$18,519; iron work, C. F. Ernst's Sons, \$21,719; carpenter work, Christian Fierl, \$6,671; roofing, Martin Reiber, \$4,039; plumbing, Shaddock & Patton, \$2,744; total, \$63,692.

Lockport, N. Y.—Cleaning and sprinkling streets for one year, to Stainthorpe & Co., \$4,000.

Syracuse, N. Y.—Building comfort station, to John J. Sherlock, \$2,150.

NEW INCORPORATIONS

Union Sanitary Ash Co., Albany, N. Y.; collecting and disposing of ashes, e. trucking business; capital, \$10,000. Incorporators: Chas. H. Minch, 126 Hudson av.; Bernard L. Patterson, 21 Grand st.; Steph. C. Voelcker, 93 North Pearl st.—all of Albany, N. Y.

Humphrey Gas Pump Co., Syracuse, N. Y.; manufacture and sell internal combustion engines, air and gas compressors, etc. capital, \$1,500,000. Incorporators: Edward N. Trump, Edward L. Pierce, Wm. Cogswell, Syracuse, N. Y.

Buffalo Receptacle Manufacturing Co., Buffalo, N. Y.; manufacture and deal garbage and refuse receptacles, etc.; capital, \$150,000. Incorporators: Gustave Steiwachs, Mamie Steiwachs, Bertha Ambrose all of Buffalo, N. Y.

Hancock-Howell Electrical Engineering Co., Buffalo, N. Y.; general contract business; electrical and mechanical engineers; capital, \$5,000. Incorporators: Wheeler W. Hancock, Herbert H. How Geo. C. Hillman, all of Buffalo, N. Y.

Cincinnati Wood Preserving Co., Cincinnati, O., has been incorporated with \$20,000 capital stock. The company owns a plot in the western part of the city, to which some extensive additions are planned next summer. Its officers are: H. H. Be President; F. W. Cherrington, General Manager, and J. M. Stirnkorb, Secretary & Treasurer.

Illinois Shale Tile Co., Coal City, Ill., been incorporated with a capital stock of \$75,000. The incorporators are: D. A. Herger, John K. Newhall and John M. R. Mond. The company will engage in manufacture of brick, tile and other products. Construction will begin at once.

PROPOSALS

AUTO FIRE TRUCK

City of Bozeman, Gallatin County, Mont.

Notice is hereby given that sealed proposals will be received by the undersigned up to 5 o'clock p. m., March 2, 1911, for Auto Combination Chemical and Hose Wagon, according to following specifications:

H. P.—80 to 90—A. L. A. M. Rating; speed 45 miles per hour; partition body; 1,200 2½-in. hose; 40 gallon steel chemical tank and basket for 250 feet ¾-in. chemical hose; two short extension ladders; Bosch motor; electric lights and revolving search light on dashboard; with or without 6 tires; capacity eight men. Complete specifications to be furnished with each proposal.

A. M. BRANDENBURG,
City Clerk

COMMISSION GOVERNMENT

Cities Which Have Adopted It to Date—What is Meant by This Term—Essential Features—Non-Essential Features of the Several Charters and State Laws—Number of Commissioners—Length of Term

Commission government, as that term is generally understood, began just ten years ago when the city of Galveston, Texas, wrecked both physically and financially by a tidal wave, faced the herculean task of reconstructing its streets, buildings and finances in the hands of a commission of five men appointed by the governor of the State. No great notice was attracted by this form of government at first, but the excellent results obtained were soon appreciated and four years later Houston, in the same State, adopted practically the same form of government, following which, in 1907, five other cities of the same State placed their governments in the hands of commissions. By that time, six years after Galveston had inaugurated commission government, what seemed to some like a craze swept over the Central and Northwestern part of the country and general laws permitting the adoption of commission government by their cities were passed by the States of Iowa, Kansas, North and South Dakota in 1907, Mississippi in 1908, Minnesota, Texas and Wisconsin in 1909 and Illinois in 1910, in addition to special charters granted to cities in other States.

While the forms adopted or provided for in all these States were called commission government, there were a number of variations introduced by the different States and cities, some of which were so favorably received and adopted by other cities that the name of the originator was given to those particular variations. The best known of these was the so-called Des Moines plan. In fact, so numerous were the differentiations between the various charters and State laws under which commissioner governments were established that there are probably no two of them just alike, and it has come to be a question of some dispute as to what is and what is not commission government.

During the past two or three years considerable study has been given to the essential features and operation of the various forms of commission government, and books, pamphlets and articles, both popular and technical, have been published on the subject. One of the latest of these is a paper read by Mr. Ernest S. Bradford before the National Municipal League at Buffalo last November, in which an attempt was made to study the charters of all the cities which were claimed to have commission government and analyze the various features which they had in common and those which differentiated them from each other. The Short Ballot Organization, of which Mr. Richard S. Childs is secretary, has probably gone into the matter even more thoroughly and is endeavoring to keep its records and its knowledge of the subject up to date by obtain-

ing copies of all the new charters as they are adopted and also studying reports of commission-governed cities to learn the results of the adoption of this form of government. This organization is publishing a "Digest of Short Ballot Charters," edited by Prof. Chas. A. Beard, in which is given a definition of municipal government which is perhaps as good a one as has been evolved. This definition is as follows:

The phrase "Commission Government" has, of course, been a misnomer ever since the Galveston Commission ceased to be appointive by the Governor and became elective. The word "commission" implies appointment, and in the strict sense of the word there have been no cities in the country "governed by Commission" except Washington, D. C., and Chelsea, Mass. The phrase, however, has been applied in the popular mind to all the new city charters that have been modeled on Galveston and Des Moines. These charters vary from almost exact copies through a twilight zone to charters that are essentially unlike the Galveston plan in all but name. One city changed the title of its Council to "Commission," and proceeded to call itself "Commission Governed" and is still included in most lists on that slender basis!

"Commission Plan," to the average American, means a new plan of city government that seems to be bringing about a substantial and permanent reform in cities where it has been tried. There exists in the popular mind, however, no little confusion as to the precise nature of this new plan, and a variety of definitions are given. Nevertheless, when all incidental features are eliminated, the essential element which accounts for the success thus far achieved is simply this: Conspicuous responsibility—and hence accountability—of all elected officials to the people.

Another way of expressing it is that a true Commission Plan is one which conforms to the Short Ballot principle which is defined by the Short Ballot Organization as follows:

First: That only those offices should be elective which are important enough to attract (and deserve) public examination.

Second: That very few offices should be filled by election at one time, so as to permit adequate and unconfused public examination of the candidates.

This excludes Boston, for instance. Under its recent amended charter, Boston has only six names on the ballot, but all except the mayor are of insignificant authority and uninteresting character, so that they are dangerously obscure. Waco, Texas, is likewise excluded, for although it has the "Commission" of five members, there are a number of obscure, independently elected officials to get in their way. In neither city should complete popular control be expected to ensue.

Accordingly a Commission Governed City means to us one that has a "Short Ballot" according to the Short Ballot principle, which results in popular supremacy with efficient government as a probable by-product.

The above definition possibly places undue emphasis on the short ballot idea, and draws the limits too close to suit some, but in general it presents the principles which we believe have

**Exercised by "Citizen's Board."

been responsible for the success of commission government—the placing of complete power and responsibility to the people in the hands of a few officials.

We would ourselves add, not to the definition of commission government, perhaps, but to the essentials for its continued success, the "recall"; while the "initiative" and "referendum" are also valuable checks.

It should be clearly understood that the name applied to the governing body, as "council" or "board," has no bearing upon the question of whether or not the government is of the commission form; but rather whether in a few officials, elected at large, are lodged all the functions of the government, legislative, administrative and appointive.

On the preceding page is given a table prepared from such data as we have been able to collect, a large part of it being that contained in Mr. Bradford's paper, the balance from the Short Ballot Organization and from other sources which were apparently reliable. This table shows that at least 111 cities have already adopted the commission form of government, and the number is being added to every month. Among the cities included in some lists, but apparently not covered by the above definition (in most cases because of the incompleteness of the power placed in the hands of the commission), are the following: Oakland and San Diego, Cal.; El Reno, Okla.; Baker, Ore.; Chamberlain, S. D.; Barry, Elkhart, Harlingen, Terrell and Waco, Texas; and Spokane, Wash.

An effort has been made to present in this table also the more important features of the form of government adopted in the several cities, it being thought that in this way a comparison of these could be made more intelligible than by describing, city by city, the features of the several charters or State laws, in addition to which the latter would have occupied an impossible amount of space. The data here tabulated are by no means complete, as it has seemed to be impossible for any one to obtain full information from a number of the cities more distant from the center of inquiry. So far as we know, however, this is the most complete table of the kind which has yet been published and should be of great service to those who are investigating the matter with a view to adapting this general form of government to their local conditions and requirements.

Considering the general idea of commission government

somewhat more in detail, we find the most evident features to be the comparatively small number of officials elected; election of all officials at large and not by wards or districts; conferring of all the powers of the government upon the council as a body, and assigning to each individual certain well-defined portions of this power, with the attached personal responsibility for the proper exercise of it.

The most apparent danger inherent in this form of government is the possibility that the great powers conferred upon these few officials may be used for selfish ends and against the interests of the people, or at least in a grossly arbitrary way. To meet this, many States and cities have adopted the recall, by which an official can be removed from office by popular vote. The initiative has been adopted by still more and the referendum by all but a few of the California and Texas cities.

It will be seen from the table that in about half the cities the Board contains five members, while three also is quite common. Five cities have four commissioners; and six, seven and nine are each found in one city. In several States five is the number provided for first-class cities, all smaller ones having three only, as their municipal functions are less extensive and complicated. The general idea is to focus popular attention before election, and concentrate responsibility afterward, in as small a number as possible. Another advantage of smallness of number is the probability of more prompt transaction of business. Still another is the possibility of paying salaries adequate to secure competent men.

There are all sorts of conditions as to term of office, the length varying from two to five years. In some cases the entire board is changed at each election; in others a single member or one-half or one-third of the members are elected each year, while in still others the mayor or head of the board serves for a longer or a shorter time than the other members.

In some cities the members of the board are required to give their entire efforts to the city's affairs, and are paid accordingly. In others they are supposed to give "as much time as necessary"; while in several the mayor gives his entire time and the others an hour a day or such time as is necessary.

The powers and duties of the board are generally all those conferred by State law or special charter upon the city and previously or commonly exercised by the mayor and council or aldermen, in some cases increased by additional appointing

power. Among the powers is authority to levy taxes, vote appropriations and control the finances generally; to appoint and remove all subordinate officers and employees, create or discontinue offices and fix salaries; and to have full control and supervision over all departments. In most, but not all, cases the mayor has no veto; but this is in some cases transferred to the voters, to be exercised through the referendum.

The control exercised through the recall is really the right reserved by the people to elect a new official sooner than usual. "Another method is to allow the people to vote directly on measures as well as on men; heretofore the two ideas have been tied together, and the only way to secure one or two needed laws was to vote for the men who stood for these laws but who also possibly stood for others not so desirable." (Ernest S. Bradford).

All the charters and State laws, except those of New Mexico, provide for full publicity of the proceedings of the board, of ordinances (including franchises) and of the general and financial conditions of the city. The extent to which the other forms of control which the voters may exercise over the board—referendum, initiative, recall, etc.—have been embodied in charters and State laws is shown in the table. The recall has been criticised as subjecting officials too much to the whims of the voters; but experience in this country has not shown that this power will be used in any but extreme cases, largely owing to the large percentage of voters who must appeal for the recall. One of the most recent instances is Tacoma, where a movement is on foot to recall the entire board.

In addition to the cities and States named, there is agitation for commission government in several others. New Jersey cities are organizing to ask for a State law; and twenty-two of the New York cities organized at Rochester for that purpose on February 3.

A modified plan is being advocated for cities of under 50,000 population by the Board of Trade of Lockport, N. Y., which provides for five councilmen acting under the commission plan, nominated by petition, and subject to recall; with double election except for candidates who get a majority at the first election. The initiative and referendum are provided for. The peculiarity of the plan lies in the employment by the council of a city manager, who appoints all other city employees under civil service rules, prepares the budget, is responsible to the council for all the work of the city except the schools and for the execution of its ordinances and resolutions. In general the city manager idea is that adopted at Staunton, Va. (See MUNICIPAL JOURNAL & ENGINEER for Dec. 29, 1909). Roswell, N. M., also has a manager.

DAYTON WATER WORKS

The Water Department of Dayton, Ohio, in 1910 laid a little over six miles of mains, bringing the total amount of mains in the system up to a little over 180 miles. A large percentage of the new pipe was 6-inch, although 4, 8, 12 and 20-inch pipe was laid. Six new wells were added, making a total of 100 wells at present in use. The additional wells are said to yield from 1,500,000 to 2,000,000 gallons of water per day; but even this is entirely insufficient to meet the requirements of the city, and it is stated that some definite action must be taken in the very near future to materially increase the amount of water supply to provide for increasing population.

In the maintenance of these 180 miles, 16 valves of various sizes, from 3-inch to 20-inch, were found out of order and repaired and 40 were repacked, and two valves were taken out and replaced with new ones. Forty-nine leaks were repaired; 21 of these were believed to have been caused by electrolysis, 14 of which were on main lines and the others on valves, service branches, etc.

During the year 1549 additional meters were placed, making the total number now in use 18,826. There were reported out of order and repaired during the year 2861 meters, or about 15 per cent of the total number. The total number of service connections is 23,697, showing that about 80 per cent are metered.

SEWAGE PUMPING IN NEW ORLEANS

Operation of Six Electric Automatic Stations—Descriptions and Cost of Plants and Cable Lines—Efficient and Absolutely Reliable

The development of the newer, outlying portions of the Long Island section of Greater New York has introduced a number of problems in sewerage which had not previously entered into the designing of sewerage for that city, among these being the necessity for local sewage pumping stations. In connection with the study of this problem, Assistant Engineer John E. Hill visited and reported upon the pumping plants at New Orleans, and his report forms an instructive review of the operation of these plants, the general construction of which has already been described by us. Mr. Hill's report was as follows:

New Orleans being built on very flat ground, with the highest elevations at the mandatory points of outfall, it is impracticable to install any sewerage system which will deliver the sewage flow of all sections of the city to the necessary points of outfall by uninterrupted gravity. Consequently, automatic pumping stations, electrically connected with central stations, have been designed along the lines of the main interceptors and their principal tributaries. Of the thirteen designed automatic sewage pumping stations, but six are at present built, of which four, Nos. 1, 6, 8 and 9, are primary low-lifts, and two, Nos. 14 and 15, are intermediate low-lifts; the principal elements of these six stations are shown in the following table:

Station.	Size of Pump.	Capacity of Pump in Cubic Feet per Minute.	Total Head.	Diameter of Inlet Sewer.	Diameter of Outlet Sewer.	Number of Pumps.
1.....	8"	210	7'	27"	27"	1
6.....	8"	170	6'	24"	24"	1
8.....	8"	170	8'.4	24"	24"	1
9.....	8"	270	8'.6	30"	30"	1
14.....	15"	710	8'.4	54"	53"	2
15.....	12"	450	13'	33"	24"	2

The pumps are all centrifugal pumps directly and vertically connected to induction motors, and all friction bearings and working parts are smothered in oil. An ultimate installation of three units at the primary stations and of four units at the intermediate stations is planned. Each inlet sewer discharges into a shallow suction pit having extended vertical walls.

SUB-STATION NO. 14, SEWAGE PUMPING

All these six substations are built of reinforced concrete and have their pumps set in a dry well with the center of the pump casing below the level of the center line of the inlet sewer. They are provided with automatic regulating devices connected with float-chambers and so arranged that the pumps will go into operation at their full-rated capacity when the inlet sewer is seven-tenths full, and will cease when that sewer has been pumped dry at the suction-pit end. They are also provided with secondary float-chambers and cable devices used for automatically sounding signal alarms at the central station. Each chamber is connected with the primary duct, and, when the water in the sewer rises above the seven-tenths full level, lugs

on the cable throw a connecting arm into the circuit and a continuous alarm is rung and an annunciator falls at the central station. An emergency by-pass leading from the suction pit to the discharge sewer is also provided and this comes into operation when severe storms flood the streets and surcharge the sewers, or when a sudden breakage either to machinery or to cable, or when a prolonged suspension of power renders the plant for a time inoperative.

Besides these installations, each station is provided with a set of incandescent lights, a ventilating fan, an automatic gauge for recording sewage height, a transformer, a switchboard, an hydraulic-siphon sump pump and a compound inlet-outlet ventilating stack with hooded cowl. The lights, the ventilating fans and the pressure pumps operate to keep the stations dry, warm and fit for electrical apparatus. They have been found necessary, even though such apparatus is well encased and protected. The transformer reduces the main 3,000-volt line potential to the designed 220-volt motor potential. The switchboards are provided with the necessary switches, meters, safety-plugs and short-circuit alarms.

All of these substations are connected with the central station by armored and insulated triple-conductor power transmission and telephonic-signal cables carried in ducts laid on the sewer crowns; the length of each set of cables is about 12.3 miles.

The intermediate stations are provided with superstructures, while the primary stations are entirely underground.

The cost of the unfurnished structures of Stations 1, 6, 8, 9, 14 and 15 was, respectively, \$4,600, \$4,200, \$4,600, \$4,500, \$12,300 and \$7,800. The cost of furnishing assembling and erecting the machinery of these six stations (together with an additional non-automatically operated station of the type of No. 14) was \$42,000. The cost of furnishing, laying, assembling and connecting the cable lines was \$38,500. The cost of maintenance, which consists of attendance, transportation and engine supplies, is about \$200 per month. The cost of operation, being solely the cost of the power transmitted, is said to be about 3/4-cent per kilowatt hour. The cost of repairs, so far, has been less than \$60.

The general construction and the character of the materials of these stations are admirable. There is very little leakage about the machinery. The impellers are well encased, but are easy of access. All bearings are self-lubricating and the lubricating oil is returnable. On the other hand, the thrust-bearings seemed over-slight and the absence of slip-couplings was noticeable, while the oil-feed of the sump pumps did not appear to be all it should be.

Each station is visited once each day and receives a careful inspection and attention, lasting, normally, about fifteen minutes in each station.

During each and every one of my visits all of these stations were working with entire efficiency and uninterrupted service. The intelligence devoted to the general superintendence and to the daily inspections was strictly high grade and had resulted, apparently, in maintaining absolute reliability in the automatism of the starting devices and in the precision of the operating machinery, and it is claimed that, except during floods and two isolated occasions, this perfect automatism and precise operation had continued without interruption, damage or significant cost of repairs twenty-four hours a day, every day of the last three years.

There were absolutely no disagreeable odors about the stations. The only suspicion of any form of nuisance noticeable was the humming of the ventilating fans, which could distinctly be heard outside and fifty feet away from the two intermediate stations.

My general impression is that these stations at New Orleans do, undoubtedly, work efficiently and reliably and with perfect automatism, month in and month out. And I see no reason why they should not work practically as well here. Still, there is a variable factor which should not be lost to mind and which, perhaps, might produce local failure. I refer to the normally excessive dilution of all New Orleans sewage.

Not only is there a slow but continuous seepage of ground water which in normal cases constitutes a ground water excess, but it must not be forgotten that the New Orleans sewerage system is new and no large percentage of house connections as yet feed these sewers. Whether the pumps would work as efficiently and with as absolute freedom of clogging or stoppage were the sewage heavy and strong and the flow and velocity increasingly greater is a question that cannot be answered with positive certainty. Personally, from my inspection and examination, I believe that, with the methods of installation as practiced at New Orleans, and with as precise an accompanying intelligent, trustworthy and careful inspection as is employed there, practically perfect and reliable automatism, efficiency and duty can be obtained.

In conclusion, I would direct your attention to the factors which seemed to me to constitute the saliently admirable features of the New Orleans sewage pumping stations:

(a) Broad and generous design, fortified by splendid construction and hair-line inspections.

(b) Intelligent and methodic watchfulness over both daily routine and working machinery.

(c) Shallow suction pits instead of receiving wells and the combined alternating and supplementary character of all pumping units.

(d) The use of emergency by-passes and the design for the installation of normally silent pumping units.

(e) Short runs and small lifts, with the avoidance of the necessity for screening.

(f) The use of a drum as an essential part of the starting device and the cut-in of the power by means of a triple engagement.

SEWER CLEANING IN NEW ORLEANS

In cleaning small sewers in New Orleans a rope is passed through from manhole to manhole by use of the Healy adjustable rod. A ball, one inch less in diameter than the sewer, is then attached to the rope by means of an eyebolt passing through the ball. Another rope is fastened to the other end of the eyebolt and the ball then dragged through the sewer with a head of water behind it, the sand and sediment being caught by baffle boards in the manhole at the lower end of the line. This method has provide very effective. Where the sand or sediment has hardened in the pipe and will not let the ball pass, a chain and wire brush are dragged through to disintegrate it.

This method is followed for all sizes of sewer up to and including 21-inch pipe. Sewers larger than 21 inches are cleaned by laborers crawling through and placing the sediment by hand on sleds on which it is hauled to the manholes.

TOLEDO WATER WORKS NOTES

CERTAIN items of interest concerning the water-works plant at Toledo, Ohio, were recently made public by Mr. D. H. Goodwillie, chief chemist of the department. The cost of filtration, he stated, is \$1.75 per 1,000,000 gallons for coal and electricity, \$3.00 for chemicals, \$1.95 for labor and about 4 cts. per 1,000,000 gallons for repairs, supplies and maintenance; or about \$6.74 per million gallons total cost of filtration. About 15,500,000 gallons per day are being pumped and filtered at the present time.

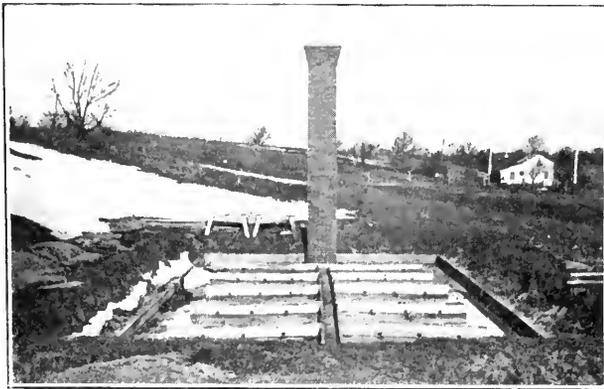

In keeping track of the operation of the filter an average of nearly 600 samples of water a month are being taken, or practically twenty a day. During the past ten months the turbidity of the raw water has run up to 2,200 parts per 1,000,000, with an average of 105, and the bacteria have averaged 10,000 per c. c. In the filtered water the turbidity and color have been practically zero and the bacteria have averaged 110 per c. c., colon bacilli having been found in 40 per cent of the samples of raw water but in none of the filtered water samples.

Producer gas is used in the low-service pumping station, and here a horse-power is produced by the use of 1.15 pounds of coal as against 4.92 pounds of coal in the steam plant.

CHIMNEY FOR VENTILATING FILTER

THE artificial ventilation of sewer beds is by no means a new idea, many patents having been obtained in England for devices and arrangements for securing either forced ventilation or a greater amount than is obtained by the ordinary construction of sewage filters. In this country Colonel Waring built several plants in the early 90's in which air was forced into the bed through pipes introduced especially for this purpose. Experiments in forced ventilation were also tried some years ago by the experiment station of the Massachusetts State Board of Health. During the present decade, however, little was heard of the use of any devices for increasing the ventilation or aeration of beds until within the past two or three years.

A Chicago engineer, Mr. Burton J. Ashley, believes that he was among the earliest, if not the earliest, of the engineers in this country to attempt to secure what may be called artificial continuous aeration of sewage beds without the use of special pipes or methods of introducing air under pressure. Several methods have been employed by him for a number of years past with the idea of introducing the maximum amount of air into a filter bed without the expense or trouble of operating machinery of any kind. Among these methods has been the use of chimneys, a small plant provided with a chimney

VIEW OF FILTER BED FROM TANK

having been built for the State Sanatorium for Tuberculosis at Howell, Mich., in 1908, and another in 1909 at the Madison, S. D., Normal School, in which he connected the collecting drains of a filter bed with the chimney stack of the boiler house.

The Howell plant consists of a tank, dosing chamber and filter bed; the first two being roofed over and the second uncovered. The former are shown in the lower of the two illustrations and the filter bed with its chimney in the upper illustration. The tank is a plain sedimentation tank and is located under the three nearer manholes in the lower illustration, the farthest manhole giving access to the dosing chamber, in which there is a 5 x 36-inch Miller siphon.

The siphon discharges upon a filter bed about 30 feet by 60 feet, in the bottom of which are collecting drains surrounded and covered by coarse crushed stone. On this was placed well-screened clinker and cinders, and these in turn were

covered with a top layer of 6 inches of well-screened and graded torpedo sand. The distribution of the sewage over the bed is effected by a main trough and several branch troughs laid upon the surface of the bed, small holes being placed at intervals along the sides of each trough to permit the sewage to escape upon the filter surface. The grade or "fall" of these troughs was adjusted by trial after the plant was put into operation so as to produce uniform distribution. The underdrains run from the near end to the further end of the bed, where they are connected to a main collecting duct or drain which runs across the further end of the bed. The chimney is connected to this main drain, the idea being that the draft created by the chimney would induce air into the bed from the surface, down through the filtering material and into the collecting drains. Mr. Shunway, secretary of the Michigan State Board of Health, stated recently that they had at first been very doubtful whether the chimney would create any draft in cold weather unless heat were applied to it. It appears, however, that a draft is created in winter, as Mr. C. G. Jewett, the contracting engineer who built the plant, states that on cold days the moisture in the air which issues from the top of the chimney condenses into a visible mist. This we would consider quite probable, owing to the fact that sewage is generally quite a little warmer than the outer air in winter. In fact, we would think the chimney would be less liable to create a draft in summer when the outer air is warmer than the sewage than it would in the winter time.

How much additional aeration this may effect, or what its value may be in either the oxidation of the sewage passing through the filter or in preventing the clogging of the pores of the filter, we are unable to say and do not know that any analyses have been made which would throw any light on this subject. Other methods of producing forced ventilation, in which the air is introduced through the subdrains and passes upward through the filter bed, have been reported to have been of considerable assistance in the aeration of the bed.

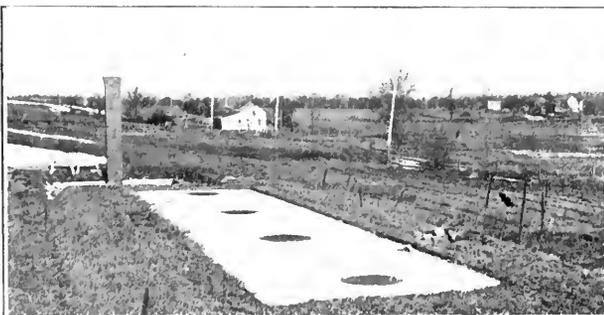

COVERED SPRINKLER FILTER

WHILE practically if not quite all of the sprinkling filters built in this country have employed fixed sprinkler heads, there is being constructed at Regina, Sask., a filter using revolving arms of the Adams patent. This plant possesses the additional novelty that, on account of the coldness of the climate, it is believed to be necessary to roof it over, this requiring a roof circular in plan and with a span of 120 feet, which is the diameter of the filter bed.

The sewage on reaching the plant first enters a grit chamber from which it flows to a septic or liquifying tank. The effluent from the septic tank flows by gravity through a 4-inch pipe to the center of the filter bed (the overflow level of the septic tank being a few feet higher than the surface of the filter bed). Here it rises to the level of the sprinkler arms and flows through these and is sprayed from orifices in their sides, the reaction of the sewage causing the arms to revolve.

The roof is composed of 16 steel trusses 59 feet long, which radiate from a central steel ring to the circumference, where each is supported on a steel column. The circular ring at the center is constructed of a 12 x 3/4-inch plate with a 4 x 4-inch angle at top and bottom, the enclosed space being filled by a diaphragm of 3/8-inch plate stiffened with 2 1/2 x 2 1/2-inch angles. This ring, which forms the crown of the arched roof, is 14 feet above the top of the columns which support the trusses, which columns are 8 feet high from the top of the foundations and are composed of I-beams, with a bracing of channels and angles between them. The 16 trusses are built up of angles and plates. The purlins are of steel channels and angles. The roof covering is of one-inch shiplap and galvanized-corrugated iron.

From the center of the lower chords of the roof trusses run horizontal tie angles, which are all connected to an octagonal plate in the center of the filter. This gives a free headroom for the distributor of about 7 feet from filter to tie rods.

Odors From Sprinkling Filters

On another page of this issue there is described a comparatively small sprinkling filter which has been roofed over and enclosed, partly, it is true, because of the severely cold climate, but partly, also, because of the possible odors which might arise. About three years ago this journal called attention to the probability that the spraying of septic sewage onto sprinkling filters would give rise to considerable nuisance in the case of large plants. The largest at present in operation in this country is that at Columbus, Ohio, and it might be interesting to know to what extent the odors from this plant may be considered as a nuisance. In connection with investigations of sewage disposal for the city of New York, Mr. John E. Hill visited the Columbus plant and reported to the Board of Estimate and Apportionment upon its condition. This visit was made in November, and Mr. Hill reported that in approaching the purification works he caught the odor of them suddenly and strong while three-fourths of a mile from the plant. "For the distance of about three-eighths of a mile this odor was dully sickening; from this point it decreased in intensity and

intolerability until a point to the windward of the septic tank and in the vicinity of the filter beds was reached, where it was not so intensely offensive. * * * That disagreeable odors emanated from the filter bed, however, was plainly evident and that the intensity of these odors was increased during the operation of spraying was also evident." No disagreeable odor was noticeable to the leeward of the plant. Residents, market gardeners and hunters, and frequenters of the marshes and lands surrounding the disposal works all testified that under certain conditions intolerable odors were appreciable to a distance of three-fourths of a mile to 1½ miles from the plant.

Mr. Hill reported that Chief Chemist Hoover believed that there would be much less nuisance from the plant if septic sewage were not sprayed upon the bed, which belief Mr. Hill shared in. Mr. Theo. S. Oxholm, engineer of construction for the Borough of Richmond, who visited the plant in October, also corroborated the report of Mr. Hill and joined in the belief that if the sewage were not septicized the nuisance would be much less.

We have given more or less extensive notice to two or three sprinkling plants which have been roofed over, and if we may judge from this report concerning the Columbus plant it would seem necessary under many conditions to provide an enclosing structure and methods of ventilation and possibly deodorization of the gases, especially if the sewage passes through a septic tank before being sprayed upon the sprinkler. If in truth the septic action is almost wholly responsible for the odor, it would certainly seem worth serious consideration whether or not preliminary septic treatment does not present more disadvantages than advantages for use in connection with sprinkling filters.

Liability For Impure Water

IN our issue of January 25 reference was made to the apparent divergence of opinions concerning the liability of cities for damages, including death, resulting from impurities in water supplied by them. Further investigation of the matter has confirmed the existence of this difference of opinion between the courts of the several States.

The two views are illustrated by two decisions, one by the Supreme Court of the State of New York and the other by that of the State of Minnesota. The former, in a decision handed down a few weeks ago, stated:

The relation between the general public and a municipality maintaining a system of water supply has been the subject of much discussion in reported decisions. Whatever expressions may appear to the contrary in textbooks and in judicial opinions elsewhere, it is the settled law of this state that in maintaining a water supply system for general public use the municipality is acting as a governmental agency in the work of the State itself, and not as proprietor engaged in a service for its own purposes and profit. This rule was adopted after careful consideration and a thorough review of the previous case law on the subject, not only of this State, but of the country at large and of England as well. As a necessary corollary from this holding it was further held that a municipal corporation was not liable for negligence for nonuser, or misuser, in the maintenance of the water supply system, so far as the furnishing of water itself was concerned.

In applying this rule of non-liability, recourse was had to a general principle many times applied theretofore and since. This principle, as repeatedly recognized and applied, is that a municipal corporation is not liable, unless made so by statute, for the negligence of its public officers in carrying out or omitting an exercise of the governmental power of the State itself, because in such agency the corporation acts, not for itself, but for the State, and has the same exemption from liability as has the State itself.

A decision of the Supreme Court of Minnesota, rendered December 23, 1910, contains the following:

It is obvious that a sound public policy holds a city to a high degree of faithfulness in providing an adequate supply of pure water. Nor does it appear why the citizens should be deprived of the stimulating effects of the fear of liability on the energy and care of its officials; nor why a city should be exempt from liability while a private corporation under the same circumstances should be held responsible for its conduct and made to contribute to the innocent persons it may have damaged

As Elliott J., said in *East Grand Forks v. Luck*: "When the municipality enters the field of ordinary private business it does not exercise governmental powers. Its purpose is, not to govern the inhabitants, but to make for them and itself private benefit. As far as the nature of the powers exercised is concerned, it is immaterial whether the city owns the plant and sells the water, or contracts with a private corporation to supply the water. It is not in either case exercising a municipal function. . . . When a municipality engages in a private enterprise for profit, it should have the same rights and be subject to the same liabilities as private corporations or individuals." Thus in *Wiltse v. Red Wing* a city operating the water works was held liable for water escaping from an embankment under the rule in *Rylands v. Fletcher*; "for," said *Start, C. J.*, "although a municipal corporation, it was engaged in the business of supplying water to its inhabitants for profit, an undertaking of a private nature."

It is apparent from the above that the point upon which both these opinions hinge is the exact position which the city occupies in its operation of a water plant; or, as it is stated in legal parlance, whether it is using mandatory or discretionary powers. In *McQuillin's Law of Municipal Ordinances* these are described as follows:

Imperative or mandatory duties imposed on the municipality imply no discretion and may be compulsorily required. Whether the duty is discretionary or mandatory is also a question of charter or legislative intention, and each case must be decided largely on its own circumstances and the intention gathered from the nature of the power and the whole law relating to the subject. . . . The Supreme Court of Nebraska well says . . . "It is a familiar principle that statutes relating merely to matters of convenience, or to the orderly and prompt conduct of business, and not to the essence of the thing to be done, are generally considered as directory only." . . . Where the law imposes the duty and gives the means of performing it, ordinarily its performance is compulsory. It has often been judicially declared that what a public corporation or officer is empowered to do, and it is beneficial to them to have it done, the law holds it should be done.

It, therefore, appears that the non-uniformity of decisions on this subject is due to the difference of opinions of the several courts as to whether or not the municipal operation of a water-distribution system is mandatory or discretionary. A somewhat different angle of the subject is presented by a decision of the Supreme Court of the United States handed down in December, 1910, in which the court states, "No higher police duty rests upon municipal authority than that of furnishing an ample supply of pure and wholesome water for public and domestic uses," thus classing the furnishing of a water supply among the police duties of a city.

It would appear that no general statement can be made concerning the responsibility of cities for serving typhoid bacteria with the water, but that the decision in the case of any city will depend upon the view taken by the Supreme Court of the particular State in which it is located as to whether the law under which the city acts confers mandatory or discretionary powers.

RELIABILITY OF ESTIMATES

It was, a few years ago, a common impression that an engineer's estimate was always greatly exceeded in actual construction—an idea not altogether without foundation. It is now recognized that there is much greater reliability in the estimates of experienced engineers. A recent report of the Board of Estimate and Apportionment of New York gives the estimated and actual costs of 321 pieces of public work in the five boroughs, totaling \$29,434,059 in cost. Between 1902 and 1909, inclusive, the totals of all estimates showed a gradual change from an excess of actual over estimated cost of 2 per cent. to an excess of estimated over actual of 9½ per cent. Taking the totals by boroughs, and averaging the eight years, we find that in Manhattan the actual cost was 100.4 per cent of the estimated; in Brooklyn it was 86.5 per cent; in the Bronx, 93.2 per cent; in Queens, 89.4 per cent, and in Richmond, 113.9 per cent.

An interesting feature presents itself when we inspect the items under the heads of sewerage, grading and paving respectively. In every case the percentage of actual to estimated cost is higher for sewers than for either of the other two. The

estimates for paving, on the other hand, were higher than the cost in every year for every borough, except in one instance. The grading estimates were sometimes too low and again too high. It would appear from this that even the experience of years has been insufficient to prepare the engineers of the sewer departments to make sufficient provision for the unforeseen difficulties in the way of sewer construction which are so generally encountered and are increasing every year.

POLLUTION OF WATER IN PUBLIC BATHS

Investigations in Hamburg, Germany—Pollution of Water After Various Intervals of Use—Sand Filtration Effective—Aeration Unnecessary

DETAILED investigations have been conducted for several years at the Hamburg (Germany) public baths and swimming tanks to determine what increase in the impurity of water may be occasioned by its use for bathing, the object being to determine just how long the same water could be used with safety. The tests were divided into two series, the first dealing with bath water not artificially purified, the second with water purified continuously by aeration and filtration. The results of these investigations are described in an article by Drs. Kister and Fromme in the December 17th issue of *Gesundheits-Ingenieur*.

Drs. Fürth and Schwarz began these investigations in 1905. Chemical and bacteriological analyses were made when the swimming tanks were first filled and at regular intervals thereafter. There were two baths from which samples were taken. Bath A had two tanks, the one for men being 40 by 75 feet and from 2.4 to 10 feet deep, with a capacity of 20,000 cubic feet; and the women's tank being 40 by 62 feet and from 2.4 to 9 feet in depth, and containing 14,000 cubic feet. In bath B the men's tank was 39 by 75 feet and from 2.4 to 10 feet deep, holding 14,600 cubic feet. Bath C was from 7 to 9 feet deep and had a capacity of only 10,000 cubic feet.

These tanks were filled with reservoir water raised to a temperature of 72 degrees Fahr. by means of steam coils. In winter the water was entirely renewed three or four times a week; in summer, daily or as often as the number of bathers made it necessary. During the bathing hours in bath C, fresh water flowed into the tank continuously from supply pipes above the water level, about 1,050 cubic feet of fresh water being admitted every 12 hours. In the other two baths there was no continuous flow of water, but the surface layer of dirty water was removed by allowing the water to overflow for one-half hour both morning and evening, the water being drawn off at the deepest places, fresh water being at the same time delivered to the tank by pulsometers. This produced a circulation of the water twice in each 12-hour period.

In bath C the supply pipe is at the shallowest part of the bath. This is considered important, as sediment might be stirred up if the supply pipe were near the bottom of the tank. The inflow is at the upper edge of the tank, while the outlet opening is a little above the opening provided for draining off dirty water at the deepest part of the tank. In cleaning the tanks they were emptied and scrubbed and then rinsed off with fresh water. In some cases the tank was flushed with a solution of HCl in the proportion of one to four, and then scrubbed. All the baths have showers in which all bathers must take shower baths before being allowed to enter the swimming tank.

The analyses of water in bath A were made both summer and winter. During December and January the fresh supply of water showed 57 germs ("keime"). With 10 c.c. of water at 99 degrees F. no B. coli or other bacteria were discovered. Tests for oxygen absorption gave 32 mmg. (parts per million) of permanganate; chlorine, 88 mmg.; ammonia, no traces. After 74 persons had bathed, the germs were found to have increased to 1,800 and B. coli were found in 10 c.c. of water. After 206 persons had bathed the number of germs remained constant,

the number of bacteria growing at 99 degrees, including B. coli, increased. The afternoon of the first day, after persons had bathed, the number of germs rose to 64,400, the number of B. coli found at 99 degrees was the same. At the end of the first day, after 820 persons had bathed, the number of germs was only 15,400, but the number of those growing at 99 degrees had increased. Traces of ammonia also were found.

On the second day, after an initial increase of germs to 36,700, the number decreased to 6,500, although a considerable number of persons had bathed in the meantime. The number of bacteria developing at 99 degrees acted similarly. The surface of the water was purified by the overflow method described. Following this the number of germs rose again to 101,000 and on the third day fell to 2,900. The deposit at the bottom of the tank, when analyzed, was found to be a grayish blue, finely divided mass, consisting of iron flakes, hairs, small dark brown particles, microscopic wool and cotton threads, sand, detritus and many protozoa. Investigations of the women's tank showed a similar deposit, but the number of germs was higher. Four hours later, after 855 persons had bathed, the number of germs averaged 61,050 in the women's baths as against 43,950 in the men's. During the night the germs in the men's bath increased to 185,850, and that in the women's baths to 160,500. After 959 men had bathed during a second fourteen-hour period, the number of germs averaged 125,000; while the number in the women's baths, after 381 women had bathed, was 350.

In bath B similar conditions were found, the overflowing method of renewing the water being found to decrease the number of germs from 123,200 to 46,600 and 28,000. Chemical analysis at the end of the first bathing day showed ammonia amounting to 0.5 to .11 parts per million. The percentage of oxygen saturation varied between 90.7 and 95.6 in summer and between 89.8 and 104 per cent in winter.

In bath C the water before admission was found to contain 10 to 46 germs, but after flowing into the basin this number rose from 600 to 1,700. At the beginning of the second day of bathing the number rose to from 14,250 to 40,000 and fell again to 1,900 to 5,400. B. coli were found only after several days of bathing.

These results apparently demonstrate that germs do not increase in water in proportion with the number of persons bathed, but the number is subject to sudden increases and just as sudden decreases. The increase in the number of 99-degree bacteria and of coli is more gradual, but the former in some cases decrease after the second day. This decrease would seem to be similar to the self-purification of rivers and is due to physical, chemical and biological processes. There was little change in the water from a chemical standpoint, even after a great number of persons had bathed. Oxygen consumed and ammonia, however, increased. In most cases after the water had been bathed in the number of germs was high, but B. coli were found only in 10 c.c. or more of water, although in some cases they were found in .1 and in some cases even in .01 c.c.

The purification plant used in these investigations, which was operated night and day, consisted of eight coke beds seven feet thick, over which water was sprayed, and two sand filters. The purpose of the coke beds was to aerate the water and remove the coarse suspended matter. Later a 24-inch bed of gravel was substituted for the coke. Under these aerators were two sand filters 20 and 40 inches thick respectively, and each seven feet in area. Water was filtered through these at the rate of 1,050 cubic feet per hour, or about one and one-half times the capacity of the tank in 24 hours. The filtered water was conveyed back to the tank by a pulsometer during the earlier part of the test, and later by centrifugal pumps. Tests were made during 7, 14 and 21-day periods. Examination was made of the turbidity of the water, the bacterial contents of the water before and after application to the coke aerators and sand filters, and also of the water in the tank. Both number and kind of germs were investigated, and the water was tested for

oxygen contents, ammonia, nitric acid, chlorine, oxygen consumed, residue on evaporation, loss on ignition and total nitrogen.

After twenty-one days of use the water was transparent down to a depth of 10 feet and the bottom was plainly visible. In fact the color became even better as the original yellow color disappeared.

The sediment contained from 864,000 to 1,360,000 germs, and B. coli were found in .001 c.c.; the loss on ignition was 8.6 per cent and the matter insoluble in HCl was 95 per cent. The water which had not been filtered contained a finely flaked deposit, which contained from 2,740,000 to 3,980,000 bacteria per c.c., 64.2 per cent loss on ignition and 22 per cent insoluble in HCl. Also a large number of protozoa.

The top layer of the coke aerator was fairly clean, but the under layers contained hairs glued together by a brownish mass of amorphous plant-like growths, with numerous infusoria, anguillula and bacteria. Numerous worms and larvæ also were found.

The effect of filtration in the elimination of bacteria is indicated by four tests made three days apart, which showed the bacteria in the raw and in the filtered water respectively to be as follows for each of the four tests: 35,025 and 1,300; 30,750 and 744; 58,530 and 558½; 10,475 and 392½. Tests made at periods of 2, 7 and 14 days showed a great decrease in bacteria after the third or fourth day, after which the number in the effluent remained low. During seven-day runs the average elimination of germs was 66.23 per cent, and during 14-day runs the average decrease was 81.93 per cent. The actual figures for the first case were as follows:

GERMS DURING SEVEN-DAY TESTS

	Tank water	Supply water	Decrease
Average of all tests.....	11,683	3,945	66.23 per cent
Average first three days..	24,075	8,307	65.49 " "
Average last four days..	1,061	206	80.58 " "

GERMS DURING TWENTY-ONE-DAY TESTS

	Tank water	Supply water	Decrease
General average for tests..	1,296	234	81.93 per cent
Average first three days..	3,727	598	83.94 " "
Average last four days...	385	78	79.71 " "

At times there was no great difference between the tank and the supply waters as to B. coli contained. Even after 21 days, during which 13,155 baths had been taken, there was no marked increase in bacteria. In comparing water analyses at morning and evening of the same day, it was found that in the evening, after an average of 776 baths had been taken, the number of germs was greater than in the morning.

During the tests the filters were changed often so as to get different results. In the case of each filter, treating the water with the coke and spraying it over 40 inches of sand gave better results than when 20-inch layers were used. When the 40-inch sand layers were used, without previous aeration on the coke beds, better results were obtained than with filtration through 20-inch layers preceded by such aeration. When the coke spraying was omitted entirely and the tank water passed through a 24-inch gravel layer, the 21-day tests showed the treated water to be equivalent to drinking water so far as bacteria were concerned. The experiments apparently demonstrated that aeration by the coke filter is unnecessary and that a 40-inch sand filter is sufficient for all purposes. Chemical tests showed no difference between the two methods. The tests also showed no great deterioration of the bathing water on the basis of soluble matter. After 3,476 baths had been taken analysis showed the following:

	First day		After four days	
	Supply	Tank	Supply	Tank
Residue on evaporation.....	436	432	440	445
Loss on ignition.....	28	52	55	60
Ammonia.....	0	0	0	trace
Nitrites.....	0	0	0	0
Nitrates.....	4.6	5.7	10	8.3
Chlorine.....	121	124	124	124
Oxygen absorbed.....	14.56	15.24	12.64	15.17

These tests led to the conclusion that tank water, if filtered continuously on plain sand filters, can be kept hygienically clean for three weeks. But a constant supply of fresh water must be added in addition to the water coming from the filters.

NEWS OF THE MUNICIPALITIES

Current Subjects of General Interest, Under Consideration by City Councils and Department Heads—Streets Water Works, Lighting and Sanitary Matters—Fire and Police Items—Government and Finance

ROADS AND PAVEMENTS

The Good Roads Special Train Popular

Harrisburg, Pa.—So great has been the interest shown by the farmers and others in the Good Roads Train being operated by the Pennsylvania Railroad that it has been necessary for the company to add another lecture coach to the train. This will make a train of five cars. The fact that this is the first Good Roads Special Train ever operated by a railroad any where, has caused the farmers and road supervisors in the various towns along the Pennsylvania Railroad to attend the lectures and witness the demonstrations which are being given. From the first afternoon meeting at Harrisburg when Governor Tener made his address, and all along the line of the Pennsylvania from Harrisburg to Altoona, the lecture coaches of the special have been crowded to such an extent that it was impossible for all to hear the talks on Good Roads.

Commissioner Makes Comparison of Costs

Mount Vernon, N. Y.—Owing to complaints from some property owners regarding the alleged high cost of street improvements, Commissioner Beresford of the Public Works Department prepared the following statement comparing Mount Vernon costs with those of neighboring municipalities:

Division of Expense

Mount Vernon—City pays: Macadam, one-third; brick pavement, one-third; curbing, none; flagging, none. Owners pay: Macadam, two-thirds; brick pavement, two-thirds; curbing, all; flagging, all.

New Rochelle—City pays: Macadam, one-third; brick pavement, none; curbing, none; flagging, none. Owners pay: Macadam, two-thirds; brick pavement, all; curbing, all; flagging, all.

Yonkers—City pays: Macadam, none; brick pavement, none; curbing, none; flagging, none. Owners pay: Macadam, all; brick pavement, all; curbing, all; flagging, all.

Borough Bronx—City pays: Macadam, none; brick pavement, none; curbing, none; flagging, none. Owners pay: Macadam, all; brick pavement, all; curbing, all; flagging, all.

In New Rochelle, Yonkers and Borough of Bronx excavation is extra; in Mount Vernon price includes excavation.

Unit Costs

Mount Vernon—Macadam, 8-inch, 98 cents square yard; brick gutters on sand, \$1.64 square yard; brick on 4-inch concrete, \$2.28 square yard; new curbing, 47 cents foot; curbing set in concrete, 70 cents foot; flagwalks, 65 cents foot.

New Rochelle—Macadam, 6-inch, 75 cents square yard; brick gutters on sand, \$1.75 square yard; new curbing, 47 to 55 cents; flagwalks, 68½ cents foot.

Yonkers—Macadam, 8-inch, \$1 square yard; brick on 6-inch concrete, \$2.50 square yard; curbing set in concrete, 1 foot; (16x5") flagwalks, 64 to 80 cents.

Borough Bronx—Macadam, 8-inch, \$1 to \$1.25; curbing set in concrete, \$1 foot; flagwalks, \$1, approximately 3-inch.

Street Widened and Straightened

Youngstown, O.—Through Councilman Fred. Weimer and Assistant Solicitor Clyde Osborn success has finally crowned the efforts of Erie street residents to have that street widened and straightened. An ordinance authorizing this improvement has passed council. In the plate the blackened portions show the land bought by the city. With the exception of several pieces the deeds have been signed and the land turned over to the city. Twenty-five parcels of land have been bought by the city for the sum of \$4,987.70. Erie street at present is 15 feet wide from

PLAN OF STRAIGHTENED STREET

Woodland to Fulton. By acquiring a 10 foot strip of land on the west between these two streets, and a five foot strip on the opposite side, the street will be widened to 30 feet, which will be the average width to the intersection of Fairmount avenue. From Fairmount to Oklahoma street, Erie street falls to 15 feet again. A 35 foot strip from a lot on the north will make the street 40 feet wide here. From Oklahoma to East Myrtle avenue Erie is at present 50 feet wide, and for a short distance south of Myrtle a jog makes the street 35 feet wide. This will be straightened by the purchase of another 25 foot strip on the west.

Brick Road Proves Very Satisfactory

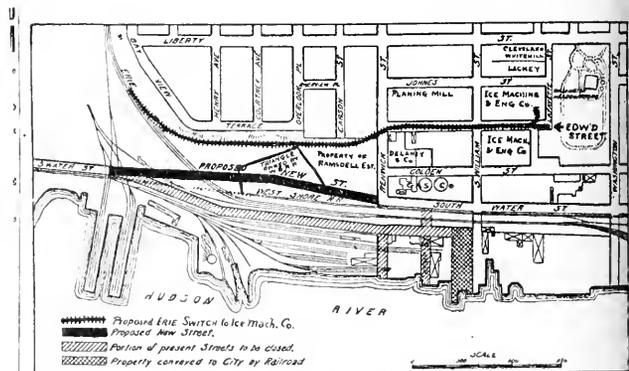

Washington, Pa.—For the period of a year a stretch of brick road, connecting the boroughs of Canonsburg and Houston, the first ever constructed by the county commissioners under the Flinn law, has been thoroughly tested and so far has proven highly satisfactory. Teamsters who have occasion to travel between Canonsburg and Houston are delighted when, after mud inches deep, they reach this brick section, which remains as solid as the best paved street. The commissioners figure that this section of brick road should last a half century with comparatively little repair.

Oil Sprinkling May Be Tested

Syracuse, N. Y.—There is strong sentiment favoring a trial this year of oils, calcium chloride or some other dust allaying material on the unpaved city streets in place of water sprinkling. Sprinkling is done by contract as a local improvement and is paid for by sprinkling tax levied on the frontage, but there is no charter provision for oiling. If a test is made this year, decision will have to be reached at an early date, as the City Clerk is preparing the sprinkling ordinances to be introduced in the Common Council.

Advantages of Relocating Street

Newburg, N. Y.—The above map shows the proposed location of South Water street, the portion of the present street to be abandoned, and with the ends of Renwick and Kemp streets, exchanged by the city, for the strip to be occupied by the new street and the 150 feet adjoining the foot of South William street, the city thereby obtaining a frontage on the river of 200 feet, which is ample for a public pier. The proposed change of route and the properties to be exchanged are clearly indicated. In addition to the above, the map shows the proposed route of the switch connecting the Erie Railroad with the Newburg Ice Machine & Engine Co. and several other important manu-

MAP SHOWING RE-LOCATION OF STREET AT NEWBURGH, N. Y. CITY GAINS A PUBLIC DOCK

factories in that neighborhood. It will be seen that this switch branches off from the Erie tracks at the foot of Bay View Terrace, continuing along the bottom of "the bluff" in almost a straight line to Renwick street, which it crosses at grade and curves into Edward street, passing the boiler works of P. Delaney & Co. At the foot of Overlook Place the route passes between the famous "triangle," owned by the West Shore Railroad Co., and "the bluff," just squeezing past the former, which has been an obstacle to the building of the switch for years because its owners refused to give a right of way. The only other property it is necessary to traverse aside from city streets, is owned by the Erie itself and the Ramsdell Estate, so that no difficulty is anticipated in securing the entire right of way. The route shown is said to be perfectly feasible and to present no difficult or costly construction problems.

SEWERAGE AND SANITATION

Epidemic of Diphtheria

Northburg, Mass.—The re-organization of the Health Department has been determined upon as a result of the appearance of nearly 700 cases of diphtheria in the city. The epidemic is costing the city between \$500 and \$1,000 weekly and is the worst outbreak of disease in any city in the State. Most of the cases so far reported are light.

Screening Foods Against Flies to Be Rigidly Enforced

Jacksonville, Fla.—In furtherance of sanitary conditions, an ordinance has been passed compelling all dealers in fruits, vegetables, meats, etc., as well as restaurants, to screen their places of business against flies. The city Board of Health is going to enforce the ordinance rigidly and all violations of the law will be punished.

Medical Society Against Free Medical Inspection of Schools

Madison, Ind.—The Jefferson County Medical Society has asked Representative Cravens to oppose the bill providing for medical inspection of public schools at State expense.

Peril in Public Water Cup

New York, N. Y.—“Beware the public drinking cup as it would poison,” said Dr. Jacolyn V. V. Manning, answering a question in regard to infantile paralysis, upon which she read a paper at the Academy of Medicine last week. She illustrated the danger by telling of a case where the members of a thrashing crew were made ill by living in a family where a child was suffering with it. One of the nine died, she said.

Investigation of the Milk Supply

St. Louis, Mo.—An exhaustive investigation of the milk supply of St. Louis is being made by the Housing and Sanitation Committee, under the direction of a sub-committee composed of Dr. B. S. Warren, of the United States Marine Hospital, chairman, Mr. Wm. S. Bedal, attorney, and Prof. S. M. Coulter, of Washington University. A large amount of work has already been done through the Milk Commission and the School of Social Economy, and the committee will avail itself of all the material which can be made secure. The report is to cover the dairies which supply St. Louis, whether located in Missouri or Illinois, and will carry with it definite recommendations as to the proper inspection of the milk supply of the whole city.

Investigation of Water Supply Discloses Impurities

Yonkers, N. Y.—Permanent residents along Lake Keuka who are allowing conditions to exist on their premises in opposition to the special sanitary rules issued in September, 1906, as well as owners of cottages that are occupied in the summer, immediately have to set about complying with the law or be fined the full penalty, according to orders issued by the State Board of Health. Representatives of the State Board have been inspecting sanitary conditions along Lake Keuka for some time. They made their identity known to no one, and not even the local Board of Health and other towns knew that an inspection was being made. The inspectors went the entire length of the lake on both shores, and what they found was not surprising to them.

War for Health and Pure Water

Washington, D. C.—Dr. Walter Wyman, surgeon general of the Public Health and Marine Hospital Service, in a report to Congress, makes a plea for a better understanding of the relation that should exist between the nation and the State in the matter of public health. He points out that it should be the object of all the forces engaged with the public health problem to diminish the death rate, to extend the period of life, to decrease physical suffering and to increase physical and mental stamina. Dr. Wyman is of the opinion that the problem presented by water pollution is the biggest one now confronting the nation who are dealing with the public health matter. He says that the legal problem involved is much more difficult to solve than the sanitary one and that the legal problem presented, so far as national action is concerned, is now being met by the careful thought of men eminent in the legal as well as the medical profession.

WATER SUPPLY

Water Purification Plant Installed

Erie, Pa.—In view of the epidemic of typhoid which has broken out in this city, a permanent purification plant will be operated in connection with the water system. Expert Engineer C. A. Jennings, of Chicago, has been called to Erie for the purpose of establishing a temporary plant to be used until a permanent plant is built.

Municipal Treatment of Water Supply Driving Out Typhoid

Minneapolis, Minn.—Dr. J. Frank Corbett, City Bacteriologist, told the Council Waterworks Committee recently that the absence of typhoid fever in Minneapolis this winter is due to the hypochlorite treatment of city water. There was but one death from typhoid fever in January, and that was due to impure well water, according to Dr. Corbett.

High Pressure Fire Service in Operation

Oklahoma City, Okla.—Announcement has been made that in a few days the new high pressure fire service will be placed in operation. Oklahoma City will be the only city in the Southwest with such equipment. Only cities of over 200,000 population are using pressure service.

Find Underground Lake Supplied by Rivers

Yonkers, N. Y.—Mayor Lennon has made public a letter from Woodson K. Oglesby in which he proposes to supply the city with a wholesome supply of water amounting to about 5,000,000 gallons daily. Mr. Oglesby, who has had engineers at work for some time, states that a large underground body of water exists in the low land south of Crestwood which is supplied in part from Troublesome River and Bronx River. Five million gallons a day would be adequate for the city needs for the next ten or fifteen years.

Municipal Water Data Now Sought

Long Beach, Cal.—Discussion of municipal ownership of water works has been taken up by the First Ward Civic Improvement Club, which has decided to collect all the information on the subject possible, and then decide upon what course of procedure will be best to acquire public ownership of the water service. There is a strong sentiment manifested among the residents of the ward and members of the club against buying the Long Beach and Alamitos water companies unless there is a reduction in the figures that were discussed at the last submission of the proposition. A committee of eleven members has been appointed to obtain data as to the value of the two privately owned water plants and also as to the probable cost of an independent system. It is asserted that the 20 acres of water-bearing land owned by the city in the vicinity of Willows is ample to supply the entire city with aqua pura, although there is no authoritative basis given in support of this claim.

STREET LIGHTING AND POWER

Mayor Says Electric Plant Saves Much Money

Burlington, Vt.—In his annual message, Mayor James E. Burke, speaking of the municipal electric plant, says that it has been shamefully treated by misrepresentation of every imaginable kind. It should be gratifying to the people of the city that the plant for the year 1910, after paying all operating expenses, including interest on bonds and charging up depreciation on the same, as 24 of the 27 municipal plants of Massachusetts, also charging off \$1,200 of uncollected bills of doubtful character, should show net earnings for the year of \$68,611. The Mayor points to the fact that we are paying but \$65 per year per lamp for street lighting as compared with \$95 per lamp, the average price of over one hundred towns and cities of Massachusetts, and the price here for commercial current is 10 cents per kilowatt hour as against 14 cents in Massachusetts. The Mayor asserts that the installation of the municipal plant here has resulted in a saving of \$40,000 a year to the citizens of Burlington on account as the reduction is rated for electricity and gas.

City Holds Up Light Bill

Burlington, N. J.—The city has adopted a "show us" policy toward the Public Service Corporation, which recently purchased the Burlington Electric Light Company's plant, by refusing to pay the monthly bill for light until investigation can be made of charges that the company is charging for lamps that do not exist. Councilmen also demand that a deduction be made for all nights when lamps were not lit. Expert evidence will also be sought as to whether the city is getting the candle-power per street lamp for which it pays.

Municipal Lighting Plant Inaugurated

Pasadena, Cal.—Ready for the last payment upon the last big boiler to be installed, the municipal light plant as it is housed on Glenarm street represents an investment of \$165,000 and has a capacity of 1,900 kilowatts, thanks to first-class machinery and careful arrangement. One of the most interesting things connected with municipal ownership of the light plant is the street lighting. To-day the city plant furnishes 319 arc lamps, 1,049 tungsten lamps of 40 candlepower each, 17 tungstens of 60 candles each, 55 tungstens of 80 candles each, 30 tungstens of 200 candles each and 57 alley lights which are each 32 candle carbons. This is said to make Pasadena the best lighted city of anything like its size and territory in the country, and the cost to the citizens is regarded as remarkably reasonable.

Sacrifice \$100,000 to Get Light for City

Pocatello, Idaho, Feb. 5.—Through the voluntary sacrifice of property valued at \$100,000, former Governor Brady has furnished electric lights to Pocatello, which had been in darkness since the substation and transformer house of Brady's power company was destroyed by flood water. By dynamiting the power company's dam, Gov. Brady, who personally superintended the work of redeeming Pocatello from darkness, was able to reach the company's transformers, buried deep below the surface of a flood in the Portneuf River and connect them again with the company's high tension transmission line from the plant at Ann Falls. Three hundred pounds of dynamite were used in blowing out the company's dam to reduce the level of the flood water around the wrecked transformer house.

Plan for Illuminating Business Street of Leavenworth, Kan.

Leavenworth, Kan.—A commercial club has started a movement to make Delaware street from Union Station to Sixth street a "White Way." The movement took tangible form at a largely attended business meeting held in the Greater Leavenworth Club rooms. The scheme calls for one 60-Watt Tungsten lamp every twenty-five feet from the Union Station to Sixth street, thereby placing one light before each store frontage of twenty-five feet. The lamps are to be provided with metal shades and hung from a cable stretched from arms attached to the trolley poles and extending into the street over the curbing. The cable will be used to prevent sagging. The light company proposes to install these lights complete and erect suitable poles between Fifth and Sixth streets where there are no trolley poles, and to charge \$1 per month per lamp for the first two years and 80 cents per month per lamp the third year, the contract to be for three years. The light company agrees to burn the lights from the usual hour for lighting until 11 o'clock on six days of the week and until midnight on Saturday night. The scheme will make the street a more traveled thoroughfare, bring the people out and be a good advertisement for the city, especially to strangers coming from Union Station or who alight from the Third street cars. It will give the city a modern appearance and cannot but result in good. The club is to devise the plans for furthering the scheme and then a hard-working committee of perhaps five will take the matter in charge and push it through to completion.

City Lighting Plant Successfully Financed

Pasadena, Cal.—General Manager C. W. Koimer, of the municipal light department, was given the last of the \$25,000 loan from the general fund, promised his department when the campaign for 4,000 users commenced, this morning. He stated in a written report that his department will begin paying back this loan after the present month out of the earnings of the city department and at the same time preserving the five-cent rate.

FIRE AND POLICE

New Fire Engine Destroyed by Fire

Ashley, Pa.—While their valiant firemen slept, while the chief of police and his men roamed the street in search for burglars, Ashley's lone fire house, used as a town hall and lock-up, was burned to the ground this morning. Firemen looked on helplessly as their home was in the power of flames. The men who protect the homes of the inhabitants of that progressive borough were unable to lift a finger to save their own place. Assistance was called from Wilkes-Barre and the fire fighting apparatus of the Central Railroad shops was used but not until the flames had finished their work. The total damage is placed at \$20,000. A car which won a prize in the Centennial parade in Philadelphia in 1876, was stored in the building and was destroyed.

Plan for River Front Protection

Astoria, Ore.—Chief C. E. Foster, of the Fire Department, reports that in 1910 the department responded to 8 alarms. The causes of fires were: Burning flues, 34; sparks, 15; matches, 4; overheated, 2; clothing near stove, 3; gasoline, 4; bonfire, 2; rubbish, 1; cigars, 3; burning flue, 1; brush, 2; combustion, 2; unknown, 2; stove pipe, 2; false alarms, 6. The number of feet of hose laid out was 9,000 gallons of chemical used 1,700. The total cost of maintenance of the department was \$14,157. The value of apparatus, hose, etc., \$23,150; buildings, \$25,000. Total fire loss was \$64,500.

Regarding water front protection Chief Foster says:

"I believe it would be a good investment for the city to buy a steam pump of about 600 gallons per minute capacity, place it on a low wagon, equip it with flexible suction and the proper steam connections, then in case of a water front fire it might be run aboard one of the small steamers, one of which is always at one of the wharfs. This apparatus complete would not cost over \$1000. If we had this and the two government boats equipped with pumps of like capacity it would be a great advantage in water front fires."

Street Car Upsets Fire Truck

Brooklyn, N. Y.—Twelve firemen were thrown to the roadway at Broadway and Moffatt street recently when a surface car of the Broadway line, bound downtown, crashed into Truck 57. The truck was being swung out of Broadway into Moffatt street when the car struck it just back of the forward wheels, and hurled it against an elevated railroad pillar. One of the wheels was broken and Capt. Patrick Kelly and his eleven men thrown off. The three horses were thrown from their feet and dragged along. All the firemen were badly shaken up, but none was seriously injured.

Cost of Fire in Canada

Halifax, Canada.—In the last two years Canada has lost \$47,000,000 by fire. Consul General James W. Ragsdale, of Halifax, says that this means a per capita tax equal to \$3.30 per annum for every man, woman and child, and if the census ratio of one adult man for every five of population is considered, then it means an annual loss equal to \$16.75 for every Canadian family. This is a loss far greater than that of any other country. In Austria the per capita loss during the same years was 29 cents; Denmark, 26 cents; France, 30 cents; Germany, 49 cents; Italy, 12 cents, and Switzerland, 30 cents.

Motorcycle for the Police.

Iola, Kan.—The City Commission has ordered a motorcycle for the use of the Police Department. It will be used by the officers to answer all hurry-up calls and to make trips to the outlying districts of the city. The motor is of the Indian type and is regarded as one of the best made.

Fire Captain Suspended on Novel Charge.

New York, N. Y.—Captain Edward F. O'Connor, of Engine Company No. 72, has been suspended pending trial on a charge that is the first of its kind to be preferred against a company commander. The charge is Captain O'Connor, without authority and without notifying the Fire Alarm Telegraph Bureau of his department, took out of service apparatus intrusted to his charge, and took it from the engine house for the purpose of exhibiting it on the streets; thus leaving without proper fire protection portion of the city supposed to be protected by this apparatus.

Finger Prints of New Policemen Taken for Identification

New York, N. Y.—Applicants for patrolman were somewhat surprised when required to register on the medical book an imprint of their finger tips of both hands. This is a new safeguard adopted by the Municipal Civil Service Commission against the dishonest practice of sending a substitute to take the mental examination. Applicants are not given the medical test. Those who fail proceed no further. The successful candidate is directed to place his hands side by side, palms down, and then to press the tips of the four fingers of each hand on a stone slab coated with black ink. He is next told to make an imprint of his finger tips at a certain place on the back of his medical book and the operation is over for the time being. When the candidate appears for the mental examination he will be required to make a second imprint, and if the two do not correspond that will be accepted as conclusive proof that it is not the man who passed the medical examination. A third imprint will be taken when the candidate appears at Police Headquarters before appointment.

Annual Report of Providence Police Department

Providence, R. I.—According to the report of the Board of Police Commissioners, the cost of maintenance of the department in 1910 was \$439,418, a per capita cost of \$1.96. The report of Superintendent of Police Patrick Egan shows that the department now numbers 347 officers and men, an increase of 26 over the previous year. The total number of arrests last year was 11,635, an increase of 333 over the previous year, and the total amount of stolen property recovered was \$48,173.77. The report states that the new ordinance has done much toward eliminating blockades in the city streets. In all 113 arrests were made for violation of the ordinance. The auto squad made 284 arrests.

Mounted Police in Reading, Pa.

Reading, Pa.—The experiment this city has made in the last four months with mounted police has proved a success, and the two men promoted to this rank have made a number of arrests of persons who otherwise would have escaped from even the fleetest-footed officers. This branch of the police force is still limited to the two men. That Reading has mounted police is due chiefly to the fact that the old police patrol wagon was succeeded by an automobile police patrol apparatus, and Chief of Police Levan wanted to utilize the two horses that had trotted over Reading's streets, carrying wrong-doers to cells for so many years.

Pennsylvania Fire Marshal Bill

Harrisburg, Pa.—Creation of the office of State Fire Marshal is provided for in a bill presented by Senator Stinson, of Philadelphia, the legislation excluding Philadelphia. Every four years the Governor is to appoint a marshal, at an annual salary of \$5,000, who is to name a first and second deputy and a chief assistant. The assistant is to receive \$4,000 and each of the deputies \$3,500. The Marshal can also appoint additional deputies and police assistants and name uncompensated inspectors to report to the Marshal any faulty or dangerous conditions and. The Marshal will have his office in Harrisburg and the chief of every fire department or the Mayor or Township Clerk, where there is no fire department, shall investigate the cause and origin of every fire. Where the Marshal believes that a crime has been committed he can cause an arrest. The Marshal or his assistants or the chief of any fire department would have the right if they find a structure especially liable to fire and to endanger other property to order its removal. The same power is given concerning inflammables and explosives. For the purpose of maintaining the office every fire insurance company and all individuals, firms, corporations, associations or aggregations of underwriters doing business in the State are to be taxed not exceeding one-fourth of 1 per cent of the gross premium receipts on all business done in the State for the preceding period. Chiefs of fire departments and fire wardens and clerks of townships, who do not receive any compensation, are to receive 50 cents for each fire reported to the satisfaction of the Marshal, and mileage at the rate of 15 cents a mile traveled to the place of the fire.

Automobiles a Cause of Increased Fire Damage

St. Petersburg, Russia.—Attention has been called by the city authorities to the large number of fires occurring in connection with motor cars. About one hundred and fifty more or less important fires have taken place of late entirely owing to the evil practice of combining the machine and the chauffeur as joint residents of the garages, on the pattern, doubtless, of the average Russian stable, which does for man and beast.

New Features of Fire Department Report

New York, N. Y.—The annual report of the Fire Department is in the hands of the printer and will be ready for distribution in about ten days. This year's report will contain a number of improvements over other reports. It also will be illustrated. In previous years the annual report was not ready until July, but this year the Commissioner has left no stone unturned to get it out promptly. The Commissioner has also made provisions to give every deputy chief, chief of battalion and foreman one of the reports.

Auto Patrol Given Trial

Paterson, N. J.—A new automobile patrol wagon was recently given a trial. Police Commissioners together with police officials and newspaper men occupied the wagon which was taken over the rough hills and as a second test climbed Clay street to Mill street from a standing start. The machine worked admirably and will be accepted by the Board of Fire and Police Commissioners.

Fire Alarm Systems at Electrical Show

Philadelphia, Pa.—The Auxiliary Fire Alarm Company, of Philadelphia, exhibited at the Electrical Show their system of sending in fire alarms. The Municipal Electrical Bureau demonstrated the system used by the firemen and policemen in summoning the apparatus and patrol, together with the system of receiving reports at the police districts.

GOVERNMENT AND FINANCE

Legislation Regarding Commission Government

Nashville, Tenn.—By a vote of 14 to 10 the House Committee on Municipal Affairs decided to recommend for rejection the Nashville charter bill.

Eugene, Ore.—The City Council, sitting in committee of the whole, rejected the commission charter prepared by a committee authorized by a citizens' massmeeting called by the Council.

Jackson, Mich.—By a vote of 9 to 7, the Common Council in a special session refused to order a special election for submitting the new charter, which provides for the commission form of government, to a vote of the people.

Cities Favor or Reject Commission Form of Government

Pekin, Ill.—Pekin adopted February 8 the commission form of government by a vote of 817 to 557.

Appleton, Wis.—This city has voted in favor of establishing the commission form of government by a majority of about 200.

Council Grove, Kan.—A commission form of city government was adopted here by a vote of 376 to 159.

Greensboro, S. C.—By a vote of almost 2 to 1 Greensboro decided February 7 to adopt the new charter which provides for a commission form of government. For the new charter 693 votes were cast; against it 353 votes were cast.

Faribault, Minn.—At the election February 7 to determine whether or not the city should adopt a new charter, the commission plan of government was adopted by a majority of 88 votes.

Galesburg, Ill.—Commission government was rejected in an election February 8, by a vote of 586 to 2,193.

Broad Terms of Franchise Clause in Charter

St. Louis, Mo.—The introductory franchise clause of the city charter as it stands now reads as follows:

The Council shall have power to grant the right to construct, purchase, lease or operate any public utility, subject to the right to amend, alter or repeal the same in whole or in part, and to forfeit the same at any time for misuse or nonuse, and subject always to the city's power of taxation, etc.

City Demands Interest on Deposits

Burlington, N. J.—Council went on record last week against a custom of many years' standing of permitting municipal funds to remain in local banks without drawing interest. At the close of the reading of the City Treasurer's report, showing a balance of \$38,000 on hand, Councilman Craft, a new member, asked if this money was drawing interest. President Smith referred the question to former President I. Snowden Haines, who is also cashier of the Mechanics' National Bank. "No, the city is not entitled to it" was Mr. Haines' answer. A majority of Councilmen took a different view of the matter and adopted a resolution offered by Mr. Craft directing the Treasurer to demand interest on city deposits.

Pittsburg Mayor to Speak in Milwaukee

Milwaukee, Wis.—George W. Guthrie, former Mayor of Pittsburg, spoke in the Pabst Theater last week on "The Efficiency of City Government." This is the fourth lecture in the series given under the auspices of the Milwaukee Lecture Service League.

Value of Public Service Commission

Albany, N. Y.—The Public Service Commission reports that the village of Fort Edward has obtained a reduction in the price of street arc lights from \$80 a lamp to \$63.87 a lamp a year. A reduction from \$72 a lamp to \$63.87 also has been effected in South Glens Falls.

STREET CLEANING AND REFUSE DISPOSAL

Committee to Consider Extensive Street Flushing Plan

New York, N. Y.—Mayor Gaynor has appointed Borough President McAneny, President of the Aldermen; Commissioner Thompson, of the Department of Water, Gas and Electricity, and Commissioner Edwards, of the Department of Street Cleaning, as a committee to pass on the practicability of cleaning the streets on a large scale by means of flushing and squeegee machines. Commissioner Edwards would do away with the broom method, on account of its dust raising propensities, as far as possible. He figures that 75 machines, some of each kind, would go far toward washing off the pavements, at least those that need it most. There are at present in all boroughs about 24,000,000 square yards of pavement, from which a daily average of 500 tons is removed. The question of where the water is to come from is an important one and the possibility of using water from the Hudson and East Rivers may be considered.

Syracuse Used Thirty-Four Snow Plows

Syracuse, N. Y.—After the recent snowstorm, the city put in commission all of its thirty-four snow plows for cleaning sidewalks. In addition two gutter plows were used. The man in charge of each furnishes his own horse and is paid \$2.50 a day.

The Garbage Plant Question

Racine, Wis.—In view of the intention of the city to purchase a garbage burning plant, W. S. Goodland, of the Racine Times, has directed inquiries to several cities where incinerators have been operated. A reply from City Solicitor Theo. A. Hunt, of Winnipeg, Manitoba, where litigation is still pending regarding the installation for Decarie incinerators, ended with the following advice:

Under no conditions, however, can you afford to install a machine without absolute guarantee of proper incineration and freedom from nuisance, and no money should be paid to any company until the machine has been installed and in proper working order, and operated for at least 90 days, under the varying weather conditions.

Chief W. J. Bailey, Department of Sanitation, where a 100-ton Dixon crematory has been operated for a short time—with the aid of convict labor, by the way—says in part:

From the first of the month to the present date we have consumed on an estimated average of from 6 to 75 tons of mixed refuse daily, all loads being dumped into the machine, and all non-combustible refuse, etc., being hauled from the machine the following morning with the ashes. We are burning coal in this machine, for which we pay the sum of \$3.65 per ton in lots as we require it. We have two paid men at work, all other labor being furnished by the city prisoners, they being worked by this department. Our highest rate of operation per ton of garbage, etc., consumed, thus far, has been \$0.219. The percentage of ashes, tin cans, etc., is about 15 to the 100 loads.

RAPID TRANSIT

Street Railway Outlines a Franchise

Des Moines, Ia.—The Des Moines Street Railway Company has presented to the City Council a proposal for a franchise to be submitted to the people of the city, in settlement of the long standing trouble over street railway matters. The proposal includes an indeterminate franchise as to time of ending, with 5 cent fares, and when dividends reach a certain sum that six tickets will be sold for a quarter. Other provisions are:

Both the street railway and interurban systems offered to the city for a gross price of \$6,659,000 or city can assume \$2,575,000 street railway bonds and \$1,160,000 interurban bonds, and take the two properties—154 miles of railway and 177 acres of city real estate—for \$2,575,000.

Option to purchase may be exercised at any time before October 1, 1911, or on October 1, 1921. If purchased in future, later additions to investments to be included.

Provision made for full publicity and for arbitration of labor troubles.

Company to pay for seven feet of paving.

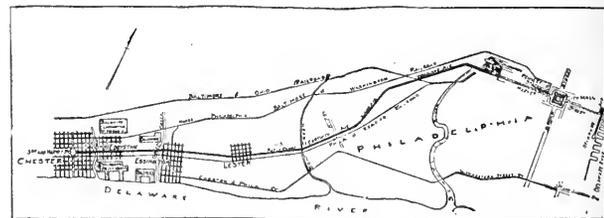

Will relinquish all rights claimed under the other ordinances if proposals now submitted are accepted by the city and validated by legislature.

Subway Traffic Rivals "L"

New York, N. Y.—According to the figures compiled by the Public Service Commission the Interborough Rapid Transit Company carried a total of 569,636,807 passengers on its combined subway and elevated lines during the year 1910. Of this total, 299,415,317 passengers were carried by the four elevated lines, as against 270,221,490 for the subway. Total collection of fares for 1910 was \$28,481,839, as compared with the total for 1909 of \$27,158,588, an increase of \$1,323,251. The daily average of passengers carried works out, according to the Commission's count of the ticket sales, as 820,317 for the elevated lines and 740,335 for the subway. This shows that the single subway line carries only 79,984 fewer passengers daily than all four of the elevated lines put together. The ratio of increase on the elevated lines was 4.54 per cent. The ratio of increase on the subway was a little more, the increase having been 13,452,509, or 5.24 per cent. The Third Avenue Elevated line carries by far the heaviest traffic of any of the elevated roads, having a credit of 137,452,443. The heaviest subway increase was in the section comprising the Brooklyn stations, which showed an increase of 10.44 per cent. According to estimates made at the City Hall, the ticket sale receipts gave a profit of about 20 per cent on the subway for 1910.

City Officials Attend Opening of New Route

Chester, Pa.—The city officials of Philadelphia, Lester, Essington, Eddystone and Chester made an inspection of the new line of the Philadelphia Rapid Transit Company running from the subway station at Market and Juniper streets to Chester. This new route has been made feasible

QUICK ROUTE FROM CHESTER TO PHILADELPHIA

by the construction of a short line from Eighty-seventh street, connecting with the existing line of the Chester & Philadelphia Railway and passing through Lester, Essington and other points on to Chester. Cars will leave both ends every 15 minutes. Among the advantages claimed for the new route are that it will be the only through line to Chester, that there will be a big saving over the fare charged by the steam roads and that the time saved over the present trolley route will be 20 minutes.

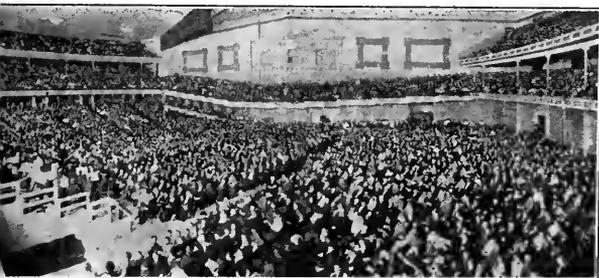

MISCELLANEOUS

No Inventory of Art Works

Boston, Mass.—Though most of the city property is properly inventoried, there is no catalogue of the municipal art works, according to the Art Commission, which has omitted its annual report to the Mayor. The Commission therefore has begun the preparation of a catalogue which will contain not only a complete list of the monuments and pictures of the city, but a sketch of each.

Popularity of Municipal Concerts Is Unbounded

Denver, Col.—Sunday concerts at the Auditorium February 5 were attended by 22,000 people. Manager Collins' estimates are 11,500 for the afternoon and 10,500 for the evening. This is about the size of the crowds that have been going for the preceding five Sundays. The afternoon musical program consisted of the masterpieces of Austrian, Hungarian and Bohemian composers. The piano solos by Miss Frances Boardman proved a feature. The evening concert consisted of the patriotic airs of the different nations. The vocal soloist, Miss Alice Howard, sang two selections, which were highly appreciated. The cornet solo, "Der Wasserfall," rendered by Band Leader Herman Alstedt, was enthusiastically encored. The motion pictures were among the best yet, and included logging machines, the making of steel rails and mica mining, all subjects of an educational nature, and which the entire audience seemed to enjoy. Just before the house was darkened for

DENVER MUNICIPAL AUDITORIUM—FREE SUNDAY AFTERNOON CONCERT

motion pictures the audience sat quiet for a flash-light photograph for Municipal Facts. It is said to be one of the most wonderful ever taken of such a large audience. The original size of the picture is 25 inches wide by 11 inches deep.

The municipal concerts are free to the public. They were inaugurated by Mayor Speer two years ago for amusement of the people during the winter months. Their popularity is unbounded, as is demonstrated by the crowds which attend every concert.

Theater Ticket Speculation to Cease in New York

New York, N. Y.—Speculation in theater tickets in the city of New York has been ordered abolished by the Board of Aldermen in an ordinance adopted unanimously, after years of agitation of the question. The ordinance was passed after advice had been received from the Corporation Counsel that such a measure would be constitutional. It is provided that violation is punishable by a fine not exceeding \$10 or a prison term of ten days.

Ordinance Provides for Lights for All Vehicles

Sacramento, Cal.—Provision for lights on all vehicles on Sacramento streets after dark, except those carrying explosives such as benzine, and for mufflers on motorcycles and automobiles, are made in two ordinances introduced by City Trustee Carraghar at the instance of the City Board of Health. In introducing the muffler ordinance Carraghar said that it is to suppress intoxicated owners of motorcycles who turn loose the exhaust of their machines on the streets, frequently frightening horses driven by women.

Lansing, Mich., to Have a City Market

Lansing, Mich.—A movement is on foot to establish a city market in Lansing. It is thought a market in a central location will do away with peddling to a great extent, although licenses for hucksters will not be done away with entirely.

Spraying Saved Many Trees from Ravages of Moths

Lynn, Mass.—The annual report of the Park Commissioners, which has just been issued, contains an interesting review of the work performed by that Board during the year 1910, and contains many valuable suggestions for the preservation of Lynn's system of parks and woods. In reference to the moth work, the Commissioners declare that adequate spraying machines are now as essential a part of the city property as stone crushers and rollers. Hitherto the Park Department has had to use borrowed spraying machines. An inspection of the woods from Mount Gilead Tower, says the report, furnished an object lesson in gypsy moth work and afforded a striking comparison of two methods of fighting the pest. Every point on the roads and as far back as the powerful sprayer could touch revealed the foliage as green and brilliant as it ever was after a summer shower. Every road was as shaded as before the advent of the moth blight. This was the result of the spraying method of treatment. Under the tanglefoot and spraying method with sufficient money the woods can be saved and kept as a thing of beauty forever, and a memorial of the public spirit of the people of Lynn.

Alabama Bill for Registration of Engineers

Montgomery, Ala.—A bill to establish a board of registration and examination for civil engineers, mining engineers and surveyors, and to regulate the practice of such engineers, has been introduced in the Legislature. This bill was prepared by a committee of the Alabama section of the Engineering Association of the South, the committee being composed of Prof. E. B. Kay of the University of Alabama, and E. Francis McCrossin and C. H. Ohme of Birmingham. "Our bill relates only to engineers occupying official positions, State, county or municipal," said Mr. McCrossin, "and is, therefore, of no direct concern to industrial companies or mine operators. But it is nevertheless a very important measure and should be enacted into law."

Perth Amboy Will Have Public Playgrounds

Perth Amboy, N. J.—Announcement has been made by Mayor Bollschweiler that he would appoint a Public Playgrounds Commission, and that he was considering names for the positions. In the Mayor's mind the playground movement is a good one and in answer to the popular demand that such a Commission should be named he will announce the personnel of the playground body in a communication to the Board of Aldermen either at the next or the following meeting. To get the best results out of such a movement the Mayor feels that the board should be a congenial one, in sympathy with the movement and ready to work for its success. He is selecting his appointees with this in mind.

Park Boards Have Right to Tax for Park Improvements

Indianapolis, Ind.—Judge Remster, of the Circuit Court, has handed down a decision as to the constitutionality of the law giving the Park Board and the Council the right to divide the city into park districts and levy assessments on real estate valuations to cover the cost of park improvements. The constitutionality of the law was upheld as far as it is affected by the questions raised in the case tried. The Judge said that if there had been any inequalities in the assessments, they were not caused by the law but by the administration of it.

Municipal Drug Store Suggested

Boston, Mass.—At a hearing in City Hall recently before Mayor Fitzgerald and members of the City Council the most necessary improvements in the various wards were discussed by the citizens. The desirability of a drug store under municipal control at which medicine might be obtained at all hours was suggested. It was approved by the Mayor, who declared, however, that it was not within the province of the city government to do anything about the matter, and urged that it be carried before the State Board of Pharmacy.

Municipal Ice Plants

Boston, Mass.—There is a bill pending in the Massachusetts Legislature providing for municipal ownership of ice plants. The City Council of Salem has already voted in favor of a municipal ice plant.

LEGAL NEWS

A Summary and Notes of Recent Decisions—Rulings of Interest to Municipalities

Change of Grade—Claim for Damages

Stillman vs. Village of North Olean.—Where, when a petition for paving a street was presented to the Trustees of a village, the plans therefore had not been made, and one signing the petition was told by the Trustees that the construction of the pavement would cause no appreciable change in the grade of the street that would damage his property, and signed in reliance on such statement, and it did not appear that the paving could be done without making so great a change, petitioner was not estopped from claiming damages for changing the grade. Under the Village Law requiring a claim against a village for change of grade of a street to be presented within 60 days after such change of grade is effected, where the cutting down of a street and the laying of a brick pavement was one entire piece of work, the change of grade was effected when the work was completed.—New York Supreme Court, 126 N. Y. S.

Defective Streets—Negligence

Suchovalsky vs. City of New York.—Where a city did not have actual knowledge of a defect in a street made by an excavation, and it had not existed long enough to impute knowledge thereof to it, the city was not liable for injuries caused by falling into the excavation.—New York Supreme Court, 126 N. Y. S., 699.

Defective Streets—Evidence—Questions for Jury

Murphy vs. City of New York.—A plaintiff, who testified, in her action for injuries on a defective sidewalk, that she stepped into a hole in a cement sidewalk, and that the hole was so large that her entire foot went into it up to her ankle, was entitled to go to the jury on the issue whether the hole was of sufficient size to charge the city with liability for its continuance, notwithstanding the testimony, on cross-examination of her witness, that the hole was about six inches in circumference and an inch or an inch and a half deep. Where, in an action for injuries to a pedestrian by stepping into a hole in a sidewalk, a witness for plaintiff testified that she had occupied abutting premises for four months, and that every time she went out to sweep the sidewalk she saw the hole, but could not tell how many times she saw it, plaintiff was entitled to have her fix one or more of the times she had seen the hole, to determine whether the city was chargeable with notice of the defect.—New York Supreme Court, 126 N. Y. S., 707.

Defective Sidewalk—Question for Jury

Page vs. Inhabitants of Weymouth.—The fact that plaintiff, who was injured by falling into a hole in sidewalk, had passed over the hole before and knew of its existence, does not as a matter of law preclude her from recovering, as it was a question for the jury, under the evidence, whether at the time of the accident plaintiff was using due care.—Supreme Judicial Court of Massachusetts, 93 N. E. R., 644.

Regulating Car Service—Police Power

City of Tacoma vs. Boutelle.—The police power reserved to a city in a street railway franchise stipulating that the city may adopt ordinances necessary for the protection of the interests of the city vests in the city the power to determine the frequency of street car service, having in mind the general welfare of the traveling public, and the health and safety of the citizens. Under constitution authorizing any city to make local, police and sanitary regulations, and Rem. & Bal. Code, authorizing any city to regulate the operation of street railroads within its limits, and to provide for the punishment of all practices dangerous to the public safety, a city empowered by its charter to regulate the operation of street railroads within its limits may adopt an ordinance requiring a five-minute street car service between designated hours of each day.—Supreme Court of Washington, 112 P. R., 661.

Action for Services—Superintending Water Works

Laut vs. Village of Oakdale.—If one agrees to perform a certain service for a village gratuitously, he may withdraw such promise any time before the same is performed, and notice of such action is sufficient, if duly given to one member of a committee of the village board in charge of the improvement upon which the services are performed, and if the committee then continues his employment, the village will be liable for the value of the services thereafter rendered.—Supreme Court of Nebraska, 129 N. W. R., 257.

Excluding Territory from Municipal Corporations

Chapin et al. vs. Village of College View et al.—A judgment of the district court in a proceeding prosecuted under Comp. St. 1909, to exclude territory from the boundaries of a municipal corporation, will not be set aside on appeal, unless it is made to appear that the trial court committed an important mistake of fact, or made an erroneous inference of fact or of law. And this rule applies with peculiar force where the trial judge inspected the premises before rendering judgment.—Supreme Court of Nebraska, 129 N. W. R., 297.

Reopening Vacated Street

Atchison, T. & S. F. Ry. Co. vs. City of Shawnee et al.—A resolution of a city council, ordering a railroad company to open and put in condition for public travel a street through its station yards, previously vacated by an ordinance which constituted a contract with the company, where disobedience of such order subjected the railroad company to a penalty under the laws of the State, is a legislative act, which impairs the obligation of the contract and entitles the company to relief by injunction in a federal court of equity.—United States Circuit Court of Appeals, 183 F. R., 85.

Street Improvements—Procedure—Method of Payment

City of Bluefield vs. Johnson.—A city ordinance, passed in pursuance of charter authority, is not invalid because it omits some of the details of the method of procedure mentioned in the charter, unless the charter further provides that such omission shall render it invalid. Where a city, under authority of its charter, provides by ordinance for the improvement of a certain street and for assessing two-thirds of the cost thereof on the abutting lots, and later provides by another ordinance for raising a fund by the sale of bonds for the improvement of the same street, the city may apply the whole of such fund to the payment of its one-third of the cost of the improvement.—Supreme Court of Appeals of West Virginia, 69 S. E. R., 847.

Streets—Injuries—Negligence

Dempsey vs. City of New York.—A piece of flagstone was removed from the middle of a sidewalk, forming a hole from three inches deep on the sides to six inches deep in the middle, which remained in that condition for 11 months, when plaintiff stepped into it on a dark night and was injured. It appeared that similar accidents occurred almost daily. Held that, even if the city were not negligent as a matter of law in permitting the sidewalk to remain in such condition, the question of its negligence was for the jury.—New York Supreme Court, 126 N. Y. S., 290.

Village of Prairie du Rocher vs. Schoening-Koenigsmark Milling Co.—In proceedings by a village to condemn land to change a water course, no direct evidence was given as to any benefit to the land not taken, because of the establishment of the new water course. The jury viewed the premises. An instruction was given on behalf of the petitioners that benefits should be offset against damages. Defendant claimed this was error, but failed to show that the amount of the verdict was not fully justified by the evidence. Held harmless error.—Supreme Court of Illinois, 93 N. E. R., 425.

Assessment—Judgment

City of Alton vs. Heidrick et al.—While a judgment is not required to be in any particular form, it is necessary that the entry should contain the essential elements of the judgment, and that it should show that the court finally disposed of the cause.—Supreme Court of Illinois, 93 N. E. R., 386.

Acquisition of Lands for Streets—Assessments—Validity

Austin et al. vs. City of Everett.—Where, in a condemnation proceeding by a city for streets, the court admitted on records that he openly declined in advance to appoint assessors to assess benefits any one who would not adopt a plan by which unplatted property should be assessed more than platted property, irrespective of its relation to the streets or to the benefits derived therefrom, arbitrarily assuming that, because the property was unplatted, the benefit was greater than the benefit to platted property, so that the assessment should be proportionately greater, on the theory that the taking of land for streets was a benefit to unplatted property, since, to get the most benefit of the property, it was necessary to plat it, the assessment of benefits was invalid for want of the impartial exercise of the judgment of the commissioners and a confirmation of the assessment by an unbiased judge, to both of which the property owners were entitled.—Supreme Court of Washington, 112 P. R., 658.

Discharge of Sewage—Prescriptive Right

Olmen vs. Town of Mount Angel.—A city constructed an underground tile drain that collected surface water and drainage from houses, which ran from the drain into an open ditch and thence into a gully near the corner of plaintiff's residence property, which was low ground. The water in plaintiff's well, which was within 16 feet of the gully, was affected by the condition of the water in the ditch. Held, that water is sewage, and the city may be enjoined from discharging it into the gully, although the water in plaintiff's well at its best is not good. The convenience of the public will not authorize a city to direct surface or other waters in a public sewer or drain and empty them upon the land of an individual to his injury and the right to do so cannot be acquired by prescription.—Supreme Court of Oregon, 112 P. R., 529.

Police Regulations—Validity

City of Richmond vs. Model Steam Laundry.—An ordinance prescribing a penalty for using a furnace for melting metals or glass, or for using a stationary steam engine, in which fuel other than anthracite coal is used, without a permit from the City Council, fixing the location, height of chimneys, etc., is invalid, as violating Const. U. S. Amend. 14, in that it vests in the City Council arbitrary power and unreasonable power; no conditions upon which the permit may be granted or rules securing impartial exercise of the power being prescribed. A municipal ordinance which permits exercise of arbitrary and unreasonable power will be held invalid, without awaiting actual exercise of such power.—Supreme Court of Appeals of Virginia, 69 S. E. R., 931.

Streets—Abandonment—Railway Crossing

New York Cent. & H. R. R. Co. vs. City of Buffalo.—A Highway Law providing that every highway that shall not have been opened and worked within six years from the date it shall have been laid out shall cease to be a highway and every public right of way that shall not have been used for such period shall be deemed abandoned as a right of way applies only to unused easements, and where a city acquires title to land in fee for a street, there is no limitation on its ownership of the land and its right to open the street as a highway. Under Railroad Law, providing that when a new street shall be constructed across a steam railroad the street shall pass over or under the railroad or at grade as the board of railroad commissioners may direct, where a city condemned land for a street over a railroad right of way in 1867, but has not opened the street, when it decides to open it to the use of the public, the construction across the railroad must conform to the termination of the public service commission.—Court of Appeals of New York, 93 N. E. R., 520.

Defective Street—Notice

Couhey vs. City of Decatur.—Under Burns' Annotated Statutes, requiring notice of claim for injuries from defective streets to be given within a certain time, the right of action is to be determined from the sufficiency of the notice given to the plaintiff, and not by the fact that the city had actual notice from a published account in the daily newspapers.—Supreme Court of Indiana, 93 N. E. R., 540.

Municipal Employment—Cemetery Sexton

Holley vs. City of Mt. Vernon.—Where plaintiff was employed as sexton of a cemetery at \$25 a month, and also authorized to retain fees for digging graves, under a resolution merely authorizing his employment at a salary not to exceed \$25 a month, the payment of bills for his services for several years at \$25 a month was not a ratification of such contract by the city; there being no evidence that the city was notified of the variance between the contract as made and the resolution of authority. Where a cemetery was not owned by a city and lay beyond its limits, the city had no authority to employ a sexton therefor, under Constitution, article 8, section 10, providing that no county, city, town or village shall give any money or property or loan money or credit to or in aid of any individual, association or corporation.—Supreme Court of New York, 120 N. Y. S., 460.

Promotion of Police Captain—Liability of Commissioner

Hodgins vs. Bingham.—A complaint by a police captain against a police commissioner of the city of New York, which alleged that, according to the rules of the police commission, defendant was required to keep record as to the efficiency of police captains and to certify the same to the commission in advance of examinations for promotion, and that defendant "wantonly, willfully, maliciously and untruthfully" certified to the police commission concerning plaintiff, "On his (plaintiff's) record—poor; has not the qualities for inspector's command; stupid," to plaintiff's damage in a stated sum, did not state a cause of action, since the police commission was not bound by the facts stated in the certificate, and it was merely the expression of the defendant's opinion as to plaintiff's qualifications. In an action by a police captain against a police commissioner of the city of New York to recover damages for a false certification of plaintiff's qualifications in advance of an examination for promotion, an allegation that, by reason of the falsity of the certificate, the police commission gave plaintiff a rating lower than it otherwise would have given him, was a mere conclusion of the pleader. The mere fact that a police captain of the city of New York is rated higher under the civil service rules than other applicants for promotion does not in and of itself entitle him to priority of appointment.—Supreme Court of New York, 126 N. Y. S., 493.

Sewer Overflow—Liability

Beyer vs. City of New York.—A city was not liable for the overflowing of a sewer into plaintiff's premises, where the backing up of the sewage was caused by a stoppage of sticks used by children playing in the street, where it did not appear how long the stoppage had existed, so that any reasonable inspection would have revealed the obstruction.—Supreme Court of New York, 126 N. Y. S., 455.

Paving Contract—Performance

Snouffer & Ford vs. City of Tipton.—In an action by a paving contractor on quantum meruit, for the reasonable value of paving, where the defense was defective construction, and it appeared that in a former action in equity to restrain collection of an assessment for the same paving, the contractor had an opportunity to offer to reconstruct and repair, but failed to do so, the question of offering to repair and reconstruct is res judicata.—Supreme Court of Iowa, 129 N. W. R., 345.

Powers—Ultra Vires—Injunction

Hill Dredging Company vs. Ventnor City.—A municipal corporation is not bound by an engagement which it has no power to make, and the defense of ultra vires is available to it. A city governed by P. L. 1897, providing for the government of cities containing a population of less than 12,000 inhabitants, has no power to grant for the benefit of a company the privilege of laying pipes in the streets to pump sand to the beach front. Where plaintiff obtained permission from a city to lay pipes in the streets to pump sand to the beach front, and used them to pump mud and sewer filth, and thereby endangered the public health, equity would not grant a preliminary injunction restraining the city from interfering with such acts, though it be assumed that the city had power to grant the privilege.—Court of Chancery of New Jersey, 78 A. R., 677.

MUNICIPAL APPLIANCES

New Auto Steam Fire Engine

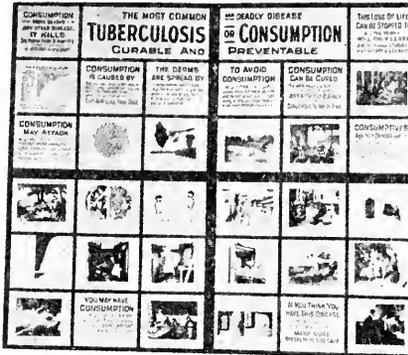

A gasoline-propelled steam fire engine, shown in the illustration, has been placed on the market by the Nott Fire Engine Company. The engine was entirely new throughout, but the motor attachment can be put on any engine now in service in fire departments. New running gear with rubber tires of special design will, however, have to be provided. At a recent trial in Minneapolis with five men on the machine, making a total weight of over 15,000 pounds, when the streets were covered with slush and ice, the machine easily made a speed of 30 miles an hour. The capacity of this engine is 700 gallons a minute. The whole apparatus is built very heavy and massive. The motor has four cylinders of the long-stroke design and developed on test 110 brake horsepower at 1,350 revolutions a minute. The crankshaft to the cylinders was cut from a solid ingot of vanadium steel which weighed 625 pounds and weighed when finished 185. All the differential gears, transmissions, etc., are cut from solid block chrome nickel steel and there are no forgings in any of the gears. The engine was built entirely by the Nott Company, who state that it was the most perfect success that they have ever brought out in their experience in building fire apparatus.

Small Tuberculosis Exhibit

At the suggestion of the National Association for the Study and Prevention of Tuberculosis the Educational Exhibition Company, 70 Waterman street, Providence, R. I., have prepared a small and inexpensive tuberculosis exhibit, a cut of which as it appears when set up is shown herewith.

The exhibit when spread out is about 7 feet long by 6 feet high. It can be made to occupy a less horizontal space

or can be set in a corner. It contains 32 units or spaces 10 by 12 inches in size and a heading or top sign 10 inches high and 4 feet long. Twenty-two of the spaces are occupied by 8 by 10-inch photographs. The 10 remaining spaces are occupied by mottoes or aphorisms. Each photograph is a black and white contact print with suitable descriptive title inserted beneath in plain, neat black lettering on white ground. These photographs are all bright, clear views, all the plates having been made specially for this exhibit.

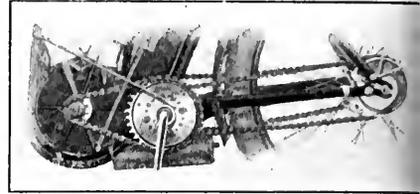

SMALL HEALTH EXHIBIT

A list of these is appended. The mottoes or short sayings in regard to tuberculosis have been designed with great care. Each is complete in itself and arranged so as to catch the eye of the spectator, and the set of 10 gives a complete popular treatment of the subject.

Motor Cycle Improvement

An improvement in construction announced by the Hendee Manufacturing Company, Springfield, Mass., should be of interest to police and other city de-

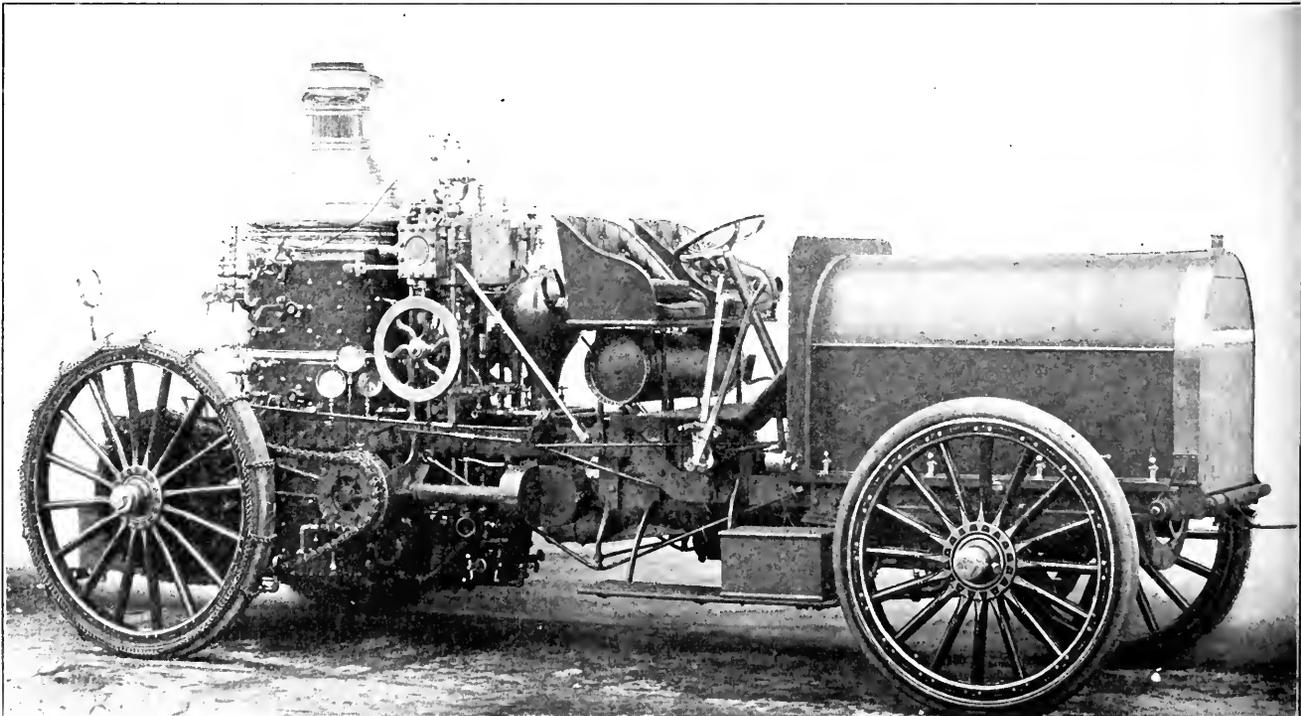

partments which employ men mounted on motor cycles. The 1911 model Indian embodies a feature which, it is claimed, revolutionizes the construction of motor cycles and solves the

NEW FRICTION CLUTCH OF INDIAN MOTOR CYCLE

problem of the transmission of the motor to the driving wheel. The new feature is a positively acting free engine clutch which makes starting the machine easy under every condition. The rider can with ease and certainty run his machine at a walking pace in a crowded street, stop and start again without stopping his motor. The new clutch gives any range of speed desired. The clutch is of the disc type, in which the various friction discs are held in adjustable contact by compressed coil springs, and the release is operated by a lever conveniently placed for the left hand of the rider which operates a quick acting screw that opens the clutch against the compression of the springs. This lever moves smoothly backward and forward, and remains fixed wherever placed without the necessity of any stop or ratchet. When the clutch is released the sprocket ring rides free on roller bearings, and as the inner circumference of the ring, which bears on the rollers, is armed with a hard steel wire sprung into a groove in its edge there is little wear at this point, and when necessary this wire can be readily replaced.

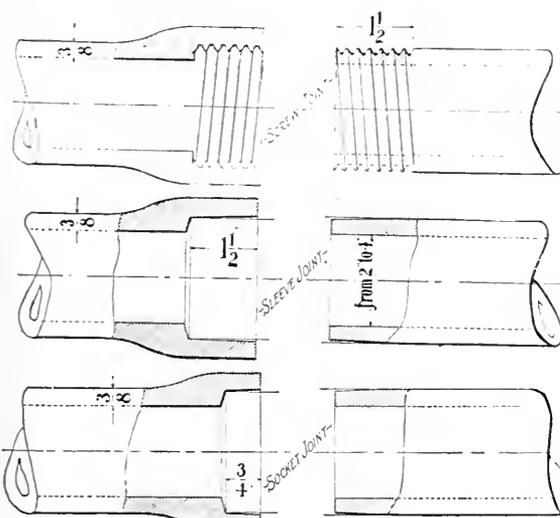

The 1911 Indians will all be of the handsome and convenient drop loop frame model same as those made last year.

NOTT GASOLINE-PROPELLED STEAM FIRE ENGINE. MOTOR SECTION CAPABLE OF BEING ATTACHED TO ANY FIRE ENGINE

J-M Fibre Conduit

ASBESTOS fibre conduits which are pressed into shape under high pressure and manufactured by the W. H. Johnsonville Company, 100 William street, New York. Each length has a solid wall three-eighths of an inch thick, all one piece, homogeneous and without joints. Ordinary fibre conduit is of laminated or layer construction. The layers are apt to split and come apart. On account of the great strength of the molded wall the J-M fibre conduit, when laid without concrete or other protection, will withstand compression without being crushed or broken. The conduit is furnished with a flange, sleeve and screw joints, and all joints are molded bell shape. Molding is the only process that will permit of a bell-shaped joint, and it is only with a bell joint that the wall of each section can be as thick and strong at the joint as at any other point in its length. In laminated fibre conduit half the wall of the ends of each length must be cut away in order that one length may fit over the other. J-M conduit joints may be made practically air tight, and will shut out not only water, but gas. The inside of the bore is smooth so that the work of pulling cables through is easy. A No. 6 wire can be pushed through each duct from manhole to manhole and the use of rods is unnecessary. The smooth bore of the J-M system is claimed to add greatly to the life of the cable, as it eliminates the cause of the trouble—seams and raw edges at joints which abrade the lead casing. Water insulating efficiency is claimed for the J-M fibre conduit as compared with stoneware or clay on account of the nature of the materials and as compared with laminated fibre conduit, because in time the layers are apt to separate and then currents pass through. Tests of this conduit with standard 3/8-inch thickness of wall which indicate an average puncture voltage of 40,800 dry and 33,000 volts for 40 hours' immersion in water. Lightness in weight aids in economy in laying the fibre, weighing about one-sixth as much as stoneware or vitrified clay. The alignment of the connected conduit is automatically taken care of, so true are the joints made at the factory. The matter of breakage in stoneware or clay conduits is sometimes serious, whereas with fibre conduit it is practically nothing.

J-M FIBRE CONDUIT JOINTS

Easy-Running Rollers

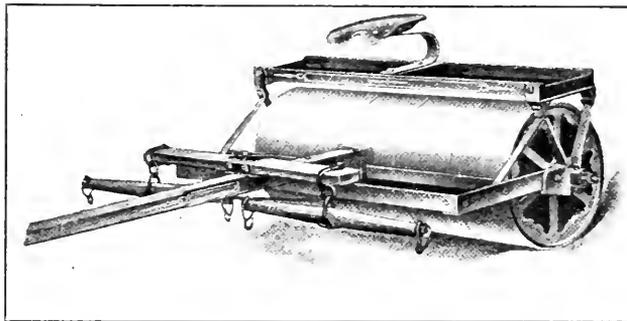

The Dunham Company, Berea, O., are said to be the largest manufacturers of rollers in the world. Their products are made of all weights between the light hand roller weighing 150 pounds to the heavy two-horse roller weighing 12,000 pounds, provided with boxes for overweights. Ease in running is the important feature of a roller, and this is attained in the Dunham hand roller by roller bearings, high carbon steel and perfectly round and smooth axles, as used in automobile construction. The construction is claimed to be different from all others, having much less friction surface than any other.

The two-horse land roller shown in the illustration suitable for park and road use is claimed to be the lightest draft roller in the market. It pulls directly from the axle and is so perfectly balanced that there is no weight on the team. It is equipped with two all-steel weight boxes at top and in front of rolls. The 3,000-pound roller shown is 32 inches in diameter, 72 inches long, made up of six sections of even width. A still heavier roller, suitable for road work, has front and rear weight boxes and the framework connecting them through the axles all of steel. The bearings are 8-inch, noiseless, dust-proof, with brass oil cups holding a teaspoon of oil each.

Reversible Street Roller

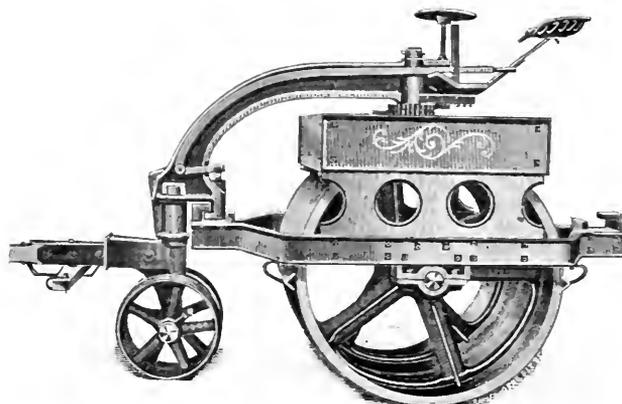

A horse roller of simple design and rigid construction is made by the Enterprise Manufacturing Company, Columbus, O. The front end of the frame is carried by a two-wheeled truck, to which the tongue is attached. This makes the roller run steady, causing no jarring of the team or side switching of the tongue when striking any obstruction, and gives the team perfect control to guide and turn the roller at the will of the operator. This truck also takes all weight off the horse's neck. The reversible feature is extremely simple. The tongue and front truck can be turned at full right angles

to main rolls, and by raising a lever from the operator's position this front truck is disengaged from the main part of the roller and can be swung around so as to engage to the other end and by leaving the lever drop the roller can then be drawn the opposite direction. This can all be done in a very small space, and as it can be reversed in either direction it is possible to roll very close to the curbing and yet turn when desired without damage to the curbing. The main roll shaft is extremely large and fastened stationary to the steel frame. The rolls are in two sections and turn independent of each other, which causes it to turn very easily in going around a curve as when

HORSE ROLLER FOR ROADS OR PARKS

turning off to a side street. This is of further advantage when using the roller as a non-reversible roller when so desired, thus moving the roller sideways just the width of the lap in turning. With a roller that has both the rolls stationary on the shaft, and bearings on the outside frame, one roll will have to slip in turning, thus making it extremely stiff and difficult for the horses to turn, due to this extra friction. Balancing the roller so as to make it heavier can be done, enough room being provided on top that another ton can be added to each roller when so desired. When this is done it is not advisable to reverse the roller in the usual manner, but to turn the roller as a non-reversible. An effective brake is provided which is operated by a hand wheel within easy reach of the operator. The main frame is made of steel channels and projects but 3 inches on the side of main rolls, thus permitting the operator to work up close to wire poles, trees, buildings and curbing. These rollers are built in sizes of 3, 4, 5 and 6 tons. Dimensions, 3-ton 52-inch diameter rolls, 4-ton 56-inch diameter rolls, 5-ton 58-inch diameter rolls, 6-ton 60-inch diameter rolls. All rollers 52 inches wide on rolling surface.

REVERSIBLE HORSE ROLLER FOR ROAD AND PAVING CONSTRUCTION

NEWS OF THE SOCIETIES

Indiana Sanitary and Water Supply Association.—The fourth annual meeting was held at the Claypool Hotel, Indianapolis, February 7-10.

The object of the association is the study of the sources of water supply in the state and their conservation and purification. All residents of the state who are interested in what Mr. Barnard termed the "greatest economical problem of the state" are eligible to membership, and there were engineers and capitalists who control water plants in many Indiana cities, mingling with municipal officers who are intrusted with the same kinds of property.

Mr. Barnard opened his annual address with a brief statement of the manner in which the streams of the state have been polluted. He said that if Tecumseh or William Henry Harrison could speak at the meeting either would say that "you have taken the beautiful Ohio and the limpid Wabash for sewers, turned lakes into cesspools and destroped pure, crystal springs." The activity of the association and the manner in which it has interested officials of cities and water companies is a guarantee of a better water supply for a longer period, said the president.

"The Successful Treatment of White River by Mechanical Filtration" was the subject of a paper in which Henry Drach, superintendent of the Anderson Water Company, described in detail the manner in which the citizens of Anderson got pure water from the polluted White river. The history of the plant from the time it was installed to the present period was reviewed by Mr. Drach, who stated that chemical tests for a long period showed that an average of 98 per cent. of the impurities of the water were removed by the filtration process.

J. H. Simonds, superintendent of the state laboratory of hygiene, addressed the meeting on "Some Typhoid Epidemics in Indiana." He referred specifically to the epidemic at Bloomington, and the State university last July, and to a previous outbreak of typhoid at the Indiana Boys' school at Plainfield. The epidemic at Bloomington he attributed to flies, which were permitted to breed in a vault located near the rear doors of four eating places. By an extensive process of deduction he proved that this was the only source of the disease on which this epidemic could be laid.

Professor R. L. Sackatt, of Purdue, spoke on the French ozone water purification plants, which he studied during a recent tour of Europe. Superintendent Joseph W. Ellms, of Cincinnati, described the filtration plants which are used by that city to supply pure water to Cincinnati. Both these lectures were illustrated.

Vice-President Fairbanks, who spoke after a luncheon, said that every city and town in the United States should provide and maintain a forest of its own.

George W. Fuller, New York, N. Y., entertained the association for an hour with stories of his experiences in tracing the sources of pollution of water supplies that were evidenced by epidemics of diseases. He advised the water works men that the first thing to do is to provide a supply of good, wholesome water. "Let the matter of rates go," he said. "The rates will take care of themselves when you supply the water."

National Paving Brick Manufacturers' Association.—The sixth annual convention of the association was held at the Seelbach, Louisville, February 6-9. The following officers were elected for the ensuing year: Charles J. Deckman, Cleveland, President; J. W. Robb, Clinton, Ind., Vice-President; C. C. Barr, Streator, Ill., Treasurer; Will P. Blair, re-elected Secretary.

At the first day's session reports of officers and committees were heard and committees were appointed. At the public session on the following day Merle Sidener, Indianapolis, and Spencer M. Duty, Cleveland, spoke on the Relation of the Association to the Public. A general discussion followed these addresses.

A resolution was adopted moving the headquarters from Indianapolis to Cleveland. The change will be made by March 15. The chief reason advanced for moving the headquarters is that Cleveland has several hundred miles of properly constructed brick streets which may be utilized as an exhibit of the methods of construction advocated by the association, while Indianapolis is declared to possess some of the worst streets in the country. A year ago Will P. Blair, Secretary, went before the Indianapolis Commercial Club and asserted that he was having difficulty in holding the headquarters for that city because the directors felt that they were put at a disadvantage by the bad brick streets of the city.

It has been customary for the association to take parties of city officials and of property owners to Cleveland to show them the kind of streets that may be produced with brick when proper construction is utilized, and it is believed that with the national headquarters in that city the general influence will be greater. Another reason for moving is that the newly elected President, C. J. Deckman, lives there, and several of the directors are Ohio men.

The first on the list of the topics for general discussion was "Is the Use of Two-Inch Vitrified Cubes Practical in Constructing or Resurfacing Wornout State Roads." Reference was made to roads laid in the last two years in the vicinity of Rochester, N. Y., and in the past year at Minneapolis. Also to the German pavement called "kleinpflaster."

The amount of brick paving laid in 1911, according to W. P. Blair, was approximately 2,000,000 yards more than that laid in 1909. The number of yards laid in 1910 was estimated at 12,000,000.

Jesse Taylor, Secretary of the Ohio Good Roads Federation, made an address favoring brick for country roads. He said that the cost of building and maintaining roads should be shared by the Federal Government, the State, the county and the adjoining land owners. The high cost of living, he said, is partly due to bad roads, the farmer being obliged to rush their products to market when the roads are in good condition.

In the course of a discussion of the question of testing brick, R. D. Culner, Veedsburg, Ind., urged a system of inspection at the manufacturing plant, thus obviating the possibility of loss of expense of transportation on brick rejected at the point of delivery. Other manufacturers agreed with him, but John Minwegen, of the Board of Local Improvements, Chicago, said he did not think it practicable.

Specifications were adopted for standard rattler for testing paving brick. This is the result of two year study and experiments. In connection with the discussion of brick tests, the association adopted a resolution criticizing the organization of city officials for standardizing paving specifications in arbitrarily naming a specific increase in the permitted loss by abrasion in the rattler test to meet the greater loss caused by the new standard rattler, as compared with the old machine.

National Brick Manufacturers' Association.—The twenty-fifth anniversary of the association was held in Louisville February 8-9. Three affiliated organizations held their conventions at the same time. They are the National Paving Brick Manufacturers' Association, the Building Brick Association of America and the National Clay Machinery Association. The meetings of each of these bodies was held at the Seelbach. The general association followed its usual custom in selecting officers for the ensuing year by promoting its vice-presidents on step. The officers are: Charles M. Crook, Youngstown, O., President; Charles A. Bloomfield, Metuchen, N. J., First Vice-President; W. H. H. Rogers, Rochester, N. Y., Second Vice-President; E. Rogers, Alton, Ill., Third Vice-President; Theodore A. Randall, Indianapolis, Ind., was re-elected Secretary, and John W. Sibley, Birmingham, Ala., Treasurer. On the first day of the meeting Mayor W. O. Head made an address of welcome, to which G. W. McNeas, Kittanning, Pa., responded. Will P. Blair made the annual presidential address. On Wednesday evening a paper illustrated by the stereopticon on vitrified sewer and culvert pipe was delivered by George H. Tefft, Secretary and sales manager of the W. S. Dickey Clay Manufacturing Company. Most of the papers presented were regarding various manufacturing processes of comparatively little interest to the public.

The association adopted a resolution empowering the directors to fix the place of the next meeting, with the recommendation that it be in Chicago.

California State Association of County Surveyors.—The annual meeting was held at Sacramento January 20. Superintendent of Streets Irvine, Sacramento, speaking on Good Roads mentioned that California had the care of roads varying in level from below that of the sea to 8,000 feet above. He advocated the oiled macadam road. It had the advantage of being freer from dust than other roads, and stood the wear and tear best. He liked asphalt for street work, but it has the disadvantage of being very dirty unless given constant attention. Marsden Manson, City Engineer, San Francisco, was the principal speaker of the evening. He said that California possessed the best material in the world for road building, asphaltic oil. He advised placing a heavy export duty on the material in order that it may be kept at home where it is needed. Mr. Manson favored the division of State roads into three classes according to importance. County Surveyor J. G. McMillan, San Jose, read a paper on bridges.

Engineers' Club of St. Louis.—At the regular meeting of Feb. 15, A. O. Cunningham, Chief Engineer of the Wabash R. R., presented a paper on "Strengthening the Columns of the Approaches of the St. Charles Bridge."

Illinois Clay Products Association.—The recent Middle West clay convention it was decided to hold under auspices of the society in 1912, a National Brick and Clay Products Convention. In the convention a resolution was offered as prepared by a special committee consisting of W. P. Blair, President of the National Brick Manufacturers' Association and Secretary of the National Paving Brick Manufacturers' Association; R. C. Penfield, President of the American Clay Machinery Company, and E. Bognild. This resolution required that a committee should be appointed by the President of the association to take charge of the matter, and last week a committee was appointed by the President Gates as follows: William Blake, President Illinois Brick Company; R. C. Penfield, President American Clay Machinery Company; Roger Coombs, Vice-President Thomas Building Company; Albert L. Leach, Brick and Clay Record. This committee has power to extend its scope and has already prepared plans of a practical nature for furthering the project and for providing ways and means.

Municipal Engineers of the City of New York.—At the meeting February 15 in the Engineering Societies Building, 29 West Twenty-ninth street, New York City, a paper entitled "The Geology of New York City in Its Relation to Engineering Problems" will be presented by Charles P. Berkey, professor of geology, Columbia University, and by R. Healy, M. M. E. N. Y. The paper will be illustrated by lantern slides.

Columbia University Civil Engineering Society.—At a meeting January 23 Elson P. Lewis, Chief Engineer of the Board of Estimate and Apportionment, spoke on "The Planning of a Modern City." He said New York City had lagged in this respect in Richmond and Queens, especially in providing park facilities. The policy of New York City, said Mr. Lewis is "Don't buy park land until the necessity is apparent," with the result that the sum of \$1,000,000 was paid for Seward Park, which amount would have provided an entire park system for Queens. In Germany, France and England, declared Mr. Lewis, the cities are required to plan properly. In the United States, Cleveland, Chicago and Washington present pleasing exceptions to the general rule. The speaker criticized New York's rectangular street system. Because of this defect, Mr. Lewis said, the beauty of many noble buildings is lost. In the matter of parks, the speaker thought New York did not compare favorably with Paris, Boston and the District of Columbia.

New York State Police Association.—The State Police association, represented by John W. Griffin, has just completed a house to house canvass of Albany and Troy, for the purpose of obtaining the names of voters on a petition to the legislature, asking that the three platoon police bill introduced recently by Assemblyman Jackson, of Buffalo, be passed. The same bill passed both houses of the legislature last year, but was vetoed on the grounds that the people of Albany and Troy had protested against it. Mr. Griffin said last night that he had obtained the names of more than four-fifths of the voters to present to the legislature. The bill provides a three platoon police system for all second class cities of the state.

Association of Sealers of Weights and Measures, New York State.—Mayor James B. McEwan welcomed the 175 city and county sealers of weights and measures who attended the annual session of their State association in Albany, February 7. President Fritz Reichmann, of Albany, gave his annual address and during the morning the sealers had a talk with Governor Dix, who received them in a short speech and said that they stood between the producer and seller to see that all got fair and square treatment. The sealers were then introduced to the Governor by President Reichmann.

During the afternoon addresses on matters of interest to the sealers were discussed by John L. Walsh, of New York City, on "Weights and Measures in New York City;" L. A. Fischer, of Washington, D. C., on "What the Federal Government is Doing in Weights and Measures;" C. C. Blood, of Orleans county, on "Beans." Messrs. A. Pettis, of the New York Central, and A. W. Epright, of the Pennsylvania railroad, told about "Testing of Railroad Track Scales." Mrs. E. Blair, of Albany, gave a paper on "Weights and Measures of the Housekeeper."

An interesting synopsis of letters discussing weights and measures from the standpoint of the grower, the commission man, the manufacturer, wholesaler, retail grocer, department store, retail butcher, steward, housekeeper and the scale manufacturer were read and discussed.

Canadian Cement and Concrete Association.—At the third annual convention, March 7-9, at Toronto, Ont., papers will be presented as follows: "Cement Concrete in Highway Construction," W. A. McLean, Provincial Engineer of Highways; "Cement Surfaces and Finishes," Robt. Cathcart, Glidden Varnish Co., Cleveland, Ohio; "Concrete Blocks," R. F. Havlick, Ideal Concrete Machinery Co., South Bend, Ind.; "The White and the Gray," Joseph M. Carrene, Blanc Stainless Cement Co., Allentown, Pa.; "Prevention of Corrosion in Metal Lath," C. W. Noble, consulting engineer, Toronto, Ont.; "Adaptation of Concrete for Long Span Bridges," F. Barber, Barber & Young, Bridge and Structural Engineers, Toronto, Ont.; "Manufacture of Portland Cement," W. M. Kinney, Assistant Inspecting Engineer, Universal Portland Cement Co., Pittsburg, Pa.; "The Necessity of Inspection in Concrete Work," E. A. James, Editor "Canadian Engineer," Toronto, Ont. Richard L. Humphrey, Director of the United States Structural Materials Testing Laboratories, Pittsburg, Pa., and several others have consented to read papers, but their subjects have not yet been chosen.

The third annual Cement Show will be held at the St. Lawrence Arena, Toronto, Ont., March 6-11. William Snaith, Secretary of the Association, is also Manager of the Cement Show.

Mayors' Annual Conference of the State of New York.—The advisory committee at a meeting in Troy made arrangements for the second annual convention, to be held this year in Poughkeepsie the latter part of May or the first part of June. Those present included Mayor Mann, of Troy; Mayor C. C. Duryee, of Schenectady, and Superintendent of Public Works R. J. Harding, of Poughkeepsie, the last named representing Mayor John K. Sague, who was unable to be present.

- February 21-22. Illinois Water Supply Association.—Annual Meeting, University of Illinois, Urbana, Ill.—E. Barton, Secretary, Urbana, Ill.
- February 28-March 1. Northwestern Cement Products Association, West Hotel, Minneapolis, Minn.—Henry B. Smith, Secretary, 834 Security Bank Building, Minneapolis, Minn.
- March 1-3. Engineering Society of Wisconsin.—Annual Meeting, Madison, Wis.—W. G. Kirchoffer, Secretary, Vrooman Building, Madison, Wis.
- March 6-11. Canadian Cement and Concrete Association.—Annual Convention, Toronto, Ont.—Wm. Snaith, Secretary, 57 Adelaide street East, Toronto, Ont.
- May. City Commission Congress.—Meeting, Galveston, Tex.—Mayor Lewis Fisher, Chairman of Committee, Galveston, Tex.
- May 29-June 3. National Electric Light Association.—Annual Convention, Engineering Societies Building, New York, N. Y.
- June 6-10. American Water Works Association.—Thirty-first Annual Convention, Powers Hotel, Rochester, N. Y.—John M. Diven, Secretary, 14 George street, Charleston, S. C.
- June 11-16. International Association of Chiefs of Police.—Eighteenth Annual Convention, Rochester, N. Y.—Major Richard Sylvester, Superintendent of Police, Washington, D. C., President.
- June 13-18. New York State Association of Chiefs of Police.—Annual Convention, Rochester, N. Y.

PERSONALS

DONOVAN, GEO., has been appointed resident engineer of the New York State Barge Canal at Oswego, N. Y.

FINNEGAN, EDWARD J., has been chosen Mayor of Norwalk, Conn., to succeed Mayor Brundage, deceased.

FORD, FREDERICK, has been reappointed Superintendent of Streets of Hartford, Conn.

HIGGINS, M. E., Fire Chief of Albany, N. Y., died on the 11th inst. During the illness of the Chief, Asst. Engineer Bridgeford was in charge of the department, and it seems to be the general opinion that he will be the next chief.

HOKE, J. J., has been elected Street Superintendent of Rock Hill, S. C.

LAKE, FORREST, has been re-elected Mayor of Sanford, Fla., after a warily contested election.

NEEL, J. J., Gettysburg, Pa., has been appointed County Engineer.

NIXON, C. N., has been elected Mayor of Amite City, La.

OWEN, JAMES, Montclair, N. J., has been named as Essex County Engineer to prepare, with Alexander Hamill, of Hudson County, plans for rebuilding Bridge Street Bridge.

RICHARD, C. BRENT, has been re-elected Mayor of Lake Charles, La.

ROLAND, CHARLES, has been elected Mayor of Tower, Minn.

STRAUSE, CHARLES, Secretary of the New York County Lawyers' Association, who was appointed by Mayor Gaynor to the Board of Water Supply, has been elected President to succeed John A. Bensen, now State Engineer and Surveyor.

TAYLOR, CHAS. E., has been elected Mayor of Little Rock, Ark.

TEMPLE, EDWARD S., City Treasurer of Taunton, Mass., has been removed from office by the Mayor.

TITUS, HENRY T., has been elected Mayor of Daytona, Fla.

VAN CLEVE, A. H., City Engineer of London, Ont., has resigned.

WOODBURY, F. WALTER, has been appointed Chief of Police of Beverly, Mass.

YOUNG, A. R., of Chanute, has been appointed City Engineer of Topeka, Kan.

TRADE NOTES

Cast Iron Pipe.—Chicago: Good lettings are expected soon from several large cities. Prices are reported 50 cents a ton higher. Quotations: 4-inch, \$25.50; 6 to 12-inch, \$24.50; 16-inch and up, \$24. Birmingham: There has been no change in the rate of production, but the outlook is such that a normal producing capacity at all plants will soon be warranted. San Francisco: Business continues active, as it is generally believed that prices will be advanced. New York: Private water and gas companies are still active in the market. Competition is keen, as pipe foundries are anxious to fill their order books. Quotations: 6-inch, carloads, \$21.50 to \$22. Lead.—Market is weak. Quotations: St. Louis, 4.30c.; New York, 4.45c.

Auto Chemical Wagons.—The first of the two new fire automobile combination chemical and hose wagons for the Tampa Fire Department arrived last week from the factory of the Webb Motor Car Company, at St. Louis, Mo. The second machine of this type is on the way and is expected any day. Then the department will have three auto chemicals of substantially the same pattern.

Paving Company Reorganized.—Reorganization of the Oregon Hassam Paving Company, Portland, Ore., has been effected and Miller & Bauer, who held the controlling interest, have been superseded by Alexander McLaren and J. H. Whittall, the former, however, retaining an interest in the firm. The capital stock has been increased from \$25,000 to \$150,000. Mr. McLaren has been chosen President and Mr. Whittall Vice-President. These men, who are members of the parent Hassam Paving Company, of Worcester, Mass., have the controlling interest in the reorganized concern. George M. Hyland has been retained as local manager, W. A. Lucy, Treasurer, and B. Assman, secretary. This company has approximately \$500,000 in paving contracts in this city at the present time, and it was found necessary to reorganize and increase the capital stock to handle the business.

Lighting Franchise.—The Public Service Commission has denied the application of the receivers of the Hudson River Electric Company to exercise a franchise granted it by the village of South Glens Falls. The field, which is a small one, is now occupied by the United Gas, Electric Light & Fuel Company of Sandy Hill and Fort Edward. At the hearing it was shown that this company has a plant sufficient to supply proper service to the village of South Glens Falls, and that no reason appears why a new company should be allowed to enter this village for the purpose of furnishing electric lights.

Autos for Chiefs.—Commissioner Waldo's plan for eliminating horsepower from the Fire Department of New York City progressed another step when the Board of Estimate appropriated \$7,500 for the purchase of ten small automobiles for the use of battalion chiefs.

Crude Oil Gas Burner.—Thomas O. Hegg, Madison, Wis., has invented an oil burner for lighting and heating, which operates in connection with a generator using crude oil. The claim is that the use of the device will greatly reduce the cost of lights.

Loan to Aqueduct Builder.—Through the filing of a bill of sale in the City Clerk's office, Yonkers, N. Y., February 10, it became known that the "George W. Jackson, Incorporated," contractors on the Catskill water works and Valentine hill had disposed of their plant to Congressman John E. Andrus for \$115,000. The Jackson Company is a Chicago firm and had secured a contract, under bid, from the New York Board of Water Supply to construct a pipe line, by tunnel under the summit of Valentine hill from the new Hill View reservoir to a point north of Palmer avenue. The work involves three shafts and a portal. About 200 men have been employed by the company. The contract represents \$1,450,000, and will require three years to complete. At the work it was said that the bill of sale was merely security for a loan and that the money was required for some contract work in the West by the Jackson Company. Other rumors had it that the money was to be used on the Yonkers work which is behind schedule. It was said that Mr. Andrus has had business relations with the Jackson interests in Western matters. Some weeks ago the Congressman went over the works at Valentine's Hill from end to end, inspecting it, and at that time rumors became rife of the probability of his becoming financially interested in it. That the contract is to be continued by the Jackson people is in part borne out by the bill of sale which provides for the conveyance of the entire working plant of the company, excepting its offices, and has no reference to the contract.

The officers of the Jackson company concerned in the transaction are: Mr. George J. Jackson, president, and Mr. Albert G. Wheeler, assistant secretary, whose names appear attached to the bill of sale.

Large Pumping Engine.—The William Tod Company, of Youngstown, O., is completing for a South Carolina waterworks one of the largest engines ever built in Youngstown. The bed-plate weighs 130 tons and was cast in one piece. The cylinders are so large that a tall man may walk into them without stooping. The feed pipe which will convey the steam from the boiler to the engine is 2 feet in diameter. It is reported that a number of other engine builders, after learning the specifications, refused to bid for its construction, claiming that it was impossible to build an engine of such size. It is expected that shipment will be made shortly.

Receiver to Finish Work.—The work of completing the laying of the 30-inch water main from Washington Lake to Newburgh, N. Y., is to be done by Colin W. Mac Lennan, receiver in bankruptcy of the Hudson Terminal Construction Co., which failed some time ago and went into bankruptcy. This was decided at a meeting of the Board of Water Commissioners when Mr. Mac Lennan came up from New York for the meeting, accompanied by E. F. Kitson, the former engineer in charge of the work of the Hudson Terminal Construction Co.

Lighting Company Consolidation.—By taking over the Monroe Electric company, Everett, Wash., H. M. Bylesby & Co. now control the gas business in Everett and Snohomish and the electric lighting in Monroe and Snohomish. The business of the three companies will be conducted from the Everett office.

Steam Engines.—The Wisconsin Engine Company, Corliss, Wis., is installing in its machine shop an erecting floor of massive concrete construction with a wood block surface, which will be of material assistance in erecting the heavy machinery which constitute the greater part of the output of the company.

Bridge Company Reorganization.—The Des Moines Bridge & Iron Works, Des Moines, Iowa, has elected E. W. Crellin, president; G. A. Smith, vice president, and W. H. Jackson, secretary and treasurer. B. N. Moss, the former secretary and treasurer, has disposed of his interest in the company to Messrs. Crellin and Jackson, with whom he has been associated for 15 years.

Chicago Cement Show.—It is announced that exhibitors' half-rate tickets may now be ordered. These will be sold in lots of a hundred at 2 cents each. After the first purchase of one hundred they may be obtained in quantities of twenty at 25 cents each. The purpose of these tickets is to enable exhibitors to provide complimentary admission tickets to their friends and customers.

Sand Dryer.—Hyde Bros. & Company, Commonwealth Building, Pittsburgh, Pa., have issued a circular describing the Steel City sand dryer which is made in two sizes having capacities of approximately 10 and 5 tons per day, respectively. In use the wet sand is shoveled into the top of the dryer and as it dries runs out through holes in the bottom.

Underground Cables.—The annual meeting of the stockholders of the Standard Underground Cable Company was held in Pittsburgh January 24 and the retiring Board of Directors was re-elected as follows: L. W. Dalzell, John Moorehead, Jr., J. N. Davidson, B. F. Jones, Jr., A. H. Childs, J. W. Marsh, W. A. Conner, F. A. Rinehart and Joseph Wood. It is understood that the business of the company the past year was most satisfactory.

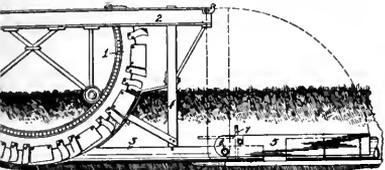

New Bridge Company.—The Detroit Bridge & Steel Works, Detroit, Mich., which was organized some months ago, has completed its plant at Delray, a few miles south of Detroit. The plant has a capacity of 12,000 to 18,000 tons of fabricated steel a year. Considerable work is now going through the shop, several local building and bridge contracts having been recently secured, the latest being the steel work for the addition to the Pingree Building, Detroit. The officers of the company are as follows: Max J. L. Fowler, president; W. E. Brinkerhoff, secretary; Richard P. Joy, treasurer; C. A. McLees, assistant treasurer. All the active officials of the company were formerly identified with the old Detroit Bridge & Iron Works.

New Paving Brick Plant.—The Salina Vitrified Brick Company, Salina, Kan., has announced that their plant is undergoing reconstruction with a view to the manufacture of paving bricks which will be put on the market this season. The new departure is made possible the company says by the discovery of a large deposit of pure soft blue shale located under the strata that have been worked hitherto. The shale has been tested and pronounced of good quality.

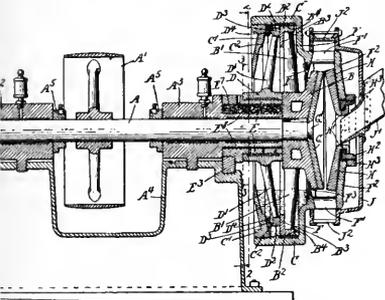

Crushing Plant.—A granite crushing plant is to be installed at the granite quarries near Llano, Tex., by C. C. Baker and associates.

PATENT CLAIMS

81. ATTACHMENT FOR DITCH-DIGGING MACHINES. William Arps, Malinta, Ohio. Serial No. 561,590.
 A trench excavating machine, the combination with a scoop-like shoe capable of digging on a trench bottom, of a pair of bars trailing from such shoe, said bars spaced from each other and from the

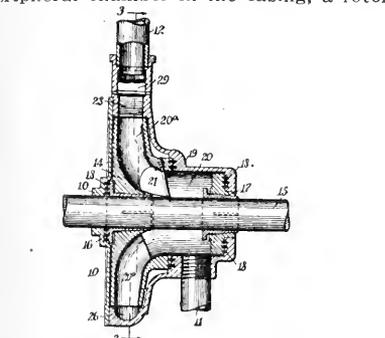

each wall and a member forming a partition transversely between said bars adjacent their inner ends and fitting down into the shoe to prevent the passage of material there through into the space between the members.
 99. CRUSHING-MACHINE. Josiah E. Symons, Chicago, Ill. Serial No. 550,563.
 A crushing machine comprising two op-

posed rotating crushing members at an angle one with the other, mounted upon a common shaft.

137. CENTRIFUGAL PUMP. John L. Seald, Alamogordo, N. Mex. Serial No. 4,914.

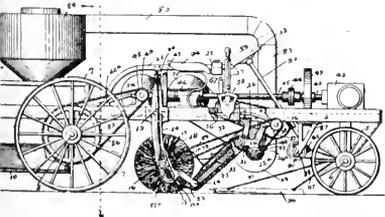

A centrifugal pump comprising a casing, a peripheral chamber in the casing, a rotor

mounted to rotate in the casing, blades pivotedly mounted on the rotor, and actuating wings secured on the rotor.

405. STREET-SWEEPING MACHINE. Henry R. Scheidler and Oscar A. Scheidler, Newark, O. Serial No. 539,283.

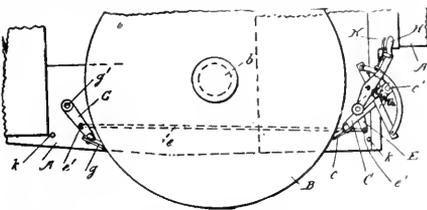

A machine of the character described, in combination with a truck body comprising a framework and ground wheels, a scraper body journaled in the frame and a motor carried by said frame, of a dirt elevator supported in front of said sweeping body, a fan casing and fan therein, a conveyer leading from said elevator to said fan casing, a dirt receptacle carried

to the machine frame, pipe connections between said dirt receptacle and fan casing, means for imparting motion to the motor shaft to the sweeping body, the elevator, the conveyor, the fan and the ground wheels of the machine and independent means for changing the speed of the ground wheels and the speed of the

983,196. SCRAPER FOR ROAD-ENGINE WHEELS. Gustaf Arvid Anderson, Waynesboro, Pa., assignor to The Geiser Manufacturing Co., Waynesboro, Pa. Serial No. 534,042.

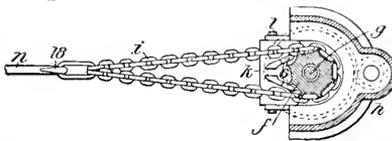

The combination, with a support, and a road-wheel, of a scraper-holder pivoted to the said support and provided with a scraper-blade, a shaft journaled in the said

scraper-holder and having two arms secured on it, means for coupling one of the said arms with the said support, and an operating-lever mounted loose on the said shaft and operatively connected with the other arm.

983,041. SAFETY-BRAKE FOR STREET CARS. Charles E. Gierding, Belleville, N. J., assignor to Sterling-Meaker Company, Newark, N. J., a Corporation of New Jersey. Serial No. 555,771.

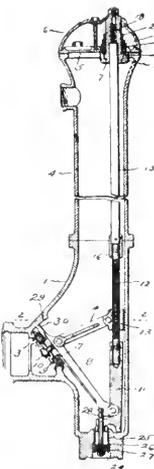

The combination, in a street-car brake, of a sprocket hub having a vertical axis, means for rotating said hub, a chain interacting with said hub, a housing partly embracing said hub and having an open side

through which the chain enters and escapes, a chain guide having rigid fingers constructed and arranged to project between the entering and escaping portions of the chain so that neither of them can "carry around," and means for fastening said chain guide within said open side of the housing.

983,279. HYDRANT. George W. Hayden, Hartford, Conn., assignor to The Pratt & Cady Company, Hartford, Conn., a Corporation of Connecticut. Serial No. 566,594.

A hydrant having a case with an inlet port and a drain opening, a block resting on the case in the interior near the bottom, an arm pivoted to said block, a valve attached to the free end of said arm and adapted to open and close the inlet port, a spindle having a threaded section rotarily

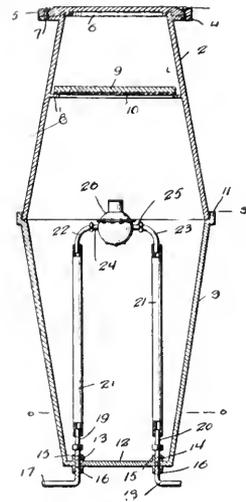

attached to said block, a nut fitting said threaded section of the spindle, a link connecting the nut and the valve arm, a stem hinged to said arm near the block, and a drain valve attached to the free end of said stem, whereby the drain valve is opened and closed by the swinging of said arm.

983,851. PROCESS OF TREATING BITUMINOUS SAND-ROCK. Henry F. Williams, San Francisco, Cal. Serial No. 575,394.

The method of treating bituminous sand rock which consists in mixing it with lime-sludge and subjecting it to a heat only sufficient to dry it without volatilizing any of the hydro-carbon constituents thereof, and then pressing it into the desired form, substantially as described.

983,311. METER-BOX. Edward J. McCreehy and Frank A. Phillips, Mount Clemens, Mich. Serial No. 562,482.

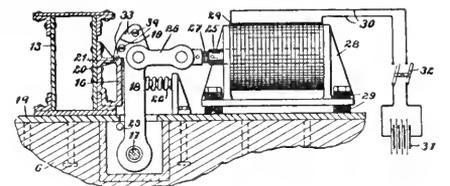

A water meter box composed of two vertical sections each of a frusto-conical form, one of said sections having both of its ends open, a lead calk connection between the sections, the second section having a closed bottom, said bottom being provided with a pair of spaced threaded openings, an inlet pipe connected with one

of the threaded openings, an outlet pipe connected with the opposite threaded opening, a vertically extending bendable pipe connected with each of the openings, a coupling connected with the free ends of both of the pipes, the open top of the upper section having a cover, the said upper section being approximately centrally provided with a continuous offset, a closure positioned upon this offset, and said closure having its under face provided with a coating of non-heating conductive material.

983,194. LOCKING DEVICE FOR DRAW-BRIDGES. Roe Manning Agnew, Chesaning, Mich. Serial No. 461,592.

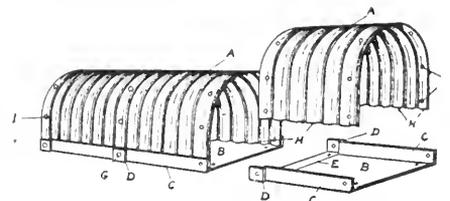

The combination with a pier and a movable bridge structure mounted independently of said pier and adapted to strike

thereon as the bridge closes, of an automatic locking device mounted on said pier, and adapted to engage and hold said structure to the pier, and a solenoid connected with said locking device to withdraw the same from such engagement.

983,623. METAL CULVERT. James B. Jarmin, Spokane, Wash., assignor to one-half to John S. Beall, Portland, Ore. Serial No. 476,779.

In a culvert, a lower section of plate form having upturned side flanges with lateral offsets at one end and a depressed flange between said offsets designed to receive the opposite end of a mating section and so constructed that when the opposite end of the mating section is placed upon said depressed end flange and between

said lateral offsets the upper portions of the bottoms of the two upper sections will be substantially in alignment with each other as well as the inner surfaces of the upturned side flanges, curved corrugated top sections designed to be secured together at their adjacent ends and also secured to the up-turned flanges of the bases, and means for securing the bases together.

STATE	CITY	RECEIVED UNTIL	NATURE OF WORK	ADDRESS INQUIRIES TO
STREET IMPROVEMENTS				
Ohio	Cincinnati	Feb. 24, noon	Resurf. Independence st., also culvert and fill on Mt. Alverno rd; Impr. Loveland and Madeira road	Fred Dreihls, Clk. Co. Comrs. Dept. of Pub. Works.
New York	Buffalo	Feb. 24, 11 a.m.	Paving various streets	
Florida	Jacksonville	Feb. 24, 9:30 a.m.	Pave por. of Lincoln ave. and grad. unfinished portion of Mandarin road	C. W. Ellis, Chm. Co. Comrs. Fred A. Klipfel, Village Clerk.
Ohio	Wapakoneta	Feb. 25	Improv. Mechanic street	B. M. Cook, Village Clerk.
Ohio	Lakewood	Feb. 27, noon	Pave Summit and repair brick pave. in other streets	E. D. Rightmire, City Engr.
New Jersey	Atlantic City	Feb. 27	Pave. Pennsylvania and Albany aves.	Chas. E. Treman, Supt. Pub. Wks.
New York	Albany	Feb. 27	Construct various highways in Oneida County	Jos. B. Harrington, Clk. Talbot C.
Maryland	Easton	Feb. 27, noon	Grading and macadamiz. about .83 mile Dover Bridge road	
Alabama	Eutaw	Feb. 27, 2 p.m.	Constructing 8,500 sq. yds. tar cap macadam street paving; 2,850 linear ft. cement curbing; 2,150 sq. yds. cem. sidewalks	John W. Cook, Mayor. F. M. Abbott, Mayor.
Kansas	Chanute	Feb. 27, noon	Constructing one-half mile macadam road	H. I. Maclay, Boro. Secretary.
Pennsylvania	Munhall	Feb. 28, 5 p.m.	Paving 1,100 ft. of Eighth ave.	F. T. Patterson, City Clerk.
North Carolina	New Bern	Feb. 28, 8 p.m.	Approx. 40,000 sq. yd. paving	Lieut. E. H. Wagner, 29th Inf. U.S.
New York	Fort Niagara	Feb. 28	Construct concr. walks and macad. and clay roads	
New York	Sackett's Harbor	Mar. 1, 2 p.m.	Constr. approx. 28,800 sq. ft. macad. road. and 800 sq. ft. concr. walk at Madison Barracks	Constructing Q.M. M. Peterson, Secy. Bd. of Control.
Manitoba, Can.	Winnipeg	Mar. 1, 11 a.m.	Supply 1,000 to 1,500 tons asphalt for paving	W. Lea Smith, County Auditor.
Indiana	Portland	Mar. 1, noon	Improving certain highways	W. T. Brooks, Engineer.
Virginia	Norfolk	Mar. 1, 12:30 p.m.	Regulating and paving about 4,125 sq. yds.	County Clerk.
Kentucky	Louisville	Mar. 1, 2 p.m.	Paving various streets with asphalt	L. S. Polk, Secy. City Clerk.
Texas	Sweetwater	Mar. 4	Constr. about 22,000 sq. yd. macad-asph. pave.	W. A. Harris, Secy. Bd. Pub. Wks.
New Jersey	Plainfield	Mar. 6	Furnish crushed stone, culverts, etc.	B. I. Bizler, City Clerk.
Virginia	Spottsylvania	Mar. 6	Constructing 1 3/4 miles macadam road	John W. Weaver, County Auditor
Indiana	Fowler	Mar. 6, 1 p.m.	Constructing three stone roads	M. Stockman, Town Clerk.
Indiana	Huntington	Mar. 6	Constructing gravel road	
New Jersey	Irvington	Mar. 6, 8 p.m.	Constructing telford pavement in Myrtle ave. and Park place	
New Jersey	Belleville	Mar. 7, 9 p.m.	Furn. five-inch bottom stone, two and one-half inch and one and one-half inch broken stone and screenings, first quality Orange Mountain traprock	C. Lyman Denison, Chm. Twp. Com.
Ohio	Wooster	Mar. 7, 1 p.m.	Grading and paving 0.71 mile of road	J. H. Villard, Chm. Bd. C. Comrs.
Ohio	Lorain	Mar. 7, noon	Constructing sidewalks, cross-walks and repairing	L. B. Johnston, Clerk.
Georgia	Savannah	Mar. 9, noon	Furn. 5,000 cu. yd. cem. gravel or like material for imp. pub. rds.	County Commissioners.
Mississippi	Jackson	Mar. 9	Constr. gravel and sand roads. \$100,000 bonds issued	Mayes Cooper, Hwy. Engr.
Minnesota	Worthington	Mar. 13, 2 p.m.	Grade approx. 10,066 yards	E. C. Pannell, Co. Aud.
SEWERAGE				
New York	Hastings-on-Hud	Feb. 24	Construct sewers in various streets. About 16,000 feet	Jos. E. Murphy, Clerk Bd. Trust.
Ohio	Toledo	Feb. 24, noon	Constructing local sewer	Fred Shane, Secy. Bd. Pub. Serv.
Missouri	St. Louis	Feb. 24, noon	Constructing Baden public sewer	Board of Public Improvements.
Colorado	Colorado Springs	Feb. 24	Constr. brick sewers, incl. 1,255 hn. ft. 48-in., 3,975 ft. 36, 30 and 27 in. and 15,408 ft. 24, 21, 18, 12 and 10 in. clay or concrete pipe	I. S. Nichols, City Clerk.
Ohio	Akron	Feb. 24, noon	Constructing sanitary sewer	J. W. Gauthier, Dir. Pub. Serv.
Ohio	Oakley	Feb. 27	Constr. sewer in Taylor ave.	Oscar Kosche, Village Clerk.
Ohio	Lakewood	Feb. 27, noon	Construct sewer main in Riverside road	B. M. Cook, Village Clerk.
Ohio	Cleveland	Feb. 28, noon	Construct sewers in Cleveland Heights	H. H. Canfield, 309 Beckman Bld.
Iowa	Corydon	Feb. 28, 3 p.m.	Constructing three miles of sewers and a disposal plant	City Clerk.
Michigan	Niles	Mar. 1, 8 p.m.	Constructing main trunk sewer	Herman Roebbeck, City Clerk.
Arizona	Parker	Mar. 1, 2 p.m.	Construct sewer at Colorado River School	Comr. Ind. Affairs, Wash'n., D. C.
New York	Watertown	Mar. 3, 8 p.m.	Constr. sanitary sewer, requiring approx. 1,800 ft. 20-in. tile; 300 ft. 18-in. tile; 300 ft. 16-in. tile; 1,200 ft. 12-in. tile; 1,200 ft. 10-in. tile	Board of Public Works.
Illinois	Bement	Mar. 3, 1 p.m.	Furnishing material and constructing system of storm sewers and outflow drain	W. I. Day, Pres. Bd. Loc. Imp.
Wisconsin	Stoughton	Mar. 3, noon	Constructing sewerage system	J. C. Currier, City Clerk.
New Jersey	Bridgeton	Mar. 7, 8 p.m.	Construction of disposal works and pumping station	D. B. Jones, City Clerk.
Idaho	Pocatello	Mar. 9, 8 p.m.	Constructing trunk sewers	W. W. Church, Mayor.
Georgia	Atlanta	Mar. 14	Constr. intercepting sewer and disp. plant	R. M. Clayton, Com. Pub. Wks.
California	San Jose	July 3	Construct septic tank for County hospital	City Clerk.
WATER SUPPLY				
Nebraska	Battle Creek	Feb. 25 noon	Constructing water works	C. T. Richardson, Village Clerk.
Pennsylvania	Akron	Feb. 27, 8 p.m.	Constructing water plant	P. D. Getz, Clerk of the Council.
Georgia	Gainsville	Feb. 27	Improving and extending water works system	J. W. Barnett, Cons. Engr. Athens, G.
Ohio	Euclid	Feb. 27, noon	Construct 6-in. water main	F. H. Shoaff, Village Clerk.
Ohio	Lakewood	Feb. 27, noon	Construct water main in Franklin ave.	B. M. Cook, Village Clerk.
New York	Fort Terry	Feb. 28, 11 a.m.	Constr. concr. reserv. and extend water main	Capt. F. T. Arnold, Constr. Q. M. U.S.A., New London, Conn.
Illinois	Niles Center	Feb. 28, 8 p.m.	Constr. w. works, incl. bldgs., machy. tower, reserv. and dp. well	Geo. H. Klehm, Pres. Bd. Trust
Iowa	Corydon	Feb. 28, 3 p.m.	Constructing 6 miles 4 to 8-in. water mains, 70,000 gal. steel tank on 100 ft. tower, pump-house, reservoir, valves, pumps, motors	City Clerk.
Ontario, Can.	St. Catherines	Feb. 28	Furn. c. i. pipe and special cast. for 36-in. gate val. 4 to 3 1/2 in.	Chm. W. Wks. Com.
Missouri	Sikeston	Mar. 1, 8 p.m.	Constr. water supply system	H. C. Hester, City Clerk.
Illinois	Apple	Mar. 1	Constructing water works	George Guy, City Clerk.
Pennsylvania	Coraopolis	Mar. 1, 7 p.m.	Furn. million and a half triplex pump; 150 H.P. gas engine; 2 two hundred and twenty five H.p. gas engines dir. con. to A.C. generators; two 175 KVA generators; 1 fifty KVA generator; switch board etc.	S. B. Martin, Cons. Eng. Boro. Clk.
New York	New York	Mar. 1	Laying water mains, etc., in various streets, and removing existing water mains	Henry S. Thompson, Comr. W. Sup.
Montana	Harlowtown	March 2	Constr. reservoir, cap. 250,000 gals., and lay. 3,550 ft. of 8-in. and 400 ft. of 6-in. main, with hydrants, etc.	S. K. Campbell, Town Clerk.
British Col., Can	Victoria	March 3	Furn. 250 4-in., 100 6-in. and 10 12-in. double gate valves, and 15 tons best blue pig lead.	Wm. H. Northcott, Purch. Agt.
Michigan	Mt. Clemens	Mar. 3	Furn. a 3,000,000-gal. pumping engine for water works	Winfred Ferrin, Deputy City Clk.
Illinois	Wheaton	Mar. 6	Furn. 60 h.p. gas engine, gas producer, pumps; 100,000 gal. concrete reservoir, etc.	Louis Ellsworth, City Clerk.
South Dakota	Bridgewater	Mar. 6, 8 p.m.	Constr. water tank and tower, cap. 50,000 gal. height 125 ft.	O. A. Rietz, City Auditor.
Wyoming	Sheridan	Mar. 6, 3 p.m.	Constr. water supply main with approx. 7,934 ft. of 14-in. and 760 ft. of 10-in. c. i. pipe	Arnold Tschirgi, City Engr.

Minnesota	Dauphin	Feb. 25, 8 p.m.	Constructing 2 reinforced concrete highway bridges	J. W. Johnston, Town Clerk.
Rhode Island	Providence	Feb. 25, 10 a.m.	Repairing Crawford Street Bridge	Wm. C. Pelkey, Clk. Bd. C. & S.
North Dakota	Yankton	Feb. 27, 7:30 p.m.	Constr. concr. bridge over Rhine Creek, 50-ft. span	John W. Summers, City Aud.
Florida	Jacksonville	Feb. 27	Constr. bridge over Hogans Creek	City Clerk.
Ohio	Springfield	Feb. 28	Constr. 120 ft. bridge over Mad river	County Commissioners.
Ohio	Urbana	Feb. 28, 10 a.m.	Rebuilding joint county bridge over Mad river	Joint Board of Comrs. Clark and Champaign Counties.
Virginia	Danville	Mar. 1	Constr. superstructure for bridge; est. cost \$40,000	J. O. Wayman, City Engr.
New York	Kingston	Mar. 2	Construct concrete bridge across creek at Eddyville	Jan. F. Loughran, Supt. Hwys.
Ohio	Lanark	Mar. 4, 6 p.m.	Bldg. rein. conc. single span bridge 70 ft. long	J. Boyd Caldwell, Chm. R. & B. Com.
Ohio	Port Clinton	Mar. 6	Constructing a draw bridge	W. H. Mylander, County Auditor.
New York	White Plains	Mar. 6, 10 a.m.	Rebuilding two bridges	E. A. Forsyth, Chm. Bd. Super.
California	Los Angeles	Mar. 6, 2 p.m.	Constr. concrete arches, graveled approaches, curbs, fences, hand-railing, pylons, etc., across Arroyo Seco and extension of Pasadena Ave.	H. T. Lelande, County Clerk.
California	South Pasadena	Mar. 6, 2 p.m.	Constr. 6 arch concr. bridge, 600 ft. long	Wm. L. Cox, City Clerk.
Wisconsin	Janesville	Mar. 7, 2 p.m.	Constr. 2 bridges across Rock River, one 384 and one 264 ft. long	W. F. Carle, Chm. St. Assess. Com.
Wisconsin	Hamilton	Mar. 11, 10 a.m.	Construction of bridge and road fill	J. E. Brate, County Auditor.
LIGHTING AND POWER				
Nebraska	Omaha	Feb. 28, 8 p.m.	Furn. street lighting with incandescent street lamps, includ. lighting, extinguishing, cleaning, repairing, maintaining, painting posts, for period of 3 years	Dan B. Butler, City Clerk.
Ohio	Cincinnati	Feb. 28	Lighting by electricity streets and squares for ten years	John J. Wenner, Clk. Bd. Pub. Serv.
Ohio	Atlantic	Mar. 1	Imp. Elec. Lt. and Power Plant, probable cost \$40,000	E. T. Nichols, City Clerk.
Ohio	Monterey, N. L.	Mar. 1	Erection of gas plant	Lewis Lukes, Apartado 58.
Ohio	Strathcona	Mar. 1	Install engines, boilers and generators	David Ewing, Ch. Engr.
Pennsylvania	Coraopolis	Mar. 1, 7 p.m.	Furn. one 1,500,000 gal. triplex pump; one 150 h.p. gas eng. for driving pump; two 225 h.p. gas engines, to be dir. con. to 175 K.V.A., 2,300 volts, 60 cycles, 3-phase alter. cur. gener.; one 75 h.p. gas engine to be dir. con. to 50 K.V.A.; two 175 K.V.A., 2,300 volts, 60 cycles, 3-phase alter. cur. gener. comp. with exciters; one 50 K.V.A.; one 5-panel switchboard, compl. one 50-light series, luminous or metallic flame arc lamp equipment complete.	E. C. Harper, Borough Clerk.
Massachusetts	Boston	Mar. 4	Furn. and install approximately 11,000 gas lamps with incandescent mantel burners; additional alternative bids for automatic lighting devices; special post extensions; and furnishing additional parts and repairs; also maintaining 11,000 gas lamps for period of ten years; city to have option of installing automatic lighting device at any time	Louis K. Rourke, Comr. Pub. Wks.
FIRE EQUIPMENT				
New York	New York	Feb. 27, 10:30 a.m.	Furn. two automobile hose wagons; also two 1½ ton mot. tr.	R. Waldo Fire Comr.
Minnesota	Helena	Feb. 29, 8 p.m.	Furn. comb. auto. fire wagon, carry, 2,000 ft. hose and one 35 gallon chemical tank	J. A. Mattson, City Clerk.
Minnesota	Bozeman	Mar. 2, 5 p.m.	Furn. 80 to 90 h.p. A. L. A.M. rating auto, chem. gasoline wagon with speed of 45 mi., including 1,200 ft. of 2½ hose, 40-gal. chemical, tank, etc.	A. M. Brandenburg, City Clerk.
Ontario, Can.	Ottawa	Mar. 14, noon	Furn. comb. automobile fire engine of pump, capacity of 700 to 800 gallons a minute	John Henderson, City Clerk.
New Jersey	Princeton	July 5	Furn. auto pumping engine	E. M. Updike, Chm. F. & W. Com.
MISCELLANEOUS				
Pennsylvania	Wilkes Barre	Feb. 24, noon	Constructing police station	Fred H. Gatten, City Clerk.
Alabama	Gadsden	Feb. 25	Constructing county jail	Judge Herzberg, Probate Judge.
Michigan	Escanaba	Feb. 25, noon	Constructing public bath house	Geo. M. Mashek, Pres. Bd. Pk. Comrs
Missouri	Topeka	Feb. 27, noon	Furnishing 12 dump wagons with two-yard beds	C. B. Burge, City Clerk.
California	Sacramento	Feb. 27	Improving South Side Park	M. J. Desmond, City Clerk.
Indiana	Logansport	Feb. 28	Two boilers and resetting old ones	Wm. Pickett, City Clerk.
Minnesota	Minneapolis	Mar. 1, noon	Furnishing and delivering one ton motor truck; 4 motor cycles; 1 gasoline launch; twelve 16 ft. cedar row boats; 50 canoes with wood sponsons 16 to 18 ft.; 500 park settees	J. A. Ridgway, Secy. Park Com.

STREET IMPROVEMENTS

Helena, Ark.—City has decided to pave number of streets.

Phoenix, Ariz.—Bids will soon be asked proposed paving of streets; pavement consist of hydraulic concrete base covered with asphalt, from specifications by engineer A. P. Campbell, Riverside, Cal.—P. Turney, City Engineer.

Los Angeles, Cal.—Plans are being prepared for the improvement of Alhambra from Mission road to the city limits; distance about 16 blocks; the roadway will 50 ft. wide, paved with asphaltum, and 25-ft. parkways.—Homer Hamlin, City Engineer.

San José, Cal.—Surveys and plans have been prepared for street improvements; cost \$40,000.

New Britain, Conn.—Board of Public Works is considering resurfacing of West st. at cost of \$7,000.

New Castle, Del.—Citizens have voted \$10,000 bonds for improvement of streets.

Wilmington, Del.—Highway Commissioner Price has been instructed to advertise for bids for building road from Lower Brandywine Church to Pennsylvania State line.

Waycross, Ga.—City is considering paving of sidewalks on principal streets; bids for about 10,000 yds. of concrete walk will be invited at once.

Batavia, Ill.—Board of Local Improvements has adopted plans for paving Main st.; macadam and tarvia to be used; cost about \$9,071.50.

Belvidere, Ill.—Board of Local Improvements has approved project to macadamize one mile of street near City Park.

Glencoe, Ill.—Plans are being prepared by Engineers Windes & Marsh, Winnetka, for five or six miles of pavement and five to six miles of concrete walks.

Evansville, Ind.—Board of Works is considering improvement of Virginia st.

Michigan City, Ind.—County Commissioners have ordered building of proposed McBride macadam road.

Muncie, Ind.—Board of Public Works will at once order paving of four streets.

Richmond, Ind.—Bids will be received by the Board of Public Works about March 5 for 15,000 sq. yds. of paving, with concrete curb and gutter, on North D and North E sts.—F. R. Charles, City Engineer.

Hampton, Ia.—City proposes to pave four blocks with brick and three alleys with cement.—Hall & Adams, Centerville, Engineers; W. H. Lackey, City Clerk.

Tacoma, Wash.—Commissioner Nicholas Lawson, of Department of Light and Water, is planning to improve water supply for next summer by drilling another large, open well at a point about opposite South Lawrence and 34th sts., from which he hopes to obtain 3,000,000 gals. every 24 hours.

Calgary, Alta., Can.—Citizens will soon vote on \$245,000 by-law for water works extension; \$256,000 has already been voted.—A. G. Graves, City Commissioner.

Penticton, B. C., Can.—Contract will be let in two or three months for construction of water works system; cost about \$130,000.—F. E. Tiley, City Clerk.

CONTRACTS AWARDED

Anna, Ill.—Supplying water to city, to Bruchhauser Bros., 9½c. per 1,000 gals for 50,000 to 75,000 gals. daily; 8½c. for 75,000 to 150,000 gals. and 7c. per 1,000 for 150,000 to \$300,000 daily.

Chicago, Ill.—Furnishing 3,514 tons of c.-i. water pipe, to United States C. I. Pipe Co., 638 The Rookery, \$23.75 per ton for all sizes of pipe; special castings, to same; flange specials, \$54.25 per ton; hub and spigot specials, \$44.65 per ton; tapping connections, to T. A. Cummings Foundry Co., 1338 Clybourn ave.; lead pipe, one year's supply, to Gardner Lead Pipe Co., 1374 W. Lake st., 5.04c. per lb.; sewer pipe, 30,000 ft. 4-in., to Wm. E. Dee & Co., 108 La Salle st., 3.2-5c. per ft.; 600 ft. 6-in., 5c. per ft.; 600 ft. 9-in., 10c. per ft.

East Moline, Ill.—By Water and Light Committee, to J. P. Miller, representing Artesian Well Co. of Chicago, to drill artesian well.

St. Paul, Minn.—Equipping artesian wells at McCarron Lake with pumping machinery, to Robinson, Cary & Sands Co., St. Paul, lowest bidder, \$26,812.

Columbia, Mo.—Drilling two wells, to P. L. Crossman & Son, Joplin, \$4,428.

Niagara Falls, N. Y.—Furnishing about 35 tons of 26-in. c.-i. pipe, to U. S. C. I. Pipe Co., \$22,400.

Huron, S. D.—To Frank Jaehn Construction Co. for pumping plant, for brick pump house, including stack base and steel stack complete, \$4,859; to W. D. Lovell, Minneapolis, for construction of a reinforced concrete reservoir, \$9,900; to E. J. Merkle & Co., Kansas City, for construction of a power plant for water works system, \$13,000, including complete pumping plant with opposed type of pumping engine; plant is to be completed and in operation for both domestic and fire service on Aug. 1, subject to liquidated damages of \$20 per day for any delay after that date; to Des Moines Bridge and Iron Co. for construction of steel tower and tank.

Corpus Christi, Tex.—Furnishing pumps, to Griggs Weaver Co., Dallas, \$4,024.

BIDS RECEIVED

St. Paul, Minn.—Equipment of the six artesian wells at McCarron Lake as follows: Baily & Marsh Co., Minneapolis, two bids, \$28,796 and \$25,796; Hanke & Eha, city, \$22,958; R. B. Whittaker, city, three bids, \$29,600, \$30,700 and \$32,200; Robinson, Cary & Sands Co., city, two bids, \$26,812 and \$27,165; J. G. Robinson & Co., city, \$37,090; propositions cover direct lift, the air lift and the centrifugal pump operated by electric current.

Huron, S. D.—Bids received by Engineer Wolff for proposed water works improvements, (a) brick pump house complete with steel stack and brick base, (b) brick chimney in place of steel stack and brick base: Cook Construction Co., Des Moines, Ia., (a) \$4,900, (b) \$1,400; Frank Jaehn Construction Co., city, (a) \$4,859, brick chimney, (b) \$2,006; Tanner Bros., Webster, (a) \$5,295, (b) \$1,380; Betz Construction Co., city, (a) \$5,425, (b) \$2,300; construction of the pumping plant, (a) steam plant, (b) oil engine plant, (c) gas producer engine plant: Betz

Construction Co., city, (a) \$15,800, (b) \$18,500, (c) \$16,690; Dwyer, Field & Co., St. Paul, (a) \$15,000, glider frame, \$14,200, (b) \$18,500, vertical engine, \$17,900, (c) \$16,000, (c) \$13,200 plus \$1,400 one unit in place of 2, \$1,000 extra for Bituminous producer; Fraser & Danforth, Rochester, Minn., (a) \$13,500, E. J. Merkle, Kansas City, Mo., (a) \$12,550, (c) \$13,000; J. G. Roberts, St. Paul, (a) \$12,733, opposed type of engine, (a) \$12,800, 18-in. stroke, one wheel type, (a) \$14,000, 18-in. stroke, two wheel type, (a) \$13,823, 24-in. stroke, (a) \$15,819, 24-in. stroke, opposed type, four bearings, (a) \$15,485, 24-in. opposed type, two bearings; Minneapolis Steel and Machinery Co., Minneapolis, (c) \$15,775, (c) \$9,800, one 80-h.p. unit; Gould Co., informal, Chicago, \$1,735, one 600-gal. triplex pump on foundation, \$1,894, one 800-gal. triplex pump on foundations; De La Veigne, informal, Kansas City, \$7,910, one 50-h.p. and one 80-h.p. H. A. engine, \$7,355, one 85-h.p. F. H. engine; for construction of reinforced concrete reservoir, Peter Nelson, Huron, \$12,400; Cook Construction Co., Des Moines, Ia., \$10,205; Des Moines B. and I. Co., Des Moines, Ia., \$12,200; Tanner Bros., Webster, \$10,480; Betz Construction Co., city, \$13,359; Iowa Bridge Co., Des Moines, Ia., \$10,400; W. D. Lovell, Minneapolis, \$9,900; Fraser & Danforth, Rochester, Minn., \$10,200, Ia and Ill, \$23,800; Lewis & Lederer, Sioux City, Ia., \$13,200; J. W. Turner, Des Moines, Ia., \$12,490; construction of steel water tower and tank complete, (a) in accordance with plans and specifications, (b) according to manufacturers' standard plan; Cook Construction Co., Des Moines, Ia., \$11,600; Des Moines B. & I. Co., (a) \$11,088, (b) \$10,825, 6 post special, (b) \$10,975, 6 post special with balcony, or \$10,604, 4 post standard; Iowa Bridge Co., Des Moines, \$11,398; W. D. Lovell, Minneapolis, \$11,800; Chicago B. & I. Co., Chicago, (a) \$11,800, (b) \$12,000; Minneapolis Steel and Machinery Co., \$11,320; Kennicott Co., Chicago, (a) \$11,466, (b) \$10,505; Black Hawk Construction Co. of Waterloo, Ia., bid on entire plant \$38,641 plus \$1,396 for brick chimney.

LIGHTING AND POWER

Eufaula, Ala.—City has selected engineer to estimate cost of constructing electric light plant.

Snyder, Ark.—Citizens have voted \$40,000 bonds for extension of electric light and water systems.

Wynne, Ark.—City will rebuild electric light plant, changing system from direct to alternating current; \$50,000 bonds will be issued.—W. H. Almut, Superintendent.

Elsmore, Cal.—M. A. Gardner and M. L. Camburn have secured franchise to lay and operate gas distributing system; test well for natural gas will be sunk.

Merced, Cal.—San Joaquin Light and Power Co. is preparing to make improvements to its gas system, including erection of gas holder, to cost about \$25,000.

Santa Ana, Cal.—Residents of Tustin have voted to establish lighting district.

Ventura, Cal.—Board of Trustees will consider establishment of municipal lighting plant.

Wilmington, Del.—A. C. Wood, Consulting Mechanical Engineer, Philadelphia, Pa., is preparing report on question of installing municipal lighting plant.

Hope, Ida.—Construction of municipal electric light plant is being considered.

Peoria, Ill.—Walter J. Spruck is circulating petitions asking for installation of ornamental lighting system from river to Glen Oak.

Cynthiana, Ind.—Town Board has sold bonds for construction of electric light plant.

Columbia, Ky.—Columbia Lighting Co. is considering installing 60-kw. direct-current generator; proposes changing system from alternating current to direct current.—A. H. Pallard, Secretary.

Baltimore, Md.—Robert J. McCuen, Superintendent of Lamps and Lighting, has submitted to Board of Estimates application of Patapco Electric and Manufacturing Co., of which Victor G. Bloede is president, asking for franchise to extend its lines to municipal buildings, so as to enable company to enter competition for lighting city.

Chestertown, Md.—Federal Engineering and Construction Co., Philadelphia, has applied to Town Council for a gas franchise.

PROPOSALS

NOTICE OF RECEIVING BIDS FOR THE CONSTRUCTION OF A MAIN TRUNK SEWER

Niles, Mich.
Take notice that the Board of Public Works will meet at the Council Rooms in the City of Niles on the 1st day of March, 1911, at 8 o'clock p. m., for the purpose of receiving written sealed proposals for the construction of a main trunk sewer, commencing at the St. Joseph River, running thence east on Sycamore Street to its intersection with Seventh Street; thence south on Seventh Street to its intersection with Broadway; thence east on Broadway to the east side of Ninth Street, in accordance with the maps, plans, diagrams and specifications now on file with the City Clerk, and which have been duly approved and adopted by the Common Council of the City of Niles, and to which reference is made.

That each bidder is required to file his sealed proposal with the City Clerk on or before 8 o'clock p. m. on Wednesday, March 1st, 1911; and each proposal shall be accompanied by the bidder's certified check for five hundred (\$500.00) Dollars, payable to the City of Niles, in case said bidder's proposal is accepted and said bidder neglects to enter into a contract with said City within ten (10) days after the acceptance of his bid.

That the person to whom the contract is awarded will be required to enter into a bond as required by the resolutions heretofore adopted by the Common Council and the Board of Public Works of the City of Niles, and by the Statutes of the State of Michigan.

The Board of Public Works reserves the right to reject any and all bids.

By order of the Board of Public Works.
HERMANN ROEBECK,
City Clerk.

SEWER AND DISPOSAL PLANT

Atlanta, Ga.
Sealed proposals, addressed to the Mayor of the City of Atlanta, will be received by the Mayor's Secretary, until 3 p. m., March 14, 1911, for furnishing all labor and materials for constructing Intrenchment Creek Disposal Plant; also the Intrenchment Creek Intercepting Sewer from the County Line to the location of the plant, and for constructing what is known as the DuBos Aqueduct on the Peachtree Creek Intercepting Sewer line, and the Aqueduct and Bridge over the Orme Street branch on the Collier Road, and the Aqueduct on Intrenchment Creek. Work to be done in accordance with the plans and specifications on file in the office of the Chief of Construction, Atlanta, Ga. Bids to be made on the blanks submitted with the specifications. A certified check as required in the specifications must accompany each bid. Plans and specifications will be furnished on application to the Chief of Construction, Atlanta, Ga., or Messrs. Hering & Fuller, No. 170 Broadway, New York, N. Y.
A deposit of \$25.00 will be required for a copy of the plans and specifications.

AUTO FIRE TRUCK

City of Bozeman, Gallatin County, Mont.
Notice is hereby given that sealed proposals will be received by the undersigned up to 5 o'clock p. m., March 2, 1911, for one Auto Combination Chemical and Hose Wagon, according to following specifications:
H. P.—80 to 90—A. L. A. M. Rating; speed 45 miles per hour; partition body; 1,200 feet 2½-in. hose; 40 gallon steel chemical tank and basket for 250 feet ¾-in. chemical hose; two short extension ladders; Bosch magneto; electric lights and revolving search light on dashboard; with or without dual tires; capacity eight men. Complete specifications to be furnished with each proposal.
A. M. BRANDENBURG,
City Clerk.

PROPOSALS

WATER WORKS PLANT

Spring Lake, N. J.
Sealed proposals will be received by the Council of the Borough of Spring Lake Monmouth County, N. J., at the office of the Borough Clerk, until 2 o'clock p. m. Friday, March 10th, 1911, and will be publicly opened and read immediately thereafter, for furnishing, delivering and erecting the complete mechanical equipment of an Artesian Water Works Plant, comprising the following:

- Brick Pumping Station, with Boiler House annexed.
- Radial Brick Stack and Foundation.
- Concrete Reservoir.
- Concrete Building and Machinery, Foundations and Floors, etc.
- Five Artesian Wells.
- Two Triple Expansion, Direct-Action Pumping Engines.
- One Duplex Cross-Compound Steam Two-Stage Air Compressor.
- One Surface Condenser, with combined air and circulating Pump.
- One Boiler Feed Pump.
- Two Feed Water Heaters.
- Three Return Tubular Boilers, and Stack Breaching.
- Suction and Discharge Mains to Pump and Reservoir.
- Piping Seven Artesian Wells.
- Conduit from Wells to Reservoir.
- Removal and resetting old Boiler.
- Removal and resetting old Air Compressor.
- Steam and Exhaust Connections to Boilers and Machinery.

One Simplex Water Meter.

Each proposal must be accompanied by a certified check, to the order of W. W. Trout, Treasurer, in the sum of 5 per cent. amount of each bid, or same will not be considered. A bond in the sum of 50 per cent. of the contract price will be required for the faithful performance of the contract.

The Council reserves the right to reject any or all bids, or to accept any bid should it deem it to be for the best interests of the Borough of Spring Lake to do so.

O. H. BROWN, Mayor.
E. V. Patterson, Borough Clerk.
Borough of Spring Lake, N. J.
JOS. L. SWEIGARD, Engineer.
Betz Building, Philadelphia, Pa.

SAND FILTRATION PLANT, PUMPING EQUIPMENT AND APPURTENANCES

Ogdensburg, N. Y.
Sealed proposals will be received by the Board of Water Commissioners, Ogdensburg, N. Y., at its office, until 12 o'clock noon, March 7, 1911, for the construction of covered sand filters, pipe lines, steam and electrical pumping machinery, water turbine, electrical equipment, boilers and other appurtenances.

Plans may be seen and copies of the specifications, proposal, bond and contract obtained at the above office, or at the office of Hazen & Whipple, Consulting Engineers, 103 Park Avenue, New York City.
JAMES M. WELLS, Chairman.
FRANK CHAPMAN,
GEORGE F. DARROW,
DR. WILLARD N. BELL,
Water Commissioners.

STABLE AND WAGON HOUSE FROM NORTHEAST

MUNICIPAL STABLE AND WAGON HOUSE

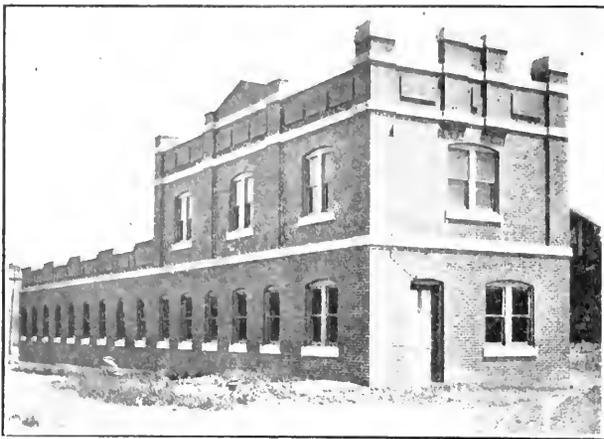

For Water Works Department—Construction Details—Brick, Timber and Concrete Used—All Rooms Have Concrete Floors and are Well Drained—Pipe Handling Trestle and Storage Yard.

THE city of Reading, Pa., completed last year a new stable and wagon house for the water works department, a considerable part of the property on which this building is located being also arranged for use as a storage yard. The city had previously maintained a storage yard, shop and stable, but the quarters were altogether too contracted and as it was impossible to extend them without purchasing expensive property, if at all, it was decided to move to a new site and construct the buildings and pipe handling structures herein described. The property contains one acre and thirty-two perches. At the time it was purchased it contained a siding from the Philadelphia & Reading Railway, a brick foundry building, traveling crane, frame

boiler house, engine room, sheds, office building, boiler, engine and drill press. This property cost about \$12,000.

Few of the buildings or pieces of machinery were considered suitable for use by the department, and the city at once proceeded to construct a stable and wagon house and a work shop, and such steel trestles and traveling cranes as were desired for the handling and storing of iron pipe and specials.

The stable and wagon shed were built of brick with stone trimmings, and an effort was made to give the exterior a pleasing although not ornamental appearance. This structure consists of two parts, a one-story wagon house, and south of this a two-story stable. The wagon house is 64 ft. 3 in. long by

STABLE AND WAGON HOUSE FROM SOUTHWEST

20 ft. wide and is enclosed by a rear 12-inch brick wall, two end brick walls each 9 inches thick, and a front composed entirely of doors, there being eight double doors, each pair being separated and supported by a 6 x 6 spruce post with a 1¼-inch board nailed to each side. Each doorway is 7 feet wide in the clear by 12½ feet high. Each of the spruce posts is supported on a 6 x 6 x 6 stone block, the block and post being held in place by an iron dowel extending into the foundation. All walls and posts rest upon concrete foundations. The entire floor of the wagon room is of concrete 6 inches thick and slopes toward two drain openings provided with bell traps for carrying off wash water. Opposite each doorway, in the rear wall, is a window, and these, together with the open front, serve to light the wagon room thoroughly. The roof is an ordinary peak roof of 2 x 8 rafters and tie beams spaced 2 feet between centers.

South of and communicating with this and also with the stable, and located between the two, is the manure room which is 8 feet wide by 20 feet deep, provided with a window at the west end and a doorway at the east end the full width of the room; also with two small doors, one opening into the wagon room and the other into the stable. In this room also there is a drain opening with a bell trap.

South of the manure room is the stable, a rectangular room 35 feet 3 inches long by 20 feet wide and containing five stalls. In the east wall there are two doors each 5 feet 6 inches wide by 9 feet high, and two windows; and in the west wall there is a window with movable sash for each stall. The stalls all drain to the concrete floor in front of them and the entire stable drains to a bell trap at the north end. The floor in front of the stalls is of 6-inch concrete and the floors of the stalls themselves are of well-packed earth. The partitions between the stalls are of plank carried up a height of about 6 feet, and fastened at the west end to the wall of the building and at the east end to 6 x 6-inch oak posts. Each post rests upon a 6 x 6 x 6 stone block, which in turn rests upon a concrete foundation. A 1½-inch iron dowel pin 2 feet long is fastened in the concrete foundation, passes through the stone block and extends for about 6 inches into the bottom of the oak post, thus holding it in place. At the top the line of oak posts is tied together with a 6 x 8 oak beam, which also supports the floor beams above.

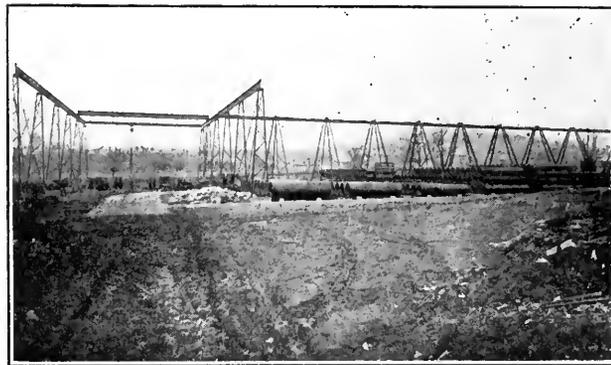

In the front part of this stable are two feed boxes, two harness closets, two closets for brushes and other small matters, and a watering trough. The watering trough is supplied with water through two ¾-inch faucets, one for hot and one for cold water.

The extreme south end of the building is occupied by an office 12 feet wide by 20 feet deep with a stairway leading to a room on the second floor. The second floor over the stable proper is used for storing feed, and for this purpose is provided with two doors, a projecting beam for carrying block and tackle being provided over the center of each door.

For draining this building a drain pipe is carried from south to north through the ground under the building a few feet to the east of the center line. This is 10 inches in size to the center of the stable, where it receives the drainage from the roof of the two-story section. From here it is continued as an 8-inch sewer pipe into the wagon shed, where it receives the roof water from part of the one-story section, just above which point it is reduced to 6-inch sewer pipe, and at the further end to a 4-inch. This drain receives, besides the rain water, the drainage from the wagon room, manure room and stable through the bell traps already referred to.

The second floor is supported on 2 x 8 beams 12 feet between centers, which beams are supported near the center line of the building by the oak beam, which, as before stated, rests upon the oak posts which form the fronts of the stall partitions.

This building was constructed by contract by Mr. Geo. H. Meinholz, the contract price being \$5,880. The necessary grading, construction of drives and building of drains was done by employees of the water department. The old sheds, boiler and engine house which were on the property when it was purchased were torn down to make room for pipe runs. The main building of those already existing was retained and a new boiler was placed in it, together with a small amount of ma-

STORAGE YARDS FOR PIPES AND SPECIALS

chinery, which it is expected to add to later. The railway siding was moved, lowered and extended to conform to the layout of the yard. The general plan of the pipe run, steel trestles, etc., is very simple and is indicated by the accompanying illustration. The traveling crane was purchased from J. G. Spiedel, and the steel trestles and runs, hoist and crane were erected by the W. F. Rempis Company.

WATER RATES IN NEW ORLEANS

In New Orleans all services are metered, the meters being set by the Sewerage and Water Board. The consumer has the option of paying either \$15 for a ½-inch meter installed and permanently maintained, on \$1.50 per year meter rental. The minimum rate is \$6.60 per year for 40,000 gallons, and 10 cents per 1,000 gallons for all in excess of this. There is, however, an unusual provision made necessary by the law governing the Board, which requires it to furnish water free for flushing water closets; to meet which requirement the Board, wherever water closets exist, allows for this purpose 4,000 gallons per capita per year above the quantity allowed for minimum rate, before excess water is charged to the consumer.

During 1909 the Board furnished free water to a considerable number of citizens by means of public faucets. These were self-closing and were attached to fire hydrants at distances apart of not less than two blocks. Up to the end of that year only about one-fifth of the residences of the city were connected to the mains, the balance relying upon rain water cisterns. During the drought many of these go dry, and the free water was furnished to prevent actual suffering among large numbers of people. The Board recognizes that the placing of faucets on fire hydrants is very objectionable, and is endeavoring to secure the introduction of city water into all houses.

MAKING WATER RATES

Method for Municipal Department Based on Business Principles—Payment for Fire Protection—Basis of Rates—Meters

By J. N. HAZLEHURST

From report to the Town of Clarksville, Tenn.

As a business proposition it seems altogether desirable that water rates be maintained sufficient to provide a revenue large enough to make these works self-sustaining.

It is of course understood that under municipal ownership the water plant is run upon a co-operative basis, and that it may be thought merely a matter of bookkeeping where one "robs Peter to pay Paul"; but this is not entirely true, for the burden of maintenance should fall most heavily upon the section or sections enjoying the larger benefits; and besides a self-respecting water management should receive a fair credit for services rendered—allowed some latitude in the matter of expenditures and payment without being called upon to become a pensioner upon the solicitor of the municipal bounty.

The matter of rate making is too often the result of slipshod or ignorant tinkering; sometimes with a little politics injected. Most frequently the rates are fixed by the council or a committee entirely by comparison of the schedules of other communities, perhaps approximately equal in the matter of population, but most generally entirely dissimilar in the local conditions affecting the cost of supplying water.

The following table compiled at random will show how water rates may differ upon important items in towns of about the same class in the Southern section:

Name.	6 in Family.	Bath.	Water Closet.	75 Foot Square Sprinkling.	Stable.	Total Flat Rate.
Clarksville, Tenn.	\$6.00	\$5.00	\$5.00	\$10.00	\$5.50	\$31.50
Memphis, Miss.	6.00	3.50	5.00	14.00	8.00	36.50
Montgomery, Ala.	12.00	12.00	8.00	12.00
Mobile, Ala.	6.00	6.00	6.00	10.00	5.00	33.00
Clarksville, Tenn.	6.00	6.00	5.00	5.00	6.00	28.00
Average.....	\$7.20	\$6.50	\$5.80	\$10.20	\$6.12½	\$35.82

Clarksville is a private plant; the others are municipal.

Fundamentally under municipal ownership, water rates are a direct tax for the use of water and like all taxes should be fully adjusted and equitably distributed.

Primarily the rates established should be sufficient to provide for (1) the fixed or overhead charges and (2) the maintenance and operating expenses.

Further differentiation of these two general requirements should be to create rates capable of (a) meeting the annual interest charge upon the cost of construction or purchase usually represented by a bonded debt; (b) laying aside each year a contribution to a sinking fund sufficient ultimately to extinguish the debt; (c) providing a similar fund annually commencing and calculated to accumulate a sum sufficient to replace worn obsolete or perishable parts; and lastly (d) the rates should be high enough in addition to safely meet current operating expense with a margin to take care of usual and anticipated extensions and betterments.

To meet these necessities without creating a burdensome surcharge, and at the same time charge no more for the service than the service is reasonably worth is a matter of nice adjustment and should be intrusted only to engineers or experts capable of understanding and dealing with such conditions and problems.

These revenues are derived from domestic consumers, manufacturing plants, railways, etc., for direct service, in addition to which private and public fire protection is paid for upon a "ready to serve" basis.

Eminent authorities have estimated that about one-half the cost of construction is chargeable to the necessity for furnishing adequate fire protection and that some 20 per cent of the operating charge is required to maintain this service.

Applying this average to your case, and assuming the cost of the works as represented by the bond issue to be \$105,000 upon a 5 per cent interest rate, and that the operating expense is \$18,000 per annum, then \$6,225 would represent the revenue which should be obtained from public or private sources for fire protection. It is generally customary to provide for such collections by an annual hydrant rental. Since Clarksville has 131 hydrants, the rate on each on this basis would amount to \$47.50, which would seem about in line when compared with the average of a recent tabulation of 70 Southern towns and cities which averaged \$44.00 for hydrant rental. To place the department upon a self-sustaining basis, some such sum should be regularly charged and collected from the city.

The remainder of the needed revenue must come out of the direct sale of water. The charge for this service varies in different communities both in amount and kind; as, for instance, by basing rates upon (1) the size of dwelling or number in family; (2) the number of water-using appliances, such as closets, baths, sinks, etc.; (3) the character of building or business served, as, for instance, saloon, barber-shop, hotels, etc.; (4) the size of the service pipe supplied; (5) the number of faucets in use; (6) the value of the consumer's property or premises; (7) the property frontage of the consumer; and lastly (8) upon a "flat" or sliding scale predicated upon the amount of water used, as estimated or measured.

Many tariffs have been devised, based upon one or a combination of these methods of collecting the needed revenue, but perhaps that best adapted to the smaller plants is the method proposed by a select committee of the New England Waterworks Association some years ago and known as the "multiple minimum" plan.

In this the consumer pays a stated sum for each fixture. This entitles him to a given amount of water, but when exceeded the excess is measured by meter and charged upon stipulated sliding rates. A few of the more usual or important fixtures may be taken for the minimum charge to simplify the bookkeeping and records.

How meters should be purchased is a matter of local public policy. Some cities purchase the meters out of the current revenues by direct taxation or bond issue. Some towns require the consumers to supply themselves with the meters, and where this is the policy the cost is sometimes rebated from the water bill until finally absorbed. In most cities the water department maintains the meters in good order. In Atlanta, and other cities which might be mentioned, the property owner pays all charges in connection with the purchase and installation of the meter and fixtures. Inasmuch as the section in which the water mains are laid is generally within a limited district, it hardly seems fair to tax the general public with the cost of these fixtures which benefit those who are fortunate enough to reside within the water limits, and who have not only the comfort and convenience of a water supply under pressure, but benefit by the lessened hazard from fire risk; and therefore it would seem more equitable to require each consumer to buy his own meter, although from the standpoint of increasing the revenues, the use of water would be made popular by minimizing the difficulties and expense of securing same.

WATER RATES IN EAST ORANGE

The new water rates schedule of the East Orange Water Department, which went into effect in March, 1910, contains one feature at least which is somewhat unusual. This is set forth in Article 77 as follows:

"For the purpose of accounting on the books of the department for the use of fire hydrants and for water used by other departments of the municipal government, but for which the department receives no pay, the following charges are established, the rates for water being per each one thousand cubic feet:
 "For water for public street sprinkling, \$1.00.

"For water for flushing the public sewers, \$1.20.

"For water for fire protection, supplying municipal buildings and any other purposes where water is furnished for municipal purposes free of charge, \$1.20.

"For furnishing, setting, maintaining, repair and supervision of public fire hydrants, per year, each \$30.00.

"Where free water for municipal plants is not metered the engineer will estimate as nearly as practicable the quantity used."

Public schools and free public libraries of the city are charged at the rate of \$1.20, and public hospitals and the charitable institutions of recognized standing and usefulness to the city are charged at the rate of \$1.00. The minimum rate for other consumers is \$1.20, which is charged for all water in excess of 100,000 cubic feet in any quarter. The other rates to regular consumers are \$1.65 for the first 10,000 cubic feet, \$1.58 for the next 15,000, \$1.50 for the next 25,000 and \$1.35 for the next 50,000, the quantities being those used in any one quarter. It is seen by the above that the city is charged for public purposes at the minimum rate allowed private consumers, although this charge is merely a book charge. We heartily commend this provision for a business-like accounting method by the department; too many departments which attempt to keep their books in such a way as to receive credit for service rendered to the city, being required to assume a charge for water furnished to the city for public purposes, in which case such assumption may give to some the impression of being an unwarranted procedure on the part of the superintendent for the purpose of making a better showing.

The new regulations provide that, from the date of their going into effect, each new service installed shall be provided with a meter and all charges for water used through such service shall be by meter rates. They also provide that any owner may have a meter installed on his service pipe by application to the engineer, and also that the board may place meters on such services as they may select because of excessive use or waste of water or where there is other good reason for requiring payment by meter rates. The meters are retained as the property of the department, and all the necessary expense of installing and caring for the meters is borne by the department unless such repairs are rendered necessary by the acts or carelessness of the owner.

INJURIOUS EFFECT OF SALT IN WATER

In a recent article on "Public Water Supplies" by Mr. John W. Hill, M. Am. Soc. C. E., of Cincinnati, published in the Bulletin of the Ohio State Board of Health, appears the following:

There are some interesting facts connected with public water supplies which I have not seen exploited as far as they should be. One of these is the possible relation of a saline water supply to the disease popularly known as "cancer." Several years ago in some publication of which I took no note at the time, and now unfortunately cannot recall, a statement was made that "cancer" most frequently occurred with people who were accustomed to a liberal use of salt, and realizing that with low stream flow of the Delaware river above Philadelphia, and the future draft of several hundred millions of gallons of water per day, that the water drawn might during the flood tides furnish a water for the people of Philadelphia which would contain more than the normal or desirable quantity of salt I sought information from one of the cities of Holland, (Leuwarden) which was drawing its water supply from Lake Leuwarden (itself affected by the salt from the German ocean), upon the "cancer" rates before and after this new source of supply was adopted for general use, and a comparison of the reported cases of "cancer" for the decades before and after Lake Leuwarden was tapped showed an increase in the rate of 100 per cent. When the burgomaster's attention was called to this fact he exhibited great alarm, and promised to submit the matter to the health authorities and give me the result of their discussion, but no further information was forthcoming, and I have wondered whether the Leuwarden data were in confirmation of the statement read

years ago, about the influence of salt on the "cancer" rates, if the remarkable increase in the "cancer" rates in that city for the ten years following the introduction of the Leuwarden water might be due to other causes. The chlorine in the lake water as reported to me by the city authorities was about 150 parts per million.

In another instance in which I appeared as a witness there was a judicial inquiry into the effect on the human system of a saline water, with no reference, however, to "cancer," wholly upon the amount of salt which a drinking water might contain before it became objectionable or distasteful, and expert medical testimony was taken upon the question whether "salt" was a food or a poison, and of the amounts which the system could daily absorb without injury.

(In passing it is well known that salt or sodium chloride constitutes 1 per cent of the corpuscles in the blood, and contributes to the 1 per cent of salts in the serum, and that whether food or poison some salt may be daily taken in the circulation without injury).

The large amount of salt allowed to each soldier in the army, and in the armies of England, France, Germany and Japan (1900), indicated that if these quantities were restricted in diet and taken into the system it would far exceed the salt in the ordinary allowance per person of the Leuwarden drinking water, and if salt is in any manner connected with "cancer" the army medical officers, both here and abroad, do not seem to know it, and yet the fact can easily be verified that the introduction of salt water into the city of Leuwarden was followed by a 100 per cent increase in the "cancer" rates.

One incident connected with this investigation may be of interest. To test the amount of salt which drinking water might contain without being noticed by the users, six sections of distilled water and salt, ranging from five parts per 1,000,000 to 300 parts per 1,000,000 of chlorine, were made each bottle was numbered, and the key was unknown to the drinkers. A number of men and women employees of the Bureau of Filtration, Philadelphia, were separately brought to the office and requested to drink first from a bottle of distilled water (free from salt) and then to drink from the other bottles until the taste of salt was noticed on the palate. None of the drinkers knew at the time of the proportion of chlorine in the water which they were drinking, and the result of the test, on over 20 persons, showed that while some could detect the salt in the water containing less than 100 parts of chlorine per 1,000,000 others could not detect it in the water containing 300 parts of chlorine per 1,000,000. Tobacco users I think discovered have an impaired sense of taste, but whether this is due to smoking Carolina Perfectos or only Wheeling stops I am not prepared to say. At any rate the most delicate sense of taste was shown by the young women stenographers in the Bureau, while confirmed smokers could detect no difference in taste between the distilled water and water containing twice the amount of chlorine found in the Lake Leuwarden water.

This instance of the supposed injurious effect of too much salt in our diet or drinking water suggests that there may be other dangers in water not represented by the germ disease.

WATER RATES AT DAYTONA

In January of this year the Board of Public Works of the city of Daytona, Fla., adopted new water rates which contain a few features not found in the majority of rates. All services are metered, the meters being owned by the city. The charges \$5 for placing a ¾-inch tap, and \$10 for a one-inch tap. A meter deposit of \$5 is required before the water is turned on, to be refunded when the service is discontinued, less any unpaid bills.

The rates are divided into two parts, one based upon quantity passing through the meter, for which there is a uniform rate of ten cents per thousand gallons; the other, as prescribed as follows, takes into consideration other factors:

The minimum annual charges for maintaining services are as follows:

For a three-fourth-inch service, \$5.00.

For a one-inch service, \$7.50.

For larger services the Board will be consulted.

These charges are to cover the cost of maintaining services and are distinct from water charges, which are reckoned solely on the basis of water consumption.

This is practically a "ready-to-serve" charge, which has been authorized by the courts, in the case of other classes of utilities, for real service for which charge can be legitimately made.

STREET LIGHTING IN CINCINNATI

Enclosed Arc and Incandescent Gas Lamps — The Latter Cheaper — Discussion of Length of Contract Desirable

The city of Cincinnati is about to arrange a new contract for lighting its streets, bids for this having been advertised for and submitted on Feb. 28 of this year. In discussing this, the Bureau of Municipal Research of Cincinnati has given a statement of the present lighting system in a published report, but the major part of the report is devoted to an interesting discussion of desirable and undesirable features of a lighting contract.

As described by them, the present lighting is principally by means of electric arc lights and incandescent gas lights. The latter are of the enclosed arc type, of which about 1,000 are in the center of the city and are served by wires and cables which are all carried in underground conduits. The rest of the city, known as the "overhead district" contains about 5,000 enclosed arc lamps. Of gas lamps there are about 3,000, of which about 300 have two mantles each, these being generally placed at street corners and sections. Gas lights are located in both downtown and residential districts, though in the former they are found principally in alleys. Recently intense lighting of several downtown sections by means of electric clusters has been installed by the city funds. The electric lights are furnished by the Union Gas & Electric Company at \$72 per lamp where the wires are underground, and \$60 per lamp in the overhead district, these figures covering the entire cost to the city. This contract expires on June 1 of next year.

In the case of gas lights the city owns the posts and entire equipment outside of the gas mains, and pays the Union Gas & Electric Company for the gas furnished (natural gas), the globes, globes, etc., and for the maintenance, lighting and extinguishing of the lamps; a separate price being fixed for each.

The contract price for these several services are as follows: Gas, 30 cents per 1,000 cubic feet; care, lighting and extinguishing, \$5 per lamp per year; mantles, 20 cents each; street globes, 85 cents each; boulevard globes, 95 cents each; residential domes, 45 cents each; No. 2 globes, 65 cents each; No. 10 globes, 75 cents each; bug protectors, 20 cents each. The monthly average number of lamps was 2,748 single burners and double burners; a total of 3,039 lamps, or 3,330 burners. Gas consumed during the year 1910 52,179,068 cubic feet of which and there were purchased for them 26,378 mantles (about 100 mantles per burner), 503 bracket globes, 1,549 boulevard globes, 2,184 boulevard domes, 10 No. 2 globes, one No. 10 globe and 55 bug protectors. The average cost per single burner lamp for the year was approximately \$12.75 and per double burner lamp \$18.54.

On January 28, at the request of certain civic organizations, the Board of Public Works and Director Sundmaker gave a public hearing on the specifications for the new lighting contract, which had previously been published, and several recommendations were made by the Bureau of Municipal Research and a joint committee of civic organizations. The former had employed Messrs. Mailloux and Knox, of New York City, as consulting engineers to report upon the specifications, and certain of their recommendations are of more than local interest. Among these are the following:

Experience had in many other localities, especially in the large cities and towns, both here and in Europe, gas is still, all things considered, the cheapest and most satisfactory illuminant for the outskirts, suburbs and outlying residential districts of cities and towns. It is a significant fact that in European cities and towns, street lighting by gas lamps has not only held its own in the residential portions, but has even encroached upon the territory of electric lighting, namely, the central, public and business portions.

The particular reason for making the above statement was the belief that the specifications proposed might remove from the city the right of using any gas lamps, because of a certain clause which it was thought might be construed to this effect.

Concerning the length of contract for street lighting which it is desirable to make, the consulting engineers reported as follows:

We do not advise calling for bids for a ten-year period only. On the contrary, we advise, strongly, calling for alternative bids for different shorter periods. Furthermore, we do not advise awarding the contract for so long a period as ten years, under any circumstances.

Long-term contracts or renewals of contracts for electric street lighting are no longer in favor, especially in the large cities and towns. They never were at any time really desirable from the standpoint of the municipality. The most that can be said for them is that they were necessary or unavoidable evils in the earlier days of electrical industry. The larger cities are breaking away from this custom, which has nothing in its favor, and much against it, in their case. In New York, all street lighting contracts are made for one year only. The charter of the city now prohibits a longer period. The plan is satisfactory. It was thought that the effect of a short period would be to cause an increase in the unit-price (price per lamp, per year); but, practically, it has had little or no effect of that kind. In other large cities (like Boston) the contract renewals are for periods varying from one to five years.

The advantages to the municipality are wholly on the side of short-term contracts. Many cities and towns are to-day paying the old price for a lighting service which is behind the times or obsolete, because the lighting contracts were made for too long a term. In other cases the lighting contractor has changed the system and gets the benefit of lower cost of production, while still charging the old price, under the contract. The short-term contract enables the municipality to take advantage of all improvements in lighting methods, systems and apparatus, and to get a fair share of the reduction in cost of generating electricity.

Our opinion and recommendation is that bids should be called for for periods of two, three and five years. We would further recommend that the longest term considered be five years.

Concerning this matter the report of the bureau comments further as follows:

The objection is sometimes raised that a shorter term would prevent competition by a new company. This, however, does not appear to be the case. A new company would be unlikely to compete at all unless it were permitted to furnish commercial light and power as well as the public lighting called for by the contract; on the other hand, if such a company were permitted to furnish commercial light and power, it would regard this as the main part of its business and would be likely to bid on a public lighting contract, no matter whether the period were ten years, five years or three years. In other words, there are other factors more important than length of contract in determining whether there shall be competition or not. If there is no competition, the city certainly should not tie itself up by a ten-year contract under the proposed specifications.

The suggestion that there be coupled with a request for new bids on street lighting the agreement that a franchise for commercial lighting will be granted to the successful company might be impracticable or be accompanied by undesirable features in a number of cases. It appears to us that an alternative which would permit of a long-term contract without the objectionable feature of tying the city down to rates which in three or four years might be unduly high or to conditions which might become antiquated, would be to make a contract for say ten years, with the provision that at the end of each two- or three-year period the rates and certain specified conditions of the lighting should be readjusted by a commission of experts composed of appointees of both parties to the contract, the rates to be such as will yield to the company an adequate return upon a basis specified in the contract. Many of the franchises granted by New York City in recent years have clauses similar to this, which have been accepted by the parties of the second part without serious objection.

WISCONSIN MUNICIPAL REFERENCE BUREAU

The Municipal Reference Bureau, which is carried on as a part of the University Extension work of the University of Wisconsin, has been referred to by us, especially in connection with the information which they have collected and furnish concerning commission government. It is proposed by the City Club of Milwaukee to request the Legislature to appropriate \$150,000 for the furtherance of this work throughout the State of Wisconsin.

The Reference Bureau was established on July 1, 1909, the purpose being to collect data and information concerning various departments of municipal activity and government for the purpose of rendering such material available to the cities and citizens of the State. In setting forth its aims the Bureau calls attention to the fact that municipal reference departments have been established in many of the large cities such as New York, Boston, Baltimore, Philadelphia, Cincinnati, etc., which departments collect information for the use of its own officials; but that the smaller cities cannot afford to maintain such a municipal reference bureau. It is the aim of the university to establish one whose records are accessible to all of the smaller cities.

This reference bureau, supported by the Wisconsin State institution, "aims to collect and furnish information on all subjects of municipal organization and administration, public works, public utilities and public service rates, municipal employment, paving, sewage disposal, water supplies and water purification, garbage disposal, parks and playgrounds, housing, street cleaning, street sprinkling, dust prevention, smoke abatement, city planning, civic centers, art commissions, care of city trees, schools, charities and corrections, health and sanitation, accounting methods, comparative statistics, commission government, civic organizations, and all other objects of municipal interest; and so far as possible to collect and maintain a file of charters and ordinances of the principal cities of the United States, and the available municipal material of the principal

cities of England and the continent. In short, it aims to be a clearing house for municipal experiments and experience."

Maryland has established very much the same sort of bureau; and we believe that it would be to the advantage of the cities in every state if such bureaus should become universal throughout the country.

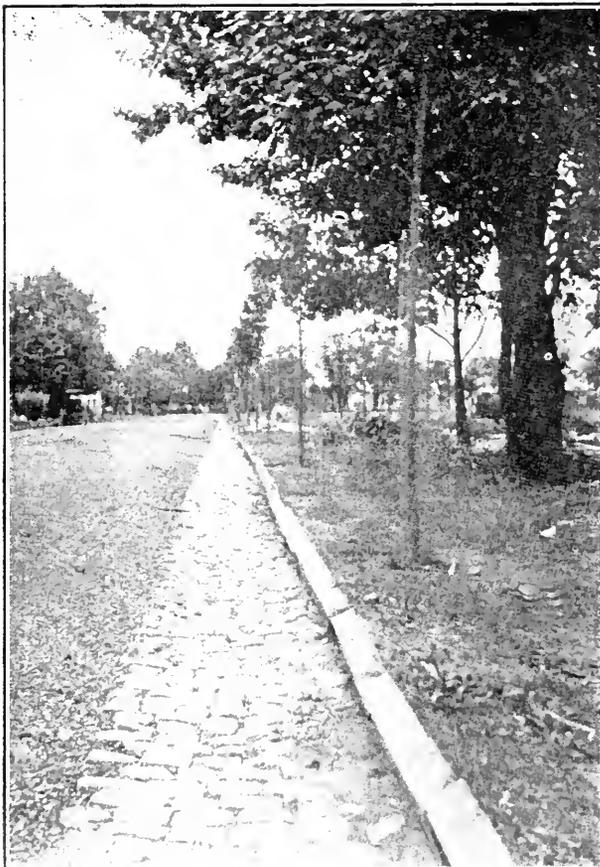

ODORS FROM SPRINKLING FILTERS

In a discussion of a paper by Mr. Earle B. Phelps before the Boston Society of Civil Engineers entitled "Disinfection of Sewage Filter Effluents," Prof. L. P. Kinnicutt (recently deceased), said:

"There seems to be another use for bleaching powder in sewage treatment besides sterilizing the effluents. In sewage treatment, when using the septic tank in connection with contact beds and sprinkling filters there are often, as you all know, very obnoxious odors given off into the air. Dr. Rideal in a recent paper advocates the addition of bleaching powder to septic tank effluent before running the effluent onto contact beds and sprinkling filters. In one of his late papers he has shown that chlorine has, what has already been noted in this country, a selective action, acting much more readily upon bacteria which develop at blood heat than upon the water and soil bacteria, and that the treatment of the septic tank effluent by bleaching powder does not at all interfere with the bacterial action of the contact bed or sprinkling filter, while it does prevent a nuisance arising from the odors from the septic tank effluent."

REPAIRING CURBS AND SIDEWALKS

In the annual report of City Engineer Frederick A. Reimold of East Orange, N. J., mention is made of the great improvement to the appearance of a street resulting from care in constructing and maintaining sidewalks, curbs and gutters of uniform surface, width and alignment. This is especially true in cities where the curbs are of stone cut in short lengths, and the sidewalks also are of stone which has been thrown mo-

CURB AND GUTTER BEFORE REPAIRING

CURB AND GUTTER AFTER REPAIRING

less out of uniform surface by the action of frost or insecure foundation. The accompanying illustrations, which are taken from Mr. Reimer's report, indicate conditions which he found in East Orange and the improvement effected. During the year covered by the report curbs and gutters were reset and relaid to proper grade and line to the extent of 11,673 feet of curb and 2625 square yards of gutter. In resetting the curbs it was necessary to use 218 feet of new curbing to replace that which was broken; the cost of the new curbing amounting to \$94.60. Including this, the total cost of repairs to curb and gutter was \$2,817.49. The average cost per foot was 24 1/5 cents.

The city also relaid 39,848 lineal feet, or 178,265 square feet of sidewalks at a cost of \$3,527.28, or a little less than 2 cents square foot. One would judge from the illustration that the cause of the irregularity of the old sidewalk was the roots of trees, which might have been avoided had the sidewalk paving been kept further from the trees. It is possible that in this case the width of the sidewalk space was insufficient to permit this, but this certainly illustrates the desirability of leaving ample planting space where there are to be shade trees. Concerning this Mr. Reimer says in his report, "There is at present no ordinance regulating the placing of sidewalks in relation to the distance from the curb line. I recommend that such an ordinance be adopted and that the lengths be established as follows: On streets having 10 feet reserved for sidewalks, one walk to be placed at least 4 feet from the curb; on streets having 11 feet reserved for sidewalks, 5 feet from the curb; on streets having 12 feet or more reserved for sidewalks, 6 feet from the curb." The minimum width of sidewalk, he thinks, should be 5 feet, which would leave a 1-foot space between the inner side of the walk and the property line where the sidewalk width is 12 feet or less. He also recommends concrete walks in place of stone when new walks are to be built. In replacing the stone walks he recommends that if these are in any place less than 4 feet in width the owner be required to put in new walks at least 5 feet wide.

BERLIN WASTE UTILIZATION PLANT

BERLIN has a plant for the destruction of wastes which has now been working for two years in a manner satisfactory from both a hygienic and a technical standpoint, according to the *Gesundheits Ingenieur* for January 21, from an article in which, descriptive of the plant, we have prepared the following:

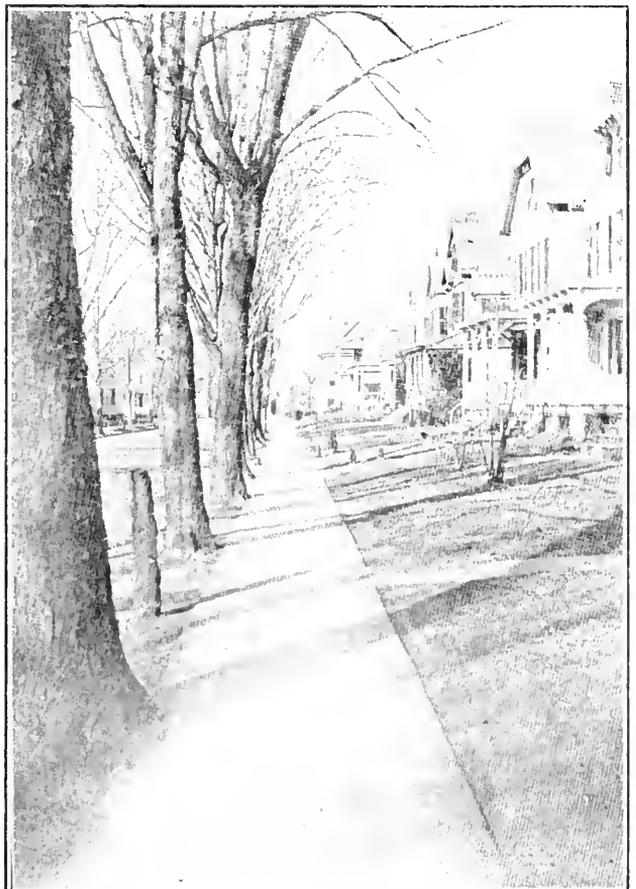

This plant lies several miles outside the city limits and is reached by a special side track from the main railway line. The site covered by the plant is divided into two parts, in one of which the wastes are received and in the other they are put through a utilization process. This division makes it possible to secure a perfect separation of the impure wastes and the products of reduction, which is considered to be desirable in order to prevent any epidemic or disease from being spread by products which have been brought in contact with infected wastes.

On the receiving side there are large tanks for storing the wastes, a disinfecting plant and a water purifying and sterilizing equipment. The other side contains a mechanical plant for the destruction of refuse as well as the storage tanks for the finished products. On each side there are facilities for shower and tub baths, a disinfecting plant for the workmen's clothing and recreation rooms.

Special railroad cars and, in the case of nearby communities, motor trucks of special design bring the wastes to the plant. The animal refuse is reduced in six Hartmann extractors, each of which has a capacity of 5,500 pounds at one charge. The refuse is subjected to steam under four atmospheres pressure in perforated drums in the extractor, and the fats and water are thus removed. These, which are in liquid form, flow into a fat separator, where the fat gathers in an upper section of conical shape, protected against the decomposing influence of the ammonia gases and oxygen generated during the process. After considerable fat has gathered it is drawn off into a fat collector and filtering tank. The glue-like mass remaining flows from the fat separator into a receiving tank, from which it is pumped into the evaporator, where the

SIDEWALK BEFORE REPAIRING

SIDEWALK AFTER REPAIRING

exhaust steam separates and goes back again into the extractor. The residue, or tankage, is dried in the extracting tank by use of steam. Power for operating the plant is furnished by an 80-hp steam engine. Two duplex steam pumps raise the necessary water from a 100-foot well into the reservoir.

Ventilation of the plant is obtained by windows which swing on a horizontal axis, thus permitting them to be opened to any extent desirable. In addition there are numerous exhaust fans for drawing off the impure air. The foul effluent waters are pumped into the ditches of an adjacent irrigation field, and the liquors which escape on the receiving side of the tank, after first being sterilized, are likewise turned into the irrigation ditches.

The plant cost about \$260,000, in addition to which \$64,000 was paid for special tracks and railway cars and \$25,000 for the collecting station in Berlin where the waste is collected and stored until there is enough to load one of the railway cars.

EXCAVATION AND CONCRETE

Classification of Excavated Materials in St. Louis—Two Classes vs. Several—Proportioning Concrete—Lack of Accuracy in Specifications

The Journal of the American Society of Engineering Contractors, the eighth number of Volume II, contains an interesting paper contributed to that Society by Mr. H. R. Fardwell, Sewer Commissioner of St. Louis, describing the sewers and sewer construction methods in that city. Possibly the most interesting part of this paper is that discussing the more general features of classification of excavated materials and greater exactness in preparing specifications.

Concerning the matter of classification Mr. Fardwell stated:

"In all the specifications at the present time under which our work is being carried on there are two classifications of excavation, viz.: Class "A," and Class "B." Class "A" is solid rock, including detached pieces of rock or boulders one cubic yard or more in contents, and all masses of solid, well-defined ledges of stone or masses of rock. Class "B" includes all other materials encountered. In my opinion, a better classification might be had, provided the engineer and contractor could reach some understanding as to the method of bidding, from which neither would vary.

In the above classification, Class "B" material may be either earth, macadam, shale, fire clay, gumbo, or cinders, with various kinds of rubbish dumped in excavations on the street. It is an undoubted fact that shale, fire clay, and gumbo will cost more to excavate than good top soil or clay, and it is also known that the concrete on the top of streets and macadam cost more to excavate than earth. Under this classification, however, the contractor is required to make a bid on anything that may be encountered, so that it is necessary that he either take a chance on these materials, or make his bid sufficiently high to enable him to take care of them. Where he does encounter them and has not made his bid to cover them he loses money; where he does make his bid sufficiently high and does not encounter these materials, the city loses money. The city, however, in trying to minimize this difficulty, has, in some of the districts, used core boring machines, and has given to the contractor a continuous core at certain definite points. These cores were placed on exhibition in the office of the Sewer Commissioner, and could be seen upon application. In districts where core borings were not made, a punch rod, with a spoon, was used, and samples were taken every five feet of depth; this, of course, does not give as good an idea of the condition of the ground as core borings.

Incidentally, as a matter of interest from personal observation, it might be stated that some of our contractors do very little more than walk over the site of the work. In one of our particular contracts, we had core borings made to show the nature of the limestone and the kinds of material above the limestone, so that the contractors might know the exact condition of the ground at various places; and out of twelve or fifteen contractors that took out plans for this work, only two looked at these core borings. Still, they put in bids.

Core borings, as well as the punching rod method of testing the ground, are expensive. If there were some means whereby it would not be necessary to make core borings, to any great extent at least, or to test the ground by means of punching

rods, the city would save not only on the excavation but also the money spent for preparing estimates. The necessity for doing this preliminary work would be lessened if the classification was enlarged, thereby giving the contractor the means of securing pay for the different materials encountered in his work.

In discussing this portion of the paper Mr. E. Wegmann stated that he considered the division of excavated material into two classes only to be very bad practice. "It makes the engineer's work very easy, but on the other hand it makes it almost impossible for the contractors to bid intelligently. The proper way to do is to pay for every kind of excavation that is likely to be encountered in the work, such as solid rock, loose rock, hardpan, macadam, etc. The contractor can then bid reasonable prices for each class of excavation and the additional work that may be caused to the engineer by such a classification is too insignificant to be considered."

Mr. E. H. Abadie stated that, in his belief, "a great many specifications are drawn, after careful forethought, with the intent to cover all conditions; but many problems are shifted, in cleverly worded specifications, to the shoulders of the contractor, because the engineers are unable to define clearly certain features of the work about which they are unsettled in their own minds prior to the beginning of the undertaking or letting of contract."

The Society of Engineering Contractors has a committee on classification of excavation.

Concerning the matter of specifications for concrete, Mr. Fardwell called attention to some rather unusual features in the St. Louis specifications. Among the more interesting clauses are the following:

All stone for concrete . . . must be quarried from ledges and have a specific gravity of not less than 2.60. . . . The grading of the stone or gravel shall be such that 100 per cent will pass a ring $1\frac{1}{2}$ inches in diameter; not more than 70 per cent nor less than 50 per cent will pass a ring $1\frac{1}{8}$ inches in diameter; not more than 40 per cent nor less than 30 per cent will pass a ring $\frac{5}{8}$ inch in diameter; and not more than 5 per cent will pass a ring $\frac{1}{4}$ inch in diameter.

After the broken stone or washed gravel has been graded to meet the above requirements, the voids will be calculated in the following manner: The broken stone or washed gravel shall be shoveled loosely, without compacting, into a box of known capacity, and shall be struck with a straight edge level with the top of the box. The actual volume of the broken stone or gravel shall then be determined.

The volume of the box minus the volume of broken stone, divided by the volume of the box, is taken as the percentage of voids.

The concrete is divided into three classes, A, B and C. Each class of concrete is made by mixing with the broken stone or gravel an amount of mortar 10 per cent in excess of the voids in the stone or gravel. The difference between the classifications is in the mortar so mixed.

Mortar for Class A concrete shall have the ratio of one barrel of cement to 7.6 cubic feet of sand. Mortar for Class B concrete shall have the ratio of one barrel of cement to 11.4 cubic feet of sand. Mortar for Class C concrete shall have the ratio of one barrel of cement to 15.2 cubic feet of sand.

In discussing these Mr. Fardwell stated that:

The various sizes of stone were so graded that the voids, measured in loose heaps, should be between 40 per cent and 50 per cent; but the voids were not determined accurately, so that it was impossible to state the exact number of cubic feet of cement to be used per cubic yard of finished work. In fact, the specifications above written do not state what is desired with a positive degree of accuracy, though they more nearly describe what is desired than the old way.

As the result to be arrived at is dense concrete, which gives the strength for which the sewer was designed, it becomes necessary for the engineer to use extra precautions in securing enough cement in the mixture. This anxiety on the part of the engineer often results in friction on the work.

A better method, in all probability, than either of the specifications is to have specified the number of cubic feet of cement to the cubic yard of finished work for the various classes of concrete work which are to be used, and in this way all misunderstanding on the work will be eliminated and the contractor will know exactly what he is bidding on at the time he bids on the work.

The Water Rate Problem

An article and shorter items in this issue call attention to the importance which the matter of rate making is assuming in the operation of water works plants. The problem has always been a more or less difficult one, and few efforts have been made to solve it with anything like mathematical exactness or scientific principles. In fact, not only do the few who have given the subject adequate consideration failed to agree entirely upon just what principles should govern the determination of rates, but in the majority of cases no attempt was made by those who fix the rates to base them upon any definite or comprehensive principles whatever. Probably the most common plan has been to collect the rate records from a number of cities, average the rates found on these and adopt either these averages or a series of flat rates approximately proportionally to such averages. Later the

adoption of meters seemed to simplify the matter somewhat. By this time a general idea had been obtained by most of the companies as to how much income was necessary to meet all charges and necessities, and meter rates were fixed with the idea of producing this amount. In some cases a uniform rate was charged all consumers, but in the majority of cities a sliding scale has been adopted. More recently it has been impressed upon the minds of a number of superintendents that neither a uniform or sliding scale of meter charges is just to either the company or the consumer; and there is besides this the service rendered to the city itself, which must either be included in the private consumers' meter rate or charged against the city treasury. Certain of these ideas as set forth in the rates of Daytona, New Orleans and East Orange are given in the preceding pages. The problem is an interesting and a very important one, and we expect to present, next week, a discussion of some additional features of it.

New York Milk Regulations

THE Board of Health of New York City has adopted new regulations concerning the sale of milk in the city, to take effect Jan. 1, 1912. The resolutions setting forth the rules adopted were as follows:

Resolved, That after December 31, 1911, all milk and cream offered for sale in the City of New York, except that to be used only for manufacturing or cooking purposes, must be of the grades technically designated and recognized by the Board of Health as certified milk or guaranteed milk, or it must be pasteurized under conditions as prescribed by the regulations of said board.

Resolved, That it is the sense of this board that milk sold in this city be graded as follows:

Grade A. *For infants and children* (To be sold in bottles only) includes:

- (1) Certified milk.
- (2) Guaranteed milk.
- (3) Milk pasteurized under special regulations.

Grade B. *Milk safe for adults* (to be sold in bottles or drawn from proper containers; not dipped) includes:

- (1) Grade A.
- (2) Pasteurized milk produced under regulations of this department.

Grade C. *Milk suitable for cooking and baking purposes* (to be sold in bottles or from cans) includes:

All milk complying with the general regulations of the department, but not complying with requirements for grades A and B.

That no one should use any milk inferior to that of grade A for feeding infant or child.

That every person purchasing milk for drinking purposes is entitled to receive milk not inferior to grade B.

That the efforts of the Department of Health in the supervision of milk will be specially concentrated on grades A and B.

The meaning and significance of this, of course, depends upon the definition of "certified," "guaranteed," "pasteurized under regulations" and "pasteurized under special regulations." These definitions are as follows:

Certified milk is milk certified by the Milk Commission appointed by the Medical Society of the County of New York or the Medical Society of the County of Kings as being produced under the supervision and in conformity with the regulations of that commission as laid down for certified milk. No milk, however, shall be held, kept, offered for sale or sold and delivered as certified milk in the City of New York which is produced under regulations less than those of the said board for guaranteed milk.

Guaranteed milk is milk produced by farms holding a permit therefor from the Board of Health and produced and handled in accordance with the rules and regulations of said board.

The minimum requirements of the Board of Health for guaranteed milk are as follows:

1. That only such cows be admitted to the herd as have not reacted to a diagnostic injection of tuberculin.
2. That all cows be tested annually with tuberculin, and all reacting animals be excluded from the herd.
3. That the milk shall not contain more than 30,000 germs per c. c. when delivered to the consumer.
4. That the milk be delivered to the consumer only in sealed bottles which shall have been filled at the dairy, and shall bear a label giving the name of the dairy, and the date of the earliest milking at which the milk forming part of the contents was drawn.

5. That such milk be delivered to the consumer within 36 hours.

The milk pasteurized under special regulations, known as grade A pasteurized milk, is that which, in a raw state, is "selected" or "inspected," containing not more than 100,000 bacteria per c. c., and has been pasteurized by being heated to at least 140 degrees F. for at least 20 minutes and which, when offered for sale, does not contain more than 10,000 per c. c. Grade B pasteurized milk is that produced on farms where the rules and regulations have been complied with, the bacterial content of which before pasteurization is not excessive and which, after pasteurization and before sale, does not contain more than 50,000 bacteria per c. c.

The general regulations of the department concerning pasteurization provide that the milk, after pasteurization, must be at once cooled and placed in sterilized containers and the containers sealed. Also that all pasteurized milk must be delivered to the consumer within twenty-four hours of the pasteurization and must be delivered in sealed containers which are plainly labeled "pasteurized." The labels must also bear the date and hour when the pasteurization of the milk was completed, the degree of the heat employed, the length of time exposed to the heat, and the number of pasteurization permit issued by the Board of Health. It is not permitted to pasteurize milk a second time. In pasteurizing, the milk must be subjected to one of the following conditions of temperature and exposure: 158 degrees F. for three minutes, 155 degrees for five minutes, 152 degrees for ten minutes, 148 degrees for 15 minutes, 145 degrees for 18 minutes, or 140 degrees for 20 minutes. The apparatus used in pasteurizing must be automatic, equipped with automatic temperature and time-regulating and recording devices.

HARRISBURG WATER WORKS NOTES

In the report of the Harrisburg, Pa., water department for the year 1910 (one of the first complete reports for that year to reach this office) Superintendent Geo. G. Kennedy states that the pumping of filtered water produces an appreciably less amount of wear in the pumps than was observed when unfiltered water was being used. During the year "the number of valves in the pump end that had to be replaced was very low, showing the difference by their lasting qualities from those used before filtered water was pumped. This filtered water has also reduced to a minimum the packing necessary for the plungers and other parts of the pump end. The pumpage is checked frequently with the slip indicator and the slip never allowed to amount to any noticeable difference. It has always been less than five per cent." This amount of slip is lower than would be found in the majority of plants where accurate tests of the same made, and it seems probable that this also may be due to the fact that filtered water only is pumped.

During the year 3,293 meters were removed and tested and 3,236 reset, after being repaired if necessary. If the cost of the parts needed for repair amounted to a small sum (a change of gear or similar parts, for instance) the meter was reset and no charges made. If, however, the repairs required to bring the meter back to correct registration were expensive a bill for them was sent to the owner. "Many of the meters taken out during the year had been in use since 1888 and 1889 and it was remarkable how well some of them maintained their accuracy. None of the meters has been in use less than five years, and every one which has been taken out for test so far was in service before filtered water was furnished and had to pass the sand and coal which was carried in suspension in the water furnished before filtration was introduced." The total number of meters in use on Dec. 31, 1910, was 9,954.

The filter plant has previously been described by us, but it may be stated briefly that it is of the rapid filtration type, sulphate of alumina being used as coagulant. The plant has been in operation for five years.

During 1910 the total number of gallons filtered was 3,401,679,700, but 2.3 per cent of this amount was used in washing the filters. The cost of filtering based on the total amount

filtered was as follows for the several items: Coagulant, \$1.18 per 1,000,000 gallons; coal, 66.1 cents; supplies, 27.2 cents; materials and repairs, 36.6 cents; oil and waste, 6.2 cents; chemist and laboratory expenses, 36.4 cents; salaries, \$2.46; a total of \$5.37. On the basis of filtered water pumped to the consumers the total cost was \$5.49 1/3. This, of course, does not make any allowance for overhead charges, but merely for operating expenses.

STUDY OF TYPHOID EPIDEMIC

At Des Moines, Ia., by Public Health and Marine Hospital Service—All Possible Causes Investigated—Water Found Responsible—Precautions Recommended

In November, 1909, there was an outbreak of typhoid fever at Des Moines, Ia., which reached its culmination on the 23d of that month. A short time after this, the secretary of the Iowa State Board of Health requested the surgeon-general of the Public Health and Marine Hospital Service to investigate the outbreak with a view to determining its cause and suggesting methods for preventing its recurrence. The investigation was begun on Dec. 22, 1910, and completed on Jan. 7, 1911. In general this survey probably did not differ from several others which have been made in this country; but probably none have been more complete than this one and it may therefore serve as a typical illustration of how an exhaustive study of this kind should be made.

A sanitary survey was made of the Raccoon river, which passes through the city and empties into the Des Moines river within the city limits; the water supply was examined bacteriologically; an epidemiological study of about fifty individual cases was made and a review of the data previously collected by the city health officer; an inspection of a number of dairies, grocery stores and ice cream manufactories; and careful inquiry into the origin and distribution of fruits, vegetables and shellfish sold in the city during the outbreak; a clinical study of a number of cases of the disease, a survey of the general sanitary conditions of the city, and a consideration in general of all conditions which appeared likely to throw any light on the situation.

A study was first made of the typhoid death rate of the city for several years previous as well as during the time of the outbreak, and it was found that there were sixteen cases in December, 1910, whereas the highest number in any previous month of any year had been four. Unfortunately the Iowa laws do not require the reporting of cases of typhoid, and it was consequently impossible to determine with anything like accuracy the development of the disease except as indicated by the death rate. It is probable that had the outbreak been known by the health authorities earlier it might have been suppressed much more promptly.

It was found that most of the cases whose history was known were scattered generally over the city, that the epidemic reached its maximum suddenly, that the majority of the cases were persons whose ages were between ten and twenty-five, and there were other characteristics which indicated that the disease had its origin in the water supply. However, due attention was given to the possibility of the outbreak having been occasioned by the sewerage, by foods or beverages, by milk, ice cream, raw shell fish, soda water, ice, raw vegetables and fruits, or by contact. There could be found no indication that any of these could have been responsible for more than a very small percentage of the fifty cases studied, and the responsibility of individual causes for some of the cases seemed to be impossible; only one of the fifty, for instance, had eaten raw shell fish within thirty days prior to illness. Two of the cases were probably attributable to infection by contact; and all of the fifty except one of these two had used unboiled city water as his principal fluid diet for several weeks previous to illness.

The above merely indicates the several lines of investiga-

tion, but each one was followed out with all the thoroughness which was possible, and the customary method of solving the problem by elimination was followed out in a scientific way.

Had there, however, been no facts showing probable reasons why the water might have been the cause of the epidemic, this also might have been considered as partly eliminated and the problem have been left unsolved. The study of the water supply, however, showed the following conditions. The city of Des Moines is located on the Des Moines river at the junction with it of the Raccoon river. On the latter, about 1½ miles from the Des Moines river, is the pumping station, which draws its supply from filter galleries placed along and under the river. Probably the major part of the supply reached the pump well through the sand and gravel in the bed of the river and overlying the filter galleries. As is very frequently the case, the surface of this sand becomes more or less clogged at times with fine sediment and the water company has been in the practice of scraping away a small amount of the surface sand at such times to permit the water to enter the filter galleries more freely. During the week ending November 5, scraping had been resorted to and a larger amount of sand removed than at any other time during the year; and a second scraping in the week ending November 12th, removed almost as great an amount, and was succeeded by another scraping on November 26th. Moreover, beginning on November 10th and continuing for some time thereafter a centrifugal pump was used to draw down the water in the river galleries so as to increase the flow into them from the river. The epidemic assumed serious proportions just two weeks after the beginning of this pumping, which had been preceded only five days by the first scraping of the beds. Twelve days is the usual incubation period of this disease, and November 17 marked the beginning of the epidemic and November 23d and 24th its height. These several days and periods certainly serve as circumstantial evidence against the scraping of the filters and the pumping of the galleries as being among the causes of the epidemic. In fact, there would seem to be extreme probability that such acts would have introduced into the public supply a greater or less number of any germs which might have existed in the river water.

On investigating further, it was found to be probable that typhoid germs were in the river water at that time. An investigation was made of the drainage area above Des Moines on the Raccoon river and it was found that just above the city is the village of Valley Junction, with a population of about 2,500. This village dumps its garbage and night soil on the banks of the river and there are a number of private sewers and house drains discharging into the river at this point. It was also found that there were cases of typhoid fever under treatment in Valley Junction in October and November. It therefore seemed far from improbable that typhoid bacilli were in the waters of Raccoon river during those months. No analyses of the river water or city water were known to have been made during the epidemic; but analysis made in December showed the presence of colon bacilli in the city water, although at that time the water was being obtained from a new infiltration gallery where the filtration of the water in entering the gallery probably was much more effective than in entering the old galleries under the river bed during November.

As, therefore, the general features of the epidemic indicated the water supply as the cause, as all other probable causes appeared to be eliminated by the facts secured, and as there seemed to be very good reasons for thinking that the water supply was contaminated with typhoid germs, there seemed to be little doubt that this was the source of nearly, if not quite, all of the cases.

While the investigators were making analyses of the city water the company began the use of hypochlorite, and immediately with the use of this material the bacterial condition of the water greatly improved. The surgeon-general, through his representative, recommended that the Raccoon river be pro-

tected from pollution by sewage at points above the filter galleries, and also from all surface drainage likely to introduce typhoid bacteria into the river. Also the abandonment, as soon as practicable, of the filter galleries which cross under the river and the obtaining of the supply from a gallery and sand basin which parallels the river near the bank; this being the new basin which went into service last December. Until both of these precautions have been taken and the safety of the water has been determined by prolonged bacteriological studies, he recommends that the whole water supply be treated with hypochlorite of lime; and until it had been rendered safe by such hypochlorite treatment the people were advised to boil the city water before using it for drinking purposes.

While it did not seem probable that the epidemic was due in any way to milk or other food supplies, the local authorities seemed to deserve little credit for this, as there had been practically no efficient control of the dairies or places where milk or food of any kind was sold in the city.

SEWAGE DISPOSAL AT SHORE RESORTS

In the latest report of Mr. H. M. Herbert, engineer of the State Board of Health of New Jersey, the matter of disposing of sewage along the ocean front, especially near pleasure resorts and bathing beaches, is discussed as follows:

During the last season the wisdom of treating the sewage before it is discharged into the ocean was apparent. All sewers along the beach with ocean outlets, from Deal to Point Pleasant, inclusive (except Belmar, where legal complications prevented the completion of the works until after the season closed), were provided with septic or sedimentation tanks which discharged a fairly clear effluent into deep water. As a result, the bathing beaches were free from the objectionable fecal matter which at times heretofore interfered with the pleasure and comfort of the bathers. There were, however, two exceptions; the first was a complaint from Spring Lake that fecal matter was being washed up on the beach at that place. An inspection proved that it came from the Belmar outlet, where the temporary screens had become displaced. These were at once put in proper condition and no further trouble was experienced during the season. The second instance was a complaint from Loch Arbour to the effect that sewage from Allenhurst made the water unfit for bathing. A thorough inspection was at once made and it was found that the trouble was not with the Allenhurst plant, which was doing good work, but that Asbury Park had discontinued using the septic tank and was by-passing the raw sewage into the ocean through the outfall pipe. Several careful examinations were made of the tank and the intercepting sewer on Ocean avenue by representatives of this division at different times, and a report showing the defects of the system and making suggestions for its improvement was made to the State Board of Health.

It is understood that a part of these suggestions is now being carried out. The other plants along the coast are apparently working satisfactorily, as no complaints against them have been received at this office.

Our State was the first to conduct practical experiments on the disinfection of sewage by the use of hypochlorite of lime, commonly known as "bleaching powder." During the summer of 1907 the State Sewerage Commission, through the co-operation and courtesy of Professor Earle B. Phelps, of Boston, Mass., installed the necessary apparatus for treating the entire sewage of Red Bank for a period of about two months, at a cost of only a few hundred dollars. The results obtained were extremely satisfactory and proved that an effluent free from dangerous germs could be obtained at a nominal cost.

It is believed that this method of treating sewage, combined with thorough screening and sedimentation, can, where the effluent is discharged into a large body of moving water, especially salt, be advantageously installed, as the first cost is small compared with cost of contact beds or sprinkling filters, and the cost of maintenance is not great. Thus many thousands of dollars will be saved by some of our municipalities.

NEWS OF THE MUNICIPALITIES

Current Subjects of General Interest, Under Consideration by City Councils and Department Heads—Streets, Water Works, Lighting and Sanitary Matters—Fire and Police Items—Government and Finance

ROADS AND PAVEMENTS

Plan to Reduce Paving Cost to Taxpayers

Springfield, Ohio.—Instead of making the people along the street to be paved stand the cost of putting down the pavement, of maintaining it and keeping it clean, while the street car company, which uses it more than any resident, pays only for that portion between its tracks and refuses to pay a cent in assessments for cleaning it, City Council can compel the street car company to pave at least three feet more of a street than it has been doing, according to a discovery made by City Engineer M. J. Bahin. This probably will lead to the introduction of an ordinance in Council soon, which will compel the company to pay a greater portion of the cost of paving the streets on which it has lines. Mr. Bahin has been doing some quiet investigating and announced that in his opinion the Council can adopt an ordinance compelling the company to pay for more of the street paving, and that all that will be necessary to insure its holding in the courts is to bring forth proof, which he can do, that the requirement is reasonable. He holds that this is covered in the provision of the franchise giving Council the power to "make such other rules and regulations as may be just and reasonable" or in the blanket portion of the franchise.

Corpus Christi Will Improve

Corpus Christi, Tex.—The City Commissioners have decided upon a plan of constructive work that will entail the expenditure of many thousands of dollars within the next several months. Among other matters, is a massive concrete bridge, 138 feet in width, which will be built across a small ravine or arroyo on one of the principal streets. An additional mile of water mains is now being laid, making the total mileage in the city 19 miles. The awarding of contracts for sewerage system supplies insures the commencement of this work within the next 60 days. The initial expenditure will be \$75,000; the total outlay will reach \$140,000. The street department is putting plans in operation to fill up the principal streets in the city, a proposition calling for a considerable amount of filling. This work is preparatory to the commencement of construction on pavements.

Propose to Spend \$50,000,000 on State Roads

Harrisburg, Pa.—Senator William C. Sproul, of Chester County, has introduced a bill providing for a State system of public highways, which, in principle and its general scope, is said to have the approval of Gov. John K. Tener. A companion measure was also presented in the form of a resolution proposing a constitutional amendment permitting the State to issue bonds in the sum of \$50,000,000.

Object to Wide Streets

Milwaukee, Wis.—Asserting that streets 100 feet wide have been found to be a failure in other cities, property owners on North avenue have filed a remonstrance with the Council against the proposition to widen that thoroughfare between Forty-fifth street and Sherman boulevard.

Street Signs to Teach History

Paris, France.—Paris intends to make the city streets teach history to Paris children. The Municipal Council is expected soon to pass a bill requiring that the historical significance and dates of events shall be added to the street name signs. The streets are already placarded plainly with white letters on a blue background, not only at every street intersection, but on every angle of every building on every corner. Practically every important street in the city is named in honor of some famous man or victory. Future signs, therefore, will read: "Rue Rivoli—French Victory in 1797;" "Avenue Victor Hugo—French Poet and Novelist, 1802-1885;" "Rue Lincoln—Famous President of the United States, 1809-1865."

Ashes Used in Improving Streets

Perth Amboy, N. J.—Ashes are at a premium with the Street Department. They are being used in all portions of the city filling in bad places in the streets and making sidewalks passable. Street Commissioner Adair would be glad to hear from any factories or other places who have suitable ashes in large quantities to dispose of for use on the streets.

Will Loan State a Million for Highway

Wilmington, Del.—Delaware will have a highway the entire length of the State, 103 miles, that will have no superior in the country. This was virtually assured when it was announced authoritatively that T. Coleman DuPont, President of the DuPont Powder Company, has offered to advance \$1,000,000 to the State for the construction of the highway. It is his intention to make the proposed road the equal of any in the United States. He wants the highway to be 100 feet in width, but his advisors have urged him to make the dimensions 80 feet and possibly 60 feet. Mr. DuPont, when asked about the project, confirmed the announcement of his proposition. "There is such a great need in Delaware for a State highway of the best construction," said he, "that I am willing to risk putting up all the money for it. Farm property will increase as a result, the State will be better in every way and the citizens will be the beneficiaries."

Special Land Tax for Good Roads

St. Augustine, Fla.—Realizing that if St. Johns County is to have an up-to-date system of good roads, it will be necessary to secure more money than is possible under the present arrangement of ordinary taxation, the Board of Trade at its regular monthly meeting last week took steps to secure special legislation whereby it will be possible to levy a tax of 2 cents per acre on all lands in St. Johns County, the taxes to be used for road purposes only.

Legality of Ten-Year Guarantee Questions

Wilkes-Barre, Pa.—Brick paving seems to be in disfavor in this city, as residents along the various streets that are to be paved during the coming summer have held up the action of Council with a request that asphalt be used instead. In this connection the members of the Street Committee will be called upon to solve a difficult question, as the bids asked for require a ten-year guarantee that the streets will be kept in good condition. According to representatives of the asphalt company desirous of bidding on the local work, this is out of the question, as surety companies will not issue a bond for that period, as shown by the following communication:

To the Honorable the Councils of the City of Wilkes-Barre, Pa.
Gentlemen: We beg to express regret at our inability to file with your honorable body proposals for paving West Elm, Auburn, Kulp and South Franklin streets, in accordance with your advertisement, for the reason that your specifications require that the work shall be guaranteed and maintained for a period of 10 years, and that a bond shall be filed supporting such maintenance requirement.

All of the responsible surety companies transacting in the United States and Canada have declined to obligate themselves upon surety bonds in any form under contracts which require a guaranty or maintenance existing over a period in excess of five years.

Our inability to secure a surety, therefore, is our reason for failing to bid.

The 10-year maintenance guarantee has been practically abandoned by all municipalities, not only because of the attitude of the surety companies on the subject, but because, from the standpoint of the municipality, such a requirement is not considered economical or advisable, since competition is thereby restricted, and the city pays what amounts to a heavy premium of insurance on the pavement, an item which it could more economically carry itself.

Furthermore, the Supreme Courts in several States, Pennsylvania particularly, have held that assessment proceedings based upon a contract which includes a provision for 10 years' maintenance are invalid as charging against the owner of abutting property a cost with which he is not properly assessable. We will not burden this communication with citations of cases, as your law department is doubtless familiar with this point.

Respectfully submitted,

THE BARBER ASPHALT COMPANY,
By J. L. Rake, General Agent.

Paving Around Postoffice

Tacoma, Wash.—Commissioner Owen Woods has completed paving the streets around the Federal Building and figures prepared by Chief Clerk A. F. Metzger show that the work done by day labor cost \$4,863.13, which is \$1,233.37 below the appropriation allowed for the improvement and probably \$500 less than it could have been done by a contractor. The work was paid for out of the general fund. Street improvements are usually made by the local improvement district plan, but the State Government refused to pay the cost of this improvement, and it was a case of either appropriating money out of the general fund for the work or letting it go undone.

Plans for Elimination of Grade Crossings

Syracuse, N. Y.—Plans for abolishing the New York Central grade crossings in Syracuse have been completed. Two propositions will soon be taken up for decision between the company and the city authorities. One plan is to elevate the West Shore Railroad tracks and the other is to run passenger trains over the present freight tracks at the head of Onondaga Lake. Under the first plan all the present freight trains on the West Shore would be sent north of the city over the present freight tracks. A passenger station would be erected convenient to the center of the city, probably near the old West Shore depot. Under the second the West Shore tracks would be left at grade for freight transportation. The present freight tracks north of the city would be continued. The new passenger station would be located near the site of the old iron pier.

SEWERAGE AND SANITATION

Amend Bronx Sewer Act

Albany, N. Y.—Assemblyman Haines, of Yonkers, has introduced in the Legislature a bill to amend the act creating the Bronx Valley Sewer Commission. Five amendments are proposed. They are: Giving authority to the commission for the construction of a settling, reducing or screening plant. Changing the methods of levying the assessments for the cost of the sewer, so that the whole amount of interest on the bonds already issued shall not be included in the first assessment levied. Increasing the amount of bonds authorized to be issued by the commission by \$500,000. Authorizing the commission to use the premiums received on the issue of bonds. Extending the terms of the commissioners to one year beyond the completion of the construction work.

Big Relief Sewer Nearly Finished

Elizabeth, N. J.—It is declared by the engineers who have charge of the work of constructing the new intercepting sewer, described in the MUNICIPAL JOURNAL of April 6, 1910, that the work of the contractors would be finished by April 1. The contractors are now engaged on the last piece of work on Union street, where the sewer will be extended to the junction of Westfield avenue. Work was begun on August 19, 1909. With the completion of this sewer, it is expected and hoped that the Elizabeth River will be made clean. All of the sewage that is now emptied into the river will flow into this sewer, with the exception of one sewer that empties into the river near its mouth. To date City Council has authorized the issuance of bonds for \$250,000 for the work. The State Legislature will also be asked to pass an amendment to the bonding act so that bonds for \$25,000 more may be issued if needed.

Drinking Fountains in Schools Planned

New York, N. Y.—C. B. J. Snyder, Superintendent of Buildings of the Department of Education, declares that the common drinking cup used in the schools helps spread disease among the children, and he is looking about for a practicable substitute. He turned his attention first to the various kinds of sanitary fountains, but so far has been unable to find any that, in his opinion, is entirely satisfactory. It is said that Mr. Snyder has become so interested in the subject that he is contemplating inventing a fountain. It would require a great number of fountains to supply the needs of the schools and the additional cost had to be taken into account.

Would Apportion Cost According to Use

Newark, N. J.—Changes of an important nature in the Passaic Valley sewerage district law are proposed in a bill offered by Assemblyman Mylod. The bill provides for a sinking fund commission and the apportionment of costs according to the use that each municipality shall make of the sewerage facilities. As to the cost, the present law requires it to be apportioned according to the ratables of 1907. The bill leaves the division of cost as at present, but provides that the bonds are to be repaid by means of a sinking fund and contributions to the funds are to be made yearly in proportion to actual use. The bill also would provide that the part of the trunk sewer within the city of Paterson should be considered as a lateral construction and not chargeable to the district commission's construction. The district sewer, according to this construction, would extend only to the southerly limit of Paterson. The bill also provides for the issuance of 50-year bonds. The Governor is to appoint three members of a "sinking fund commission of the Passaic Valley sewerage district." They are to receive a salary. The amount is left blank in the bill, to be filled in by the committee that has the bill. The bill was prepared at the request of the sub-district that includes Bloomfield, Montclair, Glen Ridge and East Orange.

WATER SUPPLY

Put Ban on "Sidewalk" Meter Reading

St. Paul, Minn.—The Water Board has inaugurated a campaign to put the system of "sidewalk readings" by its meter readers under the ban. It developed at a recent meeting that meter readers have been changed recently and the bills of some consumers have increased materially. The Board members are inclined to believe some of the former readers did not actually read the meters of all patrons, but merely guessed at the reading some months. This form is known as "sidewalk reading." Some cases under investigation by the Board show that for three and four months a consumer's bill has been practically the same amount for each alleged reading, and when a new reader has gone into the territory this same consumer's bill is doubled or trebled. This is accounted for by the contention that former readers did not actually read the meter at all, but presented a reading covering consumption about equal to the minimum the patron would be expected to use. Consequently new readers in some instances have found actual consumption much greater than the minimum. With the employment of new readers, the Water Board expects to keep tab on the actual consumption, and any case of "sidewalk reading" reported will make the accused reader subject to immediate dismissal.

Favor Municipal Ownership of Water Plant

Escanaba, Mich.—Ever since the fact developed that the municipal lighting plant has during the last five years earned \$70,000 over and above all operating expenses, there has been growing a strong sentiment and conviction that it would be a good thing for Escanaba to own a water works system. It is figured out that if the city can do so well with its lighting plant, when it is so honestly and efficiently conducted, as it has been by the Board of Public Works, it can do just as well with a municipal water works system. Many citizens are now openly advocating the purchase by the city of the water works plant and some of them most interested in the question and the public welfare generally are collecting data from cities owning such plants, which data will be used with effect when the time comes for acting upon the proposition of purchasing the plant.

Artesian Water Supply Inadequate

Devils Lake, N. D.—The water problem for this city steadily assumes a more serious aspect. The artesian well which has supplied this city for the past 20 years is now unable to supply enough water and as a result the city has been compelled to cut off the night supply. The several devices that have been used to increase the flow of water have failed, and it will be necessary to dig a large number of wells in order to insure a sufficient amount of water.

Advocate Free Water for All

Lockport, N. Y.—The Lockport Board of Trade is discussing the matter of giving free and unlimited water to manufacturers, business men, residences and, in fact, to every user of that necessary commodity within its corporate limits. This subject was broached by John R. Earl, who was most enthusiastic in urging upon his fellow-members the advisability of the city granting this right to every one with no restrictions whatever; in fact, advertising to the world at large that it will do so with the idea of inducing new industries to locate here. The acquisition of more factories and concerns of all kinds seems to hinge entirely upon their securing satisfactory water rates from the city, which if they obtain free and unlimited water would be the greatest inducement for them to come here that any community could offer prospective industries.

Work on Municipal Water Works Temporarily Stopped

Mattoon, Ill.—Judge Wright has granted a temporary injunction restraining the city of Mattoon from further work on its municipal water works. The judge says that for the city of Mattoon to operate its own water works system or to make an agreement with another company is a violation of its contract with the Clear Water Company.

Water Company Offers to Buy City Water

Niagara Falls, N. Y.—The Western New York Water Company, a private water concern, has submitted to the city a proposition for the purchase of water from the new municipal system, which is expected to be put in operation within a month. While the private company's proposition cannot be accepted by the Water Board in its entirety, the members believe that the first step toward an amicable agreement between the city and the company which may eventually lead to the purchasing of the plant of the private company has been taken. The water company's offer is as follows:

The company to purchase from the city all potable water required in its service.

The company to pay the city \$16 per million gallons for raw water and \$20 per million gallons for filtered water, the company to take filtered water when the city is ready to serve it.

The limits of territory to be supplied by the city and by the company, respectively, to be defined in the contract.

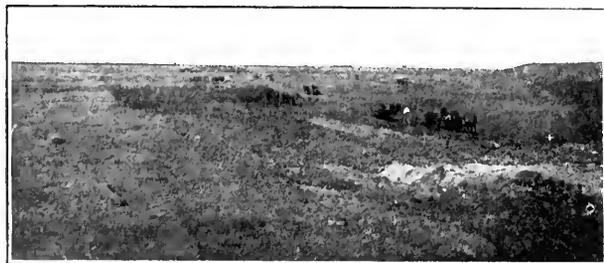

The company to have the right to supply any or all of its consumers through meters to be installed at the expense of the company and the consumer's minimum rate for such metered service shall not exceed the existing flat rate for non-metered service.

The company to operate its present plant to supply manufactories within a reasonable distance of its pumping station with raw water from its present source of supply, where potable water is not necessary.

The term of contract to be 20 years.

Work Begun on Stamford Reservoir

Stamford, Tex.—A new reservoir is being built which when completed will have a capacity of 4,000,000 gallons and will be the largest reservoir in West Texas, with the possible exception of one other. The general lay of the country, however, as shown in the photograph, would not strike an engineer living in New England, for instance, as a particularly favorable site. The contractor is J. W. Cox, of Stamford, and the work is being done under the supervision of Gurley & Hill, Stamford.

Courtesy San Antonio Express.

A TEXAS RESERVOIR SITE

Pure Water Assured by New Water System

Bristol, Va.—Bristol's new supplemental water main to the Frank Preston spring, five miles east of the city, has just been completed and the two Bristols will now enjoy an addition of from one to one and a half millions of gallons of water daily. The new supply has been pronounced by chemists to be absolutely pure. The cost of constructing the new main is about \$100,000. A modern intake, constructed of concrete, will be provided. The new supply is owned jointly by the two Bristols.

Test of Pump Is Satisfactory

Ft. Dodge, Ia.—Last week a test was made by the Mayor and City Council and Water Superintendent Pray of the new centrifugal pump recently installed at the pumping station. The test developed that the pump works satisfactorily. That it will furnish sufficient water at all times for the city supply must be determined by another test, which is now being made. When the pump was started the water in the big shaft was on a level with the top of the pump and during the morning the pump was turned on to its full capacity and only succeeded in lowering the water about 65 feet or within about 6 feet of the tunnels wherein about a million gallons of water is stored at all times. Efforts to lower the level of water from this point were unavailing and it is a significant sign that in all but very extreme cases the city supply can in the future be furnished from the deep well.

For New Onaga Water Works

Onaga, Kan.—Onaga has begun active work on its new \$20,000 water works system. A well and pumping station is under way on the banks of Hise Creek. The tower, 180 feet high at the greatest elevation in town, gives abundance of gravity pressure for the four miles of water mains now being put in. The reduction in insurance rates will pay much of the cost.

Tax Municipalities for Water Diversion

Trenton, N. J.—Fifteen municipalities and water companies will be charged this year for excess diversion, according to a schedule filed with the State Comptroller by the State Water Supply Commission. The total amount charged for excess diversion of surface waters is \$5,519.58 the tax being at the rate of \$1 per 1,000,000 gallons. Although the revenue from this source is inconsequential at this time, the indications are that within a few years it will become a source of substantial revenue to the State. This prediction was made at the time of the passage of the act providing that municipalities and water companies should pay a fee for all water taken beyond a fixed stipulated amount from sources of public supply.

Temporary Water Supply for Yonkers

Yonkers, N. Y.—The joint committee of citizens and Aldermen is considering a temporary supply of water—2,000,000 gallons daily to June 1. There are three possible sources for this temporary supply, as follows:

Water from Pocantico to be stored in local reservoir for use during dry season.

Extra filtration plant for surplus supply of Saw Mill River water.

Underground sources such as might be secured by the Oglesby plan, tube wells, etc.

Will Resume Old Damage Suit for Delay

Lockport, N. Y.—The Buffalo Dredging Company will resume the fight to make the city pay the claim of \$17,000 over alleged damages on the water supply system intake work in Niagara River, the payment of which was stopped three years ago by an injunction served by the taxpayers on Mayor Baker and the Common Council just as the Council was voting to pay \$10,000, the sum agreed on as a compromise, in settlement of the matter. Samuel J. Dark, secretary of the Buffalo company, appeared before the Committee on Accounts of the Board of Aldermen last week and pointedly asked what the city is going to do about the matter, intimating that his company intended to press the claim in the near future. The company's claim was for damages for alleged delay in getting the right of way.

STREET LIGHTING AND POWER

Dangerous Street Illumination Fixture Ordered Removed

Washington, D. C.—The old bell which has been a central figure in street illumination schemes in the downtown section of the city for the last two years has been relegated to the scrapheap. Complaints were made to the Board of Public Works by the Washington Water Power Company and by a number of citizens, who feared that the bell and the festoons might become coated over with ice and that the weight might become too great, and that the bell would fall on the electric wires below. The Board of Public Works decided that the bell must come down.

Cheap Electricity Furnished by Municipal Plant

Walla Walla, Wash.—The rates charged for electricity in Ellensburg, Wash., is said to be an excellent illustration of the advantages of municipal ownership of electric lighting plants. Compared to the rates charged for electricity in Walla Walla, Ellensburg is furnishing consumers with this necessary commodity at prices much lower than charged in this city. In general the rates charged in Ellensburg are 9 cents per kilowatt hour as the maximum charge, down to 5 cents per kilowatt hour as the minimum. These rates are subject to a discount of 10 per cent for prompt payment, which brings the maximum down to almost 8 cents and the minimum down to 4½ cents per kilowatt hour. The maximum charge in Walla Walla is 15 cents, or almost 7 cents per kilowatt hour higher than is charged in Ellensburg. A bill for 20 kilowatt hours in Walla Walla \$3, while in Ellensburg the same kilowatt charge would be \$1.60, or \$1.40 less in favor of the Ellensburg consumer.

Ordinances Providing for Underground Wires

Dallas, Tex.—Ordinances have been drawn and are being circulated for signatures for initiative legislation looking to the placing of all wires of every public service corporation in conduits underground. This is to apply at present only to what is called the "fire limits of the city." There are two of the ordinances, separately submitted. Each must have the necessary 5 per cent of the number of voters at the last preceding general election for Mayor, or about 200 in all. One ordinance will apply to all telegraph and telephone companies. The other is to apply to electric light and power companies. Both are to have the initiative provision attached before presenting to the Board of Commissioners, as it is not believed by the workers upon these matters that the Municipal Commissioners would pass the ordinance without a vote of the people.

Company Donates Town Free Lights

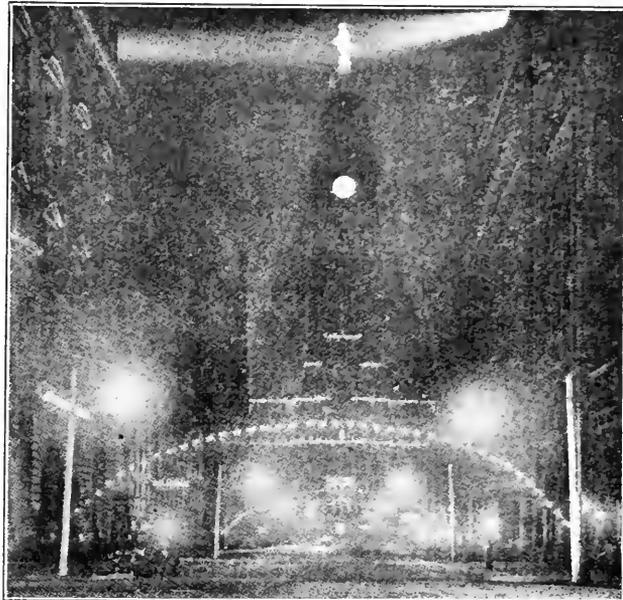

Weaverville, Cal.—At the request of the Women's Civic Improvement Club the Weaverville Electric Light Company has given 30 electric lights to Weaverville streets. Each light is to be of eight candlepower. As the company usually charges 85 cents a month for such lights, the donation made at the request of the women is equivalent to a cash gift of \$25 a month. The location of the lights is to be determined wholly to the Women's Civic Improvement Club.

Looking Toward Municipal Lighting for Minneapolis

Minneapolis, Minn.—F. R. Mistersky, Superintendent of the Public Lighting Commission at Detroit, Mich., told Mayor Haynes and the Council Gas Committee last week how his city saves money by running its own street lighting plant. Mayor Haynes, who is strongly in favor of lighting Minneapolis streets from power generated at the proposed high dam, arranged the conference. Mr. Mistersky declared that the actual cash cost for one arc lamp in Detroit is \$30.34 a year, as compared to the price of \$84 charged for Minneapolis by the Minneapolis General Electric Company, including depreciation, interest on bonds and other overhead expenses. Mr. Mistersky declared the total cost per lamp is only \$50, showing a clear saving of \$34 a lamp for the Minneapolis charge. The Detroit plant, Mr. Mistersky declared, is valued at \$1,400,000 and has been in operation since 1895. Detroit has 4,565 arc lights, as compared to 1,384 for Minneapolis. Detroit, however, has no street lamps, as has Minneapolis. "People of Detroit couldn't abolish the municipal lighting plant under any circumstances," said Mr. Mistersky.

Philadelphia City Hall Special Illumination

Philadelphia, Pa.—During the recent Electrical Show Broad street was illuminated by temporary arches of incandescent lamps which spanned the street, extending from the Armory to the City Hall. The City Hall was specially

CITY HALL AND APPROACHES ILLUMINATED

lighted and had erected on the North Broad street side a sign of welcome. The illustration shows the City Hall tower with the statue of William Penn illuminated by searchlights.

Ornamental Illumination Paid for by Assessment

Dayton, Ohio.—The City Council, at a recent meeting, unanimously enacted into law the legislation necessary so that the city could contract with the Dayton Lighting Company for the future maintenance of the present system of ornamental street lighting now in use. Since the installation of these lights payment for same has been made by the property holders or lessees of the property direct in accordance with agreement with Dayton Lighting Company. As soon as the Board of Control enters into a contract with the lighting company, in accordance with the legislation as passed, the cost for the lights will be put on the tax duplicate and assessment made direct by the city, the same as is done in other methods of city improvement.

Municipal Lighting for Orange

Orange, N. J.—Beginning February 16 Orange was lighted by its new municipal lighting system. The city has not yet assumed full responsibility for operating the system, as much finishing work remains to be done.

All Night Street Lighting for a New Hampshire Town

Rochester, N. H.—At an adjourned meeting of the City Council it was voted to have all night street lighting on and after February 14, the contract to be signed with the Twin State Gas & Electric Company.

Explosion in Sewer Cuts Off Electric Current

Kansas City, Kan.—One night last week an explosion of gas in a sewer severed four conduits controlling the electricity which supplies power to practically every electric light and street car in the city. As a consequence all the lights were out for three hours and not a street car was running. No one was injured by the explosion. It was more than an hour before the seat of the trouble was located. Reserve policemen were immediately sent to all parts of the city. Firemen patrolled downtown streets to safeguard against fire. There was neither a fire nor a robbery reported during the time the city was dark. The trouble occurred between the hours of seven and ten, when people were most dependent upon lights and cars, and great confusion reigned, especially until all were assured that there was no danger.

FIRE AND POLICE

Vote to Test Motor Engine at Tuckahoe

Tuckahoe, N. Y.—With Mayor Lennon, Commissioner of Public Safety Fleming, Aldermen Mooney and Stillwell, of Yonkers, as spectators, a demonstration of the motor fire engine from the Fire Department of Yonkers was given at Tuckahoe station and at Waverly last week under the direction of Chief Mulahey, of the Yonkers department, and an agent of the manufacturers. The demonstration was in anticipation of the vote on the proposition to expend \$8,000 for the purchase of one for the Waverly Engine Company.

Police Chief in Saddle

Allentown, Pa.—Besides maintaining four mounted officers in Allentown, the Police Committee has decided to secure a mount for the chief of police. The present chief, Major Charles D. Rhoads, ordnance officer of the Fourth Brigade, is not satisfied to sit at headquarters and receive reports, but wants to go out on the job and inspect what the subordinates are doing.

New Fire Company Inaugurated

Augusta, Ga.—Chief Frank G. Reynolds, of the Augusta Fire Department, has named the personnel of the new No. 6 auto chemical company, making his selections from among the experienced men in the department, with just one of the newly elected firemen to fill out the roll. By this selection No. 6 becomes one of the strongest and most efficient of the companies, being almost entirely composed of men of experience in the science of fire-fighting. The company will go into commission next week, at which time the formal opening of the company and the dedication of the new station will be celebrated by a gathering of the officials of the department, the city officials and a few invited guests from Augusta and the neighboring cities.

Police Statistics Sent to Governor

Baltimore, Md.—The annual report of the Board of Police Commissioners to Governor Crothers has been completed and sent by the Commissioners to the State offices in the Union Trust Building. The report shows that during 1910 33,055 persons were arrested and \$205,278.10 of lost and stolen property was recovered by the police. In regard to "pistol toting," it is shown by the report that under the new law the Commissioners issued 21 permits to carry weapons. The new private detective law passed by the last Legislature diminished the number of so-called "private detectives" and the Commissioners issued licenses to 49 men. During the year the police turned in 221 fire alarms and members of the department extinguished 300 fires without sending in an alarm.

Library Service for Fire Companies

Boston, Mass.—For many years the Boston Public Library has been sending books to fire companies. The work has increased year by year till at present books are sent to 58 companies. Others would be supplied if they requested it. The number of volumes sent in the year 1910 was 17,400. The books are in small sets, and delivery is made once a month by the library wagon. Half the books are fiction. An attempt is made to include some books that are likely to be of special interest to members of the Fire Department, and if requests come in for special books, these are sent when they are obtainable.

Prevention Work Proposed for Retired Firemen

Chicago, Ill.—H. H. Glidden, manager of the Board of Underwriters, has a plan for building inspection to prevent fires which he thinks would be exceptionally efficient and not very expensive. He proposes that the 1,200 retired firemen now drawing pensions from the city be employed as inspectors. "The city," said Mr. Glidden, "could increase their pensions to the size of a good salary by utilizing the sum annually collected as insurance tax on the premiums of the fire insurance companies. The fund amounts to nearly \$200,000 a year. One-half goes to the firemen's pension fund. The employment of these former firemen as inspectors should save the city many thousands of dollars every year."

Police Matron for Chickasha

Chickasha, Okla.—The members of the United Charities Society, the largest women's organization in the city, has petitioned the City Council and Mayor of this city for the appointment of a police matron.

New Fire Engine for Chico, Cal.

Chico, Cal.—Word has been received that the new fire engine ordered for the local department will be delivered about April 1. It is being built in Elmira, N. Y., by the American La France Company and the construction work on it is now well under way. The completed engine will be one of the most modern and best in the State, and will easily answer all the requirements of the Chico situation. The cost is about \$5,000, and it is expected that the engine will last the city at least 20 years. The old engine has given service longer than that, and is still in commission. Eight hundred feet of fire hose has been ordered from the Eureka Hose Company. It will go well with the new engine, for it is said to be one of the best brands on the market.

Underground Fire Alarm System Contemplated

Ft. Worth, Tex.—James A. Allen, one of the nominees for City Commissioner, and City Electrician Smith have been to Houston to inspect the underground fire alarm system of that city. They returned well pleased with what they saw. Ft. Worth is working on plans for an underground system. The city had an offer at one time from a company to install the underground system in this city for \$7,000. Since then the city has grown and the installation would have to be much more extensive. It is estimated the cost would be now \$15,000 or more. There will be several substations. At first the underground system would be restricted to the business part of the city.

Fire and Police Pensions Sought

Portland, Ore.—Members of the Fire Department are seeking to have created a pension and relief fund for the care of aged and incompetent firemen who have served many years in the department or have been injured in the performance of their duty. To this end a proposed charter amendment has been submitted to the Council with the request that it be placed on the ballot for the consideration of the voters at the coming municipal election. A similar bill creating a pension fund for the Police Department was presented to the Council.

Baltimore Fireboat Near Completion

Baltimore, Md.—Finishing touches are now being put on the new fireboat Deluge at the yards of the Skinner Shipbuilding & Drydock Company, and in a short time the trim vessel will be ready for delivery to the Fire Department. According to the United States steamboat inspectors who recently examined the Deluge, the vessel is perfect in every

Courtesy of Baltimore News

NEW FIREBOAT "DELUGE"

respect, and Baltimore's big interests along the water from expect from her strong protection against fire. A doctrial of the machinery has been conducted and the builder are well satisfied with the result. A big water tower on the stern of the fire fighter is one of the striking features and the top of the tower shows a large nozzle, while on the main deck are many other nozzles, all of which might be a reminder of a warship ready for action.

Permanent Technical Library for N. Y. Fire Department

New York, N. Y.—A donation of \$10,000 from Mrs. Russell Sage to the firemen of New York, to be used for the installation of technical libraries in firehouses has been announced by the Rev. Edward Knapp, the department's chaplain. Mr. Knapp has been at work upon the library project for several months. Three weeks ago he succeeded in interesting Mrs. Sage in it. The \$10,000 gift, the chaplain says, will be expended for books dealing with subjects the firemen meet in their civil service examinations. Through an arrangement made with the Public Library recently, popular literature, including light fiction and historical writings, has been provided for the fire stations. Cases in which to keep these books have been ordered and will soon be installed, and space will be provided in them for the technical works that are to become the permanent property of each firehouse. The circulating libraries will consist of 50 books for each fire station, to be changed every two months. About the same number of books will be purchased for the permanent supply. Chaplain Knapp announced that Fire Commissioner Waldo has made him chief librarian of the department and has designated the assistant foreman of each firehouse as librarian for the branch to be located there. In all, 257 branches will be established, to cover the city's four boroughs.

Police Patrol Boats to Be Kept in Touch with Headquarters

New York, N. Y.—First Deputy Police Commissioner Priscoll has practically completed his plans for reorganizing the Harbor Squad. The scheme comprises the location at prominent places on the Staten Island, South Brooklyn and East and North River shores of signal stations for the patrol. These will consist of telephone booths in which a patrolman will be constantly on duty. Each booth will be equipped with a New York Telephone Company wire for the use of the public and a private wire to the Police Department. The public wire will enable citizens to call up the booth and ask for assistance or notify the patrolman that some danger impends in the waters near by. On each booth will be a flagstaff, on which the patrolman will raise a flag by day and lantern signals by night. A danger call having been 'phoned to him, he can use his police wire to ascertain the location of the patrol boat and report to the Central Office and then raise his signal to call the attention of the boat. In order that the general public may know the location of these booths, the Police Commissioner will have cards printed giving the address of each and the telephone number. These cards will be distributed all along the shores of the harbor and rivers and at such other places where they may, in the discretion of the Police Commissioner, be of service. The launches of the Harbor Precinct also will receive new patrol schedules. They will be out much more than they have been in the past, and they will have to keep in touch with the shore signal stations. It is planned also to equip these launches with searchlights for night service. Hitherto when patrolling at night along the piers, the police have lost over thieves under the piers. These gentry would mutually make a bee-line for the darkest places, and by simply lying motionless on their oars, the thieves could not be seen by the pursuing police launch. With a powerful searchlight on their boat the police will be enabled to follow and capture their quarry.

Hoods on Cap Abolished

New York, N. Y.—Police Commissioner James C. Cropsey has issued a general order amending the rules and regulations to the effect that cloth hoods with winter caps will be no longer worn.

Police Have New Flash Lights

Hutchinson, Kan.—The Police Department has received our patent electric flash lights designed for the use of patrolmen. The batteries of the lights are made to fit in coat pocket, the cord running down the coat sleeve with the flash light attached to the inside of the cuff in such a way as to be convenient to reach. They are a great improvement over the old-fashioned light carried in the hand and the batteries of which burned out so often as to be too expensive for use.

GOVERNMENT AND FINANCE

Aims to Tax Gas Mains

Allentown, Pa.—Allentown is in the throes of a movement as pioneer among Pennsylvania cities to tax gas mains. One or two municipalities in this State do obtain revenue from their gas companies, but they are places where the more modern spirit prevailed of providing for taxation when the franchises were granted. In this city, as in hundreds of other municipalities throughout Pennsylvania, the gas company operates under the law of 1874, whereby gas companies not only have a monopoly, but are free from taxation, the franchises furthermore being self-extending when the city annexes adjoining territory. Last year Charles M. Schwab looked into this matter when he arranged for the construction of a monster coke plant at the Bethlehem Steel Works. One of the by-products of the coke operation is an enormous quantity of gas, more than enough to supply all the municipalities within a radius of 30 miles. He was considerably surprised when he learned that he could not, under the State law of 1874, secure a rival franchise, no matter how low the price at which he offered to supply gas. Recently an ordinance was introduced into the City Councils to tax gas mains.

New York Special Franchise Tax

New York, N. Y.—The total tentative special franchise assessments in Greater New York for the year 1911 are \$483,908,300, as compared with \$465,400,000 final assessments for 1910. Among the principal assessments for this year, as compared with last year, are:

	Final. 1910.	Tentative. 1911.
Am. Dist. Telegraph.....	\$100,000	\$100,000
Brooklyn R. T. system.....	53,276,300	59,304,800
Brooklyn Un. Gas system.....	18,470,000	20,085,000
Edison Elec. Ill., Brooklyn.....	12,000,000	13,000,000
Empire City Subway, Ltd.....	9,192,000	10,000,000
Consolidated Gas system.....	86,144,000	92,522,500
Manhattan Ry. Co.....	78,512,500	81,412,500
Metropolitan St. Ry. Co.....	20,258,000	19,200,000
Nassau Electric R. R. Co.....	3,056,400	3,056,400
N. Y. Telephone Co.....	44,170,000	48,500,000
Ninth Avenue R. R. Co.....	2,800,000	2,800,000
Penn. Tunnel & Term. Co.....	15,800,000	16,000,000
Third Avenue R. R. Co.....	7,920,000	8,300,000
Trustees, N. Y. & L. I. R. R.....	5,451,500	5,451,500
Twenty-third Street Ry. Co.....	2,790,000	1,625,000

Proposed Changes in New York Charter

New York, N. Y.—Material changes in the government of New York City are provided for in the report of the joint Legislative Charter Revision Committee, of which Assemblyman Fred W. Hammond, of Syracuse, is chairman, which has been submitted to both branches of the Legislature. The report consists of a brief synopsis of the work of the committee last year and a bill of more than 500 pages, which is the proposed charter for the city. The most important change advocated is the elimination of the borough presidents from the Board of Estimate, so that their entire attention can be given to the administrative affairs of their respective boroughs, and the provision for five commissioners, one to be elected by the voters from each borough, who will devote their whole attention to the Estimate Board. Provision is made for a Vice-Mayor, who will be a member of the Board of Estimate and preside at the meetings of the Board of Aldermen and act for the Mayor in his absence.

Defeat of Water Bond Election Explained

Oklahoma City, Okla.—The defeat of the water bond election was brought about, it is stated, not because the people are unmindful of the fact that Oklahoma City is in need of more and better water, but because they deemed it wise to delay the disbursement of such a large sum of money until the proposed commission form of government has become operative.

Plans to Have Annual Reports of Departments on Time

Boston, Mass.—The Mayor has issued a circular addressed to the heads of departments calling attention to an ordinance which provides that every officer in charge of a department shall issue his report within 30 days after the close of the fiscal year and asking the various officers to submit their 1910 reports within the prescribed time.

STREET CLEANING AND REFUSE DISPOSAL

Children to Assist in Cleaning Streets

South Bend, Ind.—In the organization of "clean street" leagues in the various public school buildings in South Bend nearly 10,000 school children will be enlisted in a movement to clean up the city this year, according to plans now under consideration. The children will assist in improving the condition of streets, sidewalks and lawns, but they will be liberally rewarded by the Chamber of Commerce, which is sponsor to the movement. The campaign will be launched as soon as arrangements can be completed and may become an annual feature of the work of the commercial organization. According to plans discussed by the Cleaner City Committee of the Chamber of Commerce, "clean street" leagues will be organized in all the city schools as soon as possible. Every scholar will be eligible to membership and the motto of the movement will be, "We are for clean streets." Committees will direct the actual work. Badges will be provided for the members of the committees, as well as the captains, and other badges will be distributed from time to time among the scholars particularly active in the work. The pupils will be asked to sign pledges, which may be recited in chorus before the close of school each afternoon, and will notify members of the committee of people failing to join in the movement. The people will be appealed to in various ways to assist the children in their work. The plan has been tried with great success in Brooklyn, N. Y., for several years.

To Clean City Ward by Ward

Dallas, Tex.—March has been designated as the time for a thorough clean-up of the city of Dallas and beginning on the first day of that month the city will be put in first-class sanitary condition, the work to be done ward by ward until every nook and cranny of the city is worked over. This was decided at a meeting of the Public Hygiene and Sanitation Committee of the Dallas City Plan and Development League, representatives of the Board of Health, the City Health Officer, the working head of the City Sanitary Department and representatives of the Chamber of Commerce. Another important action by the meeting was the passage of a resolution asking the City Commission to make adequate provision in the next financial budget for the proper support of the work of the Board of Health. The plan to be followed in putting the city in satisfactory sanitary condition is that efforts shall be concentrated on one ward at a time, and that each district shall be thoroughly relieved of all trash and dirt. The five city sanitary inspectors will go ahead of the trash wagons and urge residents to have all trash on their premises collected in a pile so that it may be hauled off. The city will be asked to send out 20 wagons for this work. In each ward there will be appointed from the residents a general, several captains and enough subcommittees to look after every foot of land in the ward. It is probable that premiums will be offered to children for the largest trash piles. This plan was used last year and is declared to have been a big success, the children getting good results from the friendly competition aroused by the offers. Ample notice will be given through the press of the ward to first be visited and from time to time the next district to be worked will be advertised. Three days will be spent in each ward.

Day Set Aside for Annual Cleaning for All Texas Towns

San Antonio, Tex.—March 11 has been set aside as official "clean-up" day, and every city and town of any size in Texas will, metaphorically speaking, get out with a scrubbing brush and broom. A great many cities in this State are preparing to go at this "clean-up" work in a most systematic manner.

Crusade for Clean Streets in Rome, Ga.

Rome, Ga.—The crusade for clean streets, sidewalks and premises is on in full force. Stringent regulations insuring absolute cleanliness are already on the statute books and will be rigidly enforced. These regulations relate to the cleaning of yards, the disposal of garbage, the sweeping of sidewalks, etc.

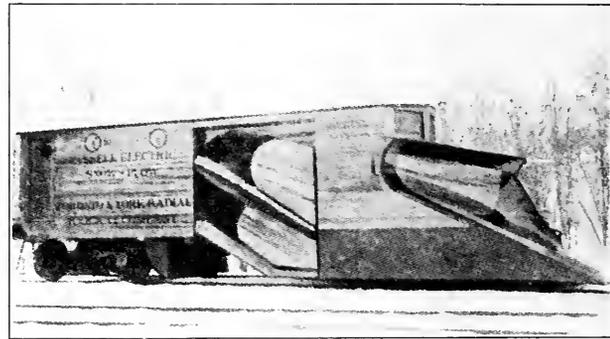

Street Flushing with Aid of New Nozzle

Altoona, Pa.—W. H. Fields, of the Highways Department, has put two or three gangs of men to work flushing the streets in all parts of the city. The work was started in the business district, and will be continued until all the paved streets are given a thorough cleaning. The departments recently procured a nozzle especially adapted to street cleaning work, and they can make much greater speed in the work by using it. It throws a spray of water about eight feet wide, and in addition to the advantage thus derived, a horse is used to drag the hose back and forth along the street. Thus not so many men are required and several gangs can be put to work. In the residential districts the work can be done in the daytime.

RAPID TRANSIT

Snow Plow for Electric Line

Toronto, Ont.—The Toronto & York Radial Railway control three suburban lines running into the city of Toronto. The longest of these lines is 55 miles, and runs through the Ridges of King, which are high hills in which the snowfall is large, and because of the location of the

SNOW PLOW FOR CANADIAN SUBURBAN LINE

road, the cuts deep. The problem of snow removal is frequently an expensive one to the company each winter. This winter they have ordered from the Russell Car & Snow Plow Company, of Ridgway, Pa., one of their newest models of plows suitable for electric lines. The principal dimensions of this plow are: Height over all, 12 feet; height of mold board, 8 feet 5 inches; length over all, 32 feet; extreme width of body, 10 feet 1 inch; width of bit, 9 feet 4 inches; total width of clearance when wings are extended, 14 feet 1 inch; equipped with air brakes; wings and flanges operated by air; approximate weight, 50,000 pounds.

Pennsylvania Legislation for Municipal Ownership

Harrisburg, Pa.—Numerous bills relating to municipal corporations, especially to second class cities, have been introduced in the House. The most important would permit municipal corporations to construct street railways and buy all equipment necessary to operate them and then lease to corporations for periods of years to be fixed by Councils. Another general bill empowers viewers to assess damages or benefits for grading of streets on railroads and street railways where they may be affected. A third provides that cities acquiring property shall take title in a simple.

Ordinance Would Put Two Men on Each Car

Moss Point, Miss.—An ordinance pending in Council, if adopted, will require the Pascagoula Street Railway & Power Company to have two men on each car at all times while operating within the city limits. The company is now operating the pay-as-you-enter system with one man to a car.

Subway Trains from New York to Mount Vernon

Mount Vernon, N. Y.—That the city officials are working to settle the question of better, quicker and cheaper transportation to New York City was again declared when Mayor Fiske made the statement that by October 1 the Interborough subway trains probably will run over the tracks of the Westchester & Boston Railroad to the union station at Columbus avenue, in Mount Vernon.

MISCELLANEOUS

Co-operation in Effect to Stamp Out Disease

Seattle, Wash.—The Seattle and Tacoma Boards of Health have promised to co-operate in securing proposed legislation having for its purpose the stamping out of tuberculosis among cattle of the State. The Seattle Board has stated its intention of taking up the matter with the Spokane Health Board and the health officers of other large cities of Washington.

Would Imitate Cleveland's Workhouse System

Toledo, Ohio.—In an effort to solve the problem of securing a central garbage loading station with which city officials have been wrestling unsuccessfully for several months, the Health Committee of the Chamber of Commerce now proposes that the city establish a county farm and workhouse close to Toledo to replace the present workhouse on Duck Island, which would permit that site to be used as a city yard and garbage loading station. Both the representatives of the city and the members of the Chamber of Commerce committee believe that a county farm and workhouse operated along the lines of the successful Cleveland institution would be a good thing for Toledo. It was stated that with a farm of not less than 50 acres the workhouse inmates could be employed the year around instead of being forced to idleness during the winter. The hay, oats and corn, products of the farm, could be used by the city safety and service departments, while the vegetable crops could be utilized in feeding the institution's inmates. At present the men are employed during the summer in making bricks, from which considerable revenue is derived. However, it is believed that in the end the farm would be just as profitable.

Band Concerts by Appropriation or Popular Subscription

Indianapolis, Ind.—Mayor Shank has under consideration asking the Board of Park Commissioners to set aside from \$1,000 to \$1,500 for giving band concerts in the parks and street centers this summer. The Mayor says band concerts will be given during the summer months, but that he has not decided definitely whether he will ask the Park Board to bear the expense or solicit subscriptions from business men, as he did last summer. The Mayor believes that for about \$100 a week concerts could be given each Sunday afternoon and evening in two parks or street centers. Last summer, through money contributed by business men, the Mayor gave two concerts each Sunday in different parts of the city, some of the concerts being given in neighborhoods where the poorer class of people live.

Municipal Council Takes Up Subject of News Stands

Lynn, Mass.—Newspaper stands located on curbstones and against buildings in the business district of the city are going to be investigated by the Commissioners of Public Safety for the purpose of determining whether they are to be regarded as a nuisance. This decision was reached at the regular meeting of the Municipal Council last week.

City Employees Want Tests for Promotion

Toledo, Ohio.—While most of the policemen and firemen are satisfied with their present berths, there are 129 of them who have just signified to the Civil Service Commission that they are not averse to promotion, and on February 1 the Civil Service Commission will hold examinations for an eligible list for promotion in the classified service.

Would Have Shade Trees Along Streets

Akron, Ohio.—The City Improvement Committee of the Chamber of Commerce at the meeting of the Chamber of Commerce last week recommended in a published report the planting of shade trees along the streets and in the yards. The committee in its report recommends the setting out Norway maples, elms or pin oaks. They are slightly higher in price, but are more hardy and much longer lived. The committee also recommends that property owners instead of planting trees between the sidewalk and the curb should, wherever possible, plant their trees 3 to 4 feet inside of the sidewalk. The tree will grow better and faster in such location and be much less liable to injury.

Votes of Women Control Election

Seattle, Wash.—In last week's primary to choose 18 candidates for Councilmen the votes of the women, following up their vote of February 7, which ousted Mayor Hiram C. Gill and his appointive officers, defeated all but three candidates who were accused of being close to the Gill administration. Most of the nominees are wealthy men, and some have devoted much time to the study of civic government. The proportion of women voting, compared with the total registration, was larger than of men.

Minneapolis Shows Interest in Playgrounds

Minneapolis, Minn.—Minneapolitans will have the opportunity to see for themselves practical demonstrations of playgrounds work on Thursday evening, April 8, when the National Playgrounds Institute will open a three days' session here with a public mass meeting. Moving pictures of playgrounds scenes, with children enjoying themselves with the swings and turning poles and invigorating games, will be a feature of the meeting. Then there will be folk dances as carried on under play leaders in parks and shelter houses of other cities, with children from one of the local settlement houses showing just how happy they can be made by such innocent pleasures. Minneapolis boy scout patrols will also drill. It is planned to make the meeting enjoyable as well as instructive.

Norfolk City Brings Suit Against Railway

Norfolk, Va.—The Norfolk & Portsmouth Traction Company, together with the Ocean View Railroad Company, an independently operated subsidiary has been made defendant here in suits aggregating \$85,000 damages in which the city of Norfolk claims actually \$43,000 for "between tracks" street paving. The traction company resists on the ground that an ordinance franchise in 1887 required its predecessor to only pay for labor and not material, while its legislative charter in 1886 requires the payment for both labor and material in paving "between tracks." The action involves some \$200,000 in back claims if the city wins.

Experts Discuss Dynamite

New York, N. Y.—The Municipal Explosives Commission gave a public hearing at fire headquarters last week in reference to the prohibition within this city of the manufacture, storage, transportation and sale of high explosives having nitroglycerine as a base. Manager Wasserman, of the W. H. Blumenstein Chemical Company, of Pottsville, Pa., said he would call attention to an explosive that his company made that was absolutely safe, though not as strong as dynamite. He gave it the name of canite. Mr. Haskell, a representative of the Dupont Powder Company, said that 95 per cent of the accidents that happened through dynamite were caused by explosion while the stuff was being thawed out. John von Lengerke, Vice-President of the Keystone National Powder Company, said that carelessness in handling dynamite was responsible for most of the accidents. W. F. Jordan, of the New York Central Railroad, said that dynamite was the only explosive that could be used to advantage in blasting.

Bill Providing for Municipal Construction

Des Moines, Ia.—A bill designed to revolutionize the method of performing city work or improvements, giving municipal cities the privilege of making improvements by private contract, has been introduced in the House by Representative Shankland, of Polk County. The following paragraph outlines the bill:

That whenever under the law governing such cities, any work or improvement is required to be done or made by contract the Council shall have power before ordering said work or improvement to cause an estimate of the cost thereof to be made and filed with the City Clerk, and if the bids or proposals thereafter received therefor shall exceed the estimated cost, or if no bids are filed in response to advertisements for proposals, the Council shall have the power to do said work without contract and to employ such labor and purchase such material as may be necessary therefor.

Don't Want to Be Village

Bellefontaine, Ohio.—The City Council has adopted resolutions opposing Representative Connoughton's bill to raise the line of demarcation between cities and villages from 5,000 to 10,000. It would change the form of government of 44 cities to the village plan.

LEGAL NEWS

A Summary and Notes of Recent Decisions—Rulings of Interest to Municipalities

Employment of Private Detectives

Flannagan vs. Buxton et al.—Municipal corporations can only exercise such powers as are clearly embraced within the legislative grant of power, or those derived therefrom by a clear and undoubted implication. Statute, 1898, authorizes villages to establish ordinances and by-laws for the maintenance of good order, and authorizes the village board to appoint policemen, night watchmen and superintendent of police, and prescribes their duties. Held, that a village organized under such act has no power in the absence of special necessity to employ private detectives at village expense to report violations of law in such village.—Supreme Court of Wisconsin, 129 N. W. R., 642.

Injury from High Voltage Wire—Liability

Hoppe vs. City of Winona et al.—The city of Winona, under authority of Congress and of the Legislatures of Wisconsin and Minnesota, constructed a bridge across the Mississippi River, from the Minnesota to the Wisconsin side thereof, and thereafter operated it as a toll bridge. By an ordinance duly enacted the city authorized defendant power company to string its electric wires over and attach the same to the framework of the bridge for the transmission of electricity from its plant in Wisconsin to and the distribution thereof in the city of Winona. The city reserved the right to control the manner in which the wires were so strung, and directions in that respect were given by the ordinance. The wires so placed upon the bridge carry from 25,000 to 45,000 voltage of electricity, and at times throw off a "brush" or "disruptive discharge" sufficient to cause the death of a person in close proximity therewith, without actual contact with the wire. The city thereafter let a contract for painting the bridge, and decedent was in the employ of the contractor in doing the work. He was killed while so at work by a "brush" or "disruptive discharge" of electricity from the wires. It is held:

(1) That if the wires were negligently strung upon the bridge, by reason of the fact that they were uninsulated and not sufficiently elevated upon supports above the structure to avoid persons coming in contact therewith while at work upon the bridge, both the city and the power company are liable.

(2) Whether there was negligence in this respect was, on the evidence, a question of fact and the verdict of the jury is sustained.

(3) That the relation of the city to the bridge was that of private owner of a quasi public highway, and its grant of authority to the power company to string its wires thereon was an exercise of its municipal and not of its governmental functions.

(4) The dangers from a "brush discharge" of electricity from the wire were unknown to the contractor or decedent, and both were entitled to warning thereof from the city.

(5) The doctrine of independent contractor has no application to the case.

(6) The question of decedent's contributory negligence was a question of fact for the jury.—Supreme Court of Minnesota, 120 N. W. R., 777.

Location of Sewage Disposal Plant

Borough of Florham Park vs. Borough of Madison et al.; Toothe vs. Same; Ward vs. Same.—The act which requires the consent of certain bodies before a sewage disposal plant can be located in a municipality other than the one desiring the same applies to all municipalities; it also applies to all proceedings taken to construct such plants, save such proceedings as at the date of the approval of the statute had reached a stage where the work had proceeded so far that the municipality was irrevocably bound to complete the work or else suffer serious pecuniary loss.—Court of Errors and Appeals of New Jersey, 78 A. R., 753.

Defective Streets—Warnings—Lights

Lasityr vs. City of Olympia.—In an action against a municipal corporation for injuries by falling over an obstruction in the street the court charged that it was the duty of the city by day or night to properly guard any obstruction placed upon a sidewalk during construction or improvement by proper and efficient signals or special lights or barriers and warnings, and that the foot passer has the right to assume that the sidewalk is safe, in the absence of reasonable barriers, lights or warnings to the contrary, and unless cautioned by some sign or notice, and the counsel for plaintiff in argument contended that the court had charged that it was the city's duty in all cases to place signal or beacon lights on barriers or obstructions in the street, and the defendant thereupon requested the court to correct the counsel and instruct the jury to the contrary. This the court refused to do on the ground that the jury had the written instructions. Held, that the refusal of the court to correct counsel or further instruct the jury was not prejudicial error.—Supreme Court of Washington, 112 P. R., 752.

Public Duty—Sprinkling Street Car Tracks

State ex rel. City of Milwaukee vs. Milwaukee Electric Railway & Light Co.—A street railway's duty under an ordinance to sprinkle the part of streets occupied by its tracks is a public one and enforceable by mandamus. A proceeding to compel a street railway to sprinkle the part of streets occupied by its tracks from April 1 to November 1, as required by ordinance, is not defeated as presenting a moot question because pending outside that period and because the duty may be afterward performed, where the ordinance has been disregarded for five years, and its validity is contested by the railway. A municipal regulation requiring a street railway to sprinkle the part of streets occupied by it so as to prevent dust rising, but not so as to create mud or pools of water, merely requires ordinary care and is not void as being unreasonable. An ordinance requiring a street railway to sprinkle the part of streets occupied by it is not void as discriminating in favor of users of automobiles and other vehicles who are not compelled to bear like expense.—Supreme Court of Wisconsin, 129 N. W. R., 623.

Police Officer—Removal—Evidence

People ex rel. Devon vs. Baker, Police Commissioner.—In a proceeding before the police commissioner of the City of New York to remove a police officer for improper conduct, the burden is on the prosecution to establish such conduct. In a proceeding before the police commissioner of New York City to remove a police officer for wrongfully assaulting and arresting another, evidence held to show that such other was the aggressor in the combat between him and the officer, so that the officer was justified in striking and arresting him.—New York Supreme Court, 126 N. Y. S., 885.

Contracts—Forfeit of Deposit

Davin vs. City of Syracuse.—Where a city advertised for sealed proposals for a public improvement, specifying that no bids would be received unless accompanied with a certified check for a certain percentage of the bid, and a bid was made accompanied by the check and the contract awarded to the bidder, who declined to make a contract, he could not recover the deposit declared forfeited by the city. The deposit will be deemed liquidated damages for a breach of the bidder, and in an action by him to recover it the city need not prove actual damages, substantial damages being presumed in the absence of evidence to the contrary. A contract must be construed in the light of the surrounding circumstances at the time it was made and not in the light of subsequent events.—Onondaga, N. Y., County Court, 126 N. Y. S., 1001.

Defective Streets—Ice

Hatch vs. City of Elmira.—A city is responsible for the defective condition of its sidewalks by reason of snow and ice, where dangerous ridges are formed and allowed to remain after the weather reasonably permits removal; but it is not liable for failure to remove small hummocks of ice on the sidewalk, which were made in snow and melting slush by passing pedestrians and later frozen.—New York Supreme Court, 126 N. Y. S., 863.

Milk Ordinance—Tuberculin Test

Adams vs. City of Milwaukee et al.—Where there are conflicting scientific beliefs or theories on the question of danger of infection from bovine tuberculosis and of the efficacy of the tuberculin test, it is for the city council to determine upon which theory it will base its police regulations, and unless it is clearly and manifestly wrong the courts will not interfere. In an action involving the validity of an ordinance requiring an inspection of milk and a tuberculin test, evidence considered, and held sufficient to show that milk from cows affected with tuberculosis is inimical to health. An ordinance applying to the inspection of milk and regulation of sale thereof and certificate of freedom of cows from disease and destruction of milk therefrom is within the power of the common council of the city of Milwaukee, under its charter. An ordinance of Milwaukee providing for inspection of milk coming from outside the city and tuberculin test and certificate of freedom from disease of cows producing the milk is not unconstitutional because it singles out milk dealers outside of the city and does not apply to dealers within it, where dealers within the city are under supervision of the board of health. An ordinance providing for inspection of milk and tuberculin test and destruction of milk from diseased cows does not violate Constitution U. S., Amendment 4, or Constitution Wisconsin, as depriving owner of property without due process of law, when the destruction is necessary to preserve the public health. In all ordinary cases of destruction of property under authority of the city council the property owner has a right of action for damages against the city for a wrongful destruction.—Supreme Court of Wisconsin, 129 N. W. R., 518.

Officers—Inspector of Buildings

Scanlon vs. Carey.—Revised Laws, providing that the superintendent of public buildings or such other officer as the mayor and the aldermen of the city may designate, shall be inspector of buildings, does not increase the number of persons holding office, but simply adds another office to that of the superintendent of public buildings, unless the mayor and aldermen designate some other officer of the city to be the incumbent of the new office; and an ordinance providing for the appointment by the mayor, triennially, of an inspector of buildings, subject to confirmation by the city council, is in violation of the statute, which calls for a designation in another way.—Supreme Judicial Court of Massachusetts, 93 N. E. R., 697.

Records of Treasurer—Deprivation of Property

Robison et al vs. Fishback.—Where a city treasurer prepared a card index system referring to assessments for public improvements at his own expense, such indexes not being required by law, an injunction against the removal of the indexes at the expiration of his term is not "taking" of services or property without just compensation, and does not violate Constitution prohibiting such taking without just compensation. An injunction against the removal by a city treasurer at the expiration of his term of office of card indexes prepared at his own expense is not a deprivation of property without due process of law.—Supreme Court of Indiana, 93 N. E. R., 666.

Sidewalks—Duty to Repair

O'Loughlin vs. Pawnee City.—A sidewalk constructed by a city along a public street in the usual place under the directions of the city and afterward controlled by it and repaired by the public should be repaired by the city, and the city may be liable for damages resulting from negligence in failing to do so, though the sidewalk is not within the limits of the street as originally platted.—Supreme Court Nebraska, 129 N. W. R., 271.

Hospitals—Nuisance

Board of Health of Ventnor City vs. North American Home et al.—Police law 1910, declaring that tuberculosis an infectious and communicable disease dangerous to the public health, does not render an institution for the treatment of persons afflicted with bone tuberculosis a nuisance per se, where it appears by the testimony of competent physicians that bone tuberculosis is neither contagious nor infectious.—Court of Chancery of New Jersey, A. R., 677.

Public Water Supply—Reasonable Waste

J. N. Matthews Company vs. City of Buffalo et al.—For failure to pay a valid claim for willful or unreasonable waste or for fraudulent use of water, the supply may be cut off until the waste is stopped and all arrears paid. In an action against a city to restrain the cutting off of plaintiff's water supply, evidence held insufficient to show plaintiff was guilty of fraudulent use or unreasonable waste of water. An ordinance of the city of Buffalo (section 44), providing that water may be shut off in case of unreasonable waste and until such waste is stopped and all arrears are paid, does not authorize the discontinuance of water service for non-payment of accounts that may be rendered for reasonable waste. In an action to restrain the discontinuance of plaintiff's water supply, evidence held insufficient to show that plaintiff had unreasonably wasted water so as to authorize the discontinuance of service. Where a water consumer chose to take water through an unmetered line, it was liable to pay rates for unmetered service, and the fact that it supposed that it was paying the water through metered lines will not relieve it from the established rate for water through unmetered lines.—Supreme Court of New York, 126 N. Y. S., 596.

Public Improvements—Proceedings

McCoy et al. vs. City of Omaha et al.—The mayor and council of cities of the metropolitan class had power under the act of 1897 to prescribe by ordinance duties of the board of public works not specified in the statute. The ordinance of the city of Omaha directing the board of public works to advertise for bids for street improvements was within the power of the mayor and council and valid. A notice inviting bids for street improvements, signed by the chairman and secretary of the board of public works, will be presumed to have been authorized by that board in the absence of evidence to the contrary.—Supreme Court of Nebraska, 129 N. W. R., 429.

Contracts—Approval of City Engineer

Baker vs. City Council of City of La Moure et al.—Where a city and a contractor enter into a contract for the construction of a sewer, and said contract specifies that the work must be done to the satisfaction of the city engineer, such provision is binding upon the city and the contractor, and the city will be restrained from levying assessments against individual property where the city engineer, in good faith, refuses to approve of the contractor's work. The fact that the supervising engineer was appointed by the council especially to superintend the building of a sewer, there being no city engineer, does not affect the question of the binding effect of the contract or the application of the statutes to that question.—Supreme Court of North Dakota, 129 N. W. R., 464.

Sidewalk Improvement—Reasonableness—Notice

City of Winchester vs. Bush et al.—Where a city passed an ordinance for the improvement of a sidewalk, providing for 30 days' notice to property owners within which they might do the work themselves, such notice should be construed as contemplating that the owners commence the improvement within the 30 days and, as so construed, provided a reasonable time for that purpose.—Court of Appeals of Kentucky, 133 S. R., 791.

Change of Grade of Street—Liability

Quinn et al. vs. City of Columbia.—Where there was a difference in the level of the ground on the two sides of a street, and a grade was established at the natural surface on one side, the city could not make a material change of grade from the natural surface on the opposite side without becoming liable to the abutting owners for the damages resulting from a change in the grade.—Kansas City Court of Appeals, Missouri, 133 S. W. R., 663.

Sidewalks—Pedestrians—Care Required

Kelley vs. Kansas City.—A pedestrian need not exercise a "higher degree of care" in descending a step in a sidewalk than in passing along a level walk, though ordinary care, which applies in both situations, might require more caution in stepping down.—Kansas City Court of Appeals, Missouri, 133 S. W. R., 670.

MUNICIPAL APPLIANCES

Electrically Propelled Water Tower

ONE of the most difficult pieces of apparatus to handle in the New York Fire Department, the water tower, has been equipped with the gasoline-electric motor system of the Couple-Gear Company, 149 Broadway, New York. At the first fire at which the newly equipped tower did actual work it was one of the first pieces of apparatus to arrive, whereas usually it is among the last. So notorious is this fact of the slowness of water towers to get into action that they are called by the firemen "window washers." The machine is capable of a speed of 15 miles an hour, and it weighs seven tons. The tower must be very stable because when raised to its full height of 65 feet and the water pressure reaches 165 pounds the reaction at the nozzle creates a tremendous leverage.

Briefly, the apparatus consists of a short, heavy chassis with four-wheel drive and four-wheel steer, which is placed under the front end of the vehicle to be handled, the fifth wheel of the vehicle being pivoted on a universally jointed platform attached to the chassis. In other words, the power chassis takes the place of the two front

wheels and horses originally used. Stability, when in service at a fire, is insured by locking the frame of the water tower to the frame of the chassis. It can be turned within its own length, the four-wheel steer permitting the power chassis to be turned at right angles to the tower, so that the rear wheels of the tower become pivots. The machine can be run backwards for any distance as fast as circumstances permit. Turning corners is greatly facilitated by the fact that when the four wheels of the power chassis are deflected they all travel on the same arc. The machine at present in service

NEW YORK WATER TOWER—GASOLINE-ELECTRIC DRIVEN

in New York is made up of one of the standard commercial semi-trailer chassis of the Couple-Gear Company, of New York, coupled up to a standard 65-foot water tower. The driving power is applied through the agency of electric motors, inclosed within the wheels, which are built up of steel discs. The motor itself is stationary, forming practically an extension of the axle. The wheel rotates about the motor, being driven by two small gears, one at each end of the armature shaft, which mesh with two large gears attached to the inner faces of the wheel discs close to the rim. The small gear on one end of the armature shaft engages the large gear in the wheel at one side, and the opposite shaft gear engages the other large gear on the other side. This is done so that both small gears will drive the wheel in the same direction. The wheel discs are fitted with doors through which access is obtained to the motors for inspection, oiling and cleaning. When the doors are in place the wheels are dustproof and may be run through water up to the hubs without danger of leakage. Current for the motors is supplied by a generator direct connected to a 50-horsepower, 4-cylinder gasoline engine. The engine and generator are so designed with relation to the requirements of the service that by manipulation of the throttle controlling the speed of the engine any desired current output may be obtained. It is possible to move the vehicle at a speed so slow as to be barely perceptible, while by merely opening the throttle (which is operated by the foot) the speed can be brought up to maximum in a few seconds. The vehicle has no fixed speeds, but any rate from minimum to maximum may be obtained at will. The machine is equipped with a controller which is the electrical equivalent of the usual automobile change speed gear. By means of the controller the speed of the machine can be cut in half, while the pulling power is doubled. In other words, the engine and generator maintain their speed, while the vehicle's speed is cut in two.

New Meter Box Top

THE Ryder self-locking meter box top, for which a patent has been applied for, has been placed on the market by the Clarksville Foundry & Machine Works, Clarksville, Tenn. The construction is shown in the accompanying drawing.

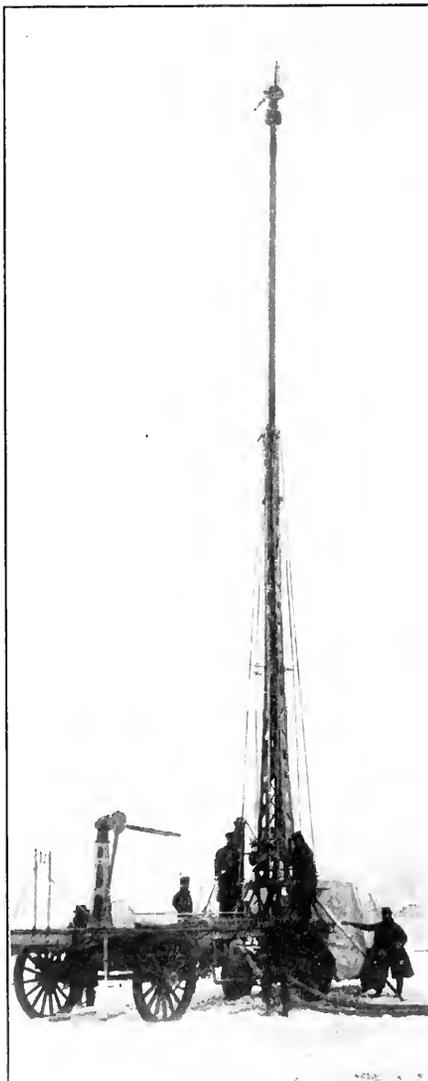

Fig. 1 is a section view across the center of the box through the center of the opening for the key B. This view shows the top A locked in position by means of the spring C extending under the projecting lugs E, which are cast on the body of the box G. The top A is made of cast iron and has an opening B at the center, a boss F on the under side around this opening and two guide lugs a' on opposite sides of the boss F and a Guard D to protect the spring C which passes

through the guide lugs a'. The spring C is made of the best spring steel and has shoulders at each end which prevent it from passing through the guide lugs a'. It also has a lead plug E riveted to it at its center which serves to close the opening in the top when the box is locked. Lead plug B is shown in Fig. 6.

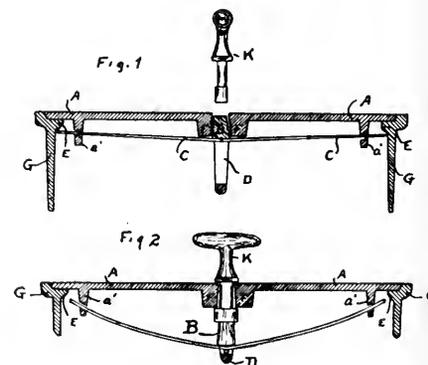

Fig. 2 is a sectional view across the center of the box through the center of the opening for the key. This view shows the top A unlocked with the key K in position and shows how the shape of the key K serves as a handle by which to lift off and replace the top when reading the meter. The shape of the key K is plainly shown. The top complete consists of only three pieces.

When it is desired to open the box the key K is pressed down upon the lead plug B until the shoulder comes against the top and the key is given a quarter turn, when the top can be lifted off by the key K as a handle. The top is then laid upon the pavement while the meter is being read. When it is desired to close the box the top is picked up by the key K and put in position and the key K given another quarter turn, when the force of the spring will bring the lead plug B back to its seat and the top will be in a locked position.

The advantages claimed are as follows: The opening in the center of

TESTING MOTOR WATER TOWER

SELF-LOCKING METER BOX

the top for admitting the key is closed automatically by a lead plug which will not corrode and which prevents dirt, water and cold air from entering the box.

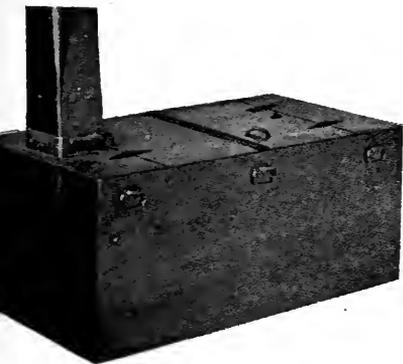

The key for unlocking the top is of such a shape that it serves as a handle by which to lift the same.

The key cannot be removed without having the top in a locked position, leaving no chance for the meter reader to leave the box in an unlocked position. It is quick to lock and unlock owing to the shape of the key and to the fact that the locking device is not visible from the top, it is hard to unlock without the special key made for the purpose so that boys or unauthorized parties have the greatest difficulty tampering with the meter.

The guard underneath serves as a protection to the spring when the top is laid upon the pavement in reading the meter and also makes it impossible to force the spring down far enough from the top to break it; as only enough room is allowed to unlock the box freely.

Small Garbage Incinerator

A SMALL portable garbage incinerator, shown in the illustration, is made by the Harris Incinerator Co., Rochester, N. Y. The construction and operation are both simple. It consists simply of an iron box divided into an upper and a lower compartment. The up-

PORTABLE GARBAGE CREMATORY

per is for garbage and the lower is the fire box. Suitable doors are provided for charging and for firing. The incinerator is made in different sizes. It is largely used in United States Army hospitals, and is suitable for hospital and other special municipal purposes.

Buffalo Pitts Steam Macadam Roller

In issuing their 1911 catalogue the Buffalo Steam Roller Company, Buffalo, N. Y., call attention to the fact that the Buffalo Pitts roller has now been on the market for nearly 20 years. New improvements have been made in design and new improved metallic compounds used as they have been invented. Even the first rollers, however, are still in satisfactory use.

Some of the important features which have made these rollers so serviceable and efficient are the following:

Steel yoke and flanged front housing, practically unbreakable. Smoke box uncovered to allow radiation and prevent burning out. Short locomotive boiler of large diameter to permit great variation of grade. Boiler of high pressure construction. Engines with locomotive link valve motion with hardened wearing parts, insuring long life. Two cylinders, avoiding dead centers and shock to shafting and

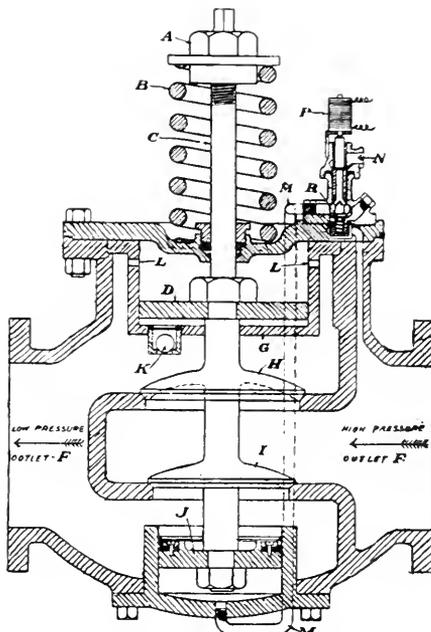

gearing. Cylinders steam-jacketed and cast in one piece with the guides. Shafting and gears of forged steel. System of gearing eliminating bevels and enabling full power to be applied to either one or both of the driving rolls at the will of the operator. All shaft boxes in removable housings. Two-speed gearing, which increases efficiency. Water glasses and gauge cocks near end of crown sheet. Low center of gravity, but with ample clearance from the ground. All working parts within sight, all levers, etc., within reach of operator. Force feed lubrication for cylinders. Large water and fuel capacity.

All of the Buffalo Pitts standard macadam rollers are equipped with two-speed gearing. It is patent to every experienced road builder that the roller is required to move rapidly when "puddling" and rolling the finishing courses, and it is necessary to move slowly with abundant power when rolling a subgrade, and the first layers of road metal, or when used for hauling purposes. The high-speed gearing of the Buffalo Pitts roller meets the first mentioned conditions, while the increased ratio of the low-speed gearing meets the latter conditions, and enables the roller to handle itself without increase of steam pressure on soft material or heavy grades or get itself out of a ditch or soft spot, where a single-speed gear machine would be unable to move itself. The double-speed gear also adds to the durability of the rollers, inasmuch as the wear is thereby distributed on two sets of gears instead of one, as is the case with a single-speed machine.

Water Pressure Regulating Valve

THE Golden-Anderson Valve Specialty Company, Fulton Building, Pittsburgh, Pa., have placed on the market an entirely new device, an automatic, cushioned, double-seated, quick-opening, electrically operated water pressure regulating valve. The valve, as shown in section, is in a closed position. When the spring B is adjusted by the nut A to the required pressure, the valve discs H and I are forced open. The high pressure, or inlet, is at E. The low pressure, or outlet, is at F. When the pressure on the low side has reached the pressure at which the valve or spring B is set, the pressure, still increasing, exerts a pressure on top of piston J (the valve H and piston D being balanced), causing the valves H and I to close. In order to have the

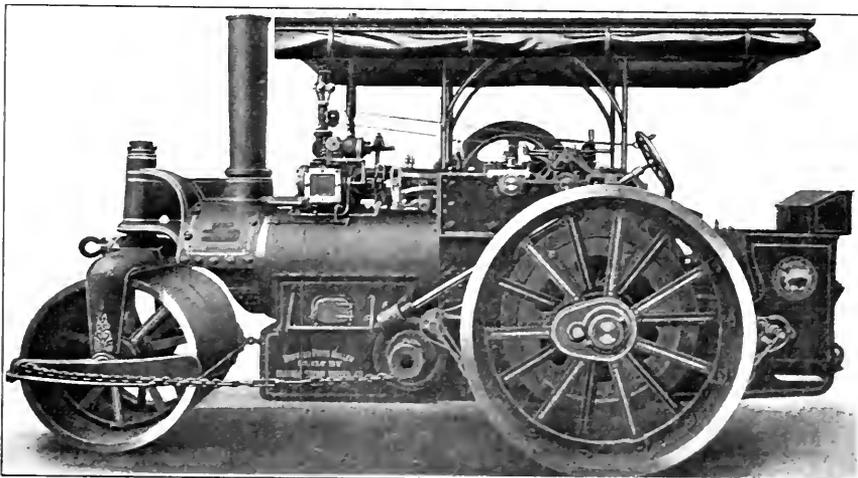

valve open freely and at the same time close very slowly, there is placed a ball check K in the bottom of dash pot G. The ports L placed in the upper rim of dash pot G prevent any accumulation of air while the valve is in service. The water above and below

PRESSURE REGULATING VALVE

the piston D and the air beneath the piston J prevent any water hammer and perfectly cushion the valve in opening and closing.

The solenoid P which controls the auxiliary valve R is wired to a switch at pumping station or any other convenient point and in case of fire the switch is thrown into contact, which causes solenoid P to open auxiliary valve R, allowing high pressure from the inlet side of the main valve to pass up through the auxiliary valve and down through small pipe M to the under side of piston J, which causes the main valves H and I to open to the full area. When the full pressure is no longer required, the switch is thrown out of contact. This allows the auxiliary valve to close and the pressure from the under side of piston J returns through the auxiliary valve, exhausting at port N. The pressure being released, the main valves return to position.

LATEST DESIGN OF 20-YEAR ROLLER

NEWS OF THE SOCIETIES

Connecticut Society of Civil Engineers.—The twenty-seventh annual meeting of the society was held at New London, February 14-15. Alfred D. Flinn, Department Engineer, Board of Water Supply, New York, delivered an illustrated lecture on the Catskill water works for New York. The author reviewed the general results to be accomplished by the project and then described in detail interesting engineering features of every part of the work. He gave special attention to the dams, conduits, siphons and various pipe and valve details.

Herbert M. Knight, formerly engineer with the Baltimore Sewerage Commission, gave an address illustrated with many lantern slides of Baltimore's ten-million-dollar sewerage system. The speaker described the legislation leading up to the project and outlined the main features of the project—a sewerage and drainage system in nearly every street in the city and a disposal plant a number of miles away. The high standard of purification required by law and the reason for it were explained. The difficulties in constructing sewers in streets where so many structures had previously been built were described.

Dr. Willis L. Moore, Chief United States Weather Bureau, read a paper on "The Relation of the Weather and Forestation to Stream Flow." The speaker argued that forests have no appreciable effect on temperature, rainfall or run-off and that therefore their removal cannot affect the occurrence or the extent of floods.

R. F. Stoddard gave a short description of the Congress Street Bridge at Bridgeport, Conn. This is a reinforced concrete highway bridge, 55 feet wide, comprising four 39-foot skew arches and a 70-foot single leaf Scherzer rolling lift draw. The main points of interest in the construction are the use of a granite protecting facing on the outside of the piers between high and low water and the use of a reinforced concrete sidewalk slab and a wood roadway.

Prof. C. M. Allen, Worcester Polytechnic Institute, read a paper, illustrated with views, on "Testing Water Wheels after Installation." He described in detail the Alden brake equipment with which he had tested a number of waterwheels in New England installations.

James A. Newlands read a paper on "Hyperchlorite Treatment of Water," which explained the theory and described a number of installations. A paper on "Actual Yield of a Typical Connecticut Watershed," by R. A. Cairns, was read by title only.

The election of officers for the ensuing year resulted as follows: Charles A. Ferry, New Haven, president; A. W. Sperry, New Haven, first vice-president; S. E. Minor, Greenwich, second vice-president; J. F. Jackson, New Haven, secretary and treasurer.

League of Michigan Municipalities.—At a special session of the League of Michigan Municipalities the representatives of the different cities in attendance unanimously adopted resolutions asking the Legislature to amend the home rule bill so as to empower the cities to amend their existing charters without holding a charter convention for the purpose of making a general charter revision. The action was directly in line with the plan proposed by Mayor Thompson of Detroit.

Lake Michigan Sanitary Association.—The fourth annual meeting was held at the La Salle Hotel, Chicago, February 18. The association is comprised of members from Illinois, Indiana and Wisconsin, and its purpose is to secure scientific analyses of the water of Lake Michigan and to promote legislation looking toward its purification. President R. R. McCormick, in his annual address, said in part:

This meeting comes at an opportune time, when for several days the Calumet River has been pouring a large volume of polluted water into Lake Michigan, owing to the recent rains. I want to point out to you that it is necessary to make haste if we want to solve these problems of sewage disposal in our own way and in a manner least expensive. The Secretary of War, under the law, has the right to prevent the putting into navigable waters of factory waste and all kinds of sewage other than liquid. As I read the law that authority extends to a point beyond where the Calumet becomes navigable on the theory that non-navigable waters cannot be allowed to pollute navigable waters. Under this law he can prevent pollution of the Calumet River and of the Chicago River. If the local bodies of Illinois and Indiana don't solve this problem the United States Government will do so, and it will not give the same attention to the wishes of the local people as the closer bodies would do. It is an open secret that when Col. Goethals finishes with the Panama Canal he is to be appointed chief engineer of the army. He has paid close attention to sanitation and has turned a fever swamp into a delightful health resort. He is coming into the office with drastic ideas of sanitation, and if we don't act first he will demand more rigorous and expensive methods than are really requisite.

Col. G. B. Young, Surgeon of the United States Public Service and Marine Hospital Service, spoke in favor of the passage of the Mann bill, now pending in the United States Senate. This bill enlarges the province of the department and authorizes it to study all questions pertaining to the public health and the propagation and spread of disease, including such questions as sanitation. Col. Young suggested that the association should ask the next Congress to give the federal officers wider authority in sanitary matters. Other speakers were Dr. W. A. Evans, Health Commissioner of Chicago, and Langdon Pearse, chemist in charge of the experimental station at the Thirty-ninth street plant of the sanitary district.

Officers of the association elected for the coming year are W. D. Weis, president; Dr. H. B. Favill, first vice-president; A. J. Horlish, second vice-president, and W. R. Humphrey, secretary.

Association of City Sealers of Weights and Measures.—City Sealer John H. Sullivan, of Newark, N. J., in an address at the convention of city sealers, held in the headquarters of the National Bureau of Standards, at Washington, February 17-18, made suggestions as to ways in which legislation could be made effective and practical in its results and described the system of the Newark department. He told of the methods that had been used here to break up dishonest practices of unscrupulous peddlers and merchants, and showed photographs of scales and measures which he and his assistants had confiscated.

A proposed "model bill" was taken up clause by clause during the two-day session of the convention and was unanimously approved in every part. Mr. Sullivan says that it is superior to the bill recently introduced in the New Jersey Legislature by Senator Prince, and that he will make an effort to have the Prince bill withdrawn and the bill approved by the sealers substituted for it.

Fire Chiefs' Club of Massachusetts.—The monthly meeting of the Fire Chiefs' Club of Massachusetts, held at the Copley Square Hotel, Boston, February 15, was the most important and best attended that the club has had in ten years. The club had as guests several men prominent in the real estate and insurance world, who discussed "What Change, if Any, Should Be Made in the Building Laws Governing the Construction and Space Between Apartment, Tenement and Single Houses in Unrestricted Districts?"

The guests of the club were Building Commissioner Arthur G. Everett, F. Eliot Cabot, secretary of the Boston Board of Fire Underwriters; Col. Edward H. Eldridge, representing the Boston Real Estate Exchange, and C. M. Goddard, representing the New England insurance exchange. There were nearly 100 present. Chief John A. Mullen, president of the club, presided.

Secretary Cabot said that in Boston the number of wooden buildings erected annually were numerous and that in districts where they were grouped the fire hazard was increased. The number here is overwhelming, he added, and the city must be protected against devastation. According to Mr. Cabot, men who persisted in having roofs shingled were really criminals. They were constantly exposing their neighbors and themselves to danger, and serious consequences might result from their acts at any time. He believed that roofs should be constructed of a less combustible material. In closing, Mr. Cabot said he has always felt that fire departments should have representation on committees that were planning to bring about changes in fire laws.

Building Commissioner Everett said that something should be done toward securing legislation to compel the better construction of buildings. Such legislation would naturally reduce the fire hazard. Insurance agents, he said, often took big risks, thus encouraging men who, if they were refused insurance, would be compelled to erect buildings that would come up to the conditions required.

C. M. Goddard said in order to better conditions it would be necessary to educate the public. Petty economy was making many property owners careless, he said. Their motto seemed to be, "Save a dollar to-day." They never realized, he declared, that they might lose \$1,000 to-morrow or next year. Mr. Goddard said that he believed in insurance, but if there was no insurance there would not be any cheap buildings.

Col. Eldredge said that the height of the buildings would have to be taken into consideration in the matter of determining the distance between frame houses in unrestricted districts. Chief Mullen, Chief Spencer of Chelsea, Ex-Commissioner Wells, who introduced the subject, and several others were heard.

New England Water Works.—The March meeting will be at Hotel Brunswick, Boston, March 8. The following papers will be presented: "The New England Portion of the Proposed Atlantic Intra-Coastal Waterways," illustrated, by Edward Parrish, Assistant United States Engineer, Newport, R. I. "The Reforestation of Watersheds for Domestic Supplies," illustrated, by F. W. Rane, State Forester of Massachusetts. This paper will be discussed by E. R. B. Allardice, Superintendent of Wachuset Department, Metropolitan Waterworks; E. S. Bryant, Practical Forester of Boston, and others.

Association of Borough Officials of Pennsylvania.—Seventy or more boroughs of the State were represented at Harrisburg last week when a formal organization was effected for the purpose of obtaining better legislation.

The organization went on record as favoring the codification of the laws relating to boroughs, the commencement of the fiscal year on the first Monday in January, instead of the first Monday in March, audits on the first Monday in March, 1911, and the first Monday in January thereafter, the election of all officers, except those whose terms are of longer duration, biennially.

The delegates met in the Senate caucus room at the Capitol and a temporary organization was formed by the election of T. F. Chrostwaite, Hanover, as chairman.

Special emphasis was placed by borough solicitors upon the need of a law permitting boroughs to issue municipal paying bonds, a privilege third class cities have long had. The bill providing that third class cities and boroughs direct telephone, telegraph and electric companies to place their wires in conduits was commended, but it was agreed to examine the bill carefully before asking legislators to vote for it.

Relief from the laws which limit the borrowing capacity of boroughs will be asked for, it being claimed that boroughs which own their own water companies that are bonded are in many instances unable to issue bonds for any other purpose.

Nanticoke was decided upon as the place for the next meeting, to be held in October, the date being left to the committee on organization. The following officers were elected: President, T. F. Chrostwaite, Hanover; secretary, Raymond Staub, New Oxford; treasurer, John C. Nissley, Harrisburg.

American Society of Mechanical Engineers.—The sixty-third meeting of the society will be held in Pittsburgh, Pa., from May 30 to June 2, inclusive. The society has not met in this city since 1884. The American Society of Mechanical Engineers is one of the foremost organizations of technical and professional engineers in the world, with a membership of over 4,000 in this country as well as abroad. The headquarters of the society are in New York City, and Col. E. D. Meier, of St. Louis, is president this year. The society has in the Pittsburgh district alone a membership of about 160. Last year the society held a joint meeting in England with the British society, the Institution of Mechanical Engineers. George Westinghouse, who was president of the society last year, presented a paper on "The Electrification of Railroads," which aroused a great deal of interest. The British society, through its local committees in Birmingham and London, entertained the American engineers by showing them many things of professional interest, as well as providing delightful social functions. An executive committee, consisting of E. M. Herr, chairman; George Mesta, J. M. Fate, Jr., Chester B. Albee, D. F. Crawford, Morris Knowles and Elmer K. Hiles, secretary, will have charge of the Pittsburgh meetings. It is expected that from 300 to 400 members and ladies will be in attendance. There will be professional sessions, when papers will be read and discussed. There will also be inspection trips through the leading local industrial establishments, besides automobile trips through the parks, a visit to Carnegie Institute, Memorial Hall, etc.

South Dakota Engineering Society.—

A number of engineers of the State met at Pierre and effected the organization of the South Dakota Engineering Society. The object is the advancement of engineering knowledge and practice in the State and the maintenance of a high professional standard among its members. Any professional engineer or architect whose qualifications meet the requirements of the society is eligible for membership. For a full member those comprise six years' experience and two years in charge of important work. To become a junior, two years' experience or graduation from a school of recognized standing is required. The society will be managed by a board of directors, a director being chosen from each of the four geographical districts into which the State has been divided. The officers are: President, S. H. Lea, State Engineer, Pierre; Vice-President, A. B. McDaniel, professor of civil engineering, State University, Vermillion; Secretary-Treasurer, R. G. Culbertson, secretary the Missouri Valley Engineering Company, Mitchell. Directors: First district, C. A. Trimmer, president Missouri Valley Engineering Company, Madison; Second district, C. C. Witt, engineer South Dakota Railroad Commission, Pierre; Third district, B. C. Yates, assistant chief engineering Homestate Mining Company, Lead; Fourth district, Stein Bangs, civil and hydraulic engineering, Rapid City.

Oklahoma Engineering Society.—At a meeting, Oklahoma City, February 2, the following resolution was adopted:

Resolved, that it is the sense of the Oklahoma Engineering Society that the bill now pending before the Legislature creating the office of State Highway Commissioner should be amended to provide that the Governor appoint a competent engineer to the office of State Highway Commissioner, who shall serve as ex-officio State Highway Engineer, but if in the wisdom of the Legislature it should be deemed necessary that both a Highway Commissioner and a Highway Engineer be appointed, then it is the sense of this society that the incumbents of both offices should be thoroughly qualified engineers, and that both of them should be appointed by the Governor.

Resolved, that a copy of this resolution be mailed to the chairman of the House committee and to the chairman of the Senate Committee on Good Roads.

Mayors' Association of Alabama.—

City Attorney Romaine Boyd, of Birmingham, has announced that at the suggestion of members of the legislature he will call a conference of all the mayors, city attorneys and presidents of the city councils of Alabama to meet in Birmingham early in June to revise the State municipal code. Mr. Boyd declares that the time has come to give the cities of Alabama adequate and definite laws. He says the present code is a conglomeration with many things so vaguely stated that he is unable to interpret them. He and Mayor Exum will later formally call the conference and suggest that a permanent organization be formed.

Engineers' Society of Milwaukee.—

R. C. Newhouse, engineer in charge of the crushing and cement department of the Allis-Chalmers Company, gave an illustrated talk February 8 on Cement Machinery before the Engineers' Society in the Plankinton House.

International Association of Inspectors of Plumbing.—The eleventh annual convention of the American Society of Inspectors of Plumbing and Sanitary Engineers was held in the council chamber, Milwaukee, February 7-9.

The address of welcome was delivered by Health Commissioner Kraft, followed with a response by William G. Williamson, Detroit, president of the organization. E. C. Stover, Trenton, spoke on "Abolition of Drinking Cups," while J. J. Luff, Cleveland, read a paper on "Shall Traps Having Concealed Partitions be Prohibited by Ordinance?" In the afternoon the following papers were read: "Ordinances of Anti-Siphon Traps," Joseph Graham, New York; "Harm Done by Plumbing Calalogs," A. S. Shaver, Pasadena; "Cast Iron Fittings for Sanitary Purposes," R. R. Rust, New York. Tuesday morning the following papers were presented: "Waterworks and Distribution Systems," Chief Engineer Thomas McMillan, Milwaukee; "Sewage Disposal of Milwaukee," City Engineer Poetsch; "Milwaukee's Incinerator Plant and Garbage Disposal," Supt. S. A. Greeley.

In the afternoon the delegates visited one of the large breweries where lunch was served; a visit was made to the refuse incinerator, and to several fire boats. At night an illustrated lecture was given by M. Wailley on "Air We Breathe." Mayor Seidel also spoke.

Addresses Wednesday morning follow: "Sizes of Vents," W. B. Gray, Louisville; "Examinations of Plumbing," E. H. Donahue, Peoria; "Construction and Repair of Barns, Regulation of Lights, Vents, and Drainage," William Huy, Portland.

Congress of Technology.—A congress of technology will be held in Boston on April 10-11, in celebration of the fiftieth anniversary of the granting of the charter of the Massachusetts Institute of Technology. In line with this idea the fifty or more papers which will be presented at the Congress will be written by graduates of the Institute, and will thus serve to record the part the alumni of the institution have taken in the development of scientific industry.

As the titles of these papers are sent in by the writers it is becoming evident that the managers of the congress will succeed in their effort to make the proceedings of the congress show from another point of view the general industrial advance that has taken place during the past fifty years under the guidance of trained engineers. The papers will cover a wide range of subjects, from architecture to sewage purification, and the names and professional standing of the writers show that they will together discuss authoritatively every important problem of modern industrial technique and management. It is already clear that this record is not limited to any narrow activity within merely technical lines, but that it covers the broader problems of the relations of science to industry, the place of the engineer in creating a more efficient type of industrial management and the general shaping of material conditions to serve alike the changing conditions of business and the improving conditions of labor.

New York Academy of Medicine.—

At a meeting, February 21, Dr. Charles E. North read a paper on "An Investigation of Recent Outbreaks of Typhoid Fever in an Adirondack Camp and the Discovery of a Typhoid Carrier."

Oregon Society of Engineers.—With a charter membership of 160 the Oregon Society of Engineers came into existence February 6, at the Commercial Club, when the first annual meeting of the organization was held, officers were elected, a constitution was adopted, and arrangements made to gather into the association all Northwest engineers, estimated to number from 600 to 700 in this field. All engineers in any line of work are eligible to membership from any part of the Northwest, although the name of this State was taken.

The officers chosen were as submitted by the nominating committee, and were as follows: D. C. Henry, consulting engineer of the United States Reclamation Service, president; O. B. Coldwell, general superintendent of the power department of the Portland Railway, Light & Power Company, first vice-president; W. R. King, consulting hydraulic engineer, second vice-president; William H. Corbett, president of the Willamette Iron & Steel Works, third vice-president; C. E. Bliven, secretary; F. A. Naramore, assistant engineer of the Northwest Bridge Company, treasurer; Thomas Bilyeu, J. H. Norton and M. Quimby, one-year term directors; H. E. Plummer, A. D. Monteith and B. Honeyman, two-year term directors, and Ralph Budd, Frederick Powell and E. P. Rawson, three-year term directors.

New England Contractors' Association.—This association was organized at Boston, February 9. Some twenty-five contractors and firms were present, among them Holbrook, Cabot & Rollins Corporation; Stone & Webster, W. L. Miller, Warren Brothers, Ward Brothers, Hanscom & Co., Fred T. Ley & Co., Charles R. Gow, Stewart & Sons Co., H. P. Converse, A. D. Fuller, Eastern Bridge Company, P. B. Elkins, Osgood Construction Company and Messrs. Smith, Cashman & Gray. Letters were read from several who were unable to attend, but promised their support. James W. Rollins, Jr., presided at the dinner, with W. M. Denman, through whose efforts the meeting was arranged, acting secretary. Mr. Rollins stated the need of an association in New England to insist on better working conditions in the contractors' business and cited a few of the annoyances which his company had experienced and which were common to all.

Kentucky Fire Prevention Association.—Besides inspecting the fire fighting facilities at Georgetown at their last meeting on February 28 the association asked that the firemen be clothed with police powers; that is, that they be given authority to arrest a person suspected of incendiary designs. The council at Maysville, where the association met last year, has already passed such an ordinance.

National Conference of City Planning.—The third annual conference will be held in Philadelphia, Pa., in May, 1911. An exhibition of city planning and housing conditions is to be held at the same time.

California State Highway League.—Initial steps for organizing a State Highway League were taken at an informal dinner given by W. G. Scott, of the Inyo Good Roads Club, at the Sacramento Hotel recently. The purpose of the league will be to create public interest in California's possibilities for tourists and the necessity that the roads of the State be put in condition for the use of automobiles. It is hoped that sectional differences will be threshed out and the highway plan be placed on the broad basis of a State proposition.

Calendar of Meetings

February 28-March 1.

Northwestern Cement Products Association, West Hotel, Minneapolis, Minn.—Henry B. Smith, Secretary, 834 Security Bank Building, Minneapolis, Minn.

March 6-11.

Canadian Cement and Concrete Association—Annual Convention, Toronto, Ont.—Wm. Snaith, Secretary, 57 Adelaide street East, Toronto, Ont.

March 8-10.

Engineering Society of Wisconsin—Annual Meeting, Madison, Wis.—W. G. Kirchoffer, Secretary, Vrooman Building, Madison, Wis.

March 21-22.

New York State Railroad Association.—Quarterly Meeting, Syracuse, N. Y.—C. Gordon Real, Secretary, Kingston, N. Y.

May.

City Commission Congress.—Meeting, Galveston, Tex.—Mayor Lewis Fisher, Chairman of Committee, Galveston, Tex.

May 29-June 3.

National Electric Light Association.—Annual Convention, Engineering Societies Building, New York, N. Y.

June 6-10.

American Water Works Association.—Thirty-first Annual Convention, Powers Hotel, Rochester, N. Y.—John M. Diven, Secretary, 14 George street, Charleston, S. C.

June 11-16.

International Association of Chiefs of Police.—Eighteenth Annual Convention, Rochester, N. Y.—Major Richard Sylvester, Superintendent of Police, Washington, D. C., President.

June 13-18.

New York State Association of Chiefs of Police.—Annual Convention, Rochester, N. Y.

PERSONALS

ADKINS, BEN C., former vice-president of the St. Louis Americans, has resigned as Water Commissioner of St. Louis.

AKEN, MAJ. H. M., has been appointed general superintendent and manager of the water works of Knoxville, Tenn., a position which he held for several years before municipal ownership was established.

ALLEN, CHARLES S., Chief of the Fire Department of Trenton, N. J., has been granted a leave of absence for the purpose of taking a trip to Florida for his health.

BERNAY, C. L., assistant city engineer of Houston, Tex., has accepted a position in the Texas Company's asphalt division.

BRAENTIGAM, H. T., Cincinnati, Ohio, has been appointed Superintendent of the City Electric Light Plant of Portland, Ind., succeeding Charles W. Bailey.

BUCHANAN, N. B., has established a general consulting engineering practice with offices at Huntsville, Ala. He had lately served as assistant resident engineer on the construction of Corey, the model industrial city for employes of the U. S. Steel Corporation.

CAREY, DENNIS E., has been appointed Chief of the Fire Department of Lawrence, Mass.

DANENHOWEN, R. O., assistant city engineer of Cincinnati, O., has tendered his resignation, to take effect March 10. Mr. F. L. Rachig, draftsman in the track elevation department, has been promoted to fill the vacancy caused by Mr. Danenhowen's withdrawal.

DENNIS, FRANK, has been appointed Fire Chief of Long Branch, N. J.

EPPS, LOUIS, has been elected Mayor of Blackstone, Va., to succeed Mayor Geo. P. Adams, resigned.

FANNING, COL. JOHN T., Water Works Engineer, died recently in Minneapolis. He was formerly a citizen of Manchester, N. H., where he constructed the water works system.

FOSTER, CLAIR, has resigned the position of Water Register of the Borough

of Manhattan, New York, to become assistant to Irving T. Bush, President of the Bush Terminal Company.

HOPKINS, FRANK, of Poughkeepsie, N. Y., a recent graduate of Cornell University, goes to Keokuk, Iowa, to accept a position as Assistant Civil Engineer under the Resident Engineer of the Keokuk and Hamilton Water Power Company, which company has a contract for the construction of a dam in the Mississippi River that will impound water for a distance of forty miles.

JOHNSON, F. G., Mayor pro tem, has been elected Mayor by the City Council of Blossom, Tex., to fill a vacancy caused by the removal of Mayor J. M. Lenoir.

KOHLER, FRED, known as the "Golden Rule Chief," has been called to take charge of the Police Department of Los Angeles, Cal. Chief Kohler has announced that he does not wish to leave Cleveland.

KOESTER, FRANK, previously employed with the Rapid Transit Subway Construction Co., recently opened an office at 115 Broadway, New York, as consulting engineer. Mr. Koester is author of "Steam Electric Power Plants" and "Hydroelectric Developments and Engineering."

MARSH, C. L., Columbus, Ohio, has been appointed City Engineer of Gadsden, Ala.

MCDONOUGH, CHAS., of Buffalo, has been appointed to succeed Henry A. Kunze as Assistant Superintendent of Canals for the Western Division.

MOORE, A. H., has been appointed Collector of Taxes of Jersey City, N. J.

MURPHY, THOMAS, a Police Captain of New York City, has been retired at his own request after forty-three years' service in the Department.

PARKER, HAROLD, chairman of the Massachusetts State Highway Commission, is reported to have been offered by Governor Dix the position as head of the State Highway Commission of New York.

PATTERSON, JACOB, has been appointed Inspector of Street and Sidewalk Construction of Oroville, Cal.

RASINSKY, CHARLES E., Assistant City Engineer of Cincinnati, O., addressed the Engineers' Club of that city February 16 on the subject, "Elasticity and Strength of Concrete."

REILLY, FRANK, Mayor of Pensacola, Fla., has received two important appointments from the Governor of his State. He will be a delegate to the Southern Commercial Congress to be held at Atlanta March 8-11, and will be an honorary member for the State of Florida of the National Committee on the Anglo-American Peace Celebration.

RIDER, FREDERICK, has been named by the Mayor of Jersey City as his private secretary.

STYRING, EDWIN, has been appointed Division Engineer of New York State Barge Canal by State Engineer John A. Benschel. The position was formerly held by Guy Moulton, of Syracuse.

SWANSTROM, J. EDWARD, ex-Borough President of Brooklyn, is dead. Mr. Swanstrom was a leader in many improvements for the advancement of Brooklyn.

WOOD, W. J., Naval Architect, has been employed to prepare the plans and supervise the construction of a new steel fire boat for the city of Portland, Ore.

WOODARD, S. H., consulting engineer of New York City, has been elected a member of the Institution of Civil Engineers.

YOUNG, A. R., of Chanute, has been appointed city engineer, Topeka, Kan.

TRADE NOTES

Cast Iron Pipe.—Chicago—The demand for all sizes is very active. A large tonnage is pending, made up of small lots from various municipalities. Prices are very firm. Quotations: 4-inch, \$25.50; 6 to 12-inch, \$24.50; 15-inch and up, \$24. Birmingham—Producers report a better feeling and stocks have been materially reduced. Quotations: 4 to 6-inch, \$21; 8 to 12-inch, \$20; over 12-inch, average, \$19. New York—The situation is reported as steadily improving, the foundries gradually increasing their percentage of operation. Quotations: 6-inch, car pads, \$21.50 to \$22.

Lead.—Market is weak. Quotations: New York, 4.425c.; St. Louis, 4.275c.

The Quebec Bridge.—It is stated that the engineers to whom the Quebec bridge tenders were referred have reported 4 to 1 in favor of the St. Lawrence Bridge Company's offer. The design prepared by Phelps Johnston, managing director of the Dominion Bridge Company, one of the two corporations composing the St. Lawrence Bridge Company, is said to have been referred by the experts to the official design. The company submitted tenders on both designs. It is further stated that the St. Lawrence Bridge Company will spend \$2,000,000 on new machinery if it gets the contract, as tops will have to be built.

Water Meter.—A. M. Lockett & Company, Ltd., New Orleans, La., have published a pamphlet illustrating and describing the operation of the Tulane pitot tube, which is designed for measuring the flow of large volumes of water in pipes and open channels.

Wire Rope.—The Macomber & Whyte Rope Company, Chicago, wire rope manufacturer, with plants at Fostoria, Ohio, and Coal City, Ill., is negotiating with several cities with a view to consolidating its two plants at one point. Among the cities under consideration is Waukegan, Ill.

Traction Engines.—Woods Brothers Steel Self-Feeder Company, Des Moines, Iowa, have published a catalogue illustrating and describing a line of single and double geared internal combustion traction engines. A special feature of the double-gear engine is the use of a center crank and two gear trains, one on each side.

A Million Dollars in Water Pipes.—The Bay Cities Water Company, Oakland, Cal., has now in place and on hand ready to be laid half a million dollars' worth of pipe. Sixty miles of pipe line have been laid in the territory embracing East Oakland and between six and seven hundred men are employed in the work. It is announced by the officials of this company that their policy is to employ as far as possible local labor. Through freight schedules have been smashed by the railroads in transporting the pipe for this company from Pittsburgh and Alabama in twelve days.

New Dustlayer.—The demand for a painless, odorless and efficient dustlayer is said to have been satisfied by a new product which has just been placed in the market by the Alden Spare's Sons Company, of Boston, New York and Chicago. This dustlayer is called Tasscoil. It is recommended for use on streets not having extremely heavy traffic and in residential sections. Tasscoil is an oil which it is claimed will not evaporate. It is applied from an ordinary watering cart.

Concrete Ties.—The Consolidated Concrete Tie Company, Cairo, Ill., has been incorporated with \$100,000 capital stock to manufacture concrete ties under the Snedd and Cowan patents. The company has a plant in operation at the present time at Pulaski, Ill., and is having plans prepared for another to be erected at Cairo. All parts necessary to the manufacture of the ties, including the wood and paper cushions, iron reinforcing rods, rail fastenings, etc., will be made by the company.

Chicago Cement Show.—The Fourth Annual Chicago Cement Show was held in the Coliseum February 16 to 23, inclusive. Practically all of the space, which had been divided into 270 booths and uniformly decorated by the Cement Products Exhibition Company, was occupied, some of the larger companies having more than one stand and booth. It was estimated by the management that the total attendance was something over 70,000. While the unfavorable weather gave the show a poor start the second week's attendance was large and most of the exhibitors seemed pleased with the results.

The bag-handling exhibit of the Universal Portland Cement Company given last year was repeated. The various exhibits of cement manufacturers were usually examples or artistic work in concrete, illuminated illustrations of the mills or illustrations of methods of sampling the finished product. Models were used extensively to show cement houses and methods of pouring them, while the machinery men usually preferred to show full-size apparatus in motion, running it by electric motors.

Water Company.—The change in the management of the Bristol Water Company, which has been a certainty for several months on account of a change in the holding of the controlling interest in the capital stock, occurred at the recent annual meeting of the stockholders. At a meeting of the directors officers elected were as follows: President, C. T. Treadway; Vice-President, W. A. Dunbar; Secretary, C. L. Wooding; Treasurer, M. C. Treadway. The newly elected President has issued a statement to the effect that it is too soon to make any definite statement as to the policy of the company, but criticism is invited as to rates and any other matters pertaining to the service. The assurance is given that the company will not oppose the bill now before the General Assembly giving the town the right to purchase the rights and privileges of the company.

Municipal Railway Cars.—The Canada Ford Company, Montreal, Canada, has obtained the contract for the cars of the municipal electric railway system in Regina, Sask. The company is having the cars built at the works of the British Company, Loughborough, England. These will be the first English-made cars used in the Canadian West. It is thought that the Loughborough company will establish works in Montreal.

Crusher.—The San Diego (Cal.) Stone Company is considering the addition of a No. 6 crusher and a complete pneumatic drilling plant at its Sweetwater quarry.

Electric Goods.—The General Electric Company will shortly occupy a nine-story warehouse at Greenwich and Morton Streets, New York. It has 60,000 square feet of floor space and will enable the company to carry a much larger stock than its old quarters on West street will accommodate.

New Automatic Alarm.—The International Electric Protection Co., 115 Broadway, New York, is introducing a new automatic alarm system. The new system is styled the Air Alarm. Its basis consists of a small hollow wire of copper alloy, one-eighth of an inch in diameter and containing a tiny insulated wire. The hollow wire acts as a conductor for the air whose expansion causes a fire alarm to sound. The tiny wire is known as the trouble wire. If for any reason the hollow wire is cut or broken the result is that an electric circuit is also broken, which causes the little wire to send a "trouble alarm" to the headquarters of the alarm company. Fire headquarters hears nothing, unless there happens to be a real fire at the time the wire breaks or is cut. Loops of this inconspicuous hollow wire are strung under the ceiling or carefully concealed behind the molding of the rooms, houses and buildings to be protected, the loops ending in a detector, which consists principally of a disc, containing a delicate diaphragm. If fire starts in a room the air in the hollow tube expands under the influence of the heat and operates a sensitive diaphragm in the detector, causing it to close an electrical circuit which sets in operation all the marvelous fire alarm machinery. All the older systems are held largely defective, due to the use of what is known as a "thermostat," placed at intervals on the ceiling. These are constantly exposed to the effects of the air and the electrical contacts become oxidized or clogged with dust, and when needed fail to operate at all or only after a raging fire is in full blast. The new system deals with incipient fires.

The new system gives an almost instantaneous alarm. If a pair of curtains catch fire, or even a newspaper, an effective alarm is given within ten to forty seconds. Moreover, another alarm is rung on a box outside of the building, which also indicates the exact location of the fire. Thence the alarm goes on and directly into the fire headquarters, where the exact location is also announced. Robert Walker is president of the company and D. G. Reid, of the Rock Island railroad, is interested. A franchise has been obtained in New York City.

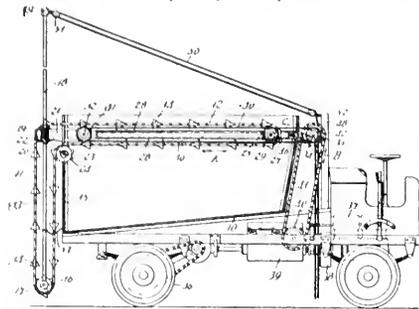

Road Machinery.—The improvement of roads is one of the liveliest questions in the South, Kentucky and Tennessee especially having aroused sentiment in favor of better highways through the formation of State organizations. One of the results of this has been the opening of many rock quarries and the purchase of rock crushing equipment in preparation for the heavy demand for road making material, which will undoubtedly be in evidence a little later on. Dealers in quarrying equipment of all kinds report sales remarkably stimulated on this account.

Catalogues of American Goods.—An import and export firm in the United States writes to the Bureau of Manufactures that it has extensive representation in Brazil, and that its agents in that country are constantly writing for catalogues of all kinds of American manufactures. Catalogues must be printed in Portuguese; those in any other language will be useless. The firm would like to be supplied with all kinds of catalogues in order that it may forward them to its agents in Brazil. For further information write No. 6244 Bureau of Manufactures, Washington, D. C.

PATENT CLAIMS

983,906. EXCAVATING-CONVEYER. John Kelly, Jamaica Plain, Mass. Serial No. 544,356.

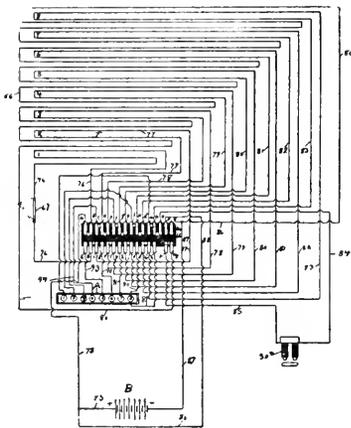

An apparatus of the class described, having, in combination, an endless belt conveyer having a vertically disposed portion and a horizontally disposed portion, a dry-

ing wheel engaging said horizontally disposed portion, a drum connected to said driving wheel, an endless flexible member wound about said drum and having two portions extending horizontally in opposite directions, respectively, from said drum, means to impart a longitudinal movement to said member, and a pawl and ratchet connected to said drum and operating to hold the same against rotative movement in one direction.

983,713. FIRE-ALARM. Stephen J. Heinrich, Bellevue, Pa., assignor to American Electric Alarm Company, Pittsburg, Pa., a Corporation of New Jersey. Serial No. 306,019.

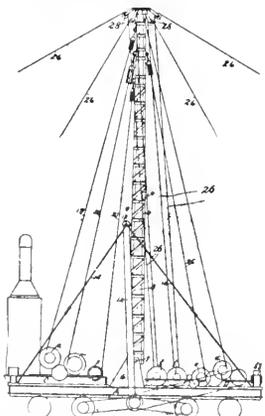

In a fire alarm, a clock train, an indicator arm operated by the clock train, a dial for the indicator arm, a sector connected with

the indicator arm forming part of the clock train, a lever having an armature, a magnet to attract the armature, a circuit for the magnet, controlling means for the lever operated by the clock train, and a thermostat in the circuit.

984,514. PORTABLE CABLEWAY. Joseph H. Dickinson, Montclair, N. J. Serial No. 425,649.

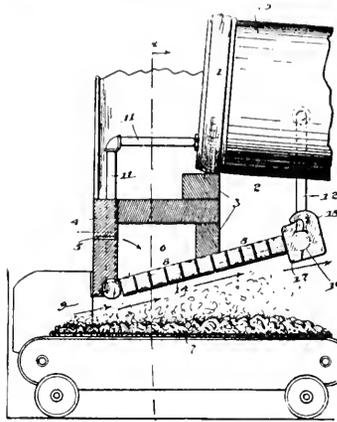

In a cableway the combination with a support, a rope connection for the sup-

port, a main cable and a tension guy adapted to be interchangeably connected to the rope connection.

983,510. SMOKE-CONSUMING FURNACE. John W. McNeal, Chicago, Ill. Serial No. 535,488.

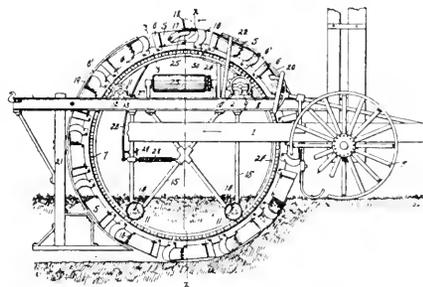

A fire arch consisting of a series of water tubes; a series of larger fire bricks formed to partially encompass a tube at the top, substantially entirely encompass it at the bottom and having their outer upper corners rounded; a series of smaller fire bricks having narrow lower portions adapted to

fit between the lower portions of said larger bricks and upper portions partially encompassing the tops of said tubes at one side and having projections at the upper corners of their other sides adapted to engage the rounded corners of said larger bricks; and a terminal brick similar to said smaller bricks except that its outer upper corner is squared off at right angles, substantially as described.

983,959. EXCAVATING-MACHINE. Hiram Walters and Nathan Bumpus, Curtice, Ohio. Serial No. 551,324.

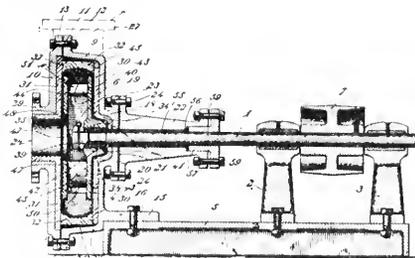

In an excavating machine, the combination with a rotary excavating wheel having a series of inwardly opening peripherally arranged buckets, of a gate hinged to the rear end of each bucket at its outer edge and adapted to have its opening and closing movements in the plane of rotation of

the wheel, a wing projecting at an angle from the hinged end of each gate and adapted to project substantially radially from the wheel when the attached gate is open and to project rearwardly from the associated bucket in substantially the arc of movement of its outer peripheral edge when the gate is closed, and means encircling portions of the wheel and cooperating with the bottom of a trench being dug to act on each gate wing to prevent an opening thereof except at a predetermined point in its revolution.

984,456. CENTRIFUGAL PUMP. William F. Trenary, Marietta, Ga. Serial No. 442,878.

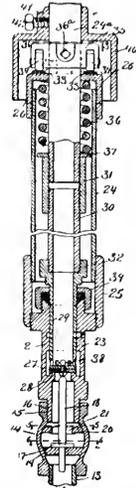

In a centrifugal pump, the combination with its rotary piston, shaft, and shell

within which the piston works, of a peripheral lining fitting loosely within the shell, and a soft metal backing-ring introduced between said lining and shell

983,545. HYDRANT. John Ewart, Arlington, Mass., assignor of one-half to M. P. McLaughlin, Wakefield, Mass. Serial No. 584,647.

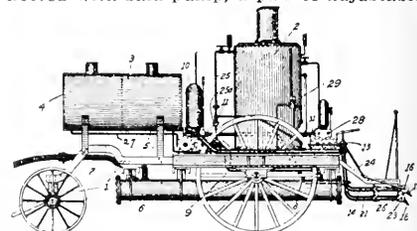

A hydrant comprising a tubular casing adapted for attachment to a water main, and having an internal valve seat, a tubular conduit rotatable and movable endwise in said casing and provided with a valve

adapted to close on said seat, a spring adapted to move the conduit in one direction to close the valve, cams supported by the casing and runners connected with the conduit and pressed by the spring against said cams, the cams and runners causing an endwise movement of the conduit to open the valve when the conduit is rotated in the casing.

984,455. SPRINKLING-MACHINE. Ellis Tomer, Visalia, Cal. Serial No. 580,707.

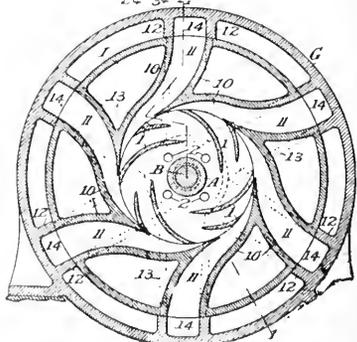

A sprinkler comprising a frame, a steam engine on said frame, a drum suspended beneath said frame, a flexible pipe leading into said drum, a union in said pipe, steam pipes leading from said engine and through said drum, a pipe connecting from said drum to said pump, a pipe disposed across said frame at the rear end thereof and connected with said pump, a pair of adjustable

valves in said last named pipe, a plurality of distributing pipes leading from between said valves, a main spraying pipe communicating with such plurality of distributing pipes, a plurality of discharge spray nozzles on said main spraying pipe, another series of distributing pipes leading from one side of the last one of said pair of valves to another spraying pipe, and a plurality of independent spray nozzles on such last-named spraying pipe.

984,189. CENTRIFUGAL AND TURBINE PUMP AND THE LIKE. William C. Brown, Prescott, Ontario, Canada. Serial No. 440,665.

A centrifugal pump, blower, or the like, having diffusing passages surrounding the

impeller and corresponding passages of substantially uniform area continuing the diffusing passages to the suction of the next impeller or to the pump delivery.

BIDS ASKED FOR

STATE	CITY	RECEIVED UNTIL	NATURE OF WORK	ADDRESS INQUIRIES TO
STREET IMPROVEMENTS				
Texas	Sweetwater	Mar. 4	Constr. about 22,000 sq. yd. macad-asph. pave.	L. S. Polk, Secy.
Texas	Dallas	Mar. 4, 10 a.m.	Grading and graveling 4,100 ft. of Dallas and Hutchins road	Geo. L. Fearn, County Auditor.
New Jersey	Jersey City	Mar. 6, 2 p.m.	Improving Holmes Avenue.	Geo. T. Bouton, Clk. Bd. S. & W. C. City Clerk.
New Jersey	Plainfield	Mar. 6	Furnish crushed stone, culverts, etc.	W. A. Harris, Secy. Bd. Pub. Wks.
Virginia	Spottsylvania	Mar. 6	Constructing 1 3/4 miles macadam road.	B. I. Bizler, City Clerk.
Indiana	Fowler	Mar. 6, 1 p.m.	Constructing three stone roads	John W. Weaver, County Auditor.
Indiana	Huntington	Mar. 6	Constructing gravel road.	M. Stockman, Town Clerk.
New Jersey	Irvington	Mar. 6, 8 p.m.	Constructing telford pavement in Myrtle ave. and Park place.	James E. Elder, County Auditor.
Indiana	Rockville	Mar. 6, 1 p.m.	Constructing gravel road.	Peter Nachand, County Auditor.
Indiana	Jeffersonville	Mar. 6, 10 a.m.	Constructing gravel roads.	Walter W. Lester, Sec'y.
Pennsylvania	Aliquippa	Mar. 6	Paving portion of Main st. with vitrified brick.	J. H. McConnell, County Auditor.
Ohio	Canton	Mar. 6, 10 a.m.	Grading and cutting road.	D. H. Moffitt, County Auditor.
Indiana	Williamsport	Mar. 6, 1 p.m.	Constructing gravel road.	R. J. Cunningham, Co. Compt.
Pennsylvania	Pittsburg	Mar. 6	Furnishing ballast, screenings, cement, etc. for imp. roads.	Thos. Nugent, County Auditor.
Indiana	Washington	Mar. 7	Constructing 2 gravel roads.	J. E. Wallace, County Auditor.
Indiana	Logansport	Mar. 7	Constructing gravel and macadam roads.	J. P. Nofztger, County Auditor.
Indiana	Wabash	Mar. 7	Constructing gravel roads.	F. E. Crane, City Engineer.
New York	Amsterdam	Mar. 7	Constructing 8,400 sq. yd. fire-clay brick pavement.	Calvin Tomkins, Comr. Docks, Pier A, North River, New York City.
New York	N. Brigh'n (S. L.)	Mar. 7	Grad. and pav. ferry appr. and construct. subway ducts.	John. C. Hall, Chm. Bd. Co. Comrs. W. G. Kirchoffer, Madison, Con. Engr. Francis A. Price, Hwy. Comr.
Indiana	Paoli	Mar. 7	Constructing 9,989 ft. of road.	C. Lyman Denison, Chm. Twp. Com. I. H. Villard, Chm. Bd. C. Comrs
Wisconsin	Monroe	Mar. 7	Laying 5,057 sq. yds. paving.	L. B. Johnston, City Clerk.
Delaware	Wilmington	Mar. 7, noon	Building State road.	A. B. Kieffer, Chm. Co. Comrs.
New Jersey	Belleville	Mar. 7, 9 p.m.	Furn. five-inch bottom stone, two and one-half inch and one and one-half inch broken stone and screenings, first quality Orange Mountain taprock.	Mayes Cooper, Hwy. Engr.
Ohio	Wooster	Mar. 7, 1 p.m.	Grading and paving 0.71 mile of road.	Board of County Commissioners.
Ohio	Lorain	Mar. 7, noon	Constructing sidewalks, cross-walks and repairing.	J. H. Sundmaker, Dir. Pub. Serv.
Georgia	Springfield	Mar. 7	Furnishing a 10-ton road roller.	Geo. W. Baxter, Auditor.
Mississippi	Jackson	Mar. 9	Constr. gravel and sand roads. \$100,000 bonds issued.	J. Kelly, City Clerk.
Georgia	Savannah	Mar. 9, noon	Furnishing 5,000 cu. yds. cement or like material for improving public roads.	Clay County Commissioners.
Ohio	Cincinnati	Mar. 10, noon	Building culvert.	Wood County Commissioners.
Indiana	LaFayette	Mar. 10, 10 a.m.	Constructing gravel road.	Warren Mitchell Greensburg, Bor. E.
Indiana	Muncie	Mar. 11	Paving various streets.	E. C. Pannell, Co. Aud.
Indiana	Brazil	Mar. 11, 11:30 a.m.	Constructing 7,655 ft. of gravel road; 10,000 ft. limestone road	J. O. Brown, City Clerk.
Ohio	Bowling Green	Mar. 13	Constructing stone road.	State Highway Comr., Bowlby.
Pennsylvania	Youngwood	Mar. 13	Paving about 2 miles of street with brick blocks.	State Highway Commission.
Minnesota	Worthington	Mar. 13, 2 p.m.	Grade approx. 10,066 yards of streets.	George E. Via, Chm. Com. on Highways and Sewers.
Kansas	Fort Scott	Mar. 13, 5 p.m.	Grading and macadamizing portion of First street.	Capt. R. B. McBride, Con. Q.M.U.S.A.
Washington	Chehalis	Mar. 15	Constructing about 3 1/2 miles macadam road.	William Pickett, City Clerk.
New York	Albany	Mar. 20, 22, 24	Building state roads, 66 pieces.	
Virginia	Newport News	Mar. 20, noon	Constructing concrete curb and gutter.	
Virginia	Fort Monroe	Mar. 21, 10 a.m.	Constructing macadam walks and roads.	
Indiana	Logansport	Apr. 1	Constructing 50,000 sq. yds. of sheet asphalt.	
SEWERAGE				
New York	Watertown	Mar. 3, 8 p.m.	Constr. sanitary sewer, requiring approx. 1,800 ft. 20-in tile; 300 ft. 18-in. tile; 300 ft. 16-in. tile; 1,200 ft. 12-in. tile; 1,200 ft. 10-in. tile.	Board of Public Works.

Class B base concrete, 1 to 6 (b), \$1.87; 1,095 lin. ft. cement combined curb and gutter (a), 50c; (b), 45c; 1,095 lin. ft. cement curb, 6x16 in., including 3-in. vit. tile drains (a), 40c; (b), 50c; 283 lin. ft. cement radius curb (a), 40c; (b), 50c; 1,307 sq. ft. cement driveways (a), 18c; (b), 18c; 4,753 cu. yd. surplus earth (a), 30c; (b), 30c; both concerns using West-rumite asphalt macadam.

Mt. Vernon, N. Y.—Paving E. Lincoln ave.: Eastern Asphalt Paving Company—New curb, \$1; old curb, 50c; brick pave-ment, 40c; sheet asphalt on 2-in. concrete foundation, \$1.75; sheet asphalt on 6-in. concrete foundation, \$2.23; new flag, 90c; old flag, 25c; Barber Asphalt Company—New curb, \$1.34; old curb, 74c; block as-phalt on 1-in. cement foundation, \$2.42; block asphalt on 6-in. concrete foundation, \$3.20; new flag, 90c; old flag, 25c; Barber Asphalt Company—New curb, \$1.34; old curb, 74c; sheet asphalt on 2-in. concrete foundation, \$2.42; block asphalt on 6-in. concrete foundation, \$3.20; new flag, 90c; old flag, 25c; Hastings Paving Company—New curb, \$1.10; old curb, 40c; brick pave-ment, 50c; block asphalt on 1-in. cement foundation, \$1.85; block asphalt on 6-in. concrete foundation, \$2.81; new flag, 90c; old flag, 24c.

New York, N. Y.—Paving with asphalt block, on a concrete foundation, Bryant ave. from Westchester ave. to E. 172d st., Hastings Pavt. Co., lowest bidder, as fol-lows: 7,689 sq. yd. completed asphalt block pavement and keep same in repair for 5 years, \$1.66; 100 sq. yd. completed asphalt block pavement, not to be kept in repair, \$1.66; 1,270 cu. yd. concrete, in-cluding mortar bed, \$5.92; 900 lin. ft. new curbs, furnished and set in concrete, \$1; 3,780 lin. ft. old curbs, rejointed, recut on top and reset in concrete, 33c; total, \$22,-597; Barber Asphalt Paving Co. bid \$22,-761; with asphalt block on concrete foun-dation, Kelly st., from Westchester ave. to Intervally ave, Barber Asphalt Paving Co. lowest bidder: 5,080 sq. yd. completed asphalt block pavement and keep same in repair for 5 years, \$1.76; 825 cu. yd. con-crete, including mortar bed, \$6; 500 lin. ft. new curbs, furnished and set in concrete, 82c; 2,540 lin. ft. old curbs, rejointed and reset in concrete, 34c; total, \$15,164; Has-tings Pavt. Co. bid, \$15,569; with asphalt, block, on a concrete foundation, Bryant ave., from Seneca ave. to Garrison ave.: Hastings Pavt. Co., \$3,681, and Barber Asphalt Paving Co., \$6,610; With asphalt block, on a concrete foundation, Eastburn Ave., from 17th St. to 175th St.: Hast-ings Pavt. Co., \$6,692, and Barber Asphalt Paving Co., \$6,617; regulating grading, setting curbs, flagging, etc., Bronxwood ave., from Gun Hill road to Burke ave., A. Cebrella lowest bidder: 3,500 cu. yd. earth excavated, 35c; 9,300 cu. yd. rock excavated, \$1.40; 29,100 cu. yd. filling, 13c; 2,950 lin. ft. new curbs, 74c; 11,550 sq. ft. new flag, 24c; 2,700 sq. ft. new bridgestone for crosswalks, 60c; 110 cu. yd. dry rubble masonry in retaining walls, culverts and gutters, \$1; 50 cu. yd. rubble masonry in mortar, \$3; 160 lin. ft. 12-in. vit. stoneware pipe, \$1; 25 lin. ft. vit. stone-ware pipe, 3c; 1,900 lin. ft. new guard rail, in place, 20c; 100 cu. yd. concrete, \$5.25; 4,200 lb. steel bars, furnished and in place, 3c; total, \$26,154; F. Pitson bid for this work \$28,661; regulating and reregulating grading and regrading, setting and reset-

ting curbs, flagging, etc., in Ryer ave., from E. 183d st. to E. 184th st., and in E. 18th st., from Grand Blvd. and Concourse to Valentine ave., Delena & Zingales, lowest bidders, \$5,027; regulating, grading, setting curbs, flagging, sidewalks, laying crosswalks, building approaches, etc., in Trafalgar pl., from E. 175th st. to E. 176th st., De Menna & De Paola, lowest bidders, \$3,905.

Springfield, O.—Paving East High st. from bridge to Limestone st., Peters Bros. Paving Co., Chicago, low on sheet asphalt with brick between tracks, \$13,861.41; W. E. Payne is low on brick with a bid of \$22,886.01; Engineer's estimate on asphalt \$18,183, and on brick \$19,457; lowest offers of the other bidders were: Cleveland Trinidad Paving Co., sheet asphalt and brick, \$14,284.76; M. J. Hannon, sheet and brick, \$16,886.70; Toledo Asphalt Block Co., block and brick, \$20,552.92; W. E. Payne, brick, \$12,886.01; J. L. McHugh, brick, \$14,629.40; M. J. Hannon, brick, \$16,617.50.

SEWERAGE

Long Beach, Cal.—Plans and specifications have been prepared by City Engineer E. P. Dewey for construction of sewer system.

Winters, Cal.—Citizens will soon vote on bonds for construction of a sewer system.

Summerville, Ga.—Citizens will vote about March 30 on \$75,000 bonds for improvements, including extension of sewerage.

Indianapolis, Ind.—Board of Works has adopted resolution for construction of sewers on Princeton and Trenton aves.

Mt. Vernon, Ind.—Plans will be prepared for the construction of improved sewerage system from east 5th st. to Saw Mill st., thence to McFadden's creek; also on Barber st., W. 4th to Ohio River. Three different types of sewers are called for in plans and specifications.

Manning, Ia.—Town Council is investigating sewerage systems.

Lake Charles, La.—Board of Commissioners of the First Sewerage District will receive bids March 11, 8 p. m., for \$125,000 sewer bonds; as soon as the bonds are sold work will be advertised for construction.—Walter G. Kirkpatrick, Jackson, Miss., Engineer; A. A. Wentz, Secretary.

Easton, Md.—Citizens have voted \$40,000 bonds to install sewer system.

Lawrence, Mass.—Board of Aldermen is considering construction of sewer in western section of Tower Hill at cost of \$30,000.

Benton Harbor, Mich.—Plans are being prepared by A. A. Johnson for construction of a sewerage system; bids will be received about April 1; the system will consist of about 1,450 ft. of 12-in. crock tile.

Blackduck, Minn.—Installation of sewer system is being considered.

Ely, Minn.—Construction of sewer system, including about three miles of tile pipe, is being considered; Duluth Engineering Co., Palladio Bldg., Duluth, will prepare plans; estimated cost \$20,000.

Hibbing, Minn.—City is considering installation of septic tank sewage system, cost \$30,000.

Brookhaven, Miss.—City has ordered R. C. Huston, Memphis, to make survey and prepare plans for system of sewers.

McComb, Miss.—City is considering construction of sewer system.

Chillicothe, Mo.—Plans are being prepared by City Engineer Joe Broadus, providing for creation of sewer districts in city.

Gordon, Neb.—Citizens have voted to issue sewer bonds.

Nebraska City, Neb.—Charles A. Shannon, City Engineer, has completed plans for sanitary sewer covering whole of the south side of city and a portion of west end.

Neligh, Neb.—Town Council is considering resolution for construction of sewerage system.

Belleville, N. J.—Dr. Herbert B. Vail, President Board of Health, has recommended installation of sewerage facilities in Silver Lake section.

Paterson, N. J.—Board of Works is considering installation of sewers in nearly every street of West Paterson.

New Hartford, N. Y.—Engineer A. M. Scripture, city, has practically completed plans and specifications for construction of a sanitary sewer system in territory north of Saquoit Creek.

Oswego, N. Y.—Hering & Fuller, New York City, have completed plans for sewage disposal plant and outfall sewer on West Side and estimate the cost at about \$25,875.

Rochester, N. Y.—Board of Contract and Supply will ask for new bids for Section 1 of intercepting sewer; bids will also be asked for Sect. 3, which is to be about 1,600 ft. long and cost \$125,000.

Scarsdale, N. Y.—Town Board is considering construction of sanitary sewers

to cost about \$10,000; Scarsdale will pay one-third and village of White Plains two-thirds.

Rockingham, N. C.—City is considering bond issue for extension of sewer system.

Flasher, N. D.—Plans are being considered for installation of sewer system.

Lorain, O.—Bids will be asked latter part of next month for construction of sewers from 18th and 21st sts.

West Lafayette, O.—City will sell \$20,000 of bonds for construction of sewer system.

Britton, Okla.—Citizens will vote on \$20,000 bonds for construction of sewer system and water works for College place addition.

Central Point, Ore.—Town is considering installation of sewer system.

Carlisle, Pa.—Citizens have voted \$90,000 bonds for sewerage.

Colwyn, Pa.—Citizens will vote on loan for installation of sewerage system.

Hazleton, Pa.—Residents of Oak and 3d sts. are urging extension of Oak st. sewer.

Jenkintown, Pa.—Cost of proposed sewerage system has been estimated at about \$100,550.

Pittsburg, Pa.—Mayor Wm. A. Magee has approved ordinance providing for reconstruction of Try st. trunk sewer.

Sharpsville, Pa.—Borough Council has decided to issue \$14,000 sewer bonds.

Williamsport, Pa.—Council will receive bids for construction of proposed Grafius run sewer.

Madisonville, Tenn.—Robert Koeppe, civil engineer, Chicago, Ill., has completed survey of city preparatory to construction of proposed system of sanitary sewers.

Front Royal, Va.—A. F. Brown, Engineer, Fredericksburg, Va., has prepared plans for sewerage system to comprise about four miles of pipe; contract for construction work will soon be awarded.

Antigo, Wis.—Citizens will vote on \$50,000 bonds for sewer improvements.

Victoria, B. C., Can.—Plans have been prepared for installation of sewerage system.

Guayaquil, Ecuador.—City will improve sanitary sewer system, install water works and build new sea walls; over \$8,000,000 will be spent in improvements.—Mons. E. Coignet, Paris, Engineer.

CONTRACTS AWARDED

Fresno, Cal.—To Jos. House, for constructing main sewers in the Belmont annexed district, \$37,900.

Turlock, Cal.—To Edw. E. Paxson, city, for constructing sewers, about \$8,668.

Brooklyn, Md.—By Anne Arundel County Commissioners, Annapolis, for installation of sewers, to Bond & Bates, Baltimore.

St. Paul, Minn.—Building St. Anthony Park, N., sewer system to O'Neil & Preston, \$91,400; other bidders: Ilstrop & Olson, Minneapolis, \$144,000; Frazer & Danforth, \$147,100; Gilbert & W. Haggart, \$709,000; John Lind, \$148,000; J. J. Connolly, \$145,200; P. J. Ryan, \$147,000; Keough Bros., \$145,000; Thornton Bros., \$145,887.

Niagara Falls, N. Y.—Sewer on Mercer st. to Nick Nolfe, \$841.50; 23d st. to same, \$565.30; South ave. to Rinaldo, Dominico & Co., \$447.30.

Springfield, O.—Constructing sanitary sewer in Race st. to M. T. Cooney, \$1,733.

Youngstown, O.—Constructing sewer on Homewood ave. to Hannon Bros., \$1,090.40.

Toronto, Ont., Can.—Construction of low level interceptor, to Godson Contracting Co., Toronto, for section 1, \$13.10 per lin. ft.; for section 2, \$13.14 per lin. ft.; for section 3, \$18.30 per lin. ft.—C. H. Rust, City Engineer.

BIDS RECEIVED

Elkhart, Ind.—Morehouse Addition sewers: F. J. Miller, \$5,290.95; Northern Construction Co., \$5,601.60; Staples & Ackerman, \$5,750.40; Bankert & Eggleston, \$6,818.77; Oakland ave., north to Harrison st.: F. J. Miller, \$1,490.80; Northern Construction Co., \$1,528.60; Staples & Ackerman, \$1,680.25.

Minneapolis, Minn.—Furnishing sewer pipe, f.o.b. trenches: (a) straight, (b) Y's, (c) curve: (a) Red Wing Sewer Pipe Co., Red Wing, 6-in. Sc. per ft., 9-in. 16.5c, 12-in. 31c, 15-in. 42.5c, 18-in. 63c, 20-in. 91.5c, 22-in. \$1.09, 24-in. \$1.29; Blackmore-Post Co., St. Louis, Mo., 8.3c. per ft., 1.75c., 31.75c., 44c., 63.5c., 95c., 13.2c. and \$1.35; Streator Clay Mfg. Co., Streator, Ill., 8.3c. per ft., 17.5c., 31.75c., 44c., 95c., \$1.12, \$1.35; (b) Red Wing Sewer Pipe Co., 9-in. 66c. each, 12-in. \$1.55, 15-in. \$2.15, 18-in. \$3.10, 20-in. \$4.05, 22-in. \$1.85, and 24-in. \$5.70; Blackmore-Post Co., 78.75c., \$1.43, \$1.98, \$2.86, \$4.28, \$5.10, and \$6.08; Streator Clay Mfg. Co., Streator, Ill., 65c., \$1.515, \$2.20, \$3. \$4.11, \$4.90 and \$5.62; (c) Red Wing Sewer Pipe Co., 9-in. 55c. each, 12-in. \$1.35, 15-in. \$1.90, 18-in. \$2.75, 20-in. \$2.98, 22-in. \$3.58, 24-in. \$4.21, and 6-in.,

30c.; Blackmore-Post Co., St. Louis, Mo., 59.5c. each, \$1.405, \$1.98, \$2.85, \$3.10, \$3.72, \$4.48 and 32c.; Streator Clay Mfg. Co., 60c. each, \$1.28, \$1.80, \$2.60, \$2.98, \$3.50, \$4.30 and 32c.; 200 tons of special castings for sewer construction: Crown Iron Works, city, \$44 per ton; Minneapolis Steel and Machinery Co., city, \$45 per ton; Menzel & Jeffrey, city, \$43.50 per ton; William Bros. Boiler Co., city, \$40 per ton; Northwestern Foundry, city, \$39 per ton, Hauser Bros., city, \$38 per ton; Standard Foundry Co., city, \$38 per ton; Diamond Iron Works, city, \$37.35 per ton; Meyer Foundry and Manufacturing Co., South Bend, Ind., \$33.50 per ton.

St. Paul, Minn.—Building Otis st. sewer, lowest bidder J. J. Connolly, \$7,912; Engineer's estimate, \$6,816; other bidders: John Lind, \$8,000; P. J. Ryan, \$9,127; Thornton Bros., \$9,427; O'Neil & Preston, \$9,999.

WATER SUPPLY

Colorado Springs, Cal.—Hiram Phillips, Civil Engineer, Third Nat'l Bank Bldg., St. Louis, Mo., has been selected to submit plans for betterment of water works system; work contemplated is enlarging of the reservoirs and strengthening of distributing system.

Glendora, Cal.—Allin Bros., Consulting Engineers, Pasadena, are preparing plans for construction of a 3,000,000-gal. reservoir in San Dumas Wash for the Glendora Water Co.; bids will be asked in about two weeks; cost \$9,000.

Lordsburg, Cal.—All bids for construction of the municipal water system have been rejected by the city; Trustees have directed Frank Lathrop, Field Engineer for Olmstead & Gillelan, Consulting Engineers, Wright & Callender Bldg., Los Angeles, to proceed with construction by day labor.

Santa Ana, Cal.—Citizens have voted \$20,000 bonds to construct reservoir.

Wallingford, Conn.—Borough is considering extension of water mains to Yalesville and Tracy, six miles of 10, 8, 6 and 4-in. pipe, and construction of two dams at Pistapang Pond; cost \$40,000.—William A. Mackenzie, Superintendent and Engineer Water Department.

Titusville, Fla.—Citizens have voted \$30,000 bonds to install water works system.

Summerville, Ga.—Citizens will vote about March 30 on \$75,000 bonds for improvements, including extension of water works.

Lewistown, Ill.—City is considering the extension of water mains, digging of large well and installation of pump; cost \$7,000.—J. H. Allison, City Clerk.

South Bend, Ind.—Water Works Trustees are considering reconstruction of water system; thorough investigation will be made by experts.—William S. Moore, City Engineer.

Vail, Ia.—Town is considering bond issue to extend water works and to build large water tank.

Canton, Kans.—J. S. Worley & Co., Reliance Bldg., Kansas City, Mo., Engineers, are preparing plans for system of water works and electric light plant; cost \$30,000. C. M. Gray City Clerk.

Cherryvale, Kans.—J. S. Worley & Co., Reliance Bldg., Kansas City, Mo., Engineers, are preparing plans for a concrete purification and filter plant; cost \$50,000. E. E. Bellamy, City Clerk.

Newton, Kan.—City Commissioners will lay about 4,000 ft. of water mains in north-eastern section of city.

Winthrop, Me.—Surveys have been completed and plans are being prepared by Dudley & Sawyer, Manchester, N. H., for the construction of water works.—Frank L. Bishop, Chairman Water Commissioners.

Quincy, Mass.—Council has passed \$51,000 order for extending water system and making improvements; Mayor Shea will petition Legislature for right to borrow \$200,000 for extending water system.

Tupelo, Miss.—Citizens will issue \$50,000 of bonds for improving and enlarging water works, paving streets and erecting city hall.

Tylertown, Miss.—Installation of water and light plant is being considered.

Gordon, Neb.—Citizens have voted water bonds.

Buffalo, N. Y.—Bill to bond city for \$1,000,000 to equip new pumping station has been approved by Aldermen.

Schenectady, N. Y.—City is considering construction of underground reservoir; also repairing various streets; cost \$300,000.—Leland FitzGerald, City Engineer.

Waterford, N. Y.—City Health Officer has recommended construction of filtration plant.

Hamilton, O.—Council has passed ordinance authorizing Department of Public Service to contract pipe, valves, hydrants, water motors, etc., for extension of water mains at a cost of \$8,500.

Municipal Journal

And Engineer

VOLUME XXX

NEW YORK, MARCH 8, 1911

No. 10

FIG. 1.—SITES OF FILTER BEDS, FROM THAT OF MAIN SEDIMENTATION TANK

CHATHAM-MADISON SEWAGE DISPOSAL WORKS

Plant for Two Boroughs—Method of Apportioning Cost—Emscher Sedimentation Tanks—Double Contact Beds—Sand Filter—Sludge Bed—Concrete Construction Throughout—Detail Plans—Cost of Construction and Operation

In the Spring of 1910 the Boroughs of Chatham and Madison, N. J., which had been considering the subject of sewage disposal and each of which had employed engineers to advise on the subject, decided to join forces and to consider a large disposal plant to be used in common by the two boroughs. Messrs. Hering and Fuller had been acting as engineers for the borough of Madison and Clyde Potts for Chatham. With the agreement to co-operate, these engineers were retained, Messrs. Hering and Fuller as consulting engineers and Mr. Potts as constructing engineer, and the joint project is now under construction.

This disposal plant is deserving of special consideration chiefly for two reasons—the joint construction and operation under a New Jersey statute of 1910, and because of the inclusion of Emscher tanks in the plans adopted.

The state statute referred to prescribes most of the details of the plan under which such co-operation may be carried on. One of these is that there shall be a prescribed and fixed per-

centage of capacity of the works which shall be considered the property of and be paid for by each of the communities. Under this provision the cost of the works has been apportioned so that Madison shall pay five-sevenths and Chatham two-sevenths of the whole, these being approximately the relative populations of the two boroughs. It is also agreed that all necessary additions and enlargements to the plant, and also to the joint trunk line leading to the same, which may be required from time to time during the first five years, will be constructed and paid for in the same proportion, as shall also the operating expenses. Five years from the first use of the plant, however, and at five-year intervals after that, there is to be a reapportionment of the costs of enlargements, betterments and renewals and also of the maintenance charges, the apportionment each time being based upon the proportionate amount of sewage discharged by the two communities, measurements of the discharges being accurately determined by competent engineers. The engineers had advised that the interest and sinking fund

expenses also be reapportioned each five years, but this, we believe, was not permitted under the state statute. An agreement was made and formally signed by the representatives of the two boroughs embodying these ideas, together with a number of others of a legal and financial nature. This agreement provided that the contract shall continue in force during the life of the plant and its additions and enlargements, this time to be not

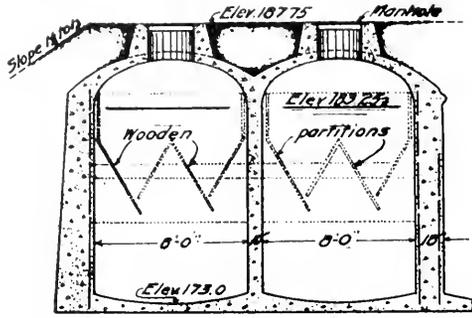

FIG. 2.—MAIN SETTLING TANK. SECTION ON H J.

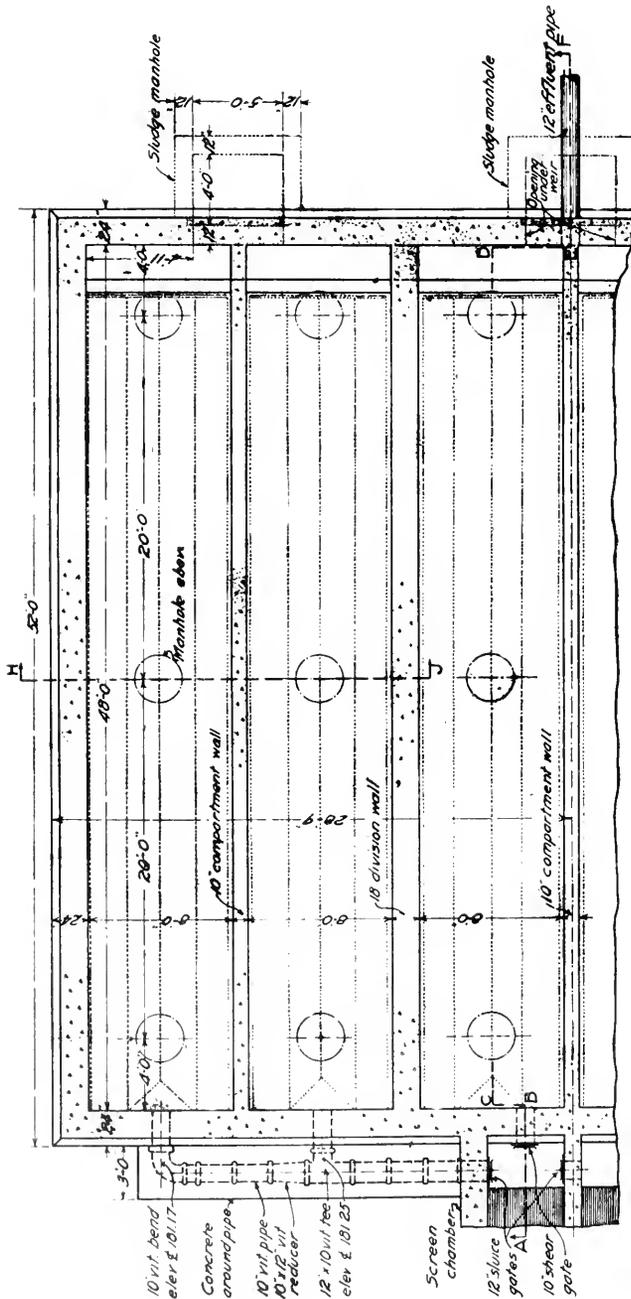

FIG. 3.—GENERAL PLAN OF ONE-HALF OF MAIN SETTLING TANK.

less than twenty-five years unless changed or abrogated by mutual consent.

The topography indicated the best site for the disposal works to be in the borough of Chatham, and the plant is now under construction on this site. Provision is made for treating 600,000 gallons per day of dry weather flow, but it is intended that the plant shall be capable of carrying an overload of 25 to 50 per cent during short periods of very wet weather. In general the plant consists of screens, main settling tank, first and second contact filters and sand filter, there being an additional settling tank provided between the two contact filters and between the second contact and the sand filter. There is also provided a sludge bed for receiving the sludge from the several settling tanks. The entire plant is about 900 feet long, the several elements following each other in a continuous straight line in the order named above.

On reaching the screen house the sewage first enters a small rectangular chamber 24 inches by 9 feet, in which are two openings leading to two screen chambers, each opening controlled by a 12-inch sluice gate. In each of these screen chambers are two screens through which the sewage passes in succession, the first having spaces of $1\frac{1}{4}$ inches between bars, the second with spaces of $\frac{5}{8}$ inch between bars. These screens are formed of $\frac{3}{8}$ x 2-inch bars held together by bolts and washers or spacers at top and bottom, each screen being the full width of the screen chamber—4 feet, and 5 feet 3 inches high. Over the screen chamber and extending some distance on either side of it is a "screen house," so-called, which contains a tool room 8 feet 7 inches by 12 feet 6 inches, and a laboratory 11 feet 7 inches by 12 feet 6 inches. This is constructed of brick with a chimney and slate roof. The screen room has a 2-inch yellow-pine floor on the ground level and the other two rooms have granolithic floors.

Immediately adjacent to the screen chambers is a settling tank divided into six sections which receives the sewage from the screen chambers (see Figs. 2, 3 and 4). Each of these six sections is 8 feet 9 inches in the clear and 48 feet long, with a depth from the bottom to the crest of the outlet weir of 10 feet. The bottom slopes 6 inches toward the center in order to facilitate withdrawing the sludge. This settling tank is covered by a series of six elliptical arches resting upon the partition walls, each arch containing three manholes giving access to the settling tank beneath. This settling tank is designed to act as an Emscher tank, and trough-like channels are provided for carrying the sewage flow. These are constructed of cypress boards fastened to a frame work of 2 x 4's, the whole fastened to the sides to the concrete walls by expansion bolts. At angles between the board surfaces 16-ounce copper flashing is used. A 2-inch slot is left at the bottom between the sloping board surfaces.

The sewage enters each of these tank sections through a 10-inch inlet whose invert is about $2\frac{1}{2}$ feet below the crest of the outflow weir, and flows the full length of the tank to the outlet. The outflow weir is in the form of a 10-inch concrete wall, outside of which is a channel 2 feet wide and 3 feet deep below the crest, through which the effluent is removed. To the front of this weir wall is fastened a scum board of 2-inch plank, held 3 inches from the face of the weir wall by spacers. This construction requires the sewage, in leaving the settling tank, to pass through the 3-inch space between the scum board and weir wall, flowing over the latter and dropping into the channel above referred to. This general construction is shown in the accompanying illustrations.

From this settling tank the sewage passes to the first contact filters. These consist of four beds, each 75 feet square in the clear, the four forming a square about 150 feet on a side. In the center of this, where the four filters come to a common corner, is placed a dosing device for alternating the flow upon the filters in succession. In the bottom of each filter, running diagonally from the common corner to the opposite one, is a main drain, to which are connected the lateral drains, the whole resting upon a concrete floor $\frac{1}{2}$ inches thick (see Fig. 6). The main drain consists of a depression in the floor 15 inches

side and from 4½ to 10½ inches deep (see Fig. 7). This is covered with a slab of 2-inch vitrified clay 24 inches wide. The lateral drains are made of split 6-inch pipe with bells, these pipes being laid with 1-inch openings at the joints, adjacent pieces of pipe being practically in contact. Along the edges of the main drain concrete is filled around these pipes and brought flush with the tops of them, in which concrete the slab covers the main drain are bedded.

In laying the split pipe in the contact filters, these are to be laid so that the joints between the ends of the pipes in any one row shall come opposite the middle of the tiles in the adjoining rows. "The tiles shall be laid as soon as practicable after the 4-inch concrete bottom of the contact filters is set. A finishing course of cement mortar about ½-inch thick shall be spread over the concrete surface, troweled smooth and then, before the mortar coating has set, the tiles shall be placed in their final position bedded slightly in the mortar."

The filters are to be filled with coarse material for a depth of from 3 feet to 3 feet 6 inches over the tops of the lateral drains. This filtering material is to consist of broken stone free from splinters, or of vitrified slag, if satisfactory to the engineer. This is to be screened so as to contain no particles retained by 2½-inch circular opening and none which will pass through 1-inch circular opening. The larger pieces are first to be

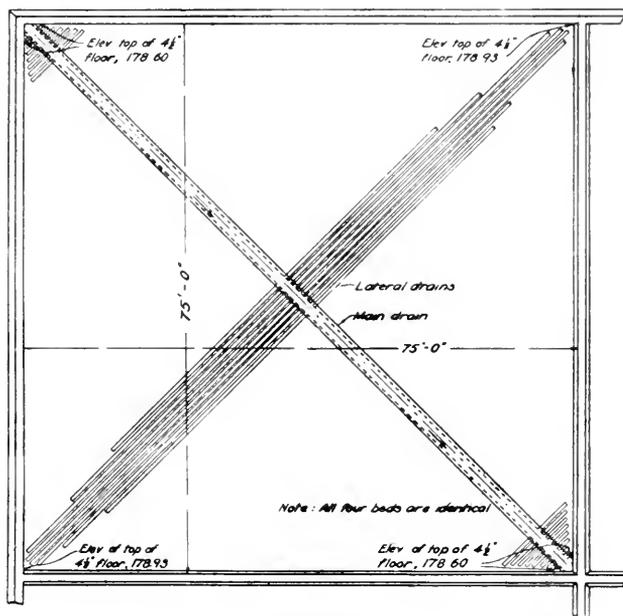

FIG. 6.—PLAN OF CONTACT FILTER, SHOWING DRAINS.

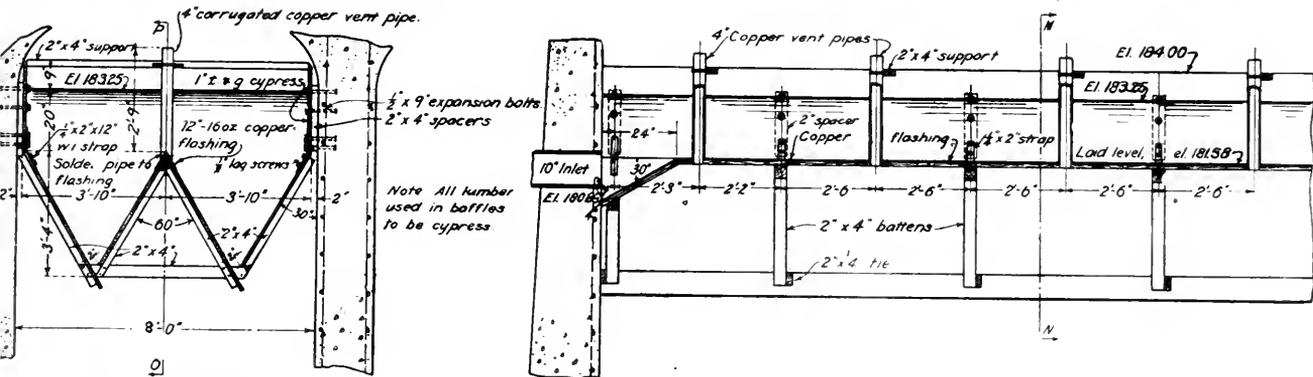

FIG. 4.—CROSS AND LONGITUDINAL SECTIONS OF MAIN SETTLING TANK.

placed around and between the drains so as to entirely cover the top of the pipe, after which the regular material is to be carefully deposited to the required depth. Automatic closing devices are to be installed which will "control the flow of the fluid from the main settling tank into each of the four primary contact filters in turn, filling them to the specified level, which is 4 inches below the top of the filtering material. The devices shall be arranged so that when necessary one or two

primary contact filters may be thrown out of service and the remaining ones continue to receive the sewage in rotation as usual."

From the first contact filter the effluent passes to a settling tank known as the preliminary settling tank, which is a double tank 16 feet wide and 48 feet long (see Figs. 9 and 10). This is provided with wooden partitions forming a trough of the general Emscher form similar to those described for the main

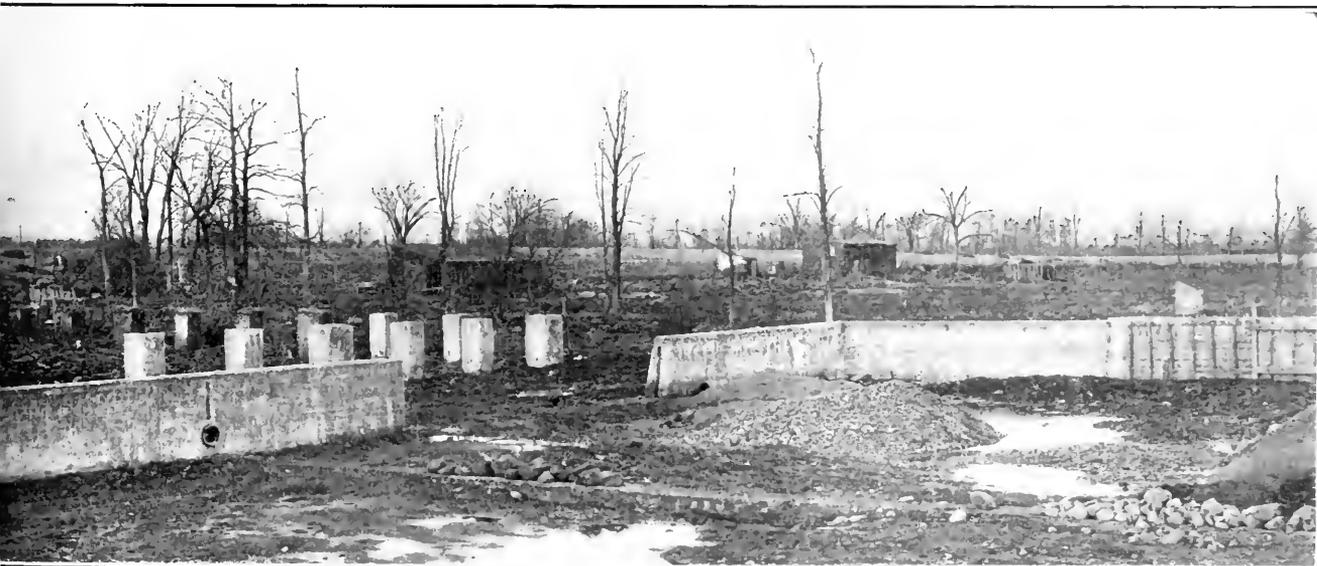

FIG. 5.—WALL OF SECOND CONTACT FILTER, AND PIERS FOR SUPPORTING FIRST CONTACT FILTER

one or gravel, the sand and gravel or broken stone being so proportioned that the sand and cement mortar shall more than fill the voids in the broken stone or gravel. Machine mixing is required.

It is provided that the contractors shall secure water-tight work in settling tanks and contact filters and that when these are completed they shall be filled with water and this shall not leak so as to give more than 1-inch fall in 24 hours.

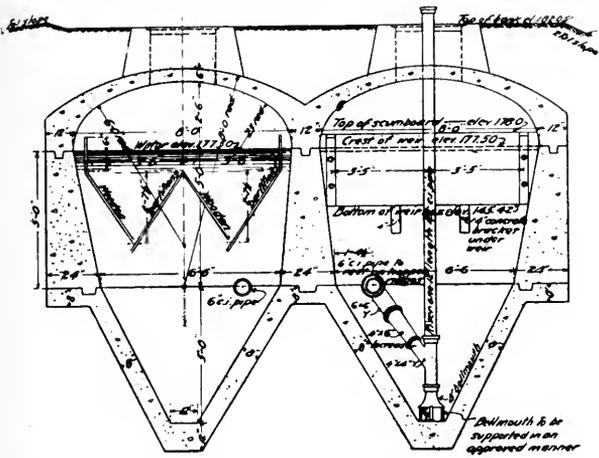

FIG. 10.—CROSS SECTION OF PRELIMINARY SETTLING TANK.

This plant is being constructed by Mr. J. W. Heller, of Newark, N. J., as contractor. The principal unit prices are as follows: earth excavation, 43 cents; earth embankment, 30 cents; concrete, \$7.40; steel reinforcing rods, 4 cents; lateral collectors, 1 cent a foot; flat tile drain covers, 40 cents a foot; broken stone for contact beds, \$2.35 a cubic yard; sand and gravel for filters, \$1.15 a cubic yard; automatic dosing apparatus (lump sum), \$7,730; wooden partitions and other appurtenances, \$400 per M. B. M. The total cost, on the basis of the estimated quantities, is \$58,696.

The engineers estimate that the annual maintenance cost will be as follows:

Attendant in charge.....	\$900.00
Labor	600.00
Repairs, maintenance and incidentals.....	200.00
General supervision	300.00
	\$2,000.00

CIVIC CO-OPERATION IN PHILADELPHIA

THE circular reprinted below is offered as a double example of commendable co-operation with a city official by a citizen organization, and of a comptroller who makes a serious and intelligent effort to make his reports intelligible to the average citizens. This circular is being sent out by the Bureau of Municipal Research of Philadelphia, Pa., and is accompanied by a balance sheet condensed to twenty-one lines and five columns; the leaflet measuring 5 x 8 inches, and carrying the reading matter on one side and the table on the other.

BUSINESS METHODS IN PUBLIC BUSINESS

The City Controller's Report to Citizen-Stockholders

These statements are presented in this report for the first time on the City of Philadelphia with the desire to answer the questions of interested citizens.

The immediate purpose of the summary consolidated balance sheet is to present in a single picture the financial condition as well as all of the funding relations of the city.—Controller's Report to Councils, February 2, 1911, page 14.

SOME OF THE QUESTIONS ANSWERED BY THE SUMMARY BALANCE SHEET

As to the General (Current) Account

1. How much cash is available for meeting the city's current obligations?
2. What are the city's current obligations that must be met at once?
3. What funds have been appropriated, but not yet set aside under contracts?

4. What funds have been set aside to meet contracts already entered into?
5. What revenues due the city have not yet been collected?

As to the Capital Account

1. What is the total debt for which city bonds are outstanding?
2. What is the value of all lands, buildings and other permanent property owned by the city?
3. How much cash from loan funds is still available for permanent improvements?
4. What is the amount of the funds set aside to meet contracts already entered into?
5. What is the amount of these funds appropriated for capital outlays, but not yet set aside under contracts?

As to the Sinking Fund

1. What is the amount of cash on hand and investments for meeting the bonded debt as it becomes due?
2. Are sufficient funds being thus set aside to meet future demands?

As to the Fire Insurance Fund

1. What is the amount of cash on hand and investments for meeting the city's losses by fire?

Similar balance sheets are presented, giving in greater detail the analysis of the general account, capital account, and the appropriation and loan fund balances. If you are an "interested citizen" and would like to know more concerning the city's financial condition, write to the Controller for his last report to Councils.

WATER RATE MAKING

Items Included in Income Which Must Be Raised—Apportioning Rates Among Consumers—"Ready to Serve" Charge—One Rate Plan Impracticable

Abstract of a paper by F. C. Jordan, Secretary Indianapolis Water Company, before the Illinois Water Supply Association.

THE rates which a city charges for water should be ample to provide a sufficient fund to take care of the following items:

1. Necessary operating expenses.
2. Proper maintenance of the property.
3. Depreciation charges.
4. Interest charges on the investment in the plant.
5. (In the case of a privately owned plant) A reasonable profit sufficient to encourage capital to incur the risks of this class of enterprise.

The first item embraces the proper operating expenses, including those required to furnish a supply of pure water by filtering it if necessary.

Concerning depreciation, recent court decisions have set forth in very plain terms the necessity for setting aside in a separate fund an amount which will leave intact the value of the physical property. Concerning the last item also the courts have stated in no uncertain terms that inventors in water-works plants are entitled to a fair income on legitimate expenses incurred, but not on those due to gross error or lack of reasonable care. It has been held that a plant shall be appraised as a "going concern," with a proper credit for the reproductive value plus the added value of the business which has been procured at a considerable cost to the investor. Courts and public utility commissions have disagreed on the percentage of this return on the investment, from 7 to 10 per cent on the total value being considered proper by different parties.

With a proper appraisal and with reliable data covering the cost of operation and other expenses, the annual revenue necessary to take care of the plant can be ascertained, after which comes the question of the proper distribution of rates to provide this amount. Unfortunately, scarcely 50 per cent of our companies or departments can tell within a reasonable degree of accuracy what it is costing them per million gallons to furnish water to the consumers. It is also agreed by all that water should be furnished to the citizens without discrimination, but there is room for argument as to what constitutes discrimination. In every city there are certain sections which would not for years pay a revenue sufficient to cover the proper

charges on the investment necessary to furnish them with water and yet which it is desirable to furnish water to, both for fire protection and as a sanitary measure. In the majority of cases consumers in other sections must pay the deficit from such non-profitable sections.

Water mains add to the value of abutting property, and in addition their presence furnishes a "readiness to serve" for which the company or department should receive some remuneration. Both these items should be included in the water rates; the readiness to serve applying both to fire protection and to the readiness to furnish water at a faucet in a residence. The ability to obtain water whenever wanted and in any reasonable amount has a value separate from that of the amount actually used. The readiness to serve in fire protection enables the property owner to reduce his insurance rates, and is thus of direct value to him.

In preparing estimates on which water rates are based, consideration must be given not only to the amount of water to be furnished to each consumer, but also to that which will undoubtedly be lost on account of leaky services, broken lines, etc., which losses cost as much per million gallons as the water actually sold. This loss varies from 15 to 25 gallons per capita per day in New England towns, where it is recognized that the management is most careful and conservative.

The city will always be the largest consumer, and a proper rental for fire hydrants and charge for water used in sprinkling streets, flushing sewers, in public buildings, etc., should be included in the calculation. It has been estimated that the cost of fire protection is approximately 45 per cent of the interest and fixed charges due to construction, and from 18 to 22 per cent of the cost of operation. In most cases it is doubtful whether the city would pay the full amount which these figures would give, and the remainder of it must be added to the rates of private consumers. In general the amount which can be charged against the city should be deducted from the amount which has been ascertained to be necessary for carrying on the business, and the balance will be that which must be obtained from the private rates.

Various methods of rate assessment have been adopted by water companies, among them being the frontage assessment plan, the valuation assessment, and the assessment equal to a certain percentage of the flat rate. In some of the municipal plants it has been found that the assessing of a certain percentage on the valuation of the property has worked very satisfactorily; this assessment, amounting to from ten to fifteen dollars on a property assessed at \$3,000, is called a ready to serve charge and covers a small amount of water sufficient for domestic purposes. Under this plan every citizen of the town becomes a consumer, and the larger property owner pays his proper proportion of the cost of running the plant. It is manifestly unfair for certain properties to share in the benefits of the water supply and yet fail to pay their share of the cost of the operation of the company.

It will be a surprise to the average superintendent to find that as a general proposition the average line does not get on a paying basis until approximately twenty years after its installation; and meantime the balance, as stated above, must be met by the other consumers.

In the matter of meter rates some plants have found to their sorrow that the one-rate plan with no ready to serve charge does not provide sufficient revenue to cover the expenses of the company. The proposal to furnish water to all persons at one rate appears beautiful in theory, but in its workings is disastrous to the finances of the company.

"As has well been stated on a number of occasions, the public has a right to know the details of the operation of a plant, and full publicity of all matters pertaining to the supply of water is absolutely essential; and the writer shares the opinion of the best engineers that the average citizen, if given a clear understanding of the cost of the supply of water, will agree to a rate which is fair and is commensurable with the service furnished by the department."

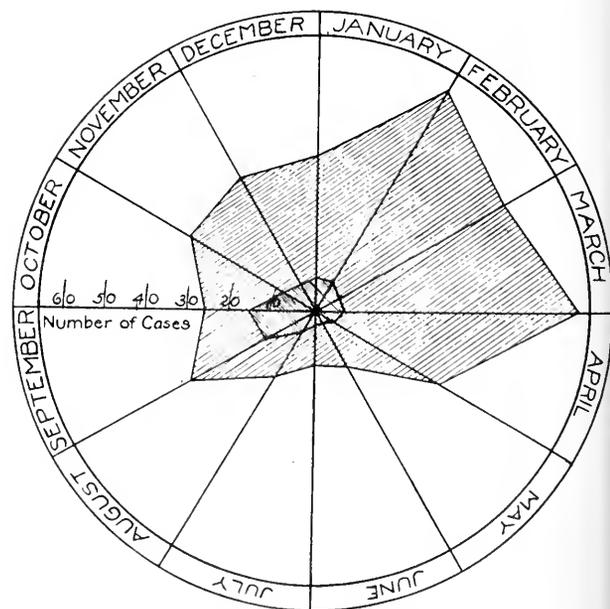

AMOUNT OF CHLORINE FOR STERILIZING

In discussing the subject of sterilizing water, before the Boston Society of Civil Engineers, Mr. S. DeM. Gage, biologist of the Massachusetts State Board of Health, made the following statement concerning the difficulty of proportioning the amount of hypochlorite to the varying conditions of the water treated:

At present there is no way of telling how much chlorine is needed or whether the amount added is sufficient, except by the results of bacterial analysis, and this bacterial analysis requires 18 to 24 hr. for the body temperature count which I mentioned, and from two to four days for a room temperature count, which is the one usually made. After a disinfection plant has been running for some time, if a complete record has been kept of all the variations in the raw water and the amount of disinfectant required with each, it may be possible to estimate the amount of bleach to use at different times, but there is no chemical test which will indicate with any degree of accuracy how much chlorine is going to be absorbed by the water before the destruction of the bacteria occurs. The oxygen-consumed determination indicates this more closely, perhaps, than any of the other chemical tests. Experiments with many hundred samples of waters and sewages at Lawrence have shown that the amount of bleaching powder required could have been predicted within 10 per cent. in about half the samples. In the rest of the samples the amount required as determined by bacterial tests was anywhere from one-tenth to one hundred times the amount estimated from the oxygen-consumed values. It may be that some satisfactory method will be devised by which the amount of bleach required can be determined in advance. If polluted waters are to be treated by this method without filtration, and the health of communities is to depend upon the satisfactory application of this process, some such test is essential before the element of danger is entirely removed. In the process as tried at Lawrence, disinfection was followed by filtration in both cases, and a large factor of safety was introduced, as even if disinfection failed to remove the bacteria, the filter might be counted on to do its work.

EFFECT OF FILTERS ON TYPHOID RATES

ACCOMPANYING the annual report of the water works department of the City of Albany, N. Y., is a diagram showing the average monthly typhoid rates for the nine years preceding and for the nine years succeeding the introduction of filtered water into the city. The irregular figure having the coarse shading represents the average number of cases for each month before filtration, while the diagram with the fine shading represents those after filtration. It will be noticed that before filtration typhoid fever was most prevalent during the winter and early spring months, while since filtration it has been most prevalent during and immediately after the summer vacation period. The average number of deaths per year per 100,000 population before filtration was 71.3 per cent and after filtration, 20.9 per cent, a reduction of 70.7 per cent.

Sewage Precipitation Patents

In this issue there is given a description of one of the first Emscher tanks to be built in this country, construction on this being just about been started. In previous issues we have described plans for using the same general type of tank in other cities, and the publicity which the idea has received and the encomium of prominent authorities render it probable that the use of such tanks will become more or less general. Most of our readers are familiar with the misunderstandings and legal complications and expenses which have been experienced by many cities which have adopted the septic tank, and it is to be hoped that this history will not be repeated because of Dr. Imhoff's patents on the Emscher tank. This seems improbable, since all the plans so far made have been, we understand, with the consent of Dr. Imhoff. But on page 324 Mr. Shields gives information concerning plans made several years ago which, it seems possible, may furnish such precedents as to invalidate the Imhoff patents. It is to be hoped that all such possibly anticipatory cases may be learned of at once, and

a decision reached at the earliest practicable date, so that the adoption of this method may not be delayed by uncertainty. Possibly the organization which is defending septic tank suits will undertake the straightening out of this matter.

Promptness in Municipal Reports

THE Mayor of Boston early this year called the attention of the heads of the various municipal departments to an ordinance which provides that every official in charge of a department shall issue his annual report within thirty days after the close of the fiscal year. This, of course, does not mean the publication and distribution of the reports, but we hope that the Mayor will be equally as urgent with the printers and those responsible for the publication of the reports in order that these may reach the citizens promptly.

We have noticed considerable improvement within the last year or two in this matter of promptness in publishing municipal reports. We have already received annual reports for the year 1910 from several cities, possibly the greatest surprise being the receiving of the report of the New York Fire Department for the year ending December 31, 1910. Ordinarily New York City reports are published anywhere from nine to twenty-four months after the close of the fiscal year. This promptness is in line with improvements in the contents also of the reports which are now being published, which indicates a growing appreciation of the importance of these and the part which they may be made to play in securing for municipal departments the confidence and appreciation of the voters.

Pure Water Saves Lives in Cincinnati

A REMARKABLE illustration of what pure water means to the health of a city is found in a statement just issued by the Cincinnati, Ohio, water-works department covering the first three years of the operation of the new \$11,000,000 water-works system in that city. It is shown that typhoid fever has been reduced to a minimum, giving Cincinnati a death rate from typhoid fever in 1910 of only 5.7 per 100,000 people.

In 1910 there were only 21 deaths in the city from typhoid fever, compared with 239 in 1906, the last year of the operation of the old water-works. The total of deaths for 1908, 1909 and 1910 from typhoid fever is 133, compared with 664 the total of the last three years of the operation of the old system. It would therefore appear that the number of lives saved by pure water was 531.

There has also been a falling off of deaths from other intestinal diseases of from 563 in the years 1904-5-6 to 246 in the last three years, a saving of 317 lives, or a grand total of 848 lives saved.

The report shows that the present cost of pumping water is \$14.36 per million gallons, compared with \$32.05 per million gallons in 1906, so that the money saving has been enormous.

Water Situation in Erie

In Erie, Pa., following a typhoid epidemic, copper sulphate has been in use for treating the water since January 28, under the direction of the State Board of Health. A building 24 x 48 is under construction and is being equipped with concrete tanks for mixing hypochlorite, which will be regularly applied to the water as soon as the plant can be completed. In connection with this, the water board will maintain a perfectly equipped laboratory in charge of Mr. Dunwoody, of Troy, N. Y., as chemist, who begins his services this week.

Water Sedimentation in Poughkeepsie

The report for the year 1910 of the bacteriologist of the Poughkeepsie, N. Y., water works plant, Mr. Thomas A. Cole, gives details of the operation and efficiency of the plant during the year. Chlorine was applied to the raw water during the entire year and coagulant was used when necessary, the number of days per month on which it was used varying from four in October to thirty in March.

The sedimentation basin, which provides storage for about 24 hours average flow, was put in commission on October 2, 1900, and operated up to June 15, 1910 (8½ months), when the water was drawn off and the basin thoroughly cleaned out. After drawing the water off and before cleaning, the amount of sludge which had been deposited in it was carefully measured and analyses were made of the same. The basin was put into operation again on September 24th and continued throughout the year. The sediment removed amounted to 464.4 cubic yards, which was used to grade around the sedimentation basin. The total cost of cleaning was \$149.30.

The total number of gallons of water which had passed through the basins was 845,679,200, making the amount of sludge per 1,000,000 gallons about .55 cubic yard. The specific gravity of this sludge was 1.183. The removal of it effected an average removal of the turbidity of the water of 57.9. Of this sludge the dry material constituted about 29 per cent, or .163 ton per 1,000,000 gallons passing through the basin. An analysis of the sludge showed that it contained 83.3 per cent of vegetable matter.

It was found that 53.3 per cent of the sludge had been deposited in the first sixteenth part of the length of the basin; 70.1 per cent was found in the first third of its length, and 83.9 per cent in the first one-half of its length.

THE IMHOFF PATENTS

EDITOR MUNICIPAL JOURNAL & ENGINEER,
New York City.

DEAR SIR:

Sanitary and municipal engineers interested in the question of sewerage purification who have been following the developments of the science and have read the recent description of the Imhoff idea of constructing tanks will be interested in the following statement and the illustrations herewith presented for the general information of the public.

Mr. Imhoff's claims for patents in this country were filed on May 6, 1907, and the claims were allowed June 15, 1909. Claim 1, which covers the patents quite clearly, reads as follows:

"In sewage treatment apparatus the combination of a depositing chamber having a mud outlet at the base thereof, a mud decomposing chamber below the depositing chamber adapted to receive the deposited mud, means for preventing the return of gases and rising particles from the decomposing chamber to the depositing chamber, and means for providing a flow of liquid through the depositing chamber without disturbing a quiescence of the decomposing chamber."

In February, 1907, the writer was called upon to design a system of sewers including a sewage purification plant for a certain town in the State of Indiana. The plans and specifications were completed and submitted in April. A cross-section of the tank as designed is shown in Figure 1. In a description of the plant which was contained in a report made to the authorities bearing date of April 9, 1907, and following a description of the trapped channels running longitudinally through the tank, the following statement is found: "The heavier particles of the sewage, as it passes through the channels, is precipitated and passes down through openings beneath the side walls and is deposited in the pockets on each side. The beam beneath extends far enough to each side to

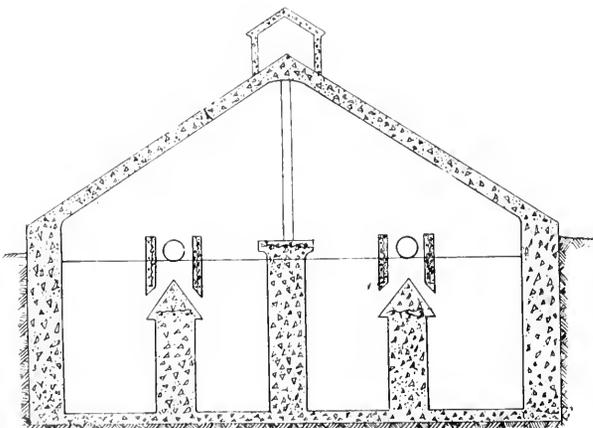

FIG. 1. DESIGNED IN FEBRUARY, 1907.

prevent any sludge from rising up and mingling with the current that passes through the channels." This plant was completed in the fall of 1907 and has been in continuous use to the present time. Similar tanks have been designed and constructed by the writer since this one, which follow along the same principles, one of which is indicated by Figure 2. This would indicate that the novelty of the claims set forth by Mr. Imhoff are not altogether new. The writer desires at this time to call the attention of those interested in the Imhoff patents to the above facts.

Again, in 1899 the then firm of Alvord & Shields was called upon by the city of Highland Park, Ill., to devise a plan for the disposal of the sewage from a small district in the western

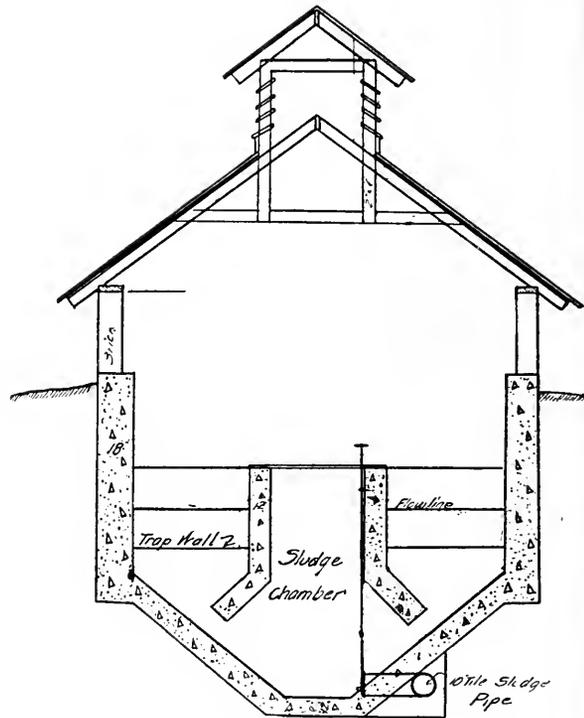

FIGURE 2.

portion of that city which had no natural outlet into which sewage might be discharged. In considering the proposition several schemes were discussed. At that time attention was been called to the different species of bacteria which were developed in the different parts of a septic tank and the possible advantage that might be derived by changing the flow of the sewage through a tank was then considered. Mr. Alvord personally worked out a plan of by-pass channels and gates so that the flow through the tank could be turned in several different directions. The tank was constructed in the year 1900 and has been in continuous operation since that time. It has been the writer's privilege to examine and report upon the working of this plant at several times during the years that have passed. The tank has been operated as intended, namely that the sewage might enter one compartment and pass through several longitudinal compartments to the outlet until the fresh sludge should accumulate to a considerable extent, then the flow would be reversed and what was first the inlet end would be changed to the outlet end. The plant has done excellent work and has served its purpose to the present time, although it has been cleaned out upon numerous occasions. It is still in use and a change in the flow was made under the observation of the writer within the past few months. This statement is made as it bears upon the later patents issued to Mr. Imhoff, application for which was filed February, 1910, and the patents issued December 20, 1910, Claim 1 of which reads as follows:

"The method of treating sewage in successive depositing chambers consisting in reversing the flow in order to obtain a similar sludge mixture in each depositing chamber."

It is most likely that other engineers have been thinking and working in this same matter and that other plants have been constructed containing these principles claimed by Mr. Imhoff. If so, it will be of interest and value to the profession to know of such cases, for if we have been using this form of construction we ought not to be required to pay royalties on foreign patents.

W. S. SHIELDS.

Chicago, February 24, 1911.

NEWS OF THE MUNICIPALITIES

Current Subjects of General Interest, Under Consideration by City Councils and Department Heads—Streets, Water Works, Lighting and Sanitary Matters—Fire and Police Items—Government and Finance

ROADS AND PAVEMENTS

Speed Limit to Be Enforced for Sake of Roads

Chattanooga, Tenn.—Automobiles running at reckless speed, in violation of the government regulations and exceeding, more than double, the speed permitted by law, are tearing away the splendid roads of Chickamauga Park faster than they can be replaced. In many places the crown of the roads has been worn off entirely, and it becomes necessary to fill in with rock to hold the road at all. To secure suitable rock the officials of the park have been at their wits' ends, and the situation, altogether, is a most peculiar, distressing and embarrassing one. The Chickamauga Park officials who reside in Chattanooga are not disposed to exercise arbitrary authority to the discomfort of their fellow citizens, yet the rules governing travel in automobiles through the park restrict the cars to ten miles an hour, and it will not be surprising if some notable examples are made, in the near future, of persons who exceed this limit.

Six Years' Paving Record

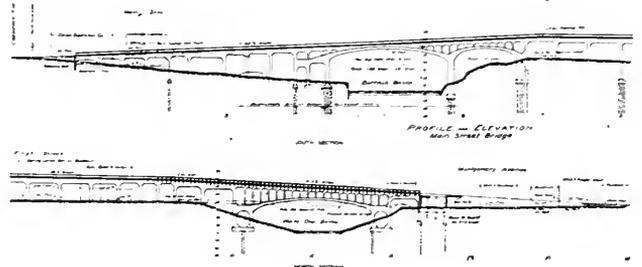

New Orleans, La.—City Engineer Hardee has sent to Mayor Behrman a statement of the amount of paving that has been done in the city since Jan. 1, 1905, the beginning of the Mayor's administration, and the present time, as compared with the amount that had been done up to that date in all previous administrations. The amount during the last six years has been 999,309 square yards and in the previous period of the city's existence it had been 724,368 square yards. The excess in amount in favor of the past six years is 274,941 square yards. The 999,309 square yards does not include any paving done in city streets by railroads or the extensive river front paving done by the Dock Board. The Illinois Central has paved a large number of streets with asphalt in the vicinity of its new terminals at Poydras street, and has still about as much more to do under its contract when it was given the use of certain streets in that locality. That was a very extensive paving contract, amounting to a number of miles of streets when finished. The paving in detail is given as follows: Asphalt—Previous to 1905, 576,475 square yards since 1905, 624,502 square yards; vitrified brick, previous to 1905, 138,300 square yards since 1905, 10,201 square yards; small granite blocks, previous to 1905, 10,168 square yards since 1905, 30,919 square yards; vitrified brick, previous to 1905, 138,000 square yards; granitoid, 138,808 square yards mineral rubber, 38,186. The effect of this work on the appearance of the city may be readily seen by inspection, the new paving covering streets in all parts of the city.

Wheat Straw Used to Build Good Roads

Walla Walla, Wash.—Wheat straw will play an important part in many miles of new good roads which will soon be built in this country. Straw has been used for years on roads in this State. It has been found to give the best results when put on wet and mixed with the soil. When scattered loosely on the road it ignites and the work of weeks is lost. The newer plans are better yet for the application of straw. In the first place, the roads will be ploughed and graded and brought to a crown. When the roadbed has been harrowed and made level the straw is put on to a depth of six inches. A disk cutter is used to cut the straw up and mix it into the earth. If all the straw works into the roadbed more straw is put on until a cushion is formed. A steam roller packs the earth and straw into a hard mat as durable as asphalt and a road which will turn off water if the grade is right. The new method of mixing the straw with the soil costs more than that of throwing straw into the ruts and makes a road that will outlast gravel and cinders. Gravel is expensive and the cost of hauling is heavy. In all the lowlands and uplands in this country straw will be used with the clay soil.

Viaduct with Some Unusual Features

Houston, Tex.—The accompanying illustration shows the design of the Main street and Montgomery avenue viaduct which will cross the ship channel, the railways and White Oak Bayou and will connect the north and south sides of the city. The total length of the structure will be 1600 feet. The roadway, 45 feet wide, will be paved with brick, and there will be two sidewalks 7½ feet wide each. The clear-

1600-FOOT VIADUCT FOR HOUSTON

ance will be 22 feet above the rails of the tracks and 58 feet above low tide. The viaduct was designed by F. L. Dormant. In the construction of this viaduct it is contemplated to lay a 12-foot or 15-foot water main under the roadway, also ducts for electric light wires, ducts for telephone wires, gas mains and also a number of hydrants for fire protection of craft in the ship channel and the upper turning basin, and also to wash and clean the brick pavement of the viaduct.

Improvements at Port Townsend, Wash.

Port Townsend, Wash.—A large amount of concrete work for a town of its size is being done under the direction of William J. Sadler, City Engineer. Last year there was completed about 27,000 sq. ft. of concrete sidewalk, 2,576 lin. ft. of combination curb and gutter, catch basins, etc. In connection with this work there was included a retaining wall containing about 275 cu. yds. of concrete and 3,000 cu. yds. of fill. During the coming year about 48,000 sq. ft. of concrete sidewalks will be laid in the residence section.

Half Million Spent on Pavements

Huntington, Ind.—Nearly a half million dollars has been expended by Huntington residents in paving streets. This is a fact brought out in a report just completed by City Engineer Wagoner covering the street improvements since 1892. During the seventeen years which have elapsed since the first dirt street was covered with brick, the total of sums expended on different thoroughfares reaches \$439,704.85. This is considered unusually high for a city of 10,000.

Illinois Good Road Bills

Springfield, Ill.—Senator Frank Landee, Moline, has introduced three bills in the Legislature designed to put roadmaking under State supervision.

Under the Landee scheme a superintendent of roads is provided for each county. He is to be appointed by the Governor on selection of the Boards of Supervisors or Commissioners. His salary is to be paid by the State. No one shall be appointed to the place unless he has had at least three years' experience as a civil engineer, and preference is to be given graduates of recognized colleges of civil engineering.

The County Superintendent is to devote all his time to his work and his salary is to be graded according to the amount of road and bridge taxes levied in the county, his pay averaging from \$800 where the tax is \$10,000 or less to \$2,400 where it is over \$100,000.

The County Superintendent of Roads is to classify the highways in his county in three classes.

First-class roads, which shall include the roads connecting the principal points in the county following the most traveled route.

Second-class roads, which shall include the principal roads leading to the main roads.

Third-class roads, which shall include all by-roads not in the first and second classes.

The first-class roads shall not include more than 25 per cent of the total road mileage of the county.

New Jersey State Road Work

Trenton, N. J.—State Road Commissioner Frederic Gilkyson's report for 1910 shows that there were 62,621 miles of public roads built in the various counties with State aid, the total cost being \$508,201.36, the State furnishing \$169,740.44 of the lump sum and the various counties the remainder.

Commissioner Gilkyson shows that since the passage of the State Aid Road Act in 1892 the total mileage of roads built in the various counties up to the end of last year was 1,562,204, and the State has expended as its one-third share toward building them \$3,050,882.70.

The Commissioner shows the list of the roads on which \$308,127.29 automobile money was spent in repairs, and he also shows that the various counties spent in addition \$1,080,160.04, making a total repair expenditure of \$1,394,296.42 last year. The list of county appropriations for road repairs singularly shows Hudson County, which has built such a small mileage with State aid, having the very largest appropriation—\$370,000. Essex County is very small, considering her area—\$85,133.54. Bergen County, another county building few roads with State aid, is large—\$126,000—whereas Middlesex County, over which every autoist making a run to the shore from New York and the northern part of the State, only spent \$45,865.01, showing the good condition of her roads and indicating how well they were put down to stand the enormous strain of the autos.

Town Now Owns Roller and Crusher

Galen, N. Y.—The Town Board has purchased a ten-ton Buffalo road roller. Last year the Board purchased a Climax stone crusher, and with this equipment propose to greatly improve the town's roads the coming season.

Seven Miles of Highway Under Way at Riverside

Riverside, Cal.—There are probably few cities in Southern California engaged in a more extensive campaign of street improvements than Riverside. Work now under way and for which proceedings have been begun amounts to approximately 90 city blocks, or seven miles of highway, to be constructed of rock roadbed with oiled macadam surface. In all cases cement curb and gutter will be constructed in connection with the roadbed. The cost will be approximately \$135,000.

South Bend Seeks Track Elevation

South Bend, Ind.—City officials from South Bend appeared before the Cities and Towns Committee of the Senate last week in behalf of a bill introduced by Senator Hibberd to give South Bend a track elevation law similar to the one now in operation in Indianapolis and Fort Wayne. The bill provides that the city shall pay 25 per cent of the cost of all street intersection elevations. Representatives of the railroad companies which would be affected through the operation of the proposed law desire it amended to compel the payment of the same per cent of the total cost of the entire work.

Superior Grade of Oil on Roads Found Economical

Milwaukee, Wis.—Because a superior grade of oil was used on thoroughfares in public parks last year, no additional street oil may have to be purchased by the Board this year. Oil to the amount of 50,000 gallons was purchased, and 6,000 gallons remaining may be sufficient to meet all requirements this year.

Wants Paving Rights

Toledo, O.—In order that Toledo may have the fullest possible use for the municipal asphalt manufacturing plant which is to be built with \$9,000 appropriated by Council a year ago, Service Director J. S. Cowell is seeking a change of existing law so as to permit cities to lay their own asphalt street pavements, instead of having them laid by contract. At Cowell's request, Representative Myer Geleerd recently introduced in the Legislature a bill to amend the law in this particular. The engineer's department estimates that the city could save 25 per cent by doing its own work, and it is urged that at the same cost asphalt paving could be put down instead of brick and inferior kinds. Product of the asphalt plant, plans for which already have been drawn by City Engineer Tonson, could be used only for repair work under the present law requiring all original paving to be done under contract.

SEWERAGE AND SANITATION

Dairy Averages Published by Health Board

Jacksonville, Fla.—The Board of Health has started to publish the standing of the various dairies that supply milk to the city. The standing is determined by daily inspections and tests of milk and an average is arrived at. This average constitutes a score. The dairies are being scored according to the methods approved by the United States Department of Agriculture.

New Sanitary Scheme

Ogden, Utah.—Dr. C. E. Coulter, President of the Board of Education, stated that, in accordance with the board's determination to give the "sanitary towel" a tryout in the local schools, orders have been placed with the manufacturers for a trial consignment, which will be installed at once. These towels are of paper, about 12 by 18 inches in size and come in big rolls, which are hung in convenient places about the wash rooms. The individual in using one tears it from the roll by means of the perforations, and after drying himself deposits the towel in a metal box provided for the purpose, and from which it cannot be withdrawn and used over again by some one else.

Mayors Will Confer on Mosquito Nuisance

South Orange, N. J.—Village President Ira A. Kip, Jr., of South Orange, has sent invitations to the mayors of twenty neighboring municipalities to attend a dinner at the Essex County Country Club on Wednesday evening, March 15, at which the extermination of the mosquito will be brought up for discussion. Dr. John B. Smith, chief entomologist of the State of New Jersey, will give an illustrated talk on "The Mosquito Problem" and will recommend the course of action to be followed in ridding this section of the pest, following the campaign successfully carried out in Panama and Cuba. An address will also be delivered by Dr. L. O. Howard, chief entomologist of the Department of Agriculture at Washington. Among those who will attend will be the executives of Newark, Elizabeth, Montclair, Glen Ridge, Bloomfield, Nutley, Belleville, Orange, West Orange, East Orange, South Orange Township, Irvington, Millburn, Harrison, Arlington, Summit, Springfield, Caldwell and Verona.

State Health Department to Issue Municipal Sanitary Regulations

Richmond, Va.—The small city or town in search of a sanitary code will have its needs met in large part when the model ordinances now being prepared by the State Health Department are ready for distribution. Covering the whole field of sanitary regulation, from the standpoint of the average Virginia city, these regulations are intended to be a guide to town and city councils and to give them a basis for such legal enactment as has been found effective in other cities. The new regulations, which will probably be issued as a number of the Virginia Health Bulletin, are based upon actual municipal ordinances, many of which have been tested in the courts and found thoroughly valid. They provide for the control of nuisances, the care of refuse material, the regulation of milk and food supplies and like matters of a sanitary character. The State Health Commissioner, on approving the new regulations, recently expressed his opinion that they would meet a long-felt want in the State. He said: "It is not likely that any city will find it expedient to adopt the entire code drafted by the department, but the ordinances cover the whole field and should be of service to all municipalities except those of the largest size."

Sanitary Conditions in New Orleans

New Orleans, La.—One of the most prominent sessions in some time was held last week by the City Board of Health in the City Hall Annex. It was made known that no cistern-screening inspections would be conducted this year, that the tenements would not be inspected and other work of the Board curtailed. Dr. O'Reilly, in his monthly report, showed that the city was in a very healthy condition, last month being the healthiest January in ten years.

WATER SUPPLY

New Pump to be Tested

Perth Amboy, N. J.—Work has now been completed on a Wisconsin cross-compound tank and fly wheel 12,000,000-gallon pump at the city water works at Runyon. The present month will be mostly taken up in making pipe connections with the mains and boilers, after which the pump will be tested. City Engineer Samuel Mason and Thomas Grieve, chairman of the committee on power of the Board of Water Commissioners, will conduct the test. Work on the pump in assembling the different parts has been going on at Runyon for the past six months. About twenty men have been employed continuously in this work and erecting buildings for housing the pump and accompanying boilers. The cost of the pump and appurtenances has been about \$2,000. The total money expended for buildings, boilers, pumps, etc., in connection with this latest addition to the efficiency of the city water supply system has been about \$50,000.

Extra Water Tax to Contractors

Wheeling, W. Va.—An old ordinance relating to the collecting of the water tax has been revived in the past couple of months and is now being enforced, to the effect that all bricklayers, brick makers, stone masons and plasterer contractors must pay an extra water tax in proportion to the amount of work they do. Blanks have been furnished to the contractors in the business and also to the contractors doing concrete work that must be filled out each month, telling how much work was done by the contractor or company, and this report is collected by the water department and water tax assessed according to the law.

Litigation with Akron Water Company Ends

Akron, Ohio.—All litigation between the city of Akron and the Akron Water Works Company came to a sudden ending last week at a conference between city attorneys, members of the Akron Chamber of Commerce and representatives of the Akron Water Works Company. An agreement was arrived at whereby the water company will once commence to install apparatus for the purpose of giving Akron a sufficient water supply and the water is to be pure. The water company will spend several thousand dollars in giving the city immediate relief. All of the water is to be treated chemically, so that obnoxious odors and impurities will be removed.

The agreement means that the water company will continue to do business until the expiration of its contract with the city. In the meantime the city will go ahead with its plans for a municipal plant. The question of buying the present plant, if it can be secured at a satisfactory figure, will be taken up later.

Many Municipalities Interested in Proposed Reservoir

Albany, N. Y.—Walter McCullough, Consulting Engineer of the State Water Supply Commission, has submitted his report relative to the project of regulating the flow of the upper Hudson River. Investigations along this line have been conducted by Mr. McCullough as the result of requests for the improvement of the river in question from several municipalities and many property owners who are affected. The need of preserving the public health and safety was emphatically dilated upon in the requests for an investigation of existing conditions received by the commission. Mr. McCullough reported that the most practical method of regulating the river was by the construction of storage reservoirs. He recommends the construction of a reservoir on the Sacandaga River, with a dam at Conklingville, which would impound 29,000,000,000 feet of water at an estimated cost of \$4,650,000.

The report was adopted by the Commission, with a resolution declaring that in its opinion the improvement of the upper Hudson is practicable and directing Mr. McCullough to complete the maps, plans, specifications, estimates and lists provided by law, together with such information as may aid the Commission in determining the percentage of the cost of the improvement to be borne by the various counties, cities, towns and villages and by the individual properties benefited collectively.

Iola Water Tests Started

Iola, Kan.—The set of water testing instruments from Washington has arrived, and Commissioner G. C. Glynn, who is directing the experiments along the line of water purification by the electrolytic process, began arrangements for the first practical test of the new method. A small reservoir, which will be filled with river water, has been constructed, through which the electrical current and salt solution will pass, and after the full treatment has been given the water will be taken from the reservoir and tested by means of an instrument loaned the city of Iola by the United States Geological Survey and which will indicate the full amount of sediment left in the water.

Pure Water for Grand Forks

Grand Forks, N. D.—The new rapid sand filter which has been in the course of construction since early last fall was formally turned over to the city as completed last week by the Pittsburg Filter Company, and official tests are now in operation. It is expected that the city will accept the plant and the citizens will again have pure drinking water after being without it for more than four months.

Municipal Water System after Long Fight

Sylvania, Ga.—An interesting lawsuit between the city of Sylvania and the Sylvania Water Company has just terminated here by the city agreeing to purchase the plant and property of the local water company.

About a year ago the city voted \$40,000 of bonds for electric lights, waterworks and sewers, but was enjoined by the United States Court for the Southern District of Georgia on the application of the water company. The court held that, while the city could grant no exclusive franchise to the local water company, yet under the terms of the franchise it had bound itself not to compete with the water company and that installation of a new system would be competitive. A short time thereafter the city authorities, acting under a fire ordinance, forcibly removed a building of the water company outside the fire limits, and at the time considerable feeling was engendered on both sides. The city officials were ruled for contempt in the United States courts for violation of the injunction. The court further ordered the water company to improve its plant and make it adequate for the needs of the city. The company failed to do so and the city brought a petition for a receivership against the company. All three of these matters stood for a hearing before Judge Emory Speer at Savannah, but an amicable settlement was reached, and all the matters withdrawn on the purchase of the property and plant by the city. Active work will be begun in a few weeks for the construction of the new improvements.

Filter Plant in Operation

Moline, Ill.—Four of the six filtering units have been put in operation in Reservoir Park in Rock Island. It will require at least three days for the old water to be drawn from the mains. Here the plant was put in motion without a hitch. Each of the four units now working has a daily capacity of 1,000,000 gallons. The daily consumption in the city is approximately 3,500,000 gallons. Thus the plant, as now operated, is capable of supplying 500,000 gallons in excess of the daily demand. There are in all six units in the plant. Each has a capacity of 1,000,000 gallons. The plant is so constructed that units may be added as the consumption of the city increases. "The Pittsburg Filter Manufacturing Company has given a first-class job," says D. C. Kelly, superintendent of waterworks. "It is now up to the city to efficiently operate the plant. We will need to increase our force, and the future successful results will depend wholly on the efficiency of the men who will be put in charge. Sulphate of aluminum is to be employed in the purification of the water supply. Our next move will be the installation of a laboratory equipment. We have provided quarters for it at Reservoir Park, and it is expected that the equipment will be on hand at an early date. It is planned to engage a professional chemist from one of the universities and to retain him here a month or longer until he can have taught the chief engineer or some other person to be designated how to operate the analytical equipment. We will then be enabled to conduct a bacteriological test of the water every day in the year."

STREET LIGHTING AND POWER

Ossining's Lighting System Is Damaged

Ossining, N. Y.—A fire badly damaged the power house of the Northern Westchester Electric Light & Power Company and put the entire electric lighting power system of the city out of commission. It was feared at first that the plant had been wrecked beyond repair and the city streets, residences, factories and the Sing Sing prison would be forced to do without electric illumination for months. A test of the machinery after the flames had been extinguished, however, revealed that the plant could be put in shape within a short time.

City Council to Investigate Light Complaints

Charlotte, S. C.—Much public interest is evidenced in the resolution passed by City Council on the motion of Alderman O'Neill providing for an investigation by City Council of the alleged excessive charges and the poor quality of both the electric and gas light which the Consolidated Company has been furnishing. No time has been yet appointed for the committee on lighting to meet, but it is expected that Chairman Masters will shortly call the committee together and take up the matter, that there may be no delay in presenting all the facts to the municipal body at the next meeting. For some time there has been much complaint and criticism about the character of the light which the Consolidated Company has been furnishing. Many householders make the point that they pay now larger gas bills with a rate of \$1.20 than they did formerly at the rate of \$1.65.

Municipal Light Plant May Go into Commercial Lighting

Columbus, O.—Electric lighting to be furnished the citizens of Columbus in their homes at a maximum rate of 5 cents a kilowatt hour from the municipal light plant is one of the recommendations which will be made to Council by Mayor George S. Marshall when he submits to them his annual report. The Mayor says:

"There is no doubt but that the local lighting company can make a reasonable profit upon its actual investment at 5 cents per kilowatt hour, and there is no reason why the people of Columbus should longer pay more than 5 cents per kilowatt hour for light. Of course," he is quoted as saying, "if the Columbus Railway & Light Company should see fit on its own account to reduce its rate to 5 cents there would be no reason for the city going into the business of commercial lighting." He states that numerous contracts have already been signed for current for power, and within the near future its sale will make the city plant self-sustaining, saving Columbus approximately \$70,000 a year. But he feels that the city plant has rendered the people an even greater service to the people by forcing the Rail-Light people to reduce its rates about one-half and sometimes more—in one case to 1 cent per kilowatt—to shut out the city from the contract.

City Grants a Franchise

Corpus Christi, Texas.—A franchise to construct a gas plant has been granted to Michael Maloney. It is estimated that the plant will cost \$100,000 and it is probable that bonds will be issued for the purpose. There is a provision in the franchise whereby the city is to receive one-half of the net revenue.

Village Without Light

Fenton, Mich.—The village has been in darkness for many nights as the result of a row with the lighting corporation. The underlying reason is that the municipal ownership spirit has come upon the village. The city fathers won't renew a contract with a private lighting corporation on the corporation's terms, whereupon the corporation supplies no electricity for the 50 street lamps. The price the corporation demands is \$60 a year per lamp and the lights to burn for but half an hour after midnight. Detroit, with her municipally owned and operated plant, lights her streets at an average cost, as shown by the city's last annual report, of \$32.17 per lamp for 4308 lamps and the lights burn all night, not the first half of the night only, as here. A committee of three of the village trustees is going to Howell to look over the municipal lighting plant there, which is said to be giving cheap and entirely satisfactory service.

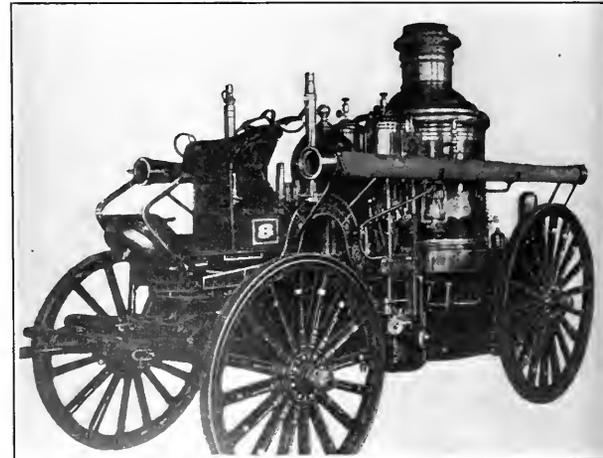

FIRE AND POLICE

Will Show Workings of Police Signal System

Toledo, O.—A feature of the police and fire exhibit in the Municipal Exhibition will be a map of the city, showing the police district, the location of call boxes and the like. These will be illuminated by tiny electric lights. The chart will be connected with the real police call system, and the lamps on the map will light as the patrolmen actually report. Citizens thus will be able to trace the movements of the guardians of the peace. They also will be allowed to hold their ears to what is called a "listening monitor," and thus hear what the patrolman says to the man on duty at the headquarters telephone station when he rings in and just how the system is conducted.

Steam Fire Engine Satisfactorily Tested

Wilmington, Del.—The new Metropolitan fire engine recently built by the American-La France Fire Engine Company, of Elmira, N. Y., for the Weccacoc fire company, of Wilmington, Del., was recently given a test at the foot of West street along the Brandywine Creek. The test was under the supervision of Andrew Jersey, a representative of the constructing company, and C. Whistler, their engineer. Besides these men the members of the local fire

Courtesy Wilmington Star.

NEW METROPOLITAN ENGINE FOR WILMINGTON

company were present, and nothing but admiration was manifested by all who witnessed the working of the modern firefighter. Steam was raised within seven minutes after its arrival at the testing grounds. The first test was with 1,000 feet of hose, the nozzle used being 1½ inches. The next test was with two lines of hose 500 feet in length and this, too, was made with a nozzle of the same dimensions used at first. Two lines of 250 feet were tried, and this, too, proved satisfactory. Three lines of hose containing 100 feet lengths with an inch nozzle were connected and the amount of water poured through the sections combined the same, appearing to prove the assertion of the builders that it would pump 8,000 gallons a minute. The last test applied to the engine was of two lengths of hose of 50 foot lengths siamesed into one, and for this test nozzle 1½ inches in diameter was used. The high water made all attempts at height throwing an impossibility. The machine cost \$5,250. It was placed in commission immediately after the test.

Improvements to Fire Department

Sanford, Fla.—The Sanford fire department is now being extended and improved so as to give the city such facilities in this regard as it needs. A steel tower has been erected to be used for giving the alarms and drying the hose. The second floor of the city hall has been divided and sleeping quarters arranged for the men who will have a highly polished brass pole to slide down just as they do in big cities and soon a locomobile fire engine will be in service. Sanford will then be prepared to do great things in the way of fighting fire.

Card Index System in Effect

Jersey City, N. J.—The new card index signal system of the Jersey City Fire Department went into effect on March 1 at 8.30 o'clock in the morning. This new system vastly simplifies the methods of the department in locating fires and properly controlling the force at the disposal of the department in case of several fires occurring simultaneously. The unwieldy and uncertain chart system is abolished. Likewise the "return blow" signal is done away with for all time. It had been used by the department since 1871.

Improvements in Fire Department Planned

New Bedford, Mass.—A drill tower more than eighty feet in height; regular courses of instruction for firemen; a fireman trained in New York's fire college as instructor, and regular monthly or bi-monthly drill for every fireman on the force are some of the interesting innovations that Chief Edward F. Dahill, of the fire department, is planning for this spring.

Fire Drill Tower for Los Angeles

Los Angeles, Cal.—Work on the new practice tower for the fire department at Avenue Twenty and Pasadena avenue is nearly completed and the first drill probably will be held there in about a week. The tower proper is practically completed and might be used now except for the fact that the ground around the foot of the structure has not yet been paved. An asphalt pavement will be laid around its base in order to permit of the easy movement of apparatus. Towers of this sort are in use in nearly all large cities, according to A. J. Eley, chief of the Los Angeles department, but this is the first one of its kind to be built here. The structure is about 20 feet square, of frame construction and in height corresponds to a six-story building, the top, which is surmounted by an iron railing, being at about the same distance from the ground as the seventh floor of an ordinary office building. On each floor of the tower there are eight window openings, two on each side. Two sides of the structure are equipped with ordinary iron fire escapes. The tower is constructed as much as possible like an office building and it is expected will be of great practical assistance in teaching the art of fire fighting.

Automobile Fire Apparatus Discussed

Butler, Pa.—An early morning fire in the business section of Lyndora gave the local firemen their first opportunity to employ the new automobile fire truck in actual service, and that the new machine is all that could possibly be expected is evidenced by the fact that water was being played upon the flames five minutes after the alarm sounded in the Central fire station on North street. It is estimated that on stretches of the run a speed of more than sixty miles per hour was attained. The run proves beyond a doubt the excellent worth of the new truck.

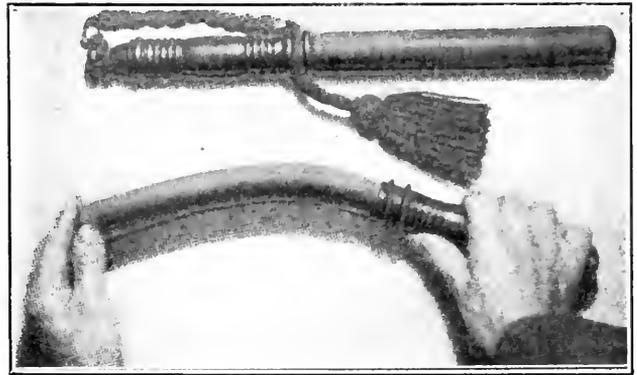

Buffalo, N. Y.—Chief McConnell, of the fire department recently told the members of the Equality Club that, in spite of the rapid advance made by the automobile fire apparatus, the horse would be used for many years to come in drawing fire apparatus. He said the present steam engine has many advantages over the new gasoline engine. "It has been demonstrated," said the chief, "that the gasoline engine weighing 15,000 pounds will not stand up under the rubber tires. Rubber dealers have told me that solid tires will not stand a weight greater than 10,000 pounds. If this is true it will require a lighter engine or a substitute for rubber tires." Chief McConnell further said that the present steam engine threw a greater stream than the gasoline engine; that it could make greater progress through snow and was generally more efficient. He doubted the practicability of the gasoline engine, except as a scout engine to make quick runs in the residence districts and extinguish fires in their incipency.

No Politics for Aberdeen Police

Aberdeen, Wash.—Chief of Police F. B. Archer has issued an order to the members of the police force declaring that any activity shown in municipal election would be followed by expulsion from the force. This is the first time that any head of a department of the city has ever issued a public order of this kind.

Humane Police Club Used by Denver Patrolmen

Denver, Col.—Since the adoption by the Denver Police Department over three years ago of what is known as the flexible humane police club, there has been an absolute absence of cut and bruised prisoners. This club is made entirely of the best grade of rubber, handle and striking end all in one piece. Through the center of the club there ex-

POLICE CLUB MADE OF RUBBER

tends a Bessemer steel handle, to which is attached a piano wire coil spring, which is loaded with shot and sand to give the required weight. The ends are vulcanized and the handle enameled a dark maroon color. Whenever officers have had occasion to use this club the prisoner has never shown any bad after effect from the blow. This club is very effective, and is said to be the only humane club in use. J. T. Gannon, while a member of the department, invented the club and the Police Department of this city was the first to use it.

Police Arrests in New York and London Compared

New York, N. Y.—Mayor Gaynor has sent to the Aldermen the second installment of his annual message. It has to do with police matters and contains many interesting observations and figures. He states that the number of persons arrested in New York City in 1909 was 220,366, as against 112,642 in Metropolitan London. Of these, i. e., in this city, 79,000 were discharged by the Magistrates as unjustified. The number of arrests during 1910 was decreased 50,000.

Police Chief Recommends Modern Ideas

Richmond, Ind.—The increase of crime in Richmond during the past year has led Chief Gorman of the police department to recommend in his annual report to Council that a number of modern police methods be adopted here among which he suggests the "flash light" patrol system and the purchase of two automobiles. Chief Gorman says the increase in crime is out of proportion to the increase in population. The large number of strangers who have come to Richmond for employment is the cause of the increase, according to Chief Gorman.

Chemical Auto Engine Giving Satisfaction

Rome, Ga.—Rome's new chemical auto engine is working satisfactorily, and those familiar with the fire engine and insurance situation predict that before many years the auto engines will entirely supplant the horse-drawn vehicles. It has been said that when the new auxiliary water-main is put in, three auto engines could handle the entire town, and thus decrease the expense of maintenance. It is said that motor equipment can be renewed every five years, at a less cost than required to maintain a horse department.

Police System for Smaller Cities

Huntington, Ind.—Corr's metropolitan police bill providing for a metropolitan police system in cities of the fifth class having a population of not less than 8,000, was passed by the House last week by a vote of 57 to 33. The bill originally included cities of 7,000, but an amendment by Representative Grieger, providing that the bill should apply to cities of not less than 8,000, was approved. The Corr bill grew out of the situation at Bloomington under the present law. Mayor John G. Harris, a Democrat, appointed a Democratic chief of police, but the Republican City Council named Republican police officers.

GOVERNMENT AND FINANCE

City Marshall Appointive Instead of Elective

Santa Ana, Cal.—A bill has been passed by the Legislature making the office of City Marshall of towns of the fifth and sixth class appointive by the Board of Trustees instead of elective as heretofore.

Co-operation in City Departments

Duluth, Minn.—The Board of Public Works has received a communication from the water and light department stating that the water and light board desires to work more closely with the works board and the engineering department in working on improvements. The communication stated that in the future the other city departments will be asked for necessary information before mains are put in. This action is taken so that when water pipes are laid the work will not interfere or damage other pipes which may already be in the street.

Commission Government Elections

Hillboro, Ill.—The commission form of government has been adopted by 212 majority, all four wards returning a majority for it.

Spring Valley, Ill.—The commission form of government was carried by a majority of 47 in a total vote of 700.

Olney, Ill.—At a special election it was voted, 331 to 177, to surrender the Olney charter and organize under the general law. The Olney charter was granted in 1869 on a proposal to establish a city court.

Sullivan, Ill.—The commission form of government was defeated on Feb. 14th by 52 votes. Only a light vote was cast.

Taylorville, Ill.—The proposition to place Taylorville under the commission form of government was defeated here on Feb. 17th by a majority of 186. Every ward in the city voted against it.

Vallejo.—Despite organized opposition the new charter, with its provision for a commission form of government was carried at the election of Feb. 24th by a vote of 1,279 to 809.

Appleton, Wis.—Appleton adopted, February 7, the commission form of government by a majority of 202.

STREET CLEANING AND REFUSE DISPOSAL

Plan to Increase Carrying Capacity of Garbage Wagons

Minneapolis, Minn.—John Brown, in charge of the garbage collection of the city; has a plan for dressing up the city garbage wagons. He proposes to buy canvas covers for the wagons to take the place of the present metal covers. Thus he would make larger loads possible, as he estimates that with the canvas covers each wagon would carry 500 pounds more than now, and end much complaint about poor service.

Solution of Garbage Disposal Problem

Boston, Mass.—Boston's garbage problem is nearer a definite solution than it has been for years. The Boston Disposal Company's offer to dispose of all the city's garbage, except that in East Boston and West Roxbury, for 54½ cents a ton, or approximately \$235,000 a year, is regarded by the Commissioner as a good indication that at last the city stands in a way to make a satisfactory contract.

Under the plan proposed by the company the city would build five receiving stations in Roxbury, Brighton, Albany street, Dorchester and Fort Hill, at an expense of about \$125,000. All the garbage of these districts would be carried to the stations by the city teams as at present, and in Roxbury and Brighton the garbage would be hauled to the waterfront by the company. This plan would mean the doing away with all dumps now used by the city, concerning the majority of which repeated complaints have been made. Mr. Rourke is convinced that the dumps should be given up at once to meet modern sanitary requirements, and says that it would be only a few years when all the dumps, at the present rate of filling, would be no longer available.

Municipal Housecleaning Becoming General

Little Rock, Ark.—Little Rock, under the direction of her City Beautiful League, is planning to have a thorough cleaning of the city by districts. District leaders for each district have been appointed. The district leader will have associated with him in the work two men, the three making an advisory committee to look after the entire district. The city has been divided into eleven districts. The City Beautiful Association plans to remove unsightly objects, see that streets are cleaned, vacant lots cleared of brush, grass and flowers set out and trees planted. Its object is to plan not only for the present but for the future with the end in view of making Little Rock one of the most beautiful cities in the South.

Muncie, Ind.—The Muncie Commercial Club is preparing to start on its campaign for a "Muncie Beautiful," and at the regular meeting of the Club last week President Marple announced the members of the special committee which will have charge of this work. This committee is now drawing its plans for the beginning of the campaign to "clean up" Muncie and at the regular meeting of the Club the chairman of the committee will announce the plans that are ready for the indorsement of the Club. The subject has been discussed to some extent, and from the expressions heard there is a growing sentiment among the business men of the city for a more beautiful city and a better city.

Street Flusher Proves Its Use

Lansing, Mich.—The new street flusher proved a very useful part of the city's equipment when Superintendent of Public Works Wilson cleaned the pavements in the business district with it last week. An attempt was made the fore part of the week to clean the streets by sweeping, but this only made matters worse; the flusher removed all dirt to the gutters where in its wet condition it was drawn away without being blown about.

Cost of Street Cleaning Is Reduced

Louisville, Ky.—The obvious improvement which has been noted in the condition of the streets of the city, and which had resulted in many compliments being expressed by citizens and organizations in letters to the Street Cleaning Department and the Board of Public Works, is analyzed in a report which has been made to the board by R. G. Heffernan, clerk of the department. The report covers the calendar years of 1909 and 1910, the latter being under the administration of Mayor Head, while 1909, with the exception of the final month, was under the previous regime. The report is interesting in that it shows that marked progress has been made in systematizing the work of the Street Cleaning Department. The report shows that during 1909 149,854 loads of ashes, garbage and dirt from the streets were disposed of by the Street Cleaning Department, as compared with 179,550 loads during 1910, under the present administration. The work was done in 1909 at a cost of \$153,675.66, compared with \$172,334.62 last year, making the cost per load under the former administration \$1.026, as against \$.960 under Mayor Head. Thus more work has been done during the past year, 26,696 more being hauled than in 1909, and at a smaller cost per load, the saving on each load handled amounting to over 6½ cents, which is a big item when applied to the work of such an important branch of the city's service as the Street Cleaning Department. The most marked improvement which has been shown has been a street cleaning proper, as distinguished from the handling of the garbage of the city. Under the former administration the records grouped the work on granite, brick and asphalt streets together, the number of loads of dirt removed from them during 1909 being 32,085. Under Mayor Head more than this amount of refuse was taken from the granite and brick streets alone, 41,020 loads being handled, while in addition 18,803 loads were taken from the asphalt streets. A point which has been emphasized in connection with the operation of the Street Cleaning Department is that not only are the streets in the downtown section being kept clean but the suburban districts are also being attended to, and crews of men are kept constantly busy in the outskirts.

RAPID TRANSIT

Test No-Seat No-Fare

Trenton, N. J.—The Trenton Street Railway Company has defeated the attempt of the city of Trenton to make a test case in the local police courts of the no-seat no-fare trolley ordinance by taking an appeal to the Public Utilities Commission to determine whether the ordinance is a proper regulation of street car traffic. The company claims that the power of the Utilities Commission to pass upon local regulations for trolley lines extends to an ordinance such as the one in question.

City's Transit Contract Legal

Philadelphia, Pa.—The contract between the city and the Rapid Transit Company has been declared legal by the Supreme Court, which yesterday affirmed the decision of Judge Kinsey in sustaining the demurrer and dismissing the suit of Elmer E. Brodie, a taxpayer. Justice Brown handed down the decision of the Court, from which Justice Mestrezat dissented. The Brodie suit was a companion action with the previous proceedings to test the right of the company to charge straight five-cent fares, following the withdrawal of the six-for-a-quarter tickets. His objections were that the whole scheme of the agreement with the city violated the constitutional provision with respect to a municipality becoming a stockholder in a private enterprise.

Would Run Street Railway

Toledo, O.—Council last week heard read the proposition of Charles A. Thatcher for the organization of a local company of \$1,000,000 capitalization to take over and operate the street railway system. The communication was referred to the committee on public affairs without discussion.

Further Municipal Railroad Planned for Los Angeles

Los Angeles, Cal.—There is a possibility that the city may be asked to build another municipal railroad, according to Charles Silent, park commissioner, who is nursing the project of a line for the purpose of opening up Griffith Park and making it more accessible to the public. Commissioner Silent has been taking the matter up with the officials of the Los Angeles Railway corporation and reports that much interest is being shown in the proposition. He suggested to the board that in case the corporation does not come through with a request for a franchise, the city still could build the line and lease it to the company. "I think the idea of a municipally owned railway to Griffith Park is worthy of consideration and should be taken seriously," he declared. There was some doubt as to whether the deed to the park would permit the city to either build a railway in the park or grant a franchise through it. This question now is being looked into by the city attorney's office.

MISCELLANEOUS

New Street Signs to Guide Night Wayfarers

Syracuse, N. Y.—New street corner signs which can be seen at night as well as in daylight, are being placed on the new ornamental street light posts in the business center of the city. The signs are made of opal glass set in a metal frame back of a stencil on which is the name of the street. During the day the light-colored glass shows through the letters on the stencil. At night the electric lights back of the glass shine through it, showing the street name plainly. The signs are ornamental and add to the appearance of the electric light posts.

Plans Ordinance to Protect Linemen

Chico, Cal.—An ordinance intended to protect the lives of linemen in the employ of the various power companies doing business in Chico has been presented to the trustees by City Attorney Guy R. Kennedy. It requires the power companies to paint the cross arms of poles carrying high voltage wires a bright yellow, that the linemen may recognize at a glance the deadly wires. The ordinance also requires that the wires be strung at least 26 inches apart and a 4-foot space be allowed at any point where they cross other wires.

Old Street Names to Be Seen

Boston, Mass.—As fast as the present street signs need replacing signs will be placed on all Boston streets which will contain the original names in small letters below the present title. This request has repeatedly been made by the Daughters of the Revolution, and the consent of the street department has been secured. Temple place was once known as "Turn Again alley," and lower Boylston street as "Frog lane." Near the post office the sign on a Devonshire street building reads "Black Jack alley." In the market district will be found "Corn court" where Merchant row now is, and "Fish lane," which was an extension of Corn court.

Compulsory Playgrounds

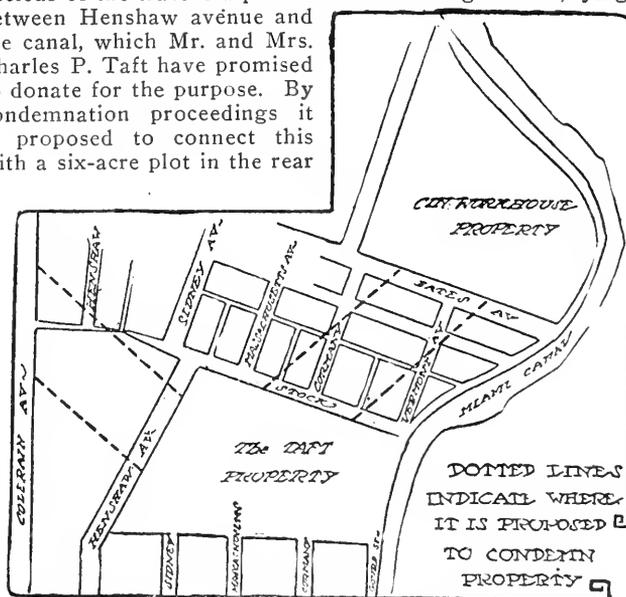

Olympia, Wash.—A bill has been introduced in the Legislature providing for the inclusion of small parks and playgrounds in all future land subdivisions within or adjoining the limits of cities of the first, second and third classes. According to the best available information this is the first attempt based on sound economics arbitrarily to combine parks and playgrounds with street plans in private real estate development.

More Public Playgrounds for Portland

Portland, Ore.—Portland is to be made famous for its children's playgrounds, according to the plans of the City Park Board. Last week it was decided to invite the Playground Association of America to send an expert here to outline a scheme for future developments. The expert will arrive in March and will deliver several addresses on playground activities in other cities. The sum of \$150 was appropriated as a fee for the expert. Contracts were awarded for furnishing playground apparatus for Kenilworth, Brooklyn and Columbia parks to Spaulding & Bros. Work on these playgrounds has already been started, and they will be ready before the Summer vacations. The playgrounds in Peninsula and Sellwood parks, installed last year, are being improved and much additional apparatus will be installed.

Land Donated for Playground

Cincinnati, O.—The largest playground in Cincinnati is being planned by the Camp Washington Business Men's Club for that section of the city. If plans mature the tract devoted to the park will contain nearly sixteen acres. The nucleus of the tract is a plot of more than eight acres, lying between Henshaw avenue and the canal, which Mr. and Mrs. Charles P. Taft have promised to donate for the purpose. By condemnation proceedings it is proposed to connect this with a six-acre plot in the rear

of the workhouse, now owned by the city and occupied by the boys in the neighborhood for baseball diamonds and football gridirons.

Savannah, Ga.—Prof. R. B. Lawrence has presented to the Legislature a suggestion that there should be legislation looking to the extermination of pet animals. It is his opinion that pet animals spread all kinds of disease, and he suggests that all stray animals be exterminated and that a tax of \$100 be placed on the owners of dogs.

Ordinance Regulates Moving of Buildings

Iola, Kan.—An ordinance has been passed prohibiting the moving of buildings, traction engines or other high or heavy structures or machines without a permit having first been obtained. A fine is imposed for non-compliance.

Shade Trees for Long Beach

Long Beach, Cal.—Tentative plans for the beautifying of this city by a general and systematic planting of trees on every street and avenue, so that they will have attained at least shade-giving height by the time visitors come this way either to or from the Panama Exposition, have already been adopted.

Poughkeepsie's Municipal Dinner

Poughkeepsie, N. Y.—A dinner of the municipal officers of the city of Poughkeepsie was held at the Nelson House, February 14. The menu was a handsome booklet containing eight views of attractive features of the city. A brief message from the Mayor, John K. Sague, printed on one of the pages, begins with the quotation, "Where there is no vision the people perish." The general purpose of the message and of the dinner was to cultivate that esprit de corps so necessary to the successful building of a city. The speakers were: Rev. Archy Decatur Ball, John Calhoun Otis, Alderman Thomas F. Mullen and Dr. Herbert E. Mills.

Extensive Improvements for Rochester

Rochester, N. Y.—Rochester is looking forward to a plan of improvements that will ultimately make it one of the finest cities in the world. At the recent dinner of its Chamber of Commerce plans which have been considered for some time were laid before those present and afterward printed in the newspapers. They represent the careful work of a landscape architect, a building architect and a traction expert, all of them of national fame, and comprise a most elaborate scheme for a new city hall as the main feature of a new civic center on Main Street West, as well as such other improvements as a union station for all the steam roads reaching the city, the widening of streets and provision for parks. The street improvement program is a very extensive one and provides for main thoroughfares to be constructed or widened traversing the city from north to south and from east to west. These are to be supplemented by what are termed local streets, the entire number of minor changes suggested being about seventy-five. The park plans contemplate the establishment of small parks of about twenty acres each whenever they are desirable and land can be acquired for the purpose. This great scheme has not been formulated with the idea that it will be carried out at once or that it will be completed for many years. The report simply outlines the artistic possibilities of Rochester.

Anti-Smoke League Discusses Plans

Cincinnati, Ohio.—The annual meeting of the Smoke Abatement League was held last week in the Union Trust Building and, following the election of the Board of Trustees for the ensuing year, short talks on the best means to rid the city of the smoke nuisance were heard. There were 25 members of the league present. In opening the meeting the president said that much improvement had been noted in the condition of the city since the Smoke League had been formed, but that there is still much work to do, and that the railroads are not doing their share in abolishing as far as possible the smoke nuisance, despite the fact that they continually promise to do so.

Condemns City Hall

Marion, O.—Carl Wilcke, state building inspector, has condemned Marion's city building, declaring it the most dangerous municipal edifice in Ohio.

Accident Insurance on City Elevators

Oakland, Cal.—Accident insurance of \$5,000 upon the elevator in the annex to the City Hall in the Braley-Grote Building at 1358 Broadway was recommended by the Board of Public Works at a recent meeting. The matter was brought before the Board by City Attorney B. F. Woolner and the action was taken that the city might be prevented from defending itself in any suits for damages as a result of accidents to passengers in the City Hall elevator.

Licenses for Washers of Clothing

Jacksonville, Fla.—Licenses for washerwomen is the latest plan of Mayor William S. Jordan, who has announced that he would urge upon the City Council the necessity of passing an ordinance requiring persons who take in washing to register with the City Recorder. The Mayor believes such an ordinance is necessary as a sanitary measure, so that clothes may not be taken into homes where contagious diseases exist. The proposed ordinance also contemplates the idea of protecting the public against the loss of clothing. The practice of requiring washerwomen to procure licenses is already in force at Pensacola.

Gift of a Drinking Fountain for Horses and Dogs

Barre, Vt.—The National Humane Alliance of New York, of which Senator Lewis M. Seaver of Williamstown is secretary and treasurer, has presented the city of Barre with a drinking fountain for horses and dogs which has been accepted by the City Council and will be set up in the city square the coming summer. The contract for cutting this fountain has been let to Marr & Gordon of this city.

Trees Will Be Sold for a Penny Each

Knoxville, Tenn.—In conjunction with the City Beautiful League, which is striving to make the city of Knoxville a place of great beauty, the Miller Store Company, through J. H. Anderson, president, has a plan on foot to distribute 1,000 catalpa trees on March 15, to the Junior League of the City Beautiful. This league is composed largely of children of the city schools. The plan is to furnish every child in the city schools a catalpa tree, bearing a card of instructions. The cost will be only one cent. This card, which gives instructions as to the care of the tree from the time it is set out until maturity, was issued by the United States Bureau of Forestry. As may be readily seen, the one cent is only a small portion of the cost of the tree and will about pay for the printing of the instruction card. It was originally intended to give the trees away absolutely free, but it was decided to place the nominal price of one cent on them so that they will be looked upon with value by the children.

Curfew Ordinance Declared Unconstitutional

Altoona, Pa.—The curfew is a thing of the past in this city. After a precarious existence of fourteen years, during which the ordinance providing for a curfew has sometimes been enforced and sometimes not, it has been declared unconstitutional by City Solicitor Thomas C. Hare, and at an early date it will be wiped off the statute books.

Saves Money for City

Trenton, N. J.—Chairman Charles H. Reichert, of the Street Committee of Common Council, has made it possible for the city to save the hire of at least ten men by compelling the drivers of rented teams to assist in loading their wagons. Heretofore it has been the custom for drivers to sit still while the city's laborers did the shoveling. From eight to ten outside teams are employed and Mr. Reichert figured that to have the drivers do their share of the work would result in saving the hire of just so many men. The city pays \$6 per day for a team of two horses, and the Councilmen on the Street Committee agreed with Mr. Reichert that the assistance of the driver was not too much to demand, since the drivers invariably work for individuals who from time to time employ the same teams.

Will Protect Trees

Columbus, O.—With his expenses to be borne jointly by the City and the Park Commission, Supt. James Underwood of Franklin Park may be given the position of tree warden with all of the trees in Columbus under his supervision. The proposition was favored in a meeting of the Franklin Park Commissioners in a meeting they held with Mayor Marshall. Faulty trimming done by owners of trees who failed to appreciate the value of their possessions to the building up of the city beautiful, and alleged careless slashing of limbs by companies wiring the city are some of the malpractices which it would be his office to prevent. His duties would not conflict with that of a landscape architect for whose appointment Mayor Marshall recommends in his annual budget.

LEGAL NEWS

A Summary and Notes of Recent Decisions—Rulings of Interest to Municipalities

Railroads—Construction of Ordinance

Behrman, Mayor, vs. Louisiana Ry. & Nav. Co.—A city desiring the construction of a belt line railroad, to be ultimately owned and controlled by it, contracted for the construction of five miles of the road by the F. Railroad Company, and, pending litigation with reference to the city's right to use a portion of the projected right of way in control of the dock commissioners, passed an ordinance granting to defendant the right to use the road when constructed in consideration of defendant's payment of \$50,000 to be used in further construction, or, in case the F. Company failed "without legal excuse" to construct the portion of the road specified in the prior ordinance, defendant might construct the same and succeed to the F. Company's rights under such ordinance in lieu of the payment required, or in lieu of a pro tanto reduction thereof according to the amount of railroad constructed by defendant in place of the F. Company. Held, that the words "without legal excuse," referring to the F. Company's default in constructing the road, were not inserted solely for defendant's benefit, so that defendant might waive the same and assert his right to construct the F. Company's portion which it failed to build, because the opposition of the dock board precluded construction over a part of the projected right of way.—Supreme Court of Louisiana, 54 S. R., 26.

Injury to Pedestrian—Negligence

Forster vs. Kansas City.—Notwithstanding the opening statement in an instruction that it was the duty of defendant to keep its streets in reasonable repair, whereas the duty is to make a reasonable effort to keep them reasonably safe, yet the instruction, having afterward stated that such duty consisted in an "exercise of reasonable diligence—that is, such care as an ordinary prudent person would exercise"—was not erroneous. While a person walking along a city sidewalk should not be heedless of defects, he is not required to consider that he is treading a dangerous and hazardous way.—Kansas City Court of Appeals, Missouri, 133 S. W. R., 663.

Public Improvement—Notice

Rubin et al. vs. City of Salem et al.—Under City Charter of Salem, requiring the recorder to give a notice "specifying with convenient certainty the street proposed to be improved and the kind of improvement which is proposed to be made," a notice of improvement of a certain street "by grading the same with proper crown and gutters to a point 8 inches below the established grade thereof, and by then macadamizing the same with crushed rock 8 inches deep, the same to be properly spread and rolled," was not insufficient, for not stating that the contractor should remove the crosswalks, and that the curbing should consist of certain sized lumber nailed to posts at certain distances.—Supreme Court of Oregon, 112 P. R., 713.

Ordinances—Validity

Cain vs. Mayor and Common Council of City of Bayonne.—Assuming that some of the provisions of an ordinance regularly enacted by a Common Council are susceptible of an application that would be in excess of the authority granted by the city charter or an unreasonable interference with its provisions, the ordinance will not, on that account and in advance of any such application, be set aside in toto, if in other respects it is unobjectionable.—Supreme Court of New Jersey, 78 A. R., 663.

Suspension Pending Hearing of Charges

Cull et al. vs. Whelple et al.—Where the Constitution gave to the Government no express power to suspend civil officers which the Governor was authorized to remove on conviction on charges preferred against them, the power to spend pending hearing of charges will not be implied from the power to remove. Court of Appeals of Maryland, 78 A. R., 820.

Defective Streets—Sufficiency of Notice

Carter vs. City of St. Joseph.—Under Revised Statutes, 1899, requiring one injured from a defect in a sidewalk, etc., to give written notice to the city, stating the time and place, etc., of the injury, no recovery could be had where the notice of injury stated that it occurred on January 29, 1909, when it in fact occurred on December 29, 1908 the fact that the city knew of the defect in the sidewalk before the injury, and that it had been repaired and was in good condition at the time specified in the notice, not obviating the effect of the erroneous statement in the notice. Kansas City Court of Appeals, Missouri, 133 S. W. R., 851.

Assessments—Corner Lots

City of Covington vs. Schlosser.—Kentucky Statute prohibits any fourth-class city from charging the owner of property abutting on improved streets with more than one-half the value of such ground, after the improvements are made, including the value of buildings and other improvements on the improved property. A section permits the city to assess the entire cost of constructing sewers, including the intersections, to an amount not exceeding \$1 per front foot for the abutting property upon the lots abutting upon the streets, etc., in which the sewers have been constructed; the cost of the construction of sewers not exceeding the sum of \$1 a front foot of the abutting property, to be apportioned equally on the abutting lot owners according to frontage. Another section, which is a part of the charter of fourth-class cities, provides that "public ways," as used in this act, shall mean all public streets, alleys, sidewalks, lanes, roads, avenues, highways and thoroughfares. Held, that, when a corner lot is assessed for the cost of improving one street upon which it abuts, the cost of such improvements should not be considered in estimating the assessment against the lot for improving the other street on which it abuts, but the cost of improving each street independent of the other cannot exceed one-half the value of the ground after the improvement is made, though when the lot is improved on one street the amount assessed against it for improving the other street should be estimated on its value after both streets have been improved. Court of Appeals of Kentucky, 133 S. W. R., 987.

Ordinance Prohibiting Cigarette Smoking—Reasonableness

Hershberg vs. City of Barbourville.—Though Kentucky Statutes gave City Councils power to enact police and sanitary regulations not conflicting with the general laws, an ordinance prohibiting the smoking of cigarettes within the corporate limits, though an attempted exercise of the police power, is void as an unreasonable invasion of personal liberty. Court of Appeals of Kentucky, 133 S. W. R., 985.

Accident to Engineer—Negligence

Essen et ux. vs. City of Philadelphia.—An employee in the engineering department of the city of Philadelphia, while standing on the elevated track of a railroad sketching a semaphore, saw a train approaching, and instead of going upon a platform, which was beside the track, stepped from the track alongside a picket fence between the two tracks, and was struck and killed by the train. There was a platform on each side of the tracks, beside one of which the semaphore stood. It did not appear that the sketch could not have been made from either platform. Held, that there was no evidence to charge the city with negligence which would render it liable for his death. United States Circuit Court of Appeals, 183 F. R., 414.

Police Power—Licensing Hotels

City of Chicago vs. M. & M. Hotel Co.—Under section 62 of the city and village act, providing for the incorporation of cities and villages, and delegating to them police powers over a large number of subjects, but not conferring power to regulate and license the occupation of hotel keeping, no such power exists, the general language of clause 66, giving power "to regulate the police of the city or village and to pass and enforce all necessary police ordinances," which clause must be construed in connection with the other clauses, meaning that the power may only be exercised in reference to such subjects and occupations as are enumerated in other specific sections. Supreme Court of Illinois, 93 N. E. R., 753.

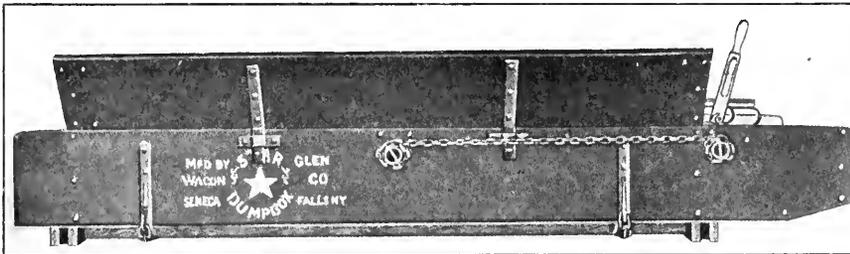

MUNICIPAL APPLIANCES

Substantial Wagon Dump Box

THE Glen Wagon Company, Seneca Falls, N. Y., claims to make the strongest and most practical dump box offered to the contracting trade.

The Star dump box, as it is called, is built of 1½-inch hard white maple sides, 2-inch maple doors. Corners of box are angle ironed. Bolsters fastened to box with heavy angles. Two center doors hung on steel pipe, which steel pipe is bolted to heavy angle iron truss running lengthwise of inside of box; cannot possibly sag or get out of alignment. Load can be controlled to either equipment or with combination spreading and dumping device. The box has a spring seat and wide foot board. It is painted red, striped in black and well varnished. Made to fit any running gear. Weight, 500 pounds. Capacities, 1½ and 2 cubic yards.

The Glen company also makes a 3½ cubic yard dumping wagon for use in trains drawn by a traction engine.

HEAVILY BUILT CONTRACTORS' WAGON DUMP BOX

Large Capacity Continuous Mixer

ONE of the new concrete mixers is the Eureka, No. 90, made by the Eureka Machine Company, Lansing, Mich. The machine was exhibited for the first time at the New York Cement Show last December, where it attracted the favorable attention particularly of paving contractors. While the capacity is large, rated at 25 cubic yards per hour, presumably on gravel or finely broken stone, the weight and dimensions are not such as to prevent its use in positions where small work is usually done or to interfere seriously with its portability. The No. 90 mixer weighs 4,700 pounds complete when equipped with a 6-horsepower gasoline engine. It may also be equipped with motor or steam engine.

The general design is pleasing. It is well balanced and symmetrical. As indicating the strength of the construction, the manufacturers state that over 800 pounds of crucible steel is used in every machine. The feeders and all parts subject to much wear are made of this material. The makers embody in it the same exclusive features of proportioning and mixing used in their other sizes. The length of the No. 90 is 14½ feet; width, 4 feet 7 inches; height to bins, 4 feet 4 inches; length of mixing trough, 7½ feet. The trough is made of 3-16-inch tank steel.

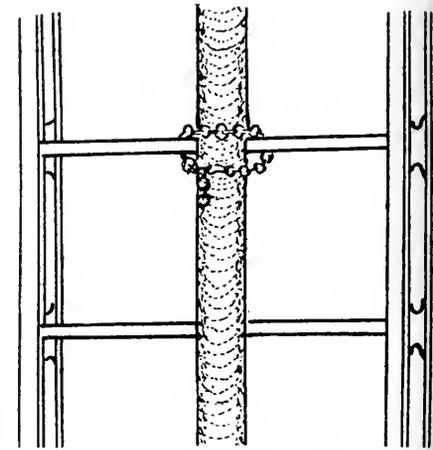

The Eureka is claimed to be the original continuous mixer. The first model appeared in the early nineties. All through the years which have followed the manufacturers have been constantly in touch with the actual field conditions. The new large capacity No. 90 embodies the result of this experience.

Device for Converting Ladder Into Water Tower

A SIMPLE device for holding a hose to a ladder so that the ladder with the line of hose becomes an improvised water tower has been invented by Chief Arthur H. Hope, Asbury Park, N. J.

It consists of a chain fastened around the hose at certain intervals along the ladder which sustains its weight. At present the ladder pipe is used in a great many places where aerial trucks are in service, but the invention of Chief Hope tends to make the pipe more serviceable by holding it secure to the rungs, thus allowing a straight stream with minimum friction to be thrown from the end of the nozzle secured to the upper rung. In order to use the upper part of a ladder on an aerial truck for running hose to feed a ladder pipe, the ladder strap at present used has a large hand grip and when the ladder is being extended this hand grip often catches between the rungs and stops the elevation. By using the

any time. With the use of the turntable the stream may be delivered at any point. In making these chains it will take about 30 inches of chain with a harness snap at one end. The chain link must be large enough to place the snap in any link to fit the hose. In making fast, take the center of chain, place it across the front of hose and over the top of rung on each side, then bring it out under the rung to the front of hose and make fast with the snap to a link in the chain.

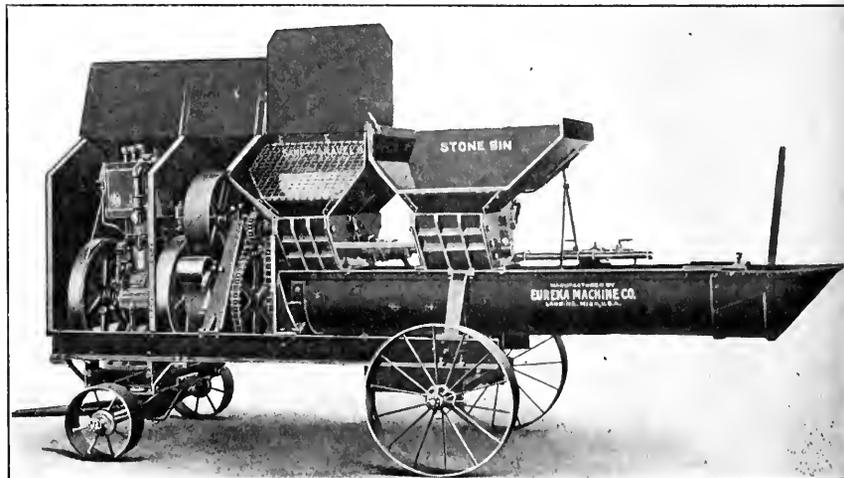

HOSE CHAINED TO LADDER

Roughen Street Gauge

THE Roughen adjustable street gauge, manufactured by P. Roughen, Fond du Lac, Wis., is simple in construction, being built of two planks, steel center mast and steel two-wheel trucks. The planks are attached in the center to the steel mast and on the end to steel extensions at the wheel trucks. By means of these extensions any width of the street can be obtained. On each side of the planks are trestle rods that keep the gauge from swaying and extending from these top of the mast to the planks are two adjusting rods that are provided with locknuts to set and hold the gauge to the desired crown. Each end of the gauge is provided with a small hand wheel by which the gauge may be raised or lowered between the trucks. The whole gauge is built strong throughout, but nevertheless is light and is easily moved. The gauge can be adjusted to any crown of any width of street.

The gauge is used for grading the streets after the curb and gutter are built

chain only about one-half inch of space is occupied and ample room is given to pass the rungs. As shown in the illustration, a four-way grip is formed and with two hundred or more pounds pressure the hose will remain in perfect line, extending to the top of the ladder. This is not the case when using the long, loose strap. In cities where aerial trucks are used they may with small expense be converted into a water tower. Where there are high frame buildings, with this device, an effective stream may be thrown into the fifth story from the top of the ladder and save sending men into a building that is likely to collapse at

CONTINUOUS CONCRETE MIXER—25-YARD CAPACITY

by placing the machine in position by resting the wheel trucks on the gutter and lowering the planks by means of the hand wheels at each end. The gauge is then moved along the street and the excavation is made to the proper depth. No grading stakes are necessary and when the grading is completed the street has the proper grade and crown. This gauge can be used equally as well on single curb as on combined curb and gutters.

By raising the planks, the gauge can be used the same way that it is used for grading to show the depth of the

Portable Pumping Outfit

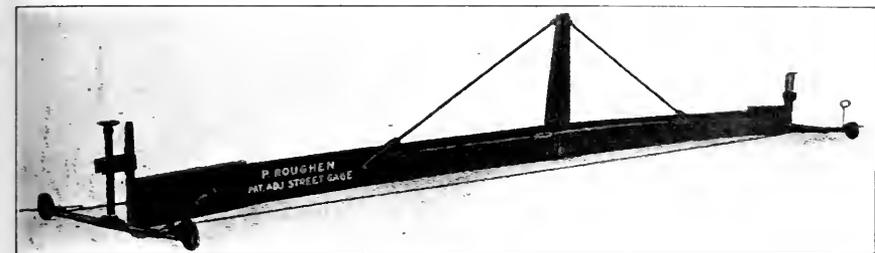

A PORTABLE pumping outfit for special construction work, either steam or electric driven, is made by the Kingsford Foundry and Machine Works, Oswego, N. Y. The platform is sufficiently large to carry a tool box. The illustration shows the steam-driven outfit. The electric apparatus is equipped with a Westinghouse induction motor. The centrifugal pumping is of the side suction type with discharge 3 inches in diameter and suction openings 4 inches in diameter. The openings are provided with flanged couplings to re-

Doherty calorimeter and the feature distinguishing it from all others is the gas under test by the water which that gas heats, thus maintaining absolutely constant the ratio of volumes. The pressure is imparted to the gas by the displacing water; and this water secures its constant pressure from a constant static "head" in the regulator of the calorimeter.

Every cubic inch of water passing the flame is heated by the burning of a cubic inch of gas displaced by it. This being the case, determination of the heating value in b. t. u.'s becomes simply a question of measuring temperatures with suitable corrections for existing conditions bearing upon the problem.

The calorimeter has two essential parts—the absorption chamber and the tank. Both of these are cylinders of annular section, the former being placed within the latter. A heavy insulating layer of non-conducting felt guards against interchange of heat through the walls. The Bunsen flame burns within the absorption chamber. The entire arrangement is thus compact and self-contained and of extreme simplicity. The regulator is simply a standpipe in which a constant head or pressure is maintained by means of a supply of flowing water, part of which escapes to the drain, the remainder keeping the standpipe full as displacement takes place in the tank.

Full instructions for operation are furnished with each calorimeter. The instrument is highly finished throughout in heavy nickel plate. The net weight is 45 pounds.

GAUGE FOR FORMING CONTOUR OF STREET PAVEMENT

concrete and to get an even surface on it.

By raising the planks a little higher, the gauge is used to strike off the top-dressing of cement pavements; the cement is poured in front of the gauge and it is pulled along by a man at each end and the whole street is struck off at the same time. No center boards are then necessary and no sags or hollows are left.

Iron hangers can be dropped over the planks of the gauge and boards laid upon these to form a bridge across the street for men to walk upon while troweling and finishing the surface. By the use of this bridge the finishing work can be done much faster and no board marks are left upon the finished street.

The gauge can be used to strike off the sand cushion for brick pavements to get an even, smooth surface. Experience has taught that there is an unnecessary loss in brick paving caused by the breaking of bricks by the roller. If the sand cushion is trampled upon too much in striking it off, it becomes packed in places and after the bricks are laid and the roller is run over them it will break the bricks which are laid upon the packed places. By the use of this gauge it is not necessary for men to walk upon the sand cushion and this loss by broken bricks is avoided.

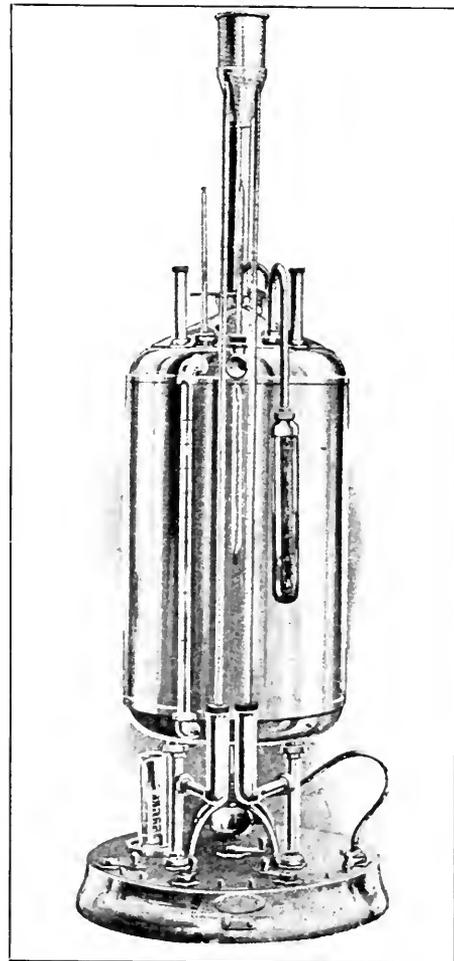

Considerable time can be saved by the use of several gauges.

ceive suction hose or linen house couplings. The reel will carry 400 feet of 3-inch inside diameter linen hose. Twenty-five feet of rubber suction hose accompanies the outfit. Each pump has a capacity of 260 g.p.m. against 35-foot head. Weight of single outfit 2800 pounds. The long length of hose carried allows a contractor in city work to carry his discharge outlet to a catch basin at a considerable distance from his work, thus avoiding the annoyance and perhaps incidental damage of having a large volume of water running along the street. The outfit is, of course, useful for a number of special purposes.

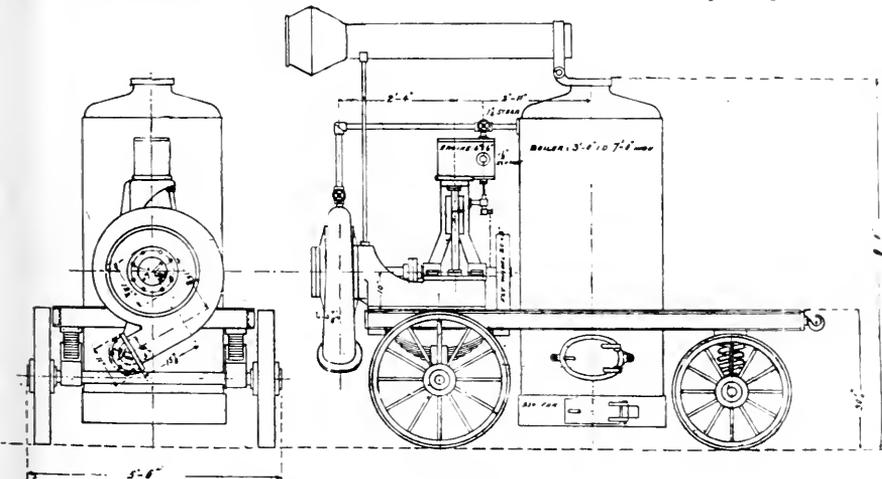

Gas Calorimeter

THE Doherty Gas Calorimeter, manufactured by the Improved Equipment Company, 60 Wall street, New York, is a device for determining the heating value of artificial gas. It is simple in construction and operation, and claimed to be so durable as to maintain its accuracy indefinitely. The unit in which the heating capacity of the gas under examination is determined is the British thermal unit, commonly abbreviated b. t. u., or the amount of heat required to raise the temperature of one pound of water one degree Fahrenheit, under standard conditions of temperature and pressure.

The fundamental principle of the

DOHERTY CALORIMETER

CONTRACTORS PORTABLE STEAM PUMPING OUTFIT

NEWS OF THE SOCIETIES

Society of Chemical Industry.—At a meeting at the Chemists' Club, 108 W. 55th street, New York, February 24, two papers were read and discussed relating to the treatment and purification of boiler feed water. Thomas R. Duggan, London, England, presented a paper on "A New Treatment of Water, Preventing Scale in Boilers Without the Use of Chemicals by the Aid of Aluminium Plates." The invention of Herr Brandes of a process employing a device known as the aluminator, which led to the softening of old scale and the formation of less new scale, was referred to. With this process the boiler feed water runs down an aluminum plate having a certain slope and various widths and depths of corrugations in its surface according to the character of the water to be treated. The theory of the operation of the aluminator is that a current of electricity is induced by the passage of the water over this metallic plate and ionization of the salts present in the water takes place.

The second paper, entitled "Boiler Water Purification," was presented by William M. Booth, who arbitrarily classified waters according to the quantity of dissolved solids present into soft, hard, saline, alkaline and acid waters. Several methods of purifying boiler waters, ranging from mechanical filtration to the use of boiler compounds and various combinations of thermo-physical, thermo-chemical and the electro-chemical methods were discussed.

Illinois Water Supply Association.—The third annual meeting was held, February 21-22, at the University of Illinois, Champaign, Ill. David Kinley, dean of the graduate school, gave an address on "Possible Lines of Service of the University to Municipalities." He advocated the collection of data regarding cities and municipal public works. Laws for the regulation of public utility corporations, he said, would not be unwelcome to them provided the laws were fair and reasonable.

F. C. Jordan, president Indianapolis Water Company, pointed out the great importance of rate making, upon which depends the success of a water system. The rates must be sufficient to provide the operating expenses, maintenance, improvements, interest on fixed charges and depreciation, and, in the case of a private company, a sufficient return on the investment to attract capital. The speaker was opposed to the meter system, and expressed the belief that if the authorities are properly informed a satisfactory rate can be agreed on.

T. C. Phillips, Chicago, presented a paper on water waste surveys in Chicago. It was contended that such surveys or tests are more effective than meters in checking waste.

C. H. Burdick, Chicago, presented a paper on "The Relation of Intakes to the Purity of Water from the Great Lakes." The paper showed the necessity of long intakes to avoid troubles due to turbidity, pollution and the blocking of intakes by ice and sand or clay. The relative cost of long intakes and short intakes, supplemented by filter plants, was discussed.

W. B. Bull, Chicago, described a new and simple electro-mechanical method of purifying water. Caustic soda produced in an electrolytic cell is fed to the pump suction main, and at a little distance beyond an iron chloride solution is introduced. The evaporation is very effective and the process is cheap,

costing only about 45 cents per million gallons.

Prof. E. O. Jordan read a paper on "Bacteriology of the Swimming Pool," and described some experiments made in Germany as to the bacterial contents of the water in such pools, and the effect of the hypochlorite treatment in reducing the bacteria to a minimum.

W. F. Monfort, St. Louis, presented a paper on "Experiments on Water Treatment with Ozone." Prof. E. Barbour presented an abstract of a paper by himself and H. P. Corson on the "Analysis of Chemical Used in Water Treatment." E. MacDonald Lincoln presented a paper on "The Condemnation of Land to Protect Wells," in which he cited court decisions. F. C. Amsbary presented some notes on deep well pumps. Papers on various features of the sewage-disposal problem were presented by Dr. A. Lederer, Frank Bachman, Chicago, and Langton Pearse.

Officers for 1911 were elected as follows: Owen T. Smith, Freeport, president; R. R. Parkin, Elgin; C. H. Cobb, Kankakee, and E. M. Ely, Danville, vice-presidents; Edward Barton, Director of the State Water Supply Survey, Urbana, secretary.

League of Second and Third-Class Cities of New York.—The second annual conference of the Mayors and other city officials of the second and third-class cities of New York State will be held at Poughkeepsie, N. Y., on May 25 and 26, the date having been definitely decided at a recent meeting of the advisory committee. It is planned this year to make the gathering an even larger one than was held in Schenectady a year ago when municipal health was the topic for discussion. The committee is now engaged in securing experts on the various subjects that will be discussed, and there is every indication that the addresses will be of exceptional importance to municipal officials.

The committee has decided to consider the following subjects at the Poughkeepsie conference: "The Essential Framework of Municipal Government," including the usual plan of separating the legislative and executive functions and also the more recent form of municipal administration known as government by commission, "Taxation and Assessment," "The Administration of Public Works Departments in Reference to the Various Methods of Cleaning and Care of Streets."

The question of permanent organization will be discussed at this conference and the advisory committee, to which was referred this question at the first conference, will recommend that no constitution be adopted but that merely such officers be selected as will be necessary to prepare the organization for each meeting and to carry on the conference when in session.

The object of the Mayors' conference is to meet annually to discuss the latest phases of improvements in municipal government and recommendations with the idea that the Mayors and other city officials who attend this conference may receive suggestions which will be of benefit to them in the future.

Engineers' Society of Western New York.—The society has elected these officers: President, George C. Diehl; vice-presidents, Leslie J. Bennett and Frank N. Speyer; directors, John G. Ullman, George T. Roberts, S. M. Kiehl; treasurer, Thomas J. Rogers;

secretary, Helge S. Anderson; librarian, William A. Haven.

International Association of Municipal Electricians.—Active preparations are going forward for the next convention of the association which is to be held in St. Paul, Minn., in September. The place and time of the meeting are wise selections, and, as fire matters in the Twin Cities are, in keeping with the spirit of those communities, held up to the top notch of efficiency, the visiting electricians will find much of interest. The meetings of the municipal electricians result indirectly in greater security from fire to the people of the country at large on account of the advanced knowledge obtained by the members of the latest ideas and appliances. The dates of the meeting have not yet been fixed, but the announcement will soon be made by the executive committee. Clarence R. George, city electrician, Houston, Tex., is secretary of the association.

American Highway League.—The third annual convention was held at the American Hotel, St. Louis, Mo., February 23-25. Members of the association were interested in the private restricted residence districts known in St. Louis as "places," which have no counterpart in any other city, it is said. Another feature of St. Louis which attracted attention was the asphaltic slab pavement invented by Street Commissioner Travilla. Mrs. Frank Degarmo addressed the convention after the reading of technical papers, speaking of good roads as tending to promote the educational welfare of country children. She spoke of demonstrations given in Louisiana where models of good roads are shown with a schoolhouse at one end and the home at the other.

Central Educational Association of Minnesota.—State Highway Engineer George W. Cooley addressed the recent convention on good roads, stating that good roads would do as much as any other one thing to make rural life more desirable, to keep the young people on the farm, and that a course in road-making should be taught in the agricultural schools of the state.

Calendar of Meetings

- March 6-11.
Canadian Cement and Concrete Association.—Annual Convention, Toronto, Ont.—Wm. Snaith, Secretary, 57 Adelaide street East, Toronto, Ont.
- March 8-10.
Engineering Society of Wisconsin.—Annual Meeting, Madison, Wis.—W. G. Kirchoffer, Secretary, Vrooman Building, Madison, Wis.
- March 21-22.
New York State Railroad Association.—Quarterly Meeting, Syracuse, N. Y.—C. Gordon Real, Secretary, Kingston, N. Y.
- May.
City Commission Congress.—Meeting, Galveston, Tex.—Mayor Lewis Fisher, Chairman of Committee, Galveston, Tex.
- May 29-June 3.
National Electric Light Association.—Annual Convention, Engineering Societies Building, New York, N. Y.
- June 6-10.
American Water Works Association.—Thirty-first Annual Convention, Powers Hotel, Rochester, N. Y.—John M. Diven, Secretary, 14 George street, Charleston, S. C.
- June 11-16.
International Association of Chiefs of Police.—Eighteenth Annual Convention, Rochester, N. Y.—Major Richard Sylvester, Superintendent of Police, Washington, D. C., President.
- June 13-18.
New York State Association of Chiefs of Police.—Annual Convention, Rochester, N. Y.
- April 6-8.
American Electrochemical Society.—Annual Meeting at New York City.—Secretary, Joseph W. Richards, Lehigh University, South Bethlehem, Pa.

PERSONALS

ADAMS, ARTHUR A., Superintendent of Streets of Springfield, Mass., has resigned after eleven years' service in the position. He states that it is his intention to engage in other business. Arthur H. Woodward and Howard O. Buck, Assistant Superintendents, are candidates for the position.

BOLTON, JACKSON, Assistant City Engineer of Richmond, Va., is dead.

BRIDGEFORD, WILLIAM E., First Assistant Chief of the Albany Fire Department, who has been Acting Chief for the past eight months, has been nominated by Deputy Commissioner of Public Safety William J. Rice, to succeed Chief Higgins. The nomination is practically an appointment, although an examination will take place. Chief Bridgeford has been a member of the Albany Department for forty years.

CONNELLY, President of the D. Connelly Boiler Works Company, Cleveland, Ohio, died on February 27 from pneumonia.

DICKSON, C. C., has been chosen Superintendent of Lights and Water at Tecumseh, Neb., succeeding Mr. Frank Freemole.

DICKSON, Fred N., a member of the Board of Police Commissioners, has been named by the Governor of Minnesota to fill the vacancy on the Ramsey County District bench.

DOWNEY, I. J., Chief of Police of Sault Ste. Marie, Mich., has resigned.

DUNBAR, DR., Director of the State Hygienic Institute of Berlin, Germany, is visiting the United States for the purpose of studying sewage disposal plants and methods. Dr. Dunbar is the author of "Principles of Sewage Treatment," which was translated into English in 1908 and met with a very favorable reception both by English and American sanitarians. After spending several days in New York as the guest of Dr. Hering, he left last week for a visit to the plant at Cleveland, Ohio, and other Middle and Far Western points.

FELLOWES, F. L., City Engineer of Westmount, Que., has been appointed Supervising Engineer of Vancouver, B. C.

GAMMAGE, ARTHUR L., for several years Assistant Chemist for the Connecticut State Board of Health, has taken a position with Robert Spur Weston, Sanitary Expert of Boston.

HAPGOOD, LYMAN P., has been appointed Assistant Superintendent of the Jamestown, N. Y., water system.

HILGEMAN, HENRY, has resigned from the Board of Public Works of Wayne, Ind.

JIMENEZ, J. J., formerly Superintendent of Public Works, Department of the Interior, Porto Rico, has resigned to enter private practice as consulting and contracting engineer at San Juan, P. R.

KELLY, BENJAMIN A., has been appointed Water Register of the Borough of Manhattan, New York.

LAYFIELD, E. N., formerly Chief Engineer of the Chicago Terminal Transfer R. R., has been appointed a member of the Viaduct Commission of Grand Rapids, Mich.

MANDIGO, CLARK R., has been appointed assistant City Engineer of Kansas City, Mo.

MOORE, CHARLES G., City Engineer of Eau Claire, Wis., has resigned.

STUTLER, BOYD B., of Grantsville, W. Va., is probably the youngest city executive in the United States. He is twenty-one years old. In addition to being Mayor he is also editor of the Grantville News.

TRADE NOTES

Cast Iron Pipe.—Chicago: The demand continues active for all sizes of cast iron pipe. Prices are firm. Quotations: 4-inch, \$25.50; 6 to 12-inch, \$24.50; 16-inch and up, \$24. Birmingham: The prices received for the small lots placed from time to time are very satisfactory, and in view of a stronger pig iron market an advance will no doubt be made. Only about 50 per cent of the available producing capacity is now in operation. Quotations: 4 to 6-inch, \$21; 8 to 12-inch, \$20; over 12-inch, average, \$19. San Francisco: Prices are slightly higher. Requirements of the coming season are very large. New York: Quite a large number of municipal lettings are advertised. Private buying has subsided. Quotations: 6-inch, car loads, \$21 to \$21.50.

Lead.—Lead has weakened. Quotations: New York, 4.40c.; St. Louis, 4.25c.

Cement Sidewalk Paving.—The Vulcanite Portland Cement Company, Land Title Building, Philadelphia, Pa., have published the sixth edition of their pamphlet No. 7, "Cement Sidewalk Paving Suggestions as to Method of Construction," by Albert Moyer. The instructions are clear and are illustrated so fully that a contractor not familiar with this class of work should be able to follow them and lay a good sidewalk. The instructions also contain points of value even to an experienced contractor. The pamphlet is distributed gratuitously.

Pumping Engineer.—The William Tod Company, Youngstown, Ohio, builder of engines and rolling mill equipment, has elected the following officers and directors: John Stambaugh, president; I. H. Reynolds, vice-president and general manager; H. J. Stambaugh, secretary and treasurer; L. A. Woodward, superintendent. Directors: John Stambaugh, I. H. Reynolds, Paul Jones, David Tod and H. H. Stambaugh.

Valves.—The Pittsburgh Valve, Foundry & Construction Company, Pittsburgh, has elected the following directors: Henry M. Atwood, Joseph T. Speer, C. A. Anderson, S. G. Patterson, John McCaffrey, J. G. Anderson and William Price. Mr. Price, who is president of the Diamond National Bank, is the new director, taking the place of C. R. Rhodes, deceased.

New Sewer Pipe Plant.—The Bibb Brick Company, Macon, Ga., will spend \$50,000 in an extension to its plant within the next few weeks, so as to be able to make sewer pipe and terra cotta work as well as brick. This move was decided upon recently by Messrs. W. J. and O. J. Masee, the principal owners of the concern. The necessary machinery has already been ordered.

Cast Iron Pipe.—J. K. Dimmick, Philadelphia, was elected to succeed his son, Fred D. Dimmick, as president of the Dimmick Pipe Company, at a meeting of the directors of the company held in Birmingham, Ala., February 21. Fred D. Dimmick, who has resided at Birmingham, will remove to Philadelphia to take charge of the business of J. K. Dimmick & Co. in that city, and J. K. Dimmick, who has heretofore been at Philadelphia, will remove to Birmingham. James H. Goodapple was elected secretary and treasurer of the company. The directors are James Bowron, Culpepper Exum, Erskine Ramsay, A. J. Goodwin, A. J. Brown, J. K. Dimmick and J. H. Goodapple.

Aerial Ladder.—A public test and demonstration of the new 55-foot Seagrave ladder truck for the Felton fire company, Chester, Pa., was made last week. The exhibition was under the direction of R. B. Storm, manager of the New York office of the Seagrave Company, who is also a former chief of the Fire Department of Long Branch, N. J. After the demonstration the fire committee, J. K. Hagerty, chairman, unanimously accepted the truck.

Fire Protection Company.—For the purpose of increasing the fire protection facilities in their establishments and to reduce the insurance rates nine of the largest wholesale companies in Fort Smith, Ark., recently organized the Citizens' Fire Protection Company, one of the most unique companies to apply for a charter in Arkansas. The company has a capital stock of \$25,000, of which \$12,500 has been subscribed. It has awarded the contract for the erection of a steel tank with a capacity of 100,000 gallons to be erected on a massive steel tower 150 feet high on some elevated part of the city. This tank will be connected with the wholesale houses when automatic sprinklers will be installed.

Valves.—The stockholders of the Chapman Manufacturing Company, Indian Orchard, Mass., are considering a plan proposed by a committee of their number for a financial reorganization of the business, which includes the creation of a new corporation of similar name which would take over the entire stock and business of the present company. The proposition includes increasing the preferred stock from \$300,000 to \$500,000, but also the decreasing of the common stock from \$1,000,000 to \$500,000. The action is taken at the instance of President Adolph W. Gilbert. The consummation of the plan will place the business on a more advantageous basis.

Largest Automobile Plant.—The new Studebaker corporation, recently organized, will combine the interests of the E. M. F. plant of Detroit, Mich., and the Studebaker plant at South Bend, Ind. Clement Studebaker, Jr., states that the new company will erect at Detroit the largest automobile plant in the world.

Road Machinery.—The Climax Good Roads Machinery Company, Hamilton, Ont., has been granted a charter by the Dominion Government, with a capital stock of \$40,000, to manufacture road machinery. Among the directors are John Robinson, Hanlan Robinson and William J. Robinson.

Paving Brick.—The Bessemer Limestone Company, Youngstown, Ohio, manufacturer of paving brick and owner of extensive limestone quarries, has made some changes in its organization. The position of chairman of the board of directors was created, and J. G. Butler, Jr., was elected to that office, retiring from the presidency after a service of 24 years. The resignations of C. S. Crook as treasurer and C. M. Crook as general manager were accepted. John Tod was elected president; C. C. Blair, general manager, and John A. Rowland, secretary and treasurer.

Water Tanks.—R. T. McCormick has been appointed manager of sales of the Petroleum Iron Works Company, builder of steel tanks, etc. This company has discontinued its Pittsburgh office, and will handle Pittsburgh territory business from its general offices at Sharon, Pa. Its branch offices located in various cities will be continued.

THE MUNICIPAL INDEX

In Which Are Listed and Classified by Subjects All Articles Treating of Municipal Topics Which Have Appeared During the Past Month in the Leading Periodicals

It is our purpose to give in the second issue of each month a list of all articles of any length or importance which have appeared in all the American periodicals and the leading English, French and German ones, dealing more or less directly with municipal matters. The index is kept up to date, and the month of literature covered each time will be brought up to within two or three days of publication. Our chief object in this is to keep our readers in touch with all the current literature on municipal matters. In furtherance of this we will furnish any of the articles listed in the index for the price named after each article, except that where an article is continued in two or three issues of the paper, the price given is for each of said issues. In addition to the titles, where these are not sufficiently descriptive or where the article is of sufficient importance, a brief statement of its contents is added. The length also is given, and the name of the author when it is a contributed article.

ROADS AND PAVEMENTS

Road Work in Allegheny, Pa. Illustrated, 2 pp., Engineering-Contracting, Feb. 8. 10 cts.

Good Roads Work in Washington. Paper before American Road Builders' Association. By Frank Terrace. 1 p., Good Roads February, 10 cts.

Dustless Roads of California. Paper before American Automobile Association. By A. B. Fletcher. 2 1-2 pp., Good Roads, February, 10 cts.

Highways of the Northwest. Paper before American Road Builders' Association. By S. H. Lea, State Engineer of South Dakota. 2 pp., Good Roads, February, 10 cts.

Collinsville and East St. Louis Road. Paper before the Illinois Society of Engineers and Surveyors. By A. N. Johnson. Illustrated, 1 p., Engineering Record, Feb. 25. 10 cts.

Organization of Road Building in Canada. By W. A. McLean, Provincial Engineer of Highways for Ontario. 2 pp., Contract Record, Feb. 1. 20 cts.

Roads and Bridges. Annual review of progress. 4 pp., Surveyor, Jan. 27. 20 cts.

Good Roads. Paper before Union of Manitoba Municipalities. By A. McGillivray. 3 pp., Canadian Engineer, Feb. 23. 15 cts.

Meetings, Special Road, of the American Society of Civil Engineers. 4 pp., Good Roads, February, 10 cts.

Commission, Experimental Work of the Illinois Highway. Paper before Illinois Society of Engineers. By T. R. Agg. Illustrated, 4 pp., Engineering-Contracting, Feb. 22. 10 cts.

Concerning the New York State Highway Commission and the Commission Plan of Conducting Public Works. 12-3 p., Engineering News, Feb. 9. 15 cts.

Road Construction in Dry Regions. By C. R. Thomas. 1 p., Good Roads, February, 10 cts.

Road Building in New York State; with Additional Data on Top Course of 2-in. Cubes of Clay and Concrete. By W. G. Harger. 2 pp., Illustrated, Engineering News, Feb. 2. 15 cts.

Building Fall Creek Drive, Indianapolis. Novel Method of Transporting Earth. Illustrated, 2 1-2 pp., Contractor, Feb. 1. 20 cts.

Lake Front Drive in Wisconsin. Illustrated, 1 1-2 pp., Good Roads, February, 10 cts.

Top-Soil Methods of Road Construction Used in Clarke County, Georgia. By C. M. Strahan. Illustrated, 4 1-2 pp., Southern Good Roads, January, 10 cts.

Constructing Macadam Road under Unfavorable Drainage Conditions. Illustrated, 1 1-2 pp., Engineering-Contracting, Feb. 15. 10 cts.

Rocmac Method of Road Construction. Illustrated, 2 pp., Good Roads, February, 10 cts.

Meadow Roads as Constructed in Southern New Jersey Counties. Paper before New Jersey Association of County Engineers. By E. D. Rightmire. 1 p., Engineering-Contracting, Feb. 22. 10 cts. 1 p., Engineering Record, Feb. 11. 10 cts. 2-3 p., Engineering News, Feb. 9. 15 cts.

Bituminous Highway Construction. Paper before Illinois Society of Engineers and Surveyors. By T. R. Agg. 2 1-2 pp., Contractor, Feb. 15. 20 cts.

Definitions and Discussion of Various Bituminous Materials used in Road Construction and Maintenance. 3 pp., Engineering-Contracting, Feb. 8. 10 cts.

Bituminous Concrete Roadways. From discussion before New Jersey State Association of County Engineers. By F. J. Eppele. 1-2 p., Municipal Journal and Engineer, Feb. 15. 10 cts.

Oil Macadam Work in California. Discussion before League of California Municipalities. 16 pp., Pacific Municipalities, January, 20 cts.

Road Maintenance in Cornwall. By A. E. Brookes. 1 1-4 pp., Surveyor, Feb. 3. 20 cts.

Patrol System of Maintenance Adopted by Allegheny County, Pa. By M. O. Eld-

ridge. Illustrated, 3 1-2 pp., Good Roads, February, 10 cts.

Traffic, Relation Between Modern, and the Alignment and Profile in Highway Design. Paper before American Association for the Advancement of Science. By H. B. Drowne. 1 p., Engineering-Contracting, Feb. 8. 10 cts.

London Traffic. Board of Trade Report. 1 p., Surveying and Civil Engineer, Feb. 17. 20 cts.

Methods of Taking Traffic Census on Highways. Paper before American Association for the Advancement of Science. By A. H. Blanchard and I. W. Patterson. 2 1-2 pp., Surveyor, Feb. 17. 20 cts.

Comparison of English and American Traffic Regulations. By A. R. Blanchard. 3 pp., Surveyor, Feb. 10. 20 cts.

To What Extent Do Automobiles Destroy Our Roads? By L. W. Page. Illustrated, 2 pp., Southern Good Roads, February, 10 cts.

Forestry, Relation of Good Roads to Economic. By J. S. Holmes, forester North Carolina Geological and Economic Survey. Illustrated, 33 pp., Southern Good Roads, February, 10 cts.

Road Laws and Road Building. Address before Southern Appalachian Good Roads Association. By M. O. Eldridge. Illustrated, 3 1-2 pp., Southern Good Roads, February, 10 cts.

Men in Highway Work, Opportunity for Technically Trained. Paper before American Association for the Advancement of Science. By A. N. Johnson. 2 pp., Good Roads, February, 10 cts.

Opportunity for Engineers in Highway Work. Address delivered before American Good Roads Congress. By A. N. Johnson. 2-3 pp., Engineering News, Feb. 2. 15 cts.

Paving and Lighting a Small City. Description of the kind of pavement laid in Rochelle, Ill., and reasons for selecting foundation and surface material. By P. E. Green. Illustrated, 2 pp., Municipal Journal and Engineer, Feb. 8. 10 cts.

Street Paving in Germany. 1 p., Surveyor, Feb. 10. 20 cts.

Brick Pavement Details. 1-4 p., Municipal Journal and Engineer, Feb. 8. 10 cts.

Motion in Brick Pavements. Investigation to determine causes and extent. 1-4 p., Municipal Journal and Engineer, Feb. 8. 10 cts.

Cracking of Cement Grouted Brick Pavements. Paper before Michigan Engineering Society. By E. R. Whitmore. 1 1-2 pp., Engineering-Contracting, Feb. 15. 10 cts.

Good Roads Talk. Address before National Paving Brick Manufacturers' Association. By Jesse Taylor, Secretary, Ohio Good Roads Federation. 1 p., Brick, Feb. 15. 10 cts.

Concrete Pavements in Kansas City, Mo. 1 p., Engineering Record, Feb. 25. 10 cts.

Asphaltic Oils for the Preservation of Railway Ties. Paper before Wood Preservers' Association, By F. W. Cherrington. 2-3 p., Engineering News, Feb. 2. 15 cts.

Sidewalk, Curb and Gutter Construction, Some New Methods in. Paper before National Association of Cement Users. By J. B. Landfield. 1 p., Concrete, February, 15 cts.

Constructing Asphalt Drive and Peculiar Concrete Curb, Lincoln Park, Chicago. Illustrated, 1 p., Engineering-Contracting, Feb. 15. 10 cts.

Grade Crossings in Cleveland, Ohio, Elimination of Railway. Paper before Cleveland Engineering Society. By Robert Hoffman. 1 p., Engineering News, Feb. 2. 15 cts.

Landscape Point of View, Streets from the. By A. T. Edwin. 2 pp., American City, February, 10 cts.

SEWERAGE AND SANITATION

Sewer Construction. Important Concrete Work in Toronto Sewer System. Illustrated, 1 p., Concrete, February, 15 cts.

Ditching and Trenching Machinery. Paper before Illinois Society of Engineers

and Surveyors. By E. E. R. Tratman. 3 pp., Contractor, Feb. 1. 20 cts.

The Classification of Sewer Trench Excavation. 2-3 p., Engineering-Record, Feb. 11. 10 cts.

Small Dredge for Sewage Channels. By E. S. Rankin, engineer of sewers and drainage, Newark, N. J. Illustrated, 3-4 p., Municipal Journal and Engineer, Feb. 8. 10 cts.

Sewer Pipe, Standard Tests for. 1-3 p., Engineering Record, Feb. 25. 10 cts.

Cost of Constructing Reinforced Concrete Sewer Pipe at Mishawaka, Ind. Paper before Indiana Engineering Society. By W. P. Moore. 1 p., Engineering-Contracting, Feb. 15. 10 cts.

Sewerage District, Threatened Disintegration of the Passaic Valley. 3 pp., Engineering News, Feb. 23. 15 cts.

Sewage Pumping in New Orleans. Operation of six electric automatic stations. Descriptions and cost of plant and cable lines. Efficient and absolutely reliable. Illustrated, 2 1-2 pp., Municipal Journal and Engineer, Feb. 22. 10 cts.

Sewer Cleaning in New Orleans. 1-4 p., Municipal Journal and Engineer, Feb. 22. 10 cts.

Sewage Disposal at Ohio State Tuberculosis Hospital. By Paul Hansen. Illustrated, 2 pp., Engineering Record, Feb. 18. 10 cts.

Sewerage and Sewage Disposal. Annual review of progress in. 7 pp., Surveyor, Jan. 27. 20 cts.

Recent Investigations on Sewage Disposal. Extract from report of Committee on Sewage Disposal, Canadian Society of Civil Engineers. 4 pp., Contract Record, Feb. 1. 20 cts.

Market Harborough Sewage Disposal Works. By H. W. Coles. Illustrated, 4 pp., Surveyor, Feb. 17. 20 cts.

Sewage Purification in Indo-China. By Gabriel Lambert. 6 1-2 pp., La Technique Sanitaire, February, 50 cts.

Irrigation Fields of Berlin. By Dr. Bruno Heine. Illustrated, 2 pp., La Technique Sanitaire, February, 50 cts.

Filter, Chimney for Ventilating Sewage. 3-4 p., Municipal Journal and Engineer, Feb. 22. 10 cts.

Emscher Tanks for Erie. For the classification of sewage to be discharged into Lake Erie. Detail plans for a 15,000,000-gallon plant. Illustrated, 3 1-2 pp., Municipal Journal and Engineer, Feb. 15. 10 cts.

Sprinkling Filter Plant for Suburban Community. By Paul Hansen. From Municipal Journal and Engineer. Illustrated, 5 pp., Canadian Engineer, Feb. 2. 10 cts.

Odors from Sprinkling Filters. 1-2 p., Municipal Journal and Engineer, Feb. 22. 10 cts.

Covered Sprinkling Filter. 1-4 p., Municipal Journal and Engineer, Feb. 22. 10 cts.

Disinfection of Sewage and Sewage Filter Effluents. By Earl B. Phelps. Paper before Boston Society of Civil Engineers. 8 pp., Journal, Association of Engineering Societies, January, 30 cts.

Drainage Improvements at Syracuse. Illustrated, 2 2-3 pp., Engineering Record, Feb. 25. 10 cts.

Drains and Sewers. By H. Lemmoin-Cannon. Illustrated, 1 1-2 pp., Surveying and Civil Engineer, Feb. 10. 20 cts. 1 1-2 pp., Feb. 17. 20 cts.

Sanitation of Small Towns and Villages. Paper before Union of Manitoba Municipalities. By Dr. Simpson. 2 1-2 pp., Western Municipal News, February, 15 cts.

Canadian Public Health Exhibit. To be held at National Fair. 1-4 p., Municipal Journal and Engineer, Feb. 8. 10 cts.

Efficiency and Economy in Municipal Health Work. By W. A. Evans and C. St. Clair Drake. 4 pp., American City, February, 10 cts.

Co-operation in Sanitary Work. Presidential address before Institute of Sanitary Engineers. By A. J. Martin. 3 pp., Surveyor, Feb. 10. 20 cts.

Progress of Sanitation. Address before Conference of Sanitary Inspectors. By W. Urquhart. 4 pp., Journal, Royal Institute of Public Health, February, 60 cts.

Future of Sanitation. From paper be-

fore Institute of Sanitary Engineers. By A. J. Martin. 2 1-2 pp., Surveying and Civil Engineer, Feb. 10. 20 cts.

Typhoid and Tuberculosis—The Public's Responsibility. By Earl Mayo. 6 pp., Outlook, Feb. 11. 5 cts.

Sanitary Law in India. By Colonel W. G. King. 16 pp., Journal, Royal Institute of Public Health, February. 60 cts.

Drinking Fountains, Sanitary. Compilation of laws and health regulations of different States and description of a number of types of fountains. Illustrated, 8 pp., Engineering Review, February. 10 cts.

Baths, Pollution of Water in Public. Investigations in Hamburg, Germany. Pollution of water after various intervals of use; sand filtration effective; aeration unnecessary. 1 1-2 pp., Municipal Journal and Engineer, Feb. 22. 10 cts.

WATER SUPPLY

Water Supply. Annual review of progress in. 6 pp., Surveyor, Jan. 27. 20 cts.

Municipal Water Supply. By A. G. Graves. Paper before Union of Alberta Municipalities. 3 pp., Western Municipal News, February. 15 cts.

Public Water Supplies. By J. W. Hill. 6 pp., Bulletin Ohio State Board of Health, January.

Surface Water Supplies for Small Communities. Paper before Royal Sanitary Institute. By A. P. I. Cotterell. 2 pp., Surveyor, Feb. 17. 20 cts.

Stream Flow in Pennsylvania, Droughts and. By Farley Gannett. 12-3 pp., Engineering Record, Feb. 25. 10 cts.

Determination of Stream Flow During the Frozen Season. By C. R. Adams. 3 pp., Engineering News, Feb. 2. 15 cts.

Conservation of British National Water Resources. By W. R. Baldwin-Wiseman. 5 pp., Surveying and Civil Engineer, Feb. 3. 20 cts. 3 pp., Feb. 10, 20 cts. 4 pp., Feb. 17, 20 cts.

Impure Water, Liability for. Different views taken by State courts. 3-4 pp., Municipal Journal and Engineer, Feb. 22. 10 cts.

State Boards in New York and Other States, Multi-Control of Water Works by. 1 p., Engineering News, Feb. 9. 15 cts.

Water Works, Dayton. 1-4 pp., Municipal Journal and Engineer, Feb. 22. 10 cts.

Toledo Water Works Notes. 1-4 pp., Municipal Journal and Engineer, Feb. 22. 10 cts.

Columbia Water Works. Pumping by hydraulic power plant; turbines and centrifugal and plunger pumps; auxiliary steam plant; purification by mechanical filters of the gravity type. By John McNeal, city engineer. Illustrated, 2 pp., Municipal Journal and Engineer, Feb. 8. 10 cts.

Seattle Water Works System. Illustrated, 11-2 pp., Fire and Water, Feb. 1. 10 cts.

Water Works System of Winnipeg. By R. D. Willison, assistant city engineer. Illustrated, 12-3 pp., Fire and Water, Feb. 8. 10 cts.

London Water Supply. 2-3 p., Contract Journal, Feb. 15. 20 cts.

Reservoir, a Reinforced Concrete, at Kensington, Conn. By Arthur W. Bacon. Illustrated, 11-3 pp., Engineering Record, Feb. 18. 10 cts.

Construction of Brown's Reservoir. 11-3 pp., Engineering Record, Feb. 11. 10 cts.

New Reservoir at Oakland. 2-3 pp., Fire and Water, Feb. 1. 10 cts.

Dam, Design and Computations for a Cellular Reinforced Concrete. Paper before Colorado Scientific Society. By G. J. Bancroft. Illustrated, 3 1-2 pp., Canadian Engineer, Feb. 9. 15 cts.

The Azisochos Reservoir Dam in Maine. Paper before National Association of Cement Users. By S. A. Moulton. Illustrated, 4 pp., Contractor, Feb. 1. 20 cts.

Construction of the New Croton Dam. Paper before American Society of Engineering Contractors. By Edw. Wegmann and J. B. Goldsborough. Illustrated, 61 pp., Journal Society of Engineering Contractors, November.

Standpipe, Concrete of Maximum Density for a. Illustrated, 1 p., Engineering Record, Feb. 11. 10 cts.

Methods Used in Obtaining Concrete of Maximum Density for the Westerly, R. I., Standpipe. Remarks before Boston Society of Civil Engineers. By A. B. MacMillan. Illustrated, 1 p., Engineering-Contracting, Feb. 15. 10 cts.

Pipe, Reinforced-Concrete Pressure, on the Umatilla Project, Ore., U. S. Reclamation Service. By Herbert D. Newell. Illustrated, 22-3 pp., Engineering News, Feb. 16. 15 cts.

Tunnel and Intake Crib, The Construction of the Buffalo Waterworks. By C. H. Hollingsworth. Illustrated, 82-3 pp., Engineering News, Feb. 9. 15 cts.

Aqueduct, Tufa Concrete on the Los Angeles. Paper before National Association of Cement Users. By J. B. Lippincott. Il-

lustrated, 5 pp., Cement Age, February. 15 cts.

Infiltration Plants, Some Features of Design of. Paper before the Ohio Engineers Society. By Philip Burgess. 11-3 p., Engineering Record, Feb. 4. 10 cts.

Water Purification and Its Application at Grand Forks. Paper before North Dakota Civil Engineers. By H. G. Lykken, city engineer, 1 p., Fire and Water, Feb. 15. 10 cts.

Filters, Construction of Springfield. From paper before Boston Society of Civil Engineers. By C. R. Dow, 5 1-2 pp., Contractor, Feb. 15. 20 cts.

Form Work for Arch Reservoir and Conduits, Pittsburg Filtration Works. Paper before Engineers Society of Western Pennsylvania. By J. D. Stevenson. Illustrated, 8 pp., Canadian Engineer, Feb. 16. 15 cts.

Double Filtration of Water. From paper by H. W. Clark before New England Water Works Association. 1-2 p., Municipal Journal and Engineer, Feb. 8. 10 cts.

Sterilization of Public Water Supplies. By Geo. A. Johnson. Paper before Boston Society of Civil Engineers. 12 pp., Journal Association of Engineering Societies, January. 30 cts.

Temporary Water Disinfecting Plant at Brainerd. By Frederick Bass. Illustrated, 1 p., Engineering Record, Feb. 11. 10 cts.

Hypochlorite Treatment of the Omaha Water Supply. By Jay Craven. Illustrated, 1 p., Engineering Record, Feb. 4. 10 cts.

Lime for Water Purification. Paper before Indiana Sanitary and Water Supply Association. By W. R. Copeland, chemist Columbus, O., water purification works. 1 p., Fire and Water, Feb. 22. 10 cts.

Effect of Hypochlorite of Lime Solution on Metals. Paper before New England Water Works Association. By H. C. Stevens. 1 p., Engineering-Contracting, Feb. 8. 10 cts.

The Sterilization of Water by Ultra-violet Rays. By Max von Recklinghausen. Illustrated, 5 pp., La Technique Sanitaire, February. 50 cts.

Electrolytic Purification, Experience in Massachusetts and California. 1-3 p., Municipal Journal and Engineer, Feb. 8. 10 cts.

Water Analysis and the Public Health. Paper before Union of Alberta Municipalities. By D. G. Revell, provincial bacteriologist for Alberta. 5 pp., Western Municipal News, February. 15 cts. 4 pp., Canadian Engineer, Feb. 23. 15 cts.

Memorandum on the Routine Examination of Indian Water Supplies. By Brevet-Colonel R. H. Firth, Royal Army Medical Corps. 5 pp., Indian Public Health, January. 25 cts.

Water Rates. Comment on their meaning and lack of meaning. 1-3 p., Municipal Journal and Engineer, Feb. 15. 10 cts.

Water Rates in Many Cities. An analysis of flat and meter rates in 249 cities. Very wide range of rates. 1 p., Municipal Journal and Engineer, Feb. 15. 10 cts.

Rate of Acquisition of Income for Domestic Water Service from Different Classes of Residential Property. Paper before New England Water Works Association. By F. C. Jordan. Illustrated, 2-3 p., Engineering-Contracting, Feb. 8. 10 cts.

Valuation of the Physical Property of the Peoria Water Company, with the discussion of rate making and of reasonable rates. 3 pp., Engineering-Contracting, Feb. 15; 3 pp., Feb. 22. 10 cts.

Meterage, Strong Plea for. By F. E. Wing. 2-3 p., Fire and Water, Feb. 22. 10 cts.

Labor Saving Devices Found Useful in Water Works Plants. Illustrated, 1 p., Engineering Record, Feb. 25. 10 cts.

Records, Pipe System. By R. D. Gwinn. 1 p., Engineering-Contracting, Feb. 22. 10 cts.

Efficiency in the Department of Water Supply, New York City. An Official Statement Regarding Progress and Increased. 2-3 p., Engineering News, Feb. 16. 15 cts.

STREET LIGHTING AND POWER PLANTS

Street Lighting. Annual review of progress in. 2 pp., Surveyor, Jan. 27. 20 cts.

Chicago Street Lighting. Report of Commission of City Expenditures. 3-4 p., Municipal Journal and Engineer, Feb. 8. 10 cts.

German vs. American Street Lighting. By R. F. Pierce. Illustrated, 3 pp., Public Service, February. 20 cts.

Lamps in New York, Flaming Arc. By H. Thurston Owens. Illustrated, 11-2 pp., Electrical Review, Feb. 25. 10 cts.

Municipal Control of Construction and Maintenance of Pole and Pipe Lines. Paper before Union of Nova Scotia Municipalities. By F. W. W. Doane. 2 1-2 pp., Canadian Municipal Journal, February. 10 cts.

Poles, Some Observations on the Attack of, by Woodpeckers. By Howard F. Weiss.

Illustrated, 1 p., Engineering News, Feb. 23. 15 cts.

Gas Holder, Construction of Reinforced Concrete Tank for. Paper before American Gas Institute. By V. L. Elbert. Illustrated, 9 pp., American Gas Light Journal, Feb. 13. 10 cts.

Meters, Accuracy of Consumers'. Paper before American Gas Institute. By W. A. Castor. 4 1-2 pp., American Gas Light Journal, Feb. 27. 10 cts.

Gas Calorimetry, Technical. Paper before Society of Chemical Industry. By J. H. Coste. Illustrated, 7 pp., Chemical Engineer, February. 25 cts.

Sampling Fuel Gas. Illustrated, 1-2 p., Municipal Journal and Engineer, Feb. 15. 10 cts.

Hydro-electric Development at Ventavon, France. Illustrated, 12-3 pp., Engineering Record, Feb. 18. 10 cts.

Municipal Hydro-electric Power Development at Revelstroke. Illustrated, 3 1-2 pp., Canadian Engineer, Feb. 16. 15 cts.

Water Power in New York State, Reasons for Public Development and Control of. 1 p., Engineering News, Feb. 16. 15 cts.

Boiler Efficiency, Combustion and. By E. A. Uehling. Paper before American Society of Mechanical Engineers. 5 pp., Industrial Engineering, February. 20 cts.

FIRE DEPARTMENT

Fire Hazard, Report on Woonsocket. 1 p., Fire and Water, Feb. 1. 10 cts.

Fire Starting from Steam Pipes. Illustrated, 2-3 p., Fire and Water, Feb. 22. 10 cts.

Report on Fire Conditions at Sacramento, Cal. 2-3 p., Fire and Water, Feb. 22. 10 cts.

Is There Danger of Big Conflagration in New York? 1 p., Fire and Water, Feb. 15. 10 cts.

Fire Resistance, Building Materials from the Standpoint of. Discussion before the American Society of Mechanical Engineers. Illustrated, 6 pp., Cement Age, February. 15 cts.

Evolution of Fire-Resisting Construction. Paper before Surveyors' Institution. By Wm. Woodward. 3 pp., Surveying and Civil Engineer, Feb. 10. 20 cts. 11-2 pp., Surveyor, Feb. 10. 20 cts.

How to Build Chimney. Illustrated, 1 p., Fire and Water, Feb. 22. 10 cts.

Fire Protection at Clarksburg, W. Va. 1-2 p., Fire and Water, Feb. 8. 10 cts.

Report on Fire Protection at Colorado Springs. 3-4 p., Fire and Water, Feb. 22. 10 cts.

High Pressure Fire System for Boston. By the Committee on Fire Prevention of the National Board of Fire Underwriters. 2 pp., Engineering Record, Feb. 18. 10 cts.

Fire Loss and How It Can be Reduced. By W. H. Merrill. 2-3 p., Engineering News, Feb. 9. 15 cts.

Fire Department Improvements at Grand Rapids. 1 p., Fire and Water, Feb. 8. 10 cts.

Report on Fire Service at Stockton. 2-3 p., Fire and Water, Feb. 1. 10 cts.

Repair Shop for Boston, New. Illustrated, 1-2 p., Fire and Water, Feb. 8. 10 cts.

GOVERNMENT AND FINANCE

Commission Government. Cities which have adopted it to date; what is meant by this term; essential features; non-essential features; number of commissioners and length of term. 3 1-2 pp., Municipal Journal and Engineer, Feb. 22. 10 cts.

Will Commission Government Succeed in Large Cities? By R. S. Childs. 3 pp., American City, February. 10 cts.

Government by Commission. By C. R. Woodruff. 11-3 pp., Municipal Journal, Jan. 28. 15 cts.

Municipal Profits in England. 3-4 p., Canadian Municipal Journal, February. 10 cts.

Mayor's Cabinet as Organized in Kansas City, Mo. By Mayor D. A. Brown. 1-2 p., Municipal Journal and Engineer, Feb. 15. 10 cts.

Semi-Official Municipal Body. 1-3 p., Municipal Journal and Engineer, Feb. 15. 10 cts.

Municipal Review, 1909-1910. By C. R. Woodruff. 33 pp., Journal of Sociology, January. 50 cts.

Legislation of 1909 and 1910 in Great Britain in Relation to Municipal Engineering. 6 pp., Surveyor, Jan. 27. 20 cts.

Bonds, Issue of Municipal. Paper before League of Third Class Cities in Pennsylvania. By Park Terrell. 4 pp., American City, February. 10 cts.

Apportionment of Cost of Construction and Maintenance of the Massachusetts Metropolitan Sewerage, Park and Water Systems. By J. Albert Holmes. 2 pp., Engineering News, Feb. 23. 15 cts.

Records, Value of City. 1-3 p., Municipal Journal and Engineer, Feb. 8. 10 cts.

TRAFFIC AND TRANSPORTATION

Urban Transportation Problem. A general discussion. By B. J. Arnold. 11 pp., Annals of the American Academy of Political and Social Science, January. \$1.

City Transportation Problems: A Report by Blon J. Arnold on the Pittsburgh Situation. Illustrated, 3 pp., Engineering News, Feb. 9. Illustrated, 4 pp., Engineering News, Feb. 16. 15 cts.

Presentation of Interurban Problems to the Public. By A. B. D. Van Zandt. 9 pp., Annals of American Academy of Political and Social Science, January. \$1.

Investigation of Traffic Possibilities of Proposed Subway Line. By W. S. Twining. 9 pp., Annals of American Academy of Political and Social Science, January. \$1.

Educating the Public to a Proper Appreciation of Urban Street Railway Problems. By A. W. Warnock. 6 pp., Annals of American Academy of Political and Social Science, January. \$1.

Efficiency of Surface Lines in Large Cities. Methods of Increasing the. By Williston Fish. 16 pp., Annals of American Academy of Political and Social Science, January. \$1.

Financial Returns upon Urban Street Railway Properties, Decreasing. By Thos. Connelly. 17 pp., Annals of American Academy of Political and Social Science, January. \$1.

Express Business on Interurban Lines. By A. Eastman. 4 pp., Annals of American Academy of Political and Social Science, January. \$1.00.

Freight Traffic on Interurban Lines, Possibilities of. By F. S. Cummings. 10 pp., Annals of American Academy of Political and Social Science, January. \$1.00.

Cars for Urban Service, Economic Factors in the Selection of. By S. M. Curwen. Illustrated, 10 pp., Annals of American Academy of Political and Social Science, January. \$1.

Depreciation Problem. By Wm. B. Jackson. 12 pp., Annals of American Academy of Political and Social Science, January. \$1.

Valuations of Interurban Street Railways, Logical Basis for. Paper before Central Electric Railway Association. By C. G. Young. 7 pp., Electrical Review, Feb. 4. 10 cts.

Tramways. Annual Review of Progress in. 2 pp., Surveyor, Jan. 27. 20 cts.

The Year of Tramways. Official returns comparing municipal and company undertaking. 1-2 pp., Municipal Journal, Feb. 11. 15 cts.

Electrification of the Steam Railway Lines Entering Boston. Report of the "Joint Board on Metropolitan Improvements" on the. By A. H. Smith and E. H. McHenry. 2-3 pp., Engineering News, Feb. 2. 15 cts.

Subway System for Chicago. The Proposed. Illustrated, 2-1-3 pp., Engineering News, Feb. 23. 15 cts.

Plans and Estimates for Chicago Subway System. Illustrated, 7 pp., Engineering-Contracting, Feb. 15. 10 cts.

McAdoo and the Subway. The Building and Builder of the Hudson tunnels. By Burton J. Hendrick. Illustrated, 16 pp., McClure's, March. 15 cts.

Franchises—Public and Company Rights. By A. S. Huey. 3-1-2 pp., Public Service, February. 20 cts.

The Indeterminate Permit as a Satisfactory Franchise. By W. O. Morgan. 8 pp., Annals of American Academy of Political and Social Science, January. \$1.

Intangible Street Railway Property. Valuation of. By F. R. Ford. 23 pp., Annals of American Academy of Political and Social Science, January. \$1.

Engineers and Street Railway Service. Supervising. 22 pp., Annals of American Academy of Political and Social Science, January. \$1.

Street Railway Civil Engineer. By C. H. Clark. 3 pp., Cornell Civil Engineer, February. 20 cts.

State Supervision of Electric Railways in Wisconsin. By B. H. Meyer. 20 pp., Annals of American Academy of Political and Social Science, January. \$1.

BRIDGES AND MATERIALS OF CONSTRUCTION

Bridges and Culverts, Construction of Highway. 1-2 p., Contractor, Feb. 15. 20 cts.

Michigan Bridges and Culverts. By E. N. Hines, county road commissioner, Wayne County. 3 pp., Public Officials' Magazine, January. 10 cts.

Designing Concrete Abutments for Steel Highway Bridges. Paper read at the annual meeting of the Illinois Society of Engineers and Surveyors. By H. E. Bilger. Illustrated, 1 p., Engineering News, Feb. 16. 15 cts. Illustrated, 2-1-2 pp., Engineering-Contracting, Feb. 15. 10 cts.

The Grafton Bridge at Auckland, New Zealand. By Walter E. Bush. Illustrated. 3 pp., Engineering Record, Feb. 18. 10 cts.

Bridge Collapse Caused by a Remarkable Abutment Failure. By Cornelius M. Daily. Illustrated, 2-3 p., Engineering News, Feb. 16. 15 cts.

The Hackensack River Bridge Piers. Illustrated, 1-1-3 pp., Engineering Record, Feb. 25. 10 cts.

Concrete Bridges in Augusta County, Va. Illustrated, 1 p., Good Roads, February. 10 cts.

Building a Concrete Bridge under Difficult Conditions. By W. M. Denman. Illustrated, 1-1-3 p., Engineering Record, Feb. 25. 10 cts.

Noteworthy Reinforced Concrete Bridge. By T. A. S. Hay, city engineer, Peterborough. Illustrated, 3 pp., Contract Record, Feb. 1. 20 cts.

Thorough Reinforced-Concrete Arch Bridge. By E. A. Gast. Illustrated, 1-2-3 pp., Engineering News, Feb. 16. 15 cts.

Arch-Bridge with Sidewalks through Abutments. Illustrated, 1 p., Engineering Record, Feb. 25. 10 cts.

The Fifth Avenue Viaduct at Seattle. Illustrated, 1-1-3 pp., Engineering Record, Feb. 18. 10 cts.

Crushed Stone, Items in the Cost of Producing. 2-3 p., Engineering Record, Feb. 18. 10 cts.

Concrete, Some Thermal Properties of. Paper before National Association of Cement Users. By C. L. Norton. Illustrated, 5 pp., Cement Age, February. 15 cts.

Tensile Tests of Large Concrete Specimens. 1-3 p., Engineering Record, Feb. 18. 10 cts.

Notes on Forms for Concrete. Paper before Engineers' Society of Western Pennsylvania. By J. D. Stevenson. 2-1-2 pp., Contractor, Feb. 1. 20 cts.

Tests of Reinforced Concrete Columns with Various Kinds of Transverse Reinforcement. Illustrated, 1-1-3 pp., Engineering News, Feb. 23. 15 cts.

Piers, Over-Driven, Brooklyn Fourth Avenue Subway Construction. By S. P. Brown. Illustrated, 1 p., Engineering News, Feb. 23. 15 cts.

Electrolysis, Effect of, on Metal Imbedded in Concrete. Paper before National Association of Cement Users. By C. M. Chapman. Illustrated, 4 pp., Concrete, February. 15 cts.

Columns, Investigation of Built-up, under load. By A. N. Talbot and H. F. Moore. Illustrated, 64 pp., University of Illinois, Bulletin No. 40.

The Strength of Piers or Columns of Different Materials. Illustrated, 1-3 p., Engineering News, Feb. 9. 15 cts.

Water-Proofing Concrete, Tests of Soft Soap for. 2-3 p., Engineering Record, Feb. 25. 10 cts.

Experiments Made with Waterproofing with Water. Paper before National Association of Cement Users. By C. M. Chapman. Illustrated, 3 pp., Concrete, February. 15 cts.

MISCELLANEOUS

Town Planning, Suggestions for improvement of Southport on a system of radiating boulevards. Illustrated, 3 pp., Municipal Journal, Jan. 28. 15 cts.

Foundations at the Municipal Building, New York, Testing. Illustrated, 1-1-3 pp., Engineering Record, Feb. 18. 10 cts.

Abattoirs, Liverpool. 1 p., Municipal Journal, Feb. 11. 15 cts.

Port Facilities of Philadelphia, Improvement of the 2-3 p., Engineering News, Feb. 16. 15 cts.

Explosives, Danger of Handling. 1-1 p., Fire and Water, Feb. 15. 10 cts.

BOOK REVIEWS

Municipal Chemistry. Edited by Chas. Baskerville. Published by McGraw-Hill Book Company, New York City. 8vo. 526 pages. Price \$5.00 net.

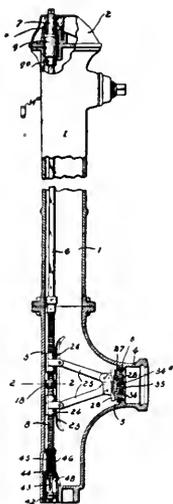

This book comprises a series of lectures delivered under the auspices of the College of the City of New York in 1910, which were open to the public. There are thirty lectures in all, the general subjects treated being water, milk, food, drugs, street city wastes, gas, smoke, ventilation, personal hygiene, combustibles, paint, iron concrete and parks. These thirty lectures were delivered by twenty different authorities, experts and city officials, and might be expected, the nature of the lectures varies greatly. Some are quite general and popular in their nature, while others give exact and technical information. While in general the lectures deal with chemistry as applied to the various functions of complex city life, in some of them this idea is almost entirely obscured by other cases of information concerning the subject; as, for instance, in the case of the lecture on street sanitation, by Wm. I. Edwards, Commissioner of Street Cleaning, of New York City. In another lecture on Waste Disposal, delivered by Mr. Edward D. Very, a great deal of the matter treats of the general method of collecting and disposing of wastes by dumping, the removal of snow and other branches of the subject on which chemistry has practical no bearing.

An idea of how the various subjects are treated can best be conveyed, perhaps, by giving the names of those who delivered the lectures, since most of them and the style of writing are well known. They included the editor, who is a professor of chemistry and director of the laboratory at the College of the City of New York; Professor W. P. Mason, of Rensselaer Polytechnic Institute; Mr. A. D. Flinn, Engineer of the Board of Water Supply; Dr. T. C. Darlington, ex-Commissioner of Health of New York City; Mr. H. V. Wiley, Chief of the Bureau of Chemists of the U. S. Government; Mr. W. A. Hamor, Research Assistant to Professor of Chemistry, College of the City of New York; Mr. Virgil Coblenz, Professor of Chemistry, Columbia University; Dr. L. J. Kebler, Chief, Division of Drugs, U. S. Bureau of Chemistry; Mr. A. S. Cushman, Acting Director, Office of Roads, U. S. Department of Agriculture; Mr. W. I. Edwards, Commissioner of Street Cleaning, New York City; Mr. E. S. Very, Sanitary Engineer, Department of Street Cleaning, New York City; Prof. C. E. A. Winslow of the Massachusetts Institute of Technology and the College of the City of New York; Mr. A. H. Elliott, Engineer Chemist to the New York Consolidated Gas Company; Dr. P. B. Parsons, formerly of the Metropolitan Sewerage Commission, New York City; Mr. H. R. Moody, Associate Professor of Chemistry, College of the City of New York; Prof. T. A. Storey, Director Department of Physical Instruction and Hygiene, College of the City of New York; Prof. L. A. Olney, Professor of Chemistry and Dyeing, Lowell Textile School, Lowell, Mass.; Mr. A. A. Brennan, expert member Municipal Explosives Commission, New York City; Mr. Maximilian Tech, paint expert, and Mr. N. Britton, Director of the Botanical Garden, Bronx Park, N. Y.

The book is profusely illustrated and has an extensive index.

PATENT CLAIMS

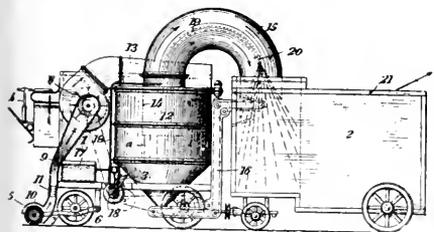

983,268. FIRE-HYDRANT. William W. Corey, St. Louis, Mo. Serial No. 573,795.
 In a hydrant, the combination with a stand pipe having a main valve, of a sectional valve operating rod, a sleeve which

receives the adjacent ends of two of the sections of the valve operating rod, and a longitudinally adjustable member within said sleeve and forming a connection between the sections of the valve operating rod.

983,293. STREET-DUST-REMOVING MACHINE. Arnold Kündig-Honegger, Zurich, Switzerland. Serial No. 320,778.

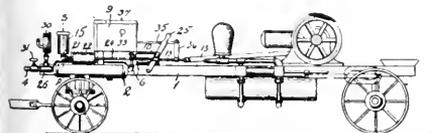

In a machine of the character described the combination with a suction conduit, of a separating chamber communicating therewith provided with a discharge orifice in its bottom, a dust removing conduit hav-

ing its receiving end inside the chamber near the orifice and its discharge end extending out of the chamber, a conveyor beneath the orifice extending to a point near the discharge end of the conduit, and a moistening device in the latter near its discharge end.

984,231. CHEMICAL FIRE-ENGINE. Henry M. Minnis, Wylie, Tex., assignor to Samuel Potts and C. D. Love, Wylie, Tex. Serial No. 560,782.

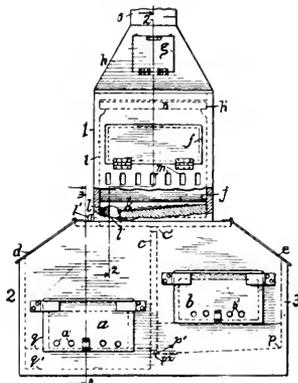

In a chemical fire-engine, the combination with a frame, of a charging tank mounted on the frame and provided with an outlet, a receptacle for receiving soda water mounted adjacent the tank, a pump cylinder interposed between the tank and receptacle, a pipe connection from the tank to the receptacle to which the cylinder is also connected, a pair of check valves in the pipe connection, a valve being located on each side of the point of connection with cylinder, an acid receptacle, a

hand operated pump interposed between the acid receptacle and the tank, a pipe connecting the said acid receptacle with the tank and to which the hand pump is also connected, a pair of check valves in the last named pipe, a valve being disposed on each side of the point of connection to the hand pump, a piston working in the first named pump cylinder, a swinging agitator operating in the soda water receptacle, and an operating connection between the piston and the agitator.

983,765. GARBAGE-CREMATORY. Chas. A. Raggio, Chicago, Ill., assignor of one-half to Louis G. Raggio, Chicago, Ill. Serial No. 466,302.

In combination with garbage and ash receptacles, a rubbish furnace on said receptacles, said rubbish furnace provided with a floor having therein a draft opening

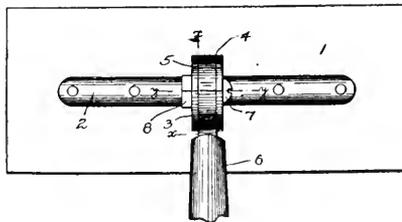

and means for air draft above said floor, the rubbish furnace being in communication with the ash receptacle through the aforementioned draft opening whereby a draft will be created by the rubbish furnace through said draft opening to carry off foul odors from the ash receptacle, substantially as described.

984,543. COMPOUND FOR FORMING PAVING. David Crockett, Birmingham, Ala. Serial No. 565,024.

A compound, comprising tar, lime, sand, cracked stone and acetic acid in the proportion specified and commingled in the manner set forth.

985,074. TOOL FOR CEMENT WORK. Ralph L. Sohn, Arrowsmith, Ill., assignor of one-third to Henry M. Scott and one third to Walter A. Scott, Arrowsmith, Ill. Serial No. 553,863.

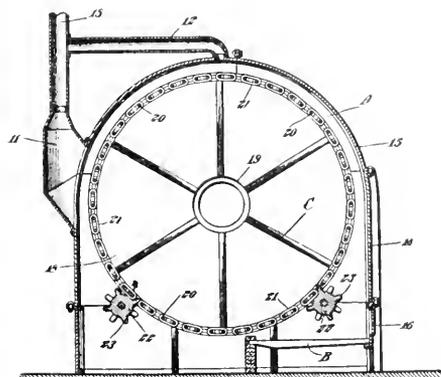

The combination, with a tool of the character described, having a bifurcated post, of a handle provided with a radially slotted disk at its end fitting the bifurcation in said post, said slot being accurate

and having a more decided turn at its inner extremity forming a shoulder for the purpose specified, and a bolt passed through said post and engaging the slot in said disk for clamping the latter in the post.

984,646. INCINERATOR. Pierre Isidore Bois, Ottawa, Ontario, Canada. Serial No. 542,614.

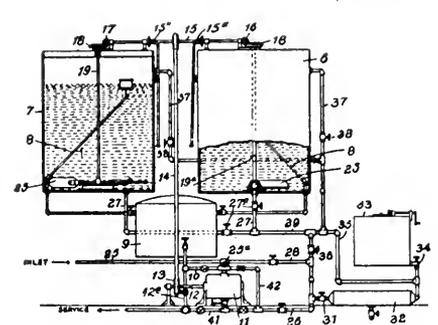

An incinerator comprising in combination a drum formed with frusto conical side members connected at the periphery by transverse cross-bars and chain links connecting the cross-bars, a casing inclosing the drum having a flue leading

therefrom, a cylindrical member journaled in the casing and being adapted to support the drum and having teeth entering the spaces between the links, means for driving said cylindrical member and a grate in the casing beneath the drum.

984,635. WATER-PURIFYING APPARATUS. Edwin S. Woods, Chicago, Ill., and John C. W. Greth, Pittsburg, Pa., assignors to Wm. E. Scaife & Sons Company, Pittsburg, Pa., a Corporation of New Jersey. Serial No. 414,266.

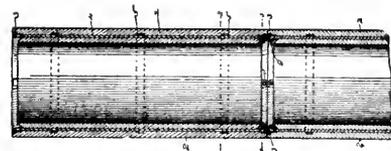

The combination in a water-purifying system of a plurality of treatment tanks, a stirring device in each tank, a water

motor connected in the outlet line from all said tanks, a water inlet pipe having also a connection to said motor, and connections from the motor to the stirring devices whereby the latter may be continuously operated, the motor being driven either by incoming or outflowing water.

984,847. SOLID-JOINT, CEMENT, REINFORCED PIPE. Craig Poling, Nebraska City, Neb., assignor of one-half to Frank M. Neville. Serial No. 544,750.

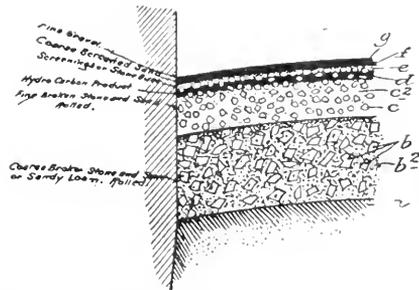

In a cement pipe of the kind described, comprising pipe sections joined together, each of said sections provided with longitudinal strips, each pipe section provided with a concavity in each of its ends, each metallic strip having its ends protruding into its respective concavity, a longitu-

dinal perforation provided in each of the ends of each strip, an inwardly projecting lug provided with a key received by each longitudinal perforation in each strip, said lugs having their faces parallel to each other when in normal position, each of said lugs provided with a corresponding perforation, means comprising a nut and bolt connection to connect the lugs of the meeting ends of each two corresponding strips in the adjacent pipe sections, the bolt of said nut and bolt connection passing through the perforations in each two corresponding lugs.

984,801. METHOD OF MAKING PAVEMENTS. Cloyd Davis, Mineola, N. Y. Serial No. 545,388.

The herein described method of making pavements consisting of first providing a road bed, covering the same with a layer of broken stone, filling said layer of broken stone with sand or sandy loam, rolling the surface thus produced, covering said surface with another layer of broken stone, the stone being of less dimensions than those of the first layer, filling in said layer with sand to within a predetermined point of the top thereof and rolling the same, then placing thereon a layer consisting of a hydrocarbon product, the thickness of which is not sufficient to thoroughly

cover the last layer of stone, then covering the said last layer of stone and the layer consisting of a hydrocarbon product with screenings or stone dust, sufficient to cover the broken stone, then covering the screenings or stone dust with a thin layer of coarse screened sand, then brooming until the screenings and sand are thoroughly mixed and then rolling the surface thus produced.

Relating to Municipal and Public Work—Street Improvements—Paving, Road Making, Cleaning and Sprinkling—Sewerage, Water Supply and Public Lighting—Fire Equipment and Supplies—Bridges and Concrete Work—Sanitation, Garbage and Waste Disposal—Police, Parks and Miscellaneous—Proposals and Awards

To be of value this matter must be printed in the number immediately following its receipt, which makes it impossible for us to verify it all. Our sources of information are believed to be reliable, but we cannot guarantee the correctness of all items. Parties in charge of proposed work are requested to send us information concerning it as early as possible; also corrections of any errors discovered.

BIDS ASKED FOR

STATE	CITY	RECEIVED UNTIL	NATURE OF WORK	ADDRESS INQUIRIES TO
STREET IMPROVEMENTS				
Ohio	Cincinnati	Mar. 10, noon	Building culvert	J. H. Sundmaker, Dir. Pub. Serv.
Indiana	LaFayette	Mar. 10, 10 a.m.	Constructing gravel road	Geo. W. Baxter, Auditor.
New York	Buffalo	Mar. 10, 11 a.m.	Paving and repaving various streets	Francis G. Ward, Commissioner.
New York	New York	Mar. 10, 2 p.m.	Regulating and repaving portions of various streets	Geo. McAneeny, Boro. President.
Washington	Spokane	Mar. 10, 2 p.m.	Grading, curbing, parking and sidewalk. West Grove Addition	J. C. Argall, Secy. Bd. Pub. Works.
Michigan	Bay City	Mar. 11	Furnishing creosoted blocks, plank etc.	J. H. Bloomfield, County Engr.
Indiana	Muncie	Mar. 11	Paving various streets	J. Kelly, City Clerk.
Indiana	Brazil	Mar. 11, 11:30 a.m.	Constructing 7,655 ft. of gravel road; 10,000 ft. limestone road	W. E. Staggs, County Auditor.
Ohio	Bowling Green	Mar. 13	Constructing stone road	Wood County Commissioners.
Pennsylvania	Youngwood	Mar. 13	Paving about 2 miles of street with brick blocks	Warren Mitchell Greensburg, Bor. E.
Minnesota	Worthington	Mar. 13, 2 p.m.	Grade approx. 10,066 yards of streets	E. C. Pannell, Co. Aud.
Kansas	Fort Scott	Mar. 13, 5 p.m.	Grading and macadamizing portion of First street	J. O. Brown, City Clerk.
Kansas	Topeka	Mar. 13, 2:30 p.m.	Paving 21 blocks with vitrified brick, necessary storm sew. &c.	C. B. Burge, City Clerk.
Ohio	Youngstown	Mar. 13, 1:30 p.m.	Improving various roads	Frank Agnew, Secy.
Indiana	Lebanon	Mar. 13, 7:30 p.m.	Grading, graveling and sewerage Baronne Street	Edmon Connor, City Clerk.
New York	Brooklyn	Mar. 13, 11 a.m.	Curbing, paving, grading etc., several streets	Lawrence Gresser, Boro. President.
Tennessee	Memphis	Mar. 14, noon	Paving about 8,500 sq. yds. with vitrified brick; about 80,000 sq. yds. with tar macadam and 10,000 sq. yds. with wood blks	J. H. Weatherford, City Engineer.
Indiana	Indianapolis	Mar. 14	Furnishing 5-ton road roller for asphalt plant	Christian Schrader, Pres. Bd. P. Wks.
Iowa	Red Oak	Mar. 15, 10 a.m.	Grading approximately 6,000 cu. yds.; 25,411 yds. brick paving; 3,312 yds. concrete paving	Richard Roberts, City Clerk.
Pennsylvania	Meadville	Mar. 15, 8 p.m.	Grading, curbing and paving portion of Market Alley	Fred C. Kribort, City Clerk.

Sullivan, Mason & Sullivan, \$19,600; Buckley & Gardner, \$19,801; J. W. Mangus, \$20,987; Tetter & Tetter, \$19,270.

Hutchinson, Kan.—Furnishing two car of Portland cement for pavements, to D. J. Fair Lumber Co.

Wichita, Kan.—To John Ritchie & Sons, Topeka, for 25 blocks of brick pavement with cement and asphalt filler, \$1,93 an \$1.83 per sq. yd.; total cost about \$16,000.

Shebysville, Ky.—Furnishing 1,000 yds. of crushed stone, to Jas. W. Tucker, of Jefferson County, \$1.10, spread on streets.

Detroit, Mich.—Paving Superior st., 3 and Wreford aves., 26 ft. wide with cedar block on concrete foundation, with Ambers curbing, to Julius Porath, McGraw Bldg., \$30,905; \$1,854 and \$5,889; Columbus pl., Ambers curbing, and Forsyth ave., Berea curbing, to J. A. Mercier, 211 Hammond Bldg., \$9,571 and \$9,792; McDougal ave. Amherst curbing, to T. E. Currie, McGraw Bldg., \$6,657.

Detroit, Mich.—By J. J. Haarer, Commissioner Public Works: To C. H. Little & Co. Penobscot Bldg., for all sand required by asphalt plant for the year ending Jan. 3, 1912, 70c. per cu. yd.; to Barber Asphalt Paving Co., for all asphalt required by the asphalt plant, for year ending Jan. 3, 1912, \$21.60 per ton for Trinidad brand and \$29.10 for Bermudez; to R. F. Conway & Co., \$22.60 for Cubanel; to Union Oil Co., \$23.38; for all binder stone for same time to Fairview Coal and Supply Co., Kercheval and Hart aves.

Barker, N. Y.—Furnishing two-cylinder roller, to the Buffalo Traction Company at cost of about \$1,800.

Maine, N. Y.—Furnishing Marathon combination roller and engine, at outlay of about \$1,800, to Climax Road Machine Company of Marathon.

Mineola, L. I., N. Y.—Constructing Babylon-Hempstead turnpike and centennial, to Twombly & Eldert, Jamaica, \$40,017.

New Bern, N. C.—To Georgia Engineering Co., Augusta, Ga., for paving, "Augusta block," \$1.44 with sand filler and \$1.48 with cement filler; East Front st. and a section of Pollock st. will be paved with asphalt.

Wapakoneta, O.—Paving Mechanic st., to J. E. Conley & Co., Dayton, \$38,065.65.

Hillsboro, Tex.—Paving several streets with Hassam concrete, to Ocklander Bros., \$80,000.

Seattle, Wash.—Grading Meridian ave. and N. 78th st., to John Kalberg, 5204 10th ave. N. E., \$8,101.

Waterville, Wash.—Construction of nine miles of county road, to J. J. McNeerney Wenatchee, \$38,000.

Belleville, Ont., Can.—To the Schuste Company for supply of 1,000 barrels, more or less, of cement, \$1.57¼ per barrel.

BIDS RECEIVED

Cumberland, Md.—Furnishing and delivering 1,800 tons of Manantico Bridge wanted 1,800 tons of gravel; Richard Craig, Cedarville, work to be completed by July 1 at \$1,224¼ per ton; Furman Waller to be completed in 65 days from time work began, 88 c. per ton; Sheppard Clark, to be completed by July 1, 74½ c. per ton.

Boston, Mass.—Constructing walks at F. Andrews, as follows: Thomas Fitzgibbon, \$6,630; C. Bevilacqua, \$7,228; Frank Williams, \$7,263; James H. Fannon, \$7,900; Thomas Whelan & Co., \$8,275; L. C. Carchia, \$8,508; John A. Costello, \$8,719; Anthony Cefalo, \$9,700; G. Porter, \$11,500.

Albany, N. Y.—Construction of highway adjacent to the Delta Reservoir in Oneida County; James Anderson, Caledonia, N. Y., \$51,037; Theodore C. Hailes, Jr., Albany, N. Y., \$40,834; Cunningham-Woodward Hudson Falls, \$47,712.

New Bern, N. C.—Street paving; Warner Quinland Asphalt Co., Syracuse, N. Y. sheet asphalt on a concrete base, California \$1.60 per sq. yd., Trinidad \$1.65, Bermudez \$1.69, provided they were awarded 30,000 sq. yds.; asphalt macadam, California asphalt with a 4-in. concrete base \$1.39 per sq. yd., Trinidad \$1.42, Bermudez \$1.43; Stitzer Engineering and Construction Co.

Philadelphia, made the following proposition: Mack brick \$1.68 per sq. yd.; bid thrown out because check for \$250 did not accompany the bid; Peters Bros. Paving Co., Dayton, O., sheet asphalt on a concrete base, \$1.43 per sq. yd.; H. S. Hancock, New Bern, made the following bids: Baltimore block, cement filler, \$1.49 per sq. yd., laid flat \$1.39 per sq. yd.; Baltimore paver \$1.42² for sand filler deduct 6c. per yd.; asphalt macadam \$1.51, Tarvia filled macadam \$1.41; T. J. McGuire, on Porter block, cement filler \$1.72, Peebles \$1.70, Mack \$1.77, Baltimore \$1.55, Baltimore paver \$1.47; same laid flat \$1.42; deduct 6c. if sand filler is used; tarvia macadam \$1.15, asphalt macadam \$1.45, asphalt macadam, Bermuda \$1.35, M. Bermuda \$1.40; Georgia Engineering Co., Augusta, Ga., on Augusta block, sand filler \$1.44, cement filler \$1.48; Bove & Page, Charleston, S. C., on Baltimore block, sand filler \$1.46², Peebles \$1.54, Bessemer \$1.59, Mack \$1.59; cement grout and 3/4c. per yd.; asphalt macadam \$1.60, Bithma macadam \$1.27, with emulsion surface 89²c.; Bessemer paver 3/2c., sand filler \$1.58, cement 3/2c. extra; Atlantic Bitulithic Co., on bitulithic on 1/2-in. foundation \$2.06.

Portland, Ore.—Paving East Glisan st. district, embracing several miles of streets in Laurelhurst, which is to be improved with asphalt: Barber Asphalt Paving Co., only bidder, \$163,719; paving of Mason st. district in Albina with bitulithic pavement, Warren Construction Co., lowest bidder, \$107,977; same company submitted a bid for paving the West Park and 9th st. district or \$24,027; paving with bitulithic pavement of the Williams ave. district, Pacific Bridge Co., lowest bidder, \$70,535; same company submitted the lowest bid for paving of 13th st., \$34,327; Pacific Bridge Co. submitted a bid for filling East 2d st. from East Oak to Hawthorne ave., \$46,214; East Morrison st. from Water to Union ave. is to be paved with wooden blocks, Montague O'Reilly Co., lowest bidder, \$24,691; M. J. Conley, to improve the Congress st. district for \$31,086; Swinton district, Kern & Field, lowest bidder, \$31,809; Oregon Independent Paving Co., underbid Barber Asphalt Co. for laying asphalt paving on number of short streets.

SEWERAGE

Long Beach, Cal.—Plans have been submitted by City Engineer Dewey for complete sewerage of city at following estimated cost: outfall pipe, \$1,022.52; outfall pier and bulkhead, \$2,286.66; weir chamber, 1,496.55; septic tank, \$29,265.81; twin sewer, Water st. to Ocean Park ave., \$32,421.75; and trap, \$1,123.30; twin sewer from 2d and 3d sts., alley to 5th st., \$21,916.94; excavation about 5th st., \$108,010.60; manholes and specials, \$79,046.44; laying pipe, 2,587.39; incidentals, \$44,378.49; engineering, \$3,219; total, \$343,450.18.

Orange, Cal.—City Trustees have rejected all bids for the work on "inside" sewer system; bids were 50 per cent higher than the estimates placed on the work by City Engineer C. L. Bates.

Willows, Cal.—Trustees have decided to divide unsewered part of city into two sections; it is proposed to hold bond elections in these sections to extend sewer system.

Bridgeport, Conn.—Board of Apportionment and Taxation is favorable to \$100,000 bond issue for construction of sewers in accordance with plans as prepared by Ludolph Hering, of New York.

Waterbury, Conn.—City Engineer Cairns as estimated cost of constructing sewer in Myrtle ave. at \$1,300.

Americus, Ga.—Citizens will vote April 4 on \$40,000 bonds for sewerage extension.

Cartersville, Ga.—City is considering election on bonds for construction of sewer system.

Marietta, Ga.—Citizens will vote May 1 on \$15,000 bonds to extend sewer and water mains.

Pelham, Ga.—Citizens will vote on \$25,000 of bonds for improvements of sewer system and for other work.

Dixon, Ill.—City will expend \$3,000 on vit. pipe sanitary sewers on Galena ave. and 8th st.

Galva, Ill.—Plans are being prepared by engineers W. S. Shields Co., 140 Dearborn st., Chicago, for sewage purification plant; cost about \$5,000.

Hillsboro, Ill.—City proposes to pave school st. at cost of \$28,600.—J. A. Tremble, Charleston, Engineer.

Madison, Ill.—City will build a new sewer on river, draining North Venice.

Danville, Ind.—Board of Town Trustees as selected John O. Kain, Danville, and Curtis Gross, Martinsville, to prepare surveys, plans and estimates for sanitary sewer system.

Manning, Ia.—Engineer P. A. Edquist, \$2-54 American National Bank Bldg.,

Omaha, Neb., is preparing plans for sanitary sewer system.

Nevada, Ia.—Plans and Specifications are being prepared by Engineer Sam Steigerwald, 327 6th st., Boone, for construction of sanitary sewer and disposal plant; estimated cost \$40,000.

Abilene, Kan.—City Engineer Guy Haid has prepared plans and specifications for construction of a storm sewer of concrete to the river.

Dodge City, Kan.—Citizens have defeated proposition to issue bonds to install sanitary sewer.

Mansfield, La.—Plans are being prepared by C. M. Robinson for construction of sewer system.—W. E. Singleton, City Clerk.

Fitchburg, Mass.—Sewer Commission is preparing for early start on big sewer, which it is estimated will cost about \$1,000,000.

Greenfield, Mass.—Town is considering \$3,000 appropriation to build sewer along Silver st.

Henderson, Minn.—City is considering construction of sewers.

De Soto, Mo.—B. H. Colby, St. Louis, is preparing plans for sewer system.—W. Cunningham, Mayor.

St. Louis, Mo.—Council is considering bill authorizing election on \$2,500,000 bonds to build sewer to carry River des Peres in tunnel under Art Hill in Forest Park.

Unionville, Mo.—Consulting Engineer Hiram Phillips, Third National Bank Bldg., St. Louis, Mo., will prepare plans and estimates for system of sewers; trunk sewer will cost \$20,000 and district sewers, \$40,000.

Warrensburg, Mo.—Council has passed ordinance creating Sewer District No. 1.

Nebraska City, Neb.—Plans and specifications for sanitary sewer have been prepared by City Engineer Chas. A. Shannon; cost about \$80,000.

Omaha, Neb.—City will soon let contracts for \$100,000 worth of brick or concrete main sewers.

Reno, Nev.—City will purchase site for installation of septic tank.

Cliffside, N. J.—Plans have been prepared by McClare & McClare for the construction of sewers estimated to cost \$80,000; work includes main line, laterals and disposal plant; election on proposition will be held.—S. Wood McClare, Mayor.

Ocean City, N. J.—Local sewer company has had plans prepared for installation of sewage disposal plant. R. W. Edwards and W. E. Massey are interested.

Las Vegas, N. M.—Council has decided to install sewer system in certain streets.—Geo. Morrison, Engineer; Chas. Jamme, City Clerk.

Binghamton, N. Y.—City Engineer John A. Giles has made plans and estimates at \$8,500 cost of proposed storm water sewer in First Ward.

Oswego, N. Y.—Assembly Committee on Affairs of City has decided to report favorably on bill providing for building of a sewer system, which was introduced at the suggestion of Mayor John Fitzgibbons.

Charlotte, N. C.—Citizens will vote on \$150,000 bonds for sewerage extensions.

Smithfield, N. C.—Citizens have voted \$35,000 of bonds for construction of sewer system, electric light plant and water works.

Amherst, O.—W. E. Sarver, Canton, is preparing plans for gravity sewers and disposal plant; cost about \$25,000.—C. G. Aschenback Village Clerk.

Cincinnati, O.—City Engineer Shipley has estimated cost of constructing sewer in Jonathan and Brewster aves. at \$10,750.

Beaver Falls, Pa.—Engineer Leo Hudson, Haverstraw, N. Y., has been selected as Engineer for preliminary work in installation of sewerage system and disposal plant.

Blairsville, Pa.—Edw. J. O'Brien, City Bldg., Latrobe, is preparing comprehensive set of plans for sewerage system and sewage disposal plant.

Grove City, Pa.—Bids will soon be asked for the construction of the proposed sewers; cost about \$15,000.—L. E. Burnside, Borough Engineer.

Nashville, Tenn.—Bids will be received March 22, 3 p. m., for \$500,000 trunk sewer bonds.

Cuero, Tex.—Council is considering installation of \$10,000 sewerage system as proposed by F. R. Perkins.

Dallas, Tex.—Bids will be re-advertised for construction of six-story sanitary sewer.

Rockdale, Tex.—Council is ascertaining authority of town to issue bonds for sewerage purposes.

Spokane, Wash.—Plans for Fourth Ward Trunk Sewer No. 4, to cost \$44,115, have been completed to-day by City Engineer Morton Macartney.

Cranbrook, B. C., Can.—Council has voted \$100,000 for installation of a sewerage system; plans will be prepared at once.

Niagara Falls, Ont., Can.—City Engineer Carl Gardner has prepared plans for reinforced concrete tube, into which principal sewers of city will empty; cost, \$75,000.

CONTRACTS AWARDED

New Britain, Conn.—Furnishing sewer pipe, to City Coal and Wood Co., 29² per cent off on 10-in. to 24-in. pipe and 80³ per cent off on 8-in. pipe; furnishing about 35 catch basins, to Duplex Mfg. Co., Cleveland, O., \$15, shipped f.o.b. city; manhole covers, to Sessions Foundry Co., \$7.40 delivered on street.

Paris, Ill.—To Frank Payne for furnishing and laying approximately 710 ft. of 26-in. and 3,381 ft. of 60-in. reinforced concrete or brick sewer, with 10 manholes, \$1,080.

Elkhart, Ind.—To F. J. Miller, representing Frank Brumbaugh and J. M. Fishley, for the Morehous addition sewer, \$5,290.95, and for the Oakland ave. sewer north from Indiana ave. to Harrison st., \$1,490.80.

Mount Vernon, Ia.—Installation of 7 1/2 miles of sanitary sewers, 6 to 15-in. pipe, with necessary accessories, a septic tank and filter beds, (a) town sewers, (b) outlet sewers, (c) septic tank and dosing chamber, (d) filter beds, to Hanning-Vineyard Co., Evansville, Ind., (a) \$18,818, (b) \$3,288, (c) \$2,634, (d) \$3,851; other bidders: Geo. M. King Construction Co., Des Moines, (a) \$20,935; Independent Construction Co., Davenport, (a) \$23,620, (b) \$3,525, (c) \$3,344, (d) \$3,322; Blackhawk Construction Co., Waterloo, (a) \$23,632; J. C. Griffith & J. F. Whalen, Anamosa, (a) \$24,502, (b) \$3,729, (d) \$3,728; Dearborn & Jackson, Cedar Rapids, (a) \$25,442, (b) \$3,127, (c) \$3,752, (d) \$4,840; Lytle Construction Co., Sioux City, (a) \$25,708, (b) \$3,469, (c) \$3,570, (d) \$3,727; J. W. Turner Improvement Co., Des Moines, (a) \$25,946; John Brogan, Green Bay, Wis., (a) \$26,093, (b) \$4,256, (c) \$3,433, (d) \$2,981; J. R. McCormick, Ft. Dodge, (a) \$26,295, (b) \$4,301, (c) \$3,587, (d) \$3,166; M. A. Camery, Harlan, (a) \$26,550, (b) \$3,500, (c) \$4,257, (d) \$4,785; W. D. Yeager Co., Cedar Rapids, (a) \$27,306, (b) \$3,516, (c) \$3,596, (d) \$3,888; R. C. De la Hunt, Cedar Rapids, (a) \$28,677, (b) \$3,702, (c) \$3,670, (d) \$3,934; C. B. McNamera & Co., Dubuque, (a) \$29,820, (b) \$3,944, (c) \$3,913, (d) \$3,564; Guy E. Smith, Indianola, (a) \$32,098, (b) \$4,069, (c) \$4,114, (d) \$3,463; Thomas Carey & Son, Clinton, (b) \$3,703, (c) \$3,413, (d) \$4,065; W. W. Cooley, Clinton, (b) \$3,838, (c) \$3,554, (d) \$3,525; Engineer's estimate, (a) \$21,987, (b) \$3,588, (c) \$3,046, (d) \$2,956.

Sigourney, Ia.—To Bush & Gray, Joplin, Mo., for constructing septic sewer system, including 49,505 ft. vit. pipe, 3 disposal plants, 41 flush tanks and 111 manholes, about \$39,000.

Baltimore, Md.—Laying trunk sewer on Pratt st., to McCay Engineering Co., \$85,751.73; lateral sewers in District 15, to William McCarthy & Co., \$75,187; water piping and steam heating work at sewerage pumping station will be done by Louis F. Andrea Co., \$3,052.15.

Detroit, Mich.—Building Fairview Station inlet and outlet, to Langley & Jaynes, city, \$19,200; building vit. brick lateral sewers, to T. G. Whittaker, 2281 W. Grant Blvd.; to J. A. Mercier, 211 Hammond Bldg.; to Wm. Blanck, 26 Waverly ave., and to Wm. Porath, 5 Rich st.

Melrose, Minn.—To M. V. Dueber, St. Cloud, for constructing 9,165 ft. of pipe sewers 10 to 24-in., \$11,414.—Samuel S. Chute, St. Cloud, Engineer.

St. Louis, Mo.—Building Cherokee Sewer, District No. 12, to Manegold & Monohan, \$1,168.59.

St. Louis, Mo.—Construction of Baden Sewer No. 1, to Fruin-Coulon Contracting Co., Merchants' Ladele Bldg.; to the W. F. Riley Construction Co., Navarre Bldg., for second section of the Baden public sewer, \$162,016.

New Bern, N. C.—Laying sewers on streets to be paved, to Frank Hackney.

Clinton, Okla.—Construction of 26,200 ft. of 8-in. lateral sewers of the first quality vit. pipe, together with manholes, lamp-holes and other appurtenances, to J. W. Rooks, \$23,751; other bidders: Hunter & Hunter, \$30,535; E. M. Eby, \$31,614; Stone Construction Co., \$31,262; Connelly Construction Co., \$31,706.

Charleston, S. C.—Extending sewerage system, to Guild & Co., Chattanooga, Tenn., \$51,629.70.

Corpus Christi, Tex.—Contracts for sewerage material have been approved by Council as follows: Manholes, to Hardwick-Abbott Mfg. Co.; alternating gear, to Cameron Septic Tank Co.; steel sheeting, to Carnegie Steel Co.; lumber, to the H. D. Taylor Lumber Co.

Oconomowoc, Wis.—To Mulholland & Son, Kaukauna, to install 2 1/2 miles of sewers.

BIDS RECEIVED

Long Beach, Cal.—Sewer construction in 24 and other streets: Peter Gihovach, \$7,900; S. Zarubica, \$7,889.50, both of Los Angeles; Frank H. Thomas, \$10,963; White & Gaskill, \$15,952.

Sigourney, Ia.—Construction of sanitary sewers: W. J. Lams, Harlan, \$11,326; John W. Scott, Ottumwa, \$55,877; Zitteral & Sullivan, Webster City, \$11,819; Henry Rees, Quincy, Ill., \$46,474; J. W. Turner Improvement Co., Des Moines, \$15,932; Blackhawk Construction Co., Waterloo, \$51,216; M. A. Camery, Harlan, \$12,231; Hamilton Bros., Chicago, Ill., \$49,219; Omaha Construction Co., Omaha, Neb., \$13,977; Bash & Grey, Joplin, Mo., \$39,741; Dearborn & Jackson, Cedar Rapids, \$50,253; McGuire & Stanton, Leavenworth, Kan., \$11,112; C. R. McKay, Omaha, Neb., \$46,279; George M. King, Des Moines, \$33,447; Burlington Construction Co., Burlington, \$49,776.

Melrose, Minn.—Building sewer system from plans by S. S. Chute, Engineer, St. Cloud; Illstrup & Olson, Minneapolis, \$17,135; Cook Construction Co., Des Moines, Ia., \$15,549; C. H. Prett, Fargo, N. D., \$15,810; William B. Bosworth, Ada, \$14,684; F. E. Kaminski, Watertown, Wis., \$13,309; Frazier & Danforth, Rochester, \$14,919; P. McDonnell, Duluth, \$13,146; Pastoret Lawrence Co., Duluth, \$14,959; L. W. Schrueth, Fargo, \$15,204; Thos. E. Woolley, La Crosse, Wis., \$15,794; G. S. Redmon, Pipestone, \$17,852; V. D. Dueber, St. Cloud, \$11,418.

St. Louis, Mo.—Constructing the Forest Park foul water sewer, requiring 9,670 ft. 42-in. and 1,959 ft. 30-in. brick sewer and 1,400 ft. 12 and 18-in. pipe sewer, with manholes, etc.; concrete pump well; also equipping the pumping plant, including furnishing and installing duplicate sets of direct-connected centrifugal pumps and motors, with valves, pipes, etc.; lowest bidder on each contract, 1st section, R. D. Salsbury, \$18,069; 2d section, Wm. F. Riley Construction Co., \$21,960; 3d section, Wm. F. Riley Construction Co., \$27,258; equipment of pumping station to be operated in connection with the system, Reeves & Skinner Machinery Co., lowest bidder, \$4,776.

Toledo, O.—Constructing sewers, E. A. Sandrock, lowest bidder, \$3,094.15; 980 ft. 15-in. d.-s. pipe, \$1.65; 284 ft. 12-in., \$1.60; 340 ft. 10-in., \$1.50; 36 ft. 12-in. c.-i. pipe, \$2.10; 650 ft. 6-in., 30c.; all clay material to be excavated; manholes, \$20; Albert Graybowski, \$3,207.24; John McMahon, \$3,228.14; Wm. McMahon, \$3,327.34.

WATER SUPPLY

Dorris, Cal.—Citizens have voted \$12,500 bonds to install water system.

Fresno, Cal.—National Board of Fire Underwriters has recommended erection of pumping station, capacity 10,000,000 gals.; station to contain two pumps, operated by steam, gas or oil engines; also extension of water mains.

Fl. Lupton, Cal.—Installation of water works is being considered.

Kingsburg, Cal.—Plans have been completed by Olmstead & Gillean, Wright & Callender Bldg., Los Angeles, for proposed water works; cost about \$36,000.

San Francisco, Cal.—Board of City Supervisors authorized expenditures as follows for materials for use in construction of auxiliary water-supply system for fire protection: \$20,000 for bolts, nuts and washers and \$13,000 for gate and check valves.

San Luis Obispo, Cal.—Plans have been prepared for construction of 5,700,000-gal. earthen reservoir.

Suisun, Cal.—Trustees have adopted plans and specifications for enlarging of storage reservoir of municipal water system whereby its capacity will be increased 13,000,000 gals.

Colorado Springs, Col.—City has selected Hiram Phillips, Consulting Engineer, Third National Bank Bldg., St. Louis, Mo., to prepare plans for improving water works system.

New Britain, Conn.—P. J. Egan, Clerk Water Board, is asking bids for about 10,000 ft. of 6-in. and 3,000 ft. of 8-in. water pipe.

Waterbury, Conn.—City Engineer Cairns has estimated cost of laying 6-in. water main in Fleet st. at \$1,450 and in Pilgrim ave. at \$1,700.

Waterbury, Conn.—Board of Public Works has authorized John R. Walker, Superintendent of Water, to purchase 20,000 ft. of water pipe of various sizes.

Milton, Del.—Citizens will vote Mar. 4 on municipal water works proposition.

Americus, Ga.—Citizens will vote April 4 on \$25,000 water works improvements.

Marietta, Ga.—Citizens will vote May 1 on \$15,000 bonds to extend water and sewer mains.

Pelham, Ga.—Citizens will vote on \$25,000 bonds for improvements to water system and for other work.

Flora, Ill.—Cost of constructing proposed water works and sewer system of vi4 pipe has been estimated at \$87,000.—J. S. Spoker, Vincennes, Ind., Engineer.

Toulon, Ill.—Engineers W. S. Shields Co., 140 Dearborn st., Chicago, are preparing plans for installation of c.-i. water pipe system.—A. Shinn, City Clerk.

South Bend, Ind.—Plans are being prepared by City Engineer A. J. Hammond for Bowman Creek sewer; pipes to be 10 ft. in diameter at intake and 12 ft. at the outlet.

Burlington, Ia.—Citizens' Water Co. contemplates making improvements at its plant this summer that will aggregate over \$13,000; improvements consist in installing a new pumping engine to pump water from the river to settling tanks and placing of two new filters; engine will cost \$7,711.30 and the filters will cost \$5,830.30.

Garden Grove, Ia.—Election on bonds for installation of water works is being considered.

Luray, Kan.—Citizens have voted \$20,000 bonds for construction of water works.—Rollins Westover, Kansas City, Mo., Engineers; P. E. Moss, City Clerk.

McPherson, Kan.—Council is considering installation of water mains on Main st.

Cumberland, Md.—Council has appointed Advisory Committee to act with it in installing proposed water supply.

Frederick, Md.—William H. Boardman, Philadelphia, Hydraulic Engineer, has been appointed to go over water situation in this city and make recommendation for increase of water supply.

Andover, Mass.—Town will vote on \$20,000 bond issue to extend and improve water system.

Springfield, Mass.—Town of East Meadow has again asked that town be connected with Little River system.

Uxbridge, Mass.—Town will expend \$20,000 on installation of water mains.

Wayne, Mich.—Village Council has voted to construct water plant.

Arlington, Minn.—Plans and specifications are being prepared by the Oscar Claussen Engineering Co., 514-515 National German American Bank Bldg., St. Paul, for installation of water works system.

Clara City, Minn.—Plans are being prepared by the Oscar Claussen Engineering Co., 514-515 National German American Bank Bldg., St. Paul, for construction of water works system.

Fergus Falls, Minn.—City Engineer Hans Blegen has prepared plans for small filter for water works.

Madison Lake, Minn.—City will install water plant, including 60,000-gal. steel tank and about 3,000 ft. of 6 and 8-in. mains.

St. Joseph, Mo.—City is considering laying of water mains to northeast suburbs.

Havre, Mont.—Sinking of additional wells has been recommended.

Bath, N. Y.—City is considering construction of water mains in Morris, Steuben, William and Haverling sts.

Jamestown, N. Y.—Municipal Water Commission has engaged experts to prepare plans and estimates for improving local water plant so as to secure more water and increase the pumping facilities.

Mt. Morris, N. Y.—Citizens have voted \$100,000 bonds to construct water system by securing water near Portage; rights of way will be secured and correct estimate of work will be made at once.

Rochester, N. Y.—Board of Contract and Supply will ask bids for furnishing water pipes, valves and stop gates for Water Department.

Rochester, N. Y.—Council is considering ordinances for extension of water pipes on 23 streets; City Engineer Fisher has estimated cost at \$175,000.

Rutherfordton, N. C.—Citizens have voted \$25,000 bonds for construction of water works and electric light plant.

Smithfield, N. C.—Citizens have voted \$55,000 bonds for construction of water works, electric light plant and sewer system.

Centerburg, O.—H. L. Maddocks, Consulting Engineer, 504 Trust Bldg., Newark, has been selected by Village Council to prepare plans and specifications for construction of water supply system.

East Liverpool, O.—City has selected Chester & Fleming, Pittsburg, Pa., to act as engineers in connection with proposed improvements to water system and installation of pumping station.

Niles, O.—City Engineer Brewer has received plans for substructure of the filtration plant from Burgess & Long.

North Brewster, O.—North Brewster Water Co. has been organized and will install plant.—J. W. Lamoreaux, President.

Ada, Okla.—Bids will be received about April 15 for construction of water works from plans of Goodwin & Harper, Kansas City, Mo.; cost about \$110,000.

Jacksonville, Ore.—Bids will be received March 15 for purchase of \$30,000 bonds to construct water works system.

Lebanon, Pa.—Water Board will ask for bonds for installing pump at pumping station.

Medla, Pa.—Water Committee is considering installation of water main on South Orange st.

Pottstown, Pa.—Citizens of West Pottsgrove, township adjacent to city, will petition Supervisors to provide number of fire plugs.

Manchester, Tenn.—Legislature has authorized issuance of \$25,000 water and electric light bonds.

Denison, Tex.—State National Bank of Denison has been awarded Shawnee Lake pipe line bond issue of \$50,000.

Electra, Tex.—City is considering installation of water system. S. Walker is interested.

Fort Worth, Tex.—Citizens will vote April 4 on \$30,000 bonds for establishment of water works system for Polytechnic Heights.

San Antonio, Tex.—Finance Committee is considering \$10,000 appropriation for sinking one or more artesian wells at head of San Antonio River.

Winters, Tex.—Citizens have voted \$2,000 bonds to install water works; O'Neill Engineering Co. has prepared plans.

Salt Lake City, Utah.—Council has passed resolution authorizing \$1,000 expenditure for construction of wooden dam across Jordan River at 12th South st.

Rockford, Wash.—Plans are being prepared for additional construction of 1,600 ft. of new iron mains.

Seattle, Wash.—Plans and specifications have been approved by Board of Public Works for pumping station for Interbay district.

Tacoma, Wash.—City Commissioners have adopted resolution to call for bids for completion of two divisions of Green River gravity water system.

New Lisbon, Wis.—Citizens have voted \$20,000 of bonds for the construction of water works plant.

Battleford, Sask., Can.—Town has decided to install \$100,000 water works system.

Goderich, Ont., Can.—City will expend \$30,000 on water works this year.

Melville, Sask., Can.—Plans are being prepared for construction of water system. Leon Benoit, city, is interested.

Montreal, Que., Can.—Hering & Fuller, New York, N. Y., are preparing plans and specifications for proposed filtration plant, cost about \$1,250,000.

Ridgetown, Ont., Can.—F. W. Farcombe, London, Ont., will prepare plans for installation of water works system.

St. Boniface, Man., Can.—Plans are being prepared for installation of reservoir, capacity, 1,000,000 gals.

CONTRACTS AWARDED

Dalton, Ga.—Following firms have secured contracts for installation of proposed water works and electric light plant: The Casey-Hedges Company, the International Steam Pump Company, Platt Iron Works Company, United States Cast Iron Pipe & Foundry Company, Columbia Iron Works, M. F. Flynn & Co., Bingham Taylor, John W. Ashe, Westinghouse Company and Ball Engine Company.

Gainesville, Ga.—Furnishing of pumps, or each of steam and electric to Henry J. Worthington, through their Atlanta office, standpipe and boiler to R. D. Vole Manufacturing Co., Newnan; filters, to the New York; c.-i. pipes, to United States Cast Iron Pipe and Foundry Co., Chattanooga, Tenn.; terra cotta pipes, to Stevens Sons Co., Macon; hydrants and valves, to R. D. Wood & Co., Philadelphia; pumping station, which is the erection of the brick building, to Prater & Loder, Gainesville.

South Bend, Ind.—To the H. Mueller Manufacturing Co., Decatur, Ill., for furnishing 1,200 brass connections, \$937.75; approximately 700 tons of pipe and fittings, Glamorgan Pipe and Foundry Co., Lynchburg, Va., 6 and 8-in. pipe \$23.50 per ton, 10 and 12-in. pipe \$23 per ton, 14 and 24-in. pipe, \$22 per ton, and standard special castings \$17 per ton.

Jefferson, Ia.—To C. W. Roland & Co., Des Moines, Ia., for constructing water works, \$6,200.

Ottumwa, Ia.—Water works improvements: To New York Continental Jew Filtration Co., New York, for filter, \$38,240; to American C. I. and Pipe Co., Birmingham, Ala., for pipe, \$24.10 per ton, f.o.b. city; concrete work, to Wm. Horabin, Iowa City.

Duluth, Minn.—By Board of Water and Light Commissioners, for 3,571 tons of c.-water and gas pipe to be used coming year, to United States Cast Iron Pipe and Foundry Co., Chicago, which bid average price, \$23.83 a ton, or \$85.112.60; American Cast Iron Foundry Co., Detroit, bid average of \$24.10 per ton, or \$86,954.85, and R. D. Wood

Co., Philadelphia, bid average of \$24.56 a ton, or \$87,716.95.

Bozeman, Mont.—Enlarging water works system, to Fred Birch, Fargo, \$40,000.

Great Falls, Mont.—To American Cast Iron Pipe Co., for 135 tons of 12-in. water pipe and specials, \$6,116.

Wymore, Neb.—Construction of municipal water and lighting plant, to Elkhorn Construction Co., Fremont, laying water mains, \$3,150; to Frank Wheeler, Havelock, constructing electric line, \$1,150; to St. Mary's Machine Co., Ohio, machines for general power, \$4,250.

Schenectady, N. Y.—Supply 180 tons of c. i. pipe, to Chas. Miller & Co., Utica; turning two tons of pig lead, to same company, \$97 per ton.

Silver Springs, N. Y.—Sinking test well, to New York and New Jersey Well Co.

Erie, Pa.—Furnishing iron pipe, to Standard C. I. Pipe Co., Bristol, \$21.95 per ton; special connections, \$50 per ton; furnishing 18 tons of lead, to John Wahl Company, St. Louis, \$4.37½ per 100 lbs.

Temple, Tex.—Installing equipment of proposed modern filtration plant, to Pittsburg Filter Mfg. Co., Pittsburg, Pa.; building and other work connected with the plant, to W. C. Rettiger, Belton, Tex.; plant will cost \$27,190, and will have a capacity of 2,000,000 every 24 hours.

Ogden, Utah.—Building Coldwater Canon conduit, to J. P. O'Neil, \$67,463.17.

Colville, Wash.—Furnishing 3,200 ft. wood pipe and quantity of wrapped copper pipe, to Geo. Van Tuij, city, \$1,120.

Burnaby, B. C., Can.—To W. Thomas, 731 Jervis st., Vancouver, to construct lap weld steel pipe water system.

Ottawa, Ont., Can.—Supplying c. i. pipe, to Canadian Iron Corporation, Ltd., Montreal, \$11,579.

BIDS RECEIVED

Webb City, Mo.—Construction of reinforced concrete reservoir, of 1,500,000 gals. capacity: Redmond, Putnam & Co., city, \$14,850; O. B. Vanderpool, Joplin, \$12,200; F. W. Keller, city, \$11,995; Oklahoma City Construction Co., Oklahoma City, Okla., \$11,450; J. C. Barr & Co., Joplin, \$11,444; S. M. Kerns, Denver, Col., \$9,990; Webb City Granolithic Co., city, \$9,975; F. W. Caulkins, city, \$9,676; Joseph Schneider, Monett, \$8,495; J. O. Williams, Aurora, \$7,400.

Spokane, Wash.—J. M. Yoeman, 04223 Howard st., was lowest of six bidders for contract for building new Lincoln Heights auxiliary pumping station, \$4,247. Other bidders: Shirley & Martin, \$4,678; Auld Bros., \$4,588.75; Alverson & Koepfer, \$5,697; Cox & Parker, \$4,575, and R. C. Alloway, \$5,950; estimate of Water Engineer Alexander Lindsay was \$5,000.

LIGHTING AND POWER

Albertville, Ala.—Citizens have voted issuance of \$7,000 of bonds for construction of electric light plant.

Eufaula, Ala.—Council has decided to install municipal electric light plant. C. M. Gammage, Chairman Finance Committee, is interested.

Huntsville, Ala.—Huntsville Gas Light Co. has sold its plant and franchise to a Philadelphia corporation; new company will make extensive improvements after taking charge, about the middle of next month.

Clarksville, Ark.—E. J. Connell will rebuild electric light plant.

Newport, Cal.—Resolution has been passed by Council providing for construction of a municipal electric light plant.—L. S. Wilkinson, City Clerk.

Turlock, Cal.—La Grange Water and Power Co. will install street electric lighting system.—A. Scott, La Grange, Superintendent.

Denver, Col.—Denver Gas and Electric Co. is preparing plans to improve system, including installation of lighting system for the boulevard and extension of gas mains; also ornamental lamp standards for several boulevard streets; this work will cost about \$400,000 and will be under contract with city.—W. J. Barker, General Superintendent.

Marietta, Ga.—Citizens will vote May 1 on \$20,000 of electric light bonds.

Pelham, Ga.—Citizens will vote on \$25,000 of bonds for improvement of light system.

Sandoval, Ill.—Installation of municipal electric light plant is being considered. R. R. McCall and W. J. McNally are interested.

Fort Wayne, Ind.—Cost of installing ornamental lighting system on Calhoun st. has been estimated by City Electrician Frank Dix at \$864 per block.

Kendallville, Ind.—Council will purchase additional dynamos for lighting plant.

Warsaw, Ind.—Winona Electric Light and Water Co. is considering improvements,

including new pumps.—Theo. Frazer, Manager.

Dodge City, Kan.—Citizens have defeated proposition to build municipal electric light plant.

Severy, Kan.—Council has granted W. H. and Earl J. Mathis, Wichita, franchise for electric light plant.

Lagrange, Ky.—City has granted electric light franchise to J. C. Emmick, Lewisport.

Maysville, Ky.—Maysville Public Service Co. will take over Maysville Gas and Electric Light Co. and will enlarge plant; gas house may be erected; connections will be at once laid from National gas pipe line to this city.

Georgetown, Mass.—Town will vote on improved lighting system.

South Framingham, Mass.—Town will consider subject of municipal ownership of electric lighting and power.

Grand Rapids, Mich.—Grand Rapids Gas Light Co. will expend \$50,000 in extending mains.

Chillicothe, Mo.—Contract will be let this spring for construction of a municipal electric light plant; plans by Fuller-Coult Co., Chemical Bldg., St. Louis; cost about \$50,000.—John H. Taylor, Mayor.

Monett, Mo.—Plans and specifications have been prepared by Rollins & Westover, Engineers, Beals Bldg., Kansas City, for proposed electric light plant.

Lavina, Mont.—E. F. Fullmer, Lewiston, has decided to install electric light plant.

Binghamton, N. Y.—Council is considering two ordinances, one directing the Board of Contract and Supply to advertise for bids for street lighting on five and ten-year contracts; other requesting Board of Contract and Supply not to make street lighting contract for period longer than one year.

Brockport, N. Y.—Additional stationary transformer of 600 h.p. capacity will be installed in substation of the Buffalo-Lockport and Rochester Railway Co.—J. H. Cain, Rochester, Superintendent.

Richfield Springs, N. Y.—Richfield Springs Electric Light & Power Company will soon commence erection of \$40,000 model plant.

Rutherfordton, N. C.—Citizens have voted \$35,000 bonds for construction of electric light plant and water works.

Smithfield, N. C.—Citizens have voted \$55,000 of bonds for construction of electric light plant, sewer system and water works.

Barberton, O.—Council will consider petition asking installation of proper equipment at pumping station to make it municipal lighting plant.

Greenfield, O.—Board of Public Works has advertised for bids for the reconstruction of electric light system at cost of \$20,000.

North Brewster, O.—North Brewster Electric Light, Heat and Power Co. has been organized and will erect plant.—J. W. Lamoreaux, President.

Lock Haven, Pa.—Bids are wanted for lighting the city with 10 arc lamps and 25 incandescents.—C. E. Oberheim, City Clerk.

Royersford, Pa.—Town is considering establishing of a municipal electric light system, and Councilman Saylor is investigating similar enterprises at Pennsburg.

Hayti, S. D.—S. M. Ellis and J. A. Snyder, Watertown, are interested in proposed construction of electric light plant.

Jackson, Tenn.—City Council, R. L. Beare, Chairman Special Committee, is interested in ornamental street lighting fixtures for business section.

Seattle, Wash.—Specifications have been submitted to Board of Public Works for 22,000 ft. of 2, 3, 4, 8, 12, 20, 30 and 40-conductor cable for use of city electrician's department; bids will soon be called for.

Spokane, Wash.—Panhandle Electric Railway and Power Co. will erect \$2,000,000 plant and transmission line to bring power from Priest River to Spokane and will enter into active competition with the Washington Water Power Co.—A. J. Smith, Local Agent.

Calgary, Alta., Can.—Natural Gas Company, Calgary, will lay piping from Gleichen, 55 miles distant, at approximate cost of \$3,500,000; work will start this spring.

Fort William, Ont., Can.—Kaministiquia Power Company has voted to spend \$250,000 this summer for enlarging power plant. R. S. Kelsch, Construction Engineer.

CONTRACTS AWARDED

Staunton, Ill.—Installing electrical apparatus in municipal electric light plant, to Wesco Supply Co., St. Louis, Mo., \$6,725.

Chesteron, Ind.—By Northern Indiana Gas and Electric Co., for two 350-KVA. steam turbines, to Westinghouse Machine Co., Pittsburg, Pa.; turbines will be connected to a 7.0-KVA., 13,200-volt, 3-phase, 60-cycle Westinghouse generator and will operate on a steam pressure of 75 lbs. and will exhaust into a vacuum of 28-in.

Trenton, N. J.—Lighting streets for next

five years, to the Public Service Corp., \$80 per year for arc and \$27 for incandescent lamps.

Georgetown, Tex.—Building of \$3,000 power house, to James Waterson.

Chase City, Va.—To John L. Livers, Grottos, for construction of electric light plant; estimated cost \$20,000.—J. Kent White, Engineer.

Seattle, Wash.—Third ave. et al, cluster lights, Subdivision No. 2, to Olympic Foundry Company, \$3,824.

Fort Frances, Ont., Can.—To Nelson & Cassaday to supply electric light poles for the town lighting system, \$1.75 per pole for 30 ft. 6 in. top and \$3.25 per pole for 35 ft. 7 in. top.

BIDS RECEIVED

Springfield, Mass.—Furnishing and installing cable for underground conduit system for municipal lighting and power plant: Safety Insulated Wire and Cable Co., Boston and New York, \$11,655.03 for the paper insulation cable and the Standard Underground Cable Co., Pittsburg, Pa., \$13,511.45 for the same kind of cable; latter company also put in bid of \$16,614.76 for varnished cambric insulation cable.

FIRE EQUIPMENT

Montgomery, Ala.—City will erect fire station in southern section.—A. R. Gilchrist, City Engineer.

Fresno, Cal.—National Board of Fire Underwriters has recommended purchase of auto chemical engine equipped with two 60-gal. tanks and 4 salvage covers, modern first-size engine, auto combination hose wagon, auto for fire chief and minor equipment, also installation of following apparatus for fire alarm system: Six-circuit non-interfering, automatic repeater, additional 4-circuit charging board, motor generator set for charging battery, etc.

Los Angeles, Cal.—Fire Chief A. J. Eley has asked Council to purchase fast auto.

Terryville, Conn.—Town has appropriated \$1,800 to purchase hose carriage and 800 ft. of hose. Alfred Blakeslee is interested.

East St. Louis, Ill.—Building Commissioner Hamler has been requested by Mayor Cook to submit plans for additions to and alteration of Fire Department Headquarters Bldg. on Main st.; work is to cost \$6,000.

Prairieburg, Ia.—Purchase of fire apparatus is being considered.

Bridgewater, Mass.—Town will erect fire house.

Cliftondale, Mass.—Town is considering purchase of auto chemical.

Conway, Mass.—Town has decided to purchase chemical engine.

Northampton, Mass.—Fire Chief F. E. Chase is urging purchase of \$5,000 auto combination chemical and hose wagon.

Wakefield, Mass.—Chief Code is urging purchase of auto fire engine.

Central City, Neb.—Council has decided to purchase fire engine.

Elizabeth, N. J.—Finance and Fire Committees are considering installation of fire engine house with suitable apparatus in Tenth Ward, purchase of auto fire engine or engines and relocation of some fire houses.

Flemington, N. J.—Fire Department is securing funds for erection of fire house.

Millville, N. J.—Fire Committee will purchase site for erection of hose house in West Millville.

New Brunswick, N. J.—Hibernia Fire Co. No. 6 will erect \$13,000 station.

Paterson, N. J.—Fire and Police Committee is considering following improvements for fire department: Converting two first-size engines, \$9,000; converting two supply wagons, \$7,000; one gasoline propelled truck, \$9,000; purchase and improvement of property on Temple Hill, \$7,500; auto engine, \$7,500; erection of fire house in West Paterson, \$4,500; converting chemical engine, \$3,000.

Salem, N. J.—Council has decided to secure bids for placing boiler in old steam fire engine.

Binghamton, N. Y.—Fire Commissioner J. M. Henwood will purchase 500 ft. of fabric fire hose.

Scotia, N. Y.—Assistant Fire Chief E. C. Hoyt has submitted plans for fire alarm system for village, costing about \$2,500.

Syracuse, N. Y.—Erection of hose house in vicinity of Butternut and Manlius sts. is being urged.

Yonkers, N. Y.—Council has passed resolution for purchase of motor cars for Fire Chief and his two assistants; also two ambulances.

Astoria, Ore.—Fire Chief C. E. Coster has recommended purchase of auto combination chemical truck and hose; also installation of additional fire alarm boxes and equipping of two tugs with fire pumps.

Erie, Pa.—Fire Commissioners Hogan, Walker and Hass have decided immediate request should be made of Councils to provide for rebuilding of No. 7 fire engine and the replacing of No. 5 fire engine and purchase of additional hose.

Mahoney City, Pa.—Alert Fire Co. will erect \$10,000 engine house.

Selinsgrove, Pa.—Borough Council has voted to purchase chemical fire engine.

Wanamie, Pa.—Architect Emery, of Wilkes Barre, will prepare plans for erection of three fire houses.

Weldon, Pa.—Weldon Fire Co. is receiving bids for erection of fire house.—Geo. Natress & Son, 12th and Walnut sts., Philadelphia, Architects.

Providence, R. I.—Fire Commissioners have been authorized by Board of Contract and Supply to purchase Knox motor fire vehicle for department; vehicle will carry 1,000 ft. of hose; chemical engine and 150 ft. of chemical hose, and will also accommodate a crew of 10 men.

Madison, Wis.—Plans are being prepared for erection of proposed No. 2 fire station.

Fort William, Ont., Can.—Canadian Fire Underwriters' Inspector has recommended purchase of two additional fire engines; also chemical engine to be placed in No. 3 station.

CONTRACTS AWARDED

Bridgeport, Conn.—Converting horse-drawn hose wagon into auto chemical, to Locomobile Co., \$2,000.

Hartford, Conn.—Furnishing auto chemical combination car, also auto for officers of fire department, to Pipe Manufacturing Co.

Duluth, Minn.—Auto combination chemical and hose wagon, to American-La France Engine Co., Elmira, N. Y., \$5,000.

Millville, N. J.—Furnishing fire hose: 500 ft., to Eureka Fire Hose Co., Boston, \$1 per ft. for Paragon brand; 500 ft., to New Jersey Car Spring and Rubber Co., Jersey City, \$1 per ft.

White Plains, N. Y.—Furnishing Locomobile combination auto chemical and hose wagon, to Chas. Paul, \$6,000; Machine will be made at Bridgeport, Conn.

Portland, Ore.—To Bowers Rubber Co., San Francisco, and Columbia Hardware Co., city, for furnishing 1,000 ft. of 2½-in. hose, 90c. per ft., and Eureka Fire Hose Co. and A. G. Long, for 1,000 ft. each, \$1 per ft.; A. G. Long also received the order for 600 ft. of 1½-in. hose, 67c. per ft.

Oshkosh, Wis.—Building hose house at West New York and Central aves., to J. T. Raycraft, city, \$9,500.

BIDS RECEIVED

Pueblo, Col.—Furnishing auto fire truck: Victor Fire Auto Co., Buffalo, N. Y., 60-70 hp., four cylinders, \$1,500 cash and the remainder at 4 per cent interest, \$4,228; Anderson Fire Supply Co., Kansas City, by George Jackson Carriage Co., Pueblo, 78 hp., four cylinders, delivery in 90 days, \$4,900 on time and \$4,802 cash; Seagrave Motor Truck Co., Columbus, O., by Pueblo Auto Co., Pueblo, 70 hp., four-cylinders, 90 day delivery, \$4,875; American-La France Auto Fire Engine Co., Elmira, N. Y., by Ideal Motor Co., city, 70 hp., 90 days delivery f.o.b. Pueblo, with forfeiture of \$100 per day for failure to deliver after that time; four cylinders and expert from factory to instruct in use, \$5,750; Webb Motor Fire Appliance Co., St. Louis, by Pueblo Auto Goods Co., two bids: No. 1, for six-cylinder, 90 hp. car, speed 60 miles per hour with equipment and men, four speeds forward, 120 days delivery, \$5,750; bid No. 2, four cylinders, 70 hp. f.o.b. Pueblo, \$5,400; Robinson Fire Auto Co., St. Louis, 80 hp., 120 days delivery, no figure named.

Haverhill, Mass.—Furnishing fire hose: Cornelius Callahan Co., 65c.; Eureka Fire Hose Co., 65c.; Combination Ladder Co., 82c., 75c., 80c., 77c. and 85c.; Triple C, 59½c. and 64½c.; La France, 61¾c. and 60c.; Boston Woven Hose, 68c. and 62c.; Voorhees Co., 70c., 65c. and 60c.; Mineralized Rubber, 75c.; Jersey Rubber, 65c., 55c., 65c.

BRIDGES

Phoenix, Ariz.—State Engineer J. B. Girard has prepared plans for erection of reinforced concrete bridge near this city.

Los Angeles, Cal.—Engineers Mayberry & Parker, Pacific Electric Bldg., have been retained by County Board of Supervisors of Ventura County to prepare plans for 11 reinforced concrete bridges and to act as Consulting Engineers for the erection of 9 steel bridges.

Denver, Col.—Construction of a bridge over the Platte River at Alameda ave. is being considered at cost of about \$30,000.

South Bend, Ind.—Board of Public Works is planning to build bridge across river at Washington ave.

Waterloo, Ia.—City will co-operate with the Waterloo, Cedar Falls and Northern Railway in erecting bridge at out-off next spring.

Elizabethtown, Ky.—Bridge to cost \$60,000 will be erected between Illinois Central and Henderson Route bridges, over Salt River.

Shreveport, La.—Plans have been prepared for building of traffic bridge over Red River, 1,900 ft. below site of the present combination railroad and traffic structure, which is largely owned by Vicksburg, Shreveport & Pacific Railway; new bridge will land on high bluff between Jones and Lake sts. in this city; estimated cost is \$225,000.

Monson, Mass.—Town is considering replacing of wooden bridges with concrete structures.

Menominee, Mich.—By Joint Bridge Committee of Menominee and Manette, to erect bridge to Wausau Iron Works, \$24,000.

Republic, Mich.—Bids, accompanied by detail plans and specifications, will be received for building a bridge over Michigan River; bridge is to be of reinforced concrete or steel truss with concrete floor.—A. Siebenthal, Republic Township, Supervisor.

Duluth, Minn.—Bids will soon be asked for erection of four bridges, two of steel construction with concrete decking, and two of all concrete construction.—H. J. Hammerbeck, Chairman Commissioners of Roads and Bridges.

Port Clinton, O.—Bids will soon be asked by County Commissioners for the construction of drawbridge over Portage River; cost \$15,000.

Washington Court House, O.—Payette County will build five new bridges at estimated cost of \$25,000.

Kittanning, Pa.—City is considering construction of bridge over Rough Run, near Winfield; plans have been prepared.

Philadelphia, Pa.—Council has adopted resolution requesting Director of Public Works to confer with United States Engineer officers and authorities of Delaware County relative to construction of bridge on line of 84th st. over Darby Creek.

Lynchburg, Va.—Street Committee is considering erection of \$200,000 concrete bridge at foot of 9th st.

Tacoma, Wash.—Waddell & Harrington, Kansas City, will prepare vertical lift and bascule bridge plans for structures city contemplates erecting over city waterway and Puyallup River.

CONTRACTS AWARDED

Fairmount, Ill.—To R. C. Spandau, Danville, for constructing bridge over Salt Fork River, near Fairmount, \$6,995.

Kingston, N. Y.—Building Eddyville bridge, to Lane Bridge Co., Corning, \$16,950; additional concrete, \$6; other bidders: E. J. Doyle & Co., Albany, to construct as per specifications, \$24,500; additional concrete, \$13 per cu. yd.; Owego Bridge Co., Owego, \$21,245; additional concrete, \$10; York Bridge Co., York, Pa., \$20,551; additional concrete, \$12; Lupfer & Remick, Buffalo, \$24,290; additional concrete, \$20; United Construction Co., Albany, \$25,152; additional concrete, \$20; Penn Bridge Co., Beaver Falls, Pa., \$20,361; additional concrete, \$15.

BIDS RECEIVED

San Jose, Cal.—Erection of bridge on Meridian road: Estery Construction Co., \$6,993; John Doyle, \$5,967; J. W. Williams, \$6,845; L. M. Scott, \$5,250; J. W. McReynolds, \$7,749; Charles P. Nott, \$6,357; James Casley, \$5,850; William Radtke, \$4,780.

MISCELLANEOUS

Douglas, Ariz.—Mayor Meguire is planning for laying out of public park and playground on five acres owned by city.

Pelham, Ga.—Citizens will vote on bonds for erection of municipal building.

Hutchinson, Kan.—Citizens will vote March 27 on \$125,000 bonds to erect auditorium.

Hutchinson, Kan.—City Commission has decided to ask for bids for installation of \$1,000 incinerating plant.—G. L. McLane, City Engineer.

Newport, Ky.—Police Committee will ask for bids for installation of patrol system.

Hagerstown, Md.—Citizens will vote March 23 on \$50,000 bonds to purchase public park.

Boston, Mass.—Derby, Robinson & Shepard will prepare plans for proposed \$20,000 Parkman bandstand.

Fitchburg, Mass.—Police Committee is considering purchase of automobile.

Lawrence, Mass.—Mayor Cahill and Board of Health are gathering information on garbage collection.

Detroit, Mich.—Architect G. A. Mueller, Bretmeyer Bldg., has prepared plans for erection of \$37,000 branch library building at King and Woodward aves.

Saginaw, Mich.—Citizens will vote April 3 on erection of central police station.

North Platte, Neb.—Plans are being prepared for erection of proposed Carnegie library on Court House Square.

Yonkers, N. Y.—Council has passed resolution for purchase of two auto ambulances and three motor cars.

Cherryville, N. C.—Town will issue \$8,000 bonds to erect city hall.

Cincinnati, O.—Fire has practically destroyed plant of the Cincinnati Reduction Co. near Anderson's Ferry in western part of city, causing loss of \$50,000; company had the contract for the collection, removal and disposal of the garbage of city, and other means of disposing of city's refuse will have to be provided for until plant is rebuilt.

Klamath Falls, Ore.—Citizens will again vote on \$30,000 bonds for erection of city hall and \$25,000 bonds for purchase of garbage site.

Union City, Tenn.—Architect H. D. Whitfield, 160 5th ave., New York City, has prepared plans for erection of \$10,000 Carnegie library.

Roanoke, Va.—Citizens have voted \$230,000 bonds to purchase site and erect public building and \$120,000 to purchase eight acres for public library, playgrounds and park.

Seattle, Wash.—Board of Park Commissioners, Central Bldg., will take bids soon for the erection of an aviary and monkey house at Woodland Park; estimated cost, \$15,000. Frank Allen, Inc., Architects.

Seattle, Wash.—Construction of five comfort stations to be established on playgrounds throughout city is contemplated by Park Board; no architect chosen. R. W. Cotterill, Secretary.

Snohomish, Wash.—Council is considering erection of municipal building at 2d st. and Ave. A.

Niagara Falls, Ont., Can.—Plans are being prepared for enlarging city hall.

CONTRACTS AWARDED

Gadsden, Ala.—To Southern Structural Steel Co., San Antonio, Tex., to erect \$25,000 jail.

Schenectady, N. Y.—Furnishing street flushing machine, to Chas. Hvass & Co., New York, \$850; street sprinkler, to Austin Western Co., New York, \$317.50; refilling brooms in street sweep, to Chas. Hvass & Co., \$7.50 per broom.

BIDS RECEIVED

Oakland, Cal.—Construction and maintenance of levees in Key Route basin by Board of Public Works; for levee extension along 14th st. in Key Route basin and for dredging of the channel along pier near line on the west side of north arm of harbor; first proposition the bidders were The Vulcan Dredging Co., Marshall C. Harris and the California Reclamation Co. On the second proposition: The California Reclamation Company and M. C. Harris. On the third proposition: M. C. Harris, San Francisco Bridge Co. and the Charles Nelson Co. Dredging of channel in the Oakland harbor, Charles Nelson Co. was lowest bidder, 7 cts. per cu. yd. and will probably receive contract; on the other two propositions, in which there were a number of specifications, the bids will be tabulated and contract soon awarded.

Holyoke, Mass.—Construction, plumbing and heating and ventilating of tuberculosis hospital by Board of Public Works. Lowest bidders were as follows: General construction, V. V. Goddard, \$8,700; plumbing, D. J. Bowler, \$681; heating and ventilating, M. J. Moriarty, \$766 and \$1,020. Bids other than the lowest, are as follows: General construction, Joseph Lalibertie, \$12,800; L. B. Smith, \$9,500; Israel Ducharme, \$8,888; Contractor Walsh, \$9,840; L. Carreau & Son, \$9,270; plumbing, M. J. Moriarty, \$770; Sullivan & Carmody, \$869; C. P. Lyman, \$737. Heating and ventilating, D. J. Bowler, \$1,047; Holyoke Supply Co. \$739 and \$1,259; Holyoke Valve & Hydrant company, \$1,029 and \$1,326; P. J. Donnelly, \$985 and \$1,250.

Spokane, Wash.—Installing police signal alarm system: Fred A. Wood, local representative of the Gamewell Fire Alarm Telegraph Co., \$10,180 for system with ordinary equipment; for complete equipment \$17,000 was bid by the same company. Signaphone Alarm Co., Milwaukee, \$10,220 through C. E. Stillwell, their local representative; N. G. Carhart, representing Western Electric Co., Seattle, \$7,470; Deal Electric Co., Myrtle O., through their representative, Merton J. Corwin, offered to place their "Flashlite" system in at \$6,400.

READE STREET, NEW YORK. A TYPICAL WOOD BLOCK PAVED STREET

DEVELOPMENT OF WOOD BLOCK SPECIFICATIONS

History of the Use of Treated Wood Blocks in the East—Early Creo-Resinate Process—Evolution of Specifications in New York—Character of Preservative Oil—Antiseptic and Waterproofing Qualities

By GEORGE W. TILLSON, Chief Engineer of Highways, Borough of Manhattan, New York City

Probably no material for street pavements has caused as much interest over the entire country since the introduction of asphalt as have creosoted wood blocks.

In the '80's brick was introduced and a large amount of it used in the central west, but as most of the clays that will make suitable paving brick are found in that locality its use has been somewhat restricted on account of the high cost of transportation. But wood is a material that is used all over the country and can be obtained at a reasonable price.

The first creosoted wood blocks were laid in Indianapolis about twelve years ago. The material was pine, and the timber was treated with about twelve pounds of oil per cubic foot. No particular attention was paid to the character of the oil. These pavements were quite satisfactory, although they swelled and bulged, making it often necessary to relay them

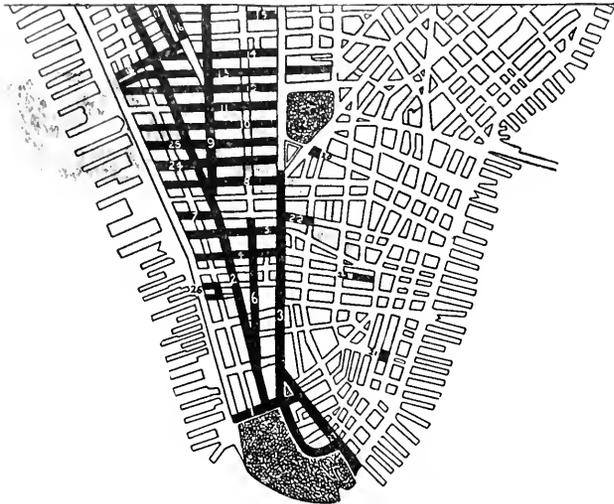

to quite an extent. The officials in charge of the work were almost ridiculed, and certainly laughed at to quite an extent, for their apparent folly in persisting in using wood as a paving material. But they continued their efforts, and the results obtained there were recognized finally by officials from other cities.

The first treated wood block pavement laid in the east was on Tremont Street, Boston, in 1900, in front of the Common, where one-half the street was laid with sheet-asphalt and the other half with wood. These blocks were treated by the so-called creo-resinate process, being impregnated with a mixture composed of one-half creosote oil and the other half resin. This pavement has been in use now for ten years with very little repair, and is in good condition at the present time.

The first pavement of this character in New York was laid

on State Street, Brooklyn, in 1902 at the expense of the contractor, the city setting the curb and laying the concrete base. The authorities were so well pleased with it that specifications were adopted and other streets paved during that and the following year. These specifications required the material to be long-leaf yellow pine, and that it should be treated with a compound composed of one-half creosote oil and the other half resin or some other suitable waterproofing material. They also provided that the blocks should sink in water, and after being dried at a temperature of 100° F. for twenty-four hours should not absorb more than three per cent. when immersed in water for another twenty-four hours.

The first pavements of this character in Manhattan were laid in 1904, with the same specifications as given above, on Warren Street west of Broadway, 20th Street between Broadway and

LOWER NEW YORK, WOOD BLOCK PAVEMENTS SHOWN IN HEAVY LINES

Fifth Avenue, and 98th Street between Central Park West and Columbus Avenue. The object in selecting these three streets was to have one of heavy, another of medium and the third of light traffic. These streets have now been laid nearly seven years and have been out of guarantee two years. They have required practically no repairs, although Warren Street, the heavy traffic street, does need some at the present time.

In 1904 other streets in the lower business section of the borough were paved with wood, the material with which the blocks were treated being composed of 50 per cent of creosote oil and 50 per cent of resin. The specifications required that the blocks should be impregnated with twenty pounds per cubic foot of this material, and should show an absorption test of not more than 3 per cent after being immersed for twenty-four hours and dried as above.

The pavements laid in 1906 were laid under the same specifications.

In 1907, however, the specifications were materially changed. The specifications for timber, which had previously called entirely for yellow pine, were modified by admitting either long-leaf yellow pine, Norway pine, black gum, or tamarack, and the requirements for the preservative were changed so that it should be composed of 75 per cent of oil and 25 per cent of resin, the specific gravity of the oil to be 1.12. The absorption test still remained the same.

In 1908 another modification was made, requiring that treated gum blocks should weigh not less than fifty-five pounds per cubic foot; in other words, not less than twenty pounds per cubic foot more than the recognized weight of such blocks when untreated.

The depth of the blocks in all of the above specifications in Manhattan was 3½ inches.

On account of the modifications, as set forth above, a few streets were laid with gum blocks instead of yellow pine, but no Norway pine or tamarack blocks have been used.

The oil referred to in all of the above specifications was required to be a direct product of coal-tar.

In 1909 the claim was made to the city authorities that on account of the high specific gravity required for the oil free competition was not obtained, and a change in the specifications was called for. The matter was referred to a committee composed of the Chief Engineer of the Board of Estimate and Apportionment, the Chief Engineer of the Finance Department, and the Chief Engineers of the Bureaus of Highways of the different boroughs for an investigation and report. The committee examined into the matter very carefully, having several hearings and calling before it different manufacturers of wood block in an endeavor to obtain the best results with as great competition as possible.

The committee recognized that two properties were required of the preservative: one, to keep the block absolutely from decay; and the other, to keep it stable in size so that it would not contract when dry or swell when wet, thus bulging and causing a deformation of the pavement.

A plea was made before the committee for the adoption of an oil manufactured from water-gas tar, it being claimed that such an oil would be just as good, and could be obtained at much less expense than from coal-tar. After a careful investigation the committee adopted a specification for oil as follows:

The oil with which the blocks are to be treated shall be a stable, antiseptic and waterproofing oil from which the water has been removed by distillation, and which shall have a specific gravity of not less than 1.12 at 38° C. When distilled in the manner hereinafter described, the oil shall lose not more than thirty-five per cent. up to a temperature of 315° C. The distillate between 255° C. and 315° C. shall have a specific gravity not less than 1.02, the said specific gravity being taken at a temperature of 60° C.

The committee felt that with its then knowledge of the use of water-gas tar oil it was not willing to permit it to be used entirely. As it was claimed before the committee that the 1.12 oil that had been previously used was not a pure creosote, but was manufactured by adulterating the 1.03 creosote oil with coal-tar pitch, the committee was willing to allow the coal-tar creosote oil to be adulterated with the water-gas product to an extent not to exceed 50 per cent. By providing that the distillate between 255 and 315° C. should not be less than 1.02, this point was covered and these specifications have been in use in Manhattan ever since.

In February of 1910, a convention of officials from the different cities of the country was held in Chicago, and this same matter was again given careful consideration. The committee was made up of representatives of some ten different cities, practically all that had been using wood block to any extent. The specifications adopted there varied from the New York specifications as relate to oil in that they required that the oil should be a coal-tar product free from adulteration of any kind; should have a specific gravity of at least 1.10 at a temperature of 38° C.; that not more than 3 per cent of the oil should be insoluble by hot continuous extraction with benzol and chloroform; that on distillation the distillate should not exceed 2 per cent up to 150° C. and 35 per cent up to 315° C.; the mean of three determinations to be taken.

In October, 1910, a sub-committee for standardizing paving specifications of the American Society of Municipal Improvements reported on wood block specifications. These specifications were the same as the Chicago specifications except that they required that not more than 4 per cent of the oil should be insoluble in hot benzol and chloroform.

In New York City, in February, 1911, at another meeting of the City Officials for Standardizing Paving Specifications the committee on creosoted wood block practically reaffirmed its former specifications, but modified the specific gravity by making a maximum of 1.14 for the specific gravity at a temperature of 38°, leaving the minimum at 1.10; and provided that not more than 3½ per cent of the oil should be insoluble by hot continuous extraction with benzol and chloroform instead of 3 per cent as in former specifications.

BROADWAY, NEW YORK, SOUTH FROM CITY HALL
Granite in foreground; wood block in distance, where traffic is heavy

The consideration of the specifications thus far has been regarding the character of the wood and its treatment rather than how the blocks should be laid.

In Brooklyn all wood blocks have been laid on a cement mortar cushion made of one part of cement and three parts of sand, one-half inch thick. The joints have been filled with clean fine sand. The pavement was guaranteed for five years.

In Manhattan the first three streets enumerated herein were laid in the same way and with the same guarantee. But subsequent pavements had a Portland cement grout joint and a ten-years' guarantee.

This matter also was considered in the city's engineer committee, and a guarantee of five years only recommended.

The principal changes made by the committee, in addition to making the preservative a 1.12 specific gravity product, not necessarily produced from coal-tar, without any admixture of resin, were making the depth of blocks four rather than three and a half inches, and making the guarantee period five rather than ten years. The preservative and guarantee changes would reduce, and the depth of block change would increase, the cost of the pavement. As an actual result the average cost of wood pavement in Manhattan in 1909, after the changes were adopted, was \$3.34 per square yard as against \$4.27 in 1908. Probably not all the reduction was on account of the specifications, but the most of it undoubtedly was.

The Borough of Manhattan is still using the 1909 specifications, except that sand has been substituted for both the mortar cushion and the grout joint.

At the present time the question most discussed in connection with wood block specifications is the character of the oil, and the following points are made by the opponents of such an oil as has been described in this article. One party objects entirely to the heavy oil on principle, believing the 1.03 to 1.06 specific gravity oil to be better than the heavier. The other objects not to the weight of the oil, but to the requirement that provides for its being a coal-tar product, claiming that an oil made from water-gas tar is just as good, and is much cheaper and more easily obtained.

It is generally admitted that the preservative must contain not only antiseptic but waterproofing qualities, although

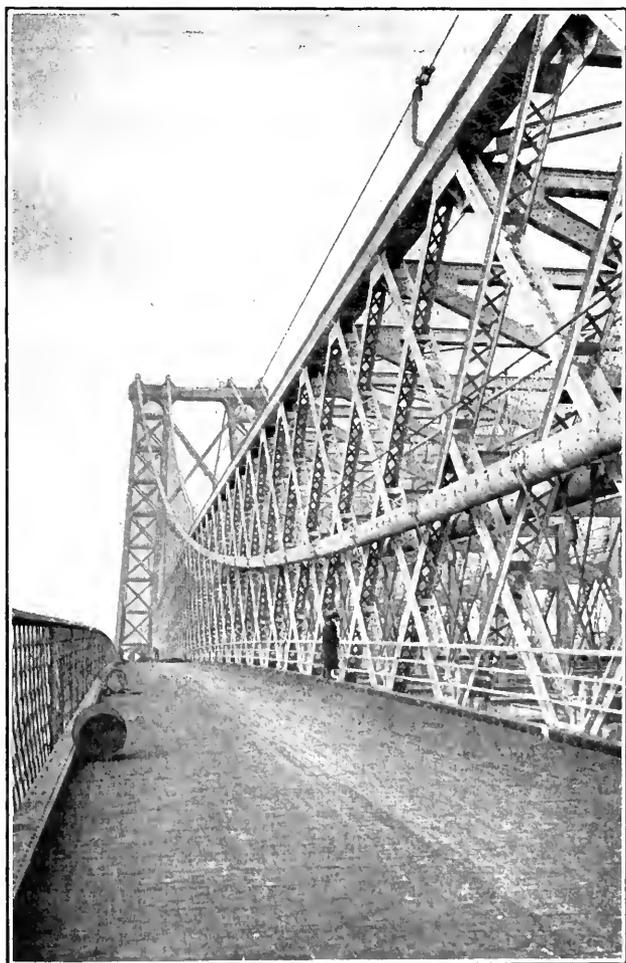

it is possible that if the water could be kept entirely from the block it would not decay. The above qualities should be maintained as long as possible, as the pavements on most of the streets where wood is used would naturally rot out before they would wear out. In London and Paris it is different, the traffic in those cities being so great that the blocks are actually worn down thin by the traffic. Accordingly the blocks are given what would be considered in this country a superficial treatment only.

It is well known that creosote oil is a volatile substance, and it seems reasonable that whatever will increase its stability should also increase its value as a preservative.

The early advocates of treated wood blocks recognized this and sought to remedy the instability of the oil by mixing with the light oil an equal part of resin, the idea being that the mixture would be stable and act both as an antiseptic and as a waterproofing material. As the cost of resin increased, the one-to-one mixture was changed to one composed of three parts of 1.12 oil to one part of resin, and in 1909 the New York City engineers' committee, heretofore referred to, decided that a 1.12 oil was sufficient in itself, but did not feel justified in recommending an oil made wholly from water-gas tar.

The two important questions then seem to be: First, is a 1.03 to 1.06 specific gravity oil sufficiently stable to preserve a pavement for twenty or twenty-five years, both as to the durability of the wood itself and the liability of the surface to become deformed on account of swelling caused by undue absorption? Second, is a 1.12 specific gravity oil, made entirely from water-gas tar, as good a preservative, as outlined above, as one that is a straight coal-tar product?

All engineers should strive for the best work possible as well as the greatest competition in attaining this result. If either of the above questions can be answered in the affirmative wood block specifications should be changed accordingly. With

WOOD BLOCK PAVING, WILLIAMSBURG BRIDGE, NEW YORK

the present knowledge of the subject it seems doubtful if they can be so answered. From the present practice of the cities now using wood for street pavements it also seems that their engineers concurred in the above conclusion. But the matter is an important one, and one that should be investigated and a determination reached only after careful experiment. This work should be done only once, but by a careful and disinterested party.

In 1907 the Forest Service of the U. S. Department of Agriculture laid a wood pavement on Nicollet Avenue, Minneapolis, Minn., of seven different varieties of wood, the idea being to determine the relative values of each for paving purposes. The varieties used were hemlock, Southern pine, fir, Western larch, birch, tamarack, and Norway pine. Sufficient time has not elapsed to enable one to draw final conclusions, but the result must be valuable. If, now, this same department would undertake a series of experiments to determine the relative preservative properties of the different oils proposed for treating wood paving blocks, it would be performing a service that could be done by few if any municipalities, and one that could not fail to be of great value. Its conclusions, too, would be generally accepted.

COMMITTEES ON PAVEMENT SPECIFICATIONS

Owing to the interest felt by paving men generally in the specifications formulated and adopted by the Organization of City Officials for the Standardizing of Paving Specifications, many inquiries have been addressed to this Journal for the names of the members composing these committees. A list of these names will serve the double purpose of informing such interested parties whom to correspond with in connection with the several specifications and also will serve to indicate the standing of the men responsible for the specifications. This list of committees is as follows:

ASPHALT PAVEMENT

George W. Craig, City Engineer, Chairman, Omaha, Neb.
 William R. Benson, Chief Bureau of Highways, Vice-Chairman, Philadelphia, Pa.
 George W. Tonson, Chief Engineer, Toledo, O.
 Felix Kleeberg, Chemist, Bureau of Highways, New York, N. Y.
 F. N. Bingham, City Chemist, Spokane, Wash.

BITUMINOUS CONCRETE PAVEMENT

Linn White, Engineer South Parks, Chairman, Chicago, Ill.
 L. W. Rundlett, City Engineer, Vice-Chairman, St. Paul, Minn.
 W. H. Connell, Assistant Commissioner Public Works, New York, N. Y. (Bronx).
 George W. Roberts, City Engineer, South Omaha, Neb.
 G. F. McGonigal, City Engineer, Salt Lake City, Utah.

BONDS AND GUARANTEES

W. J. Hardee, City Engineer, Chairman, New Orleans, La.
 Henry C. Allen, City Engineer, Vice-Chairman, Syracuse, N. Y.
 E. A. Kingsley, City Engineer, Little Rock, Ark.
 A. F. Damon, Consulting Engineer, Chester, Pa.
 W. A. Hogue, City Engineer, Charleston, W. Va.

CEMENT, CONCRETE AND CONCRETE PAVEMENTS

N. E. Murray, Superintendent of Sidewalks, Chairman, Chicago, Ill.
 George S. Smith, Commissioner Public Works, Vice-Chairman, New Orleans, La.
 J. M. Burrows, Assistant Engineer, Des Moines, Ia.
 Montgomery Schuyler, St. Louis, Mo.
 John W. Paine, City Engineer, Akron, O.

CREOSOTED WOOD BLOCK PAVEMENT

Andrew Rinker, City Engineer, Chairman, Minneapolis, Minn.
 J. C. Travilla, Street Commissioner, Vice-Chairman, St. Louis, Mo.
 N. S. Sprague, Superintendent Bureau of Construction, Pittsburgh, Pa.
 W. Purvis Taylor, Assistant Engineer of Tests, Philadelphia, Pa.
 Walter M. Cross, City Chemist, Kansas City, Mo.

MACADAM PAVEMENT

L. Darnell, Consulting Engineer, Chairman, Kansas City, Mo.

Walter C. Leininger, Assistant Superintendent of Streets, Vice-Chairman, Chicago, Ill.

Edwin H. Thomes, Assistant Engineer, New York, N. Y. (Borough of Queens).

W. F. Brooke, City Engineer, Norfolk, Va.

Wright Smith, City Engineer, Mobile, Ala.

STONE BLOCK PAVEMENT

B. T. Fendall, City Engineer, Chairman, Baltimore, Md.
 M. R. Sherrerd, Chief Engineer, Board Public Works, Vice-Chairman, Newark, N. J.
 M. F. McKenna, City Engineer, Bridgeport, Conn.
 S. W. Hoag, Jr., Assistant Engineer, Department of Docks, New York, N. Y.
 John E. Ramsey, Consulting Engineer, Salisbury, N. C.

VITRIFIED BRICK PAVEMENT

E. H. Christ, member Board of Public Works, Chairman, Grands Rapids, Mich.
 H. W. Klausmann, City Engineer, Vice-Chairman, Indianapolis, Ind.
 James H. Sullivan, Deputy Superintendent of Street, Boston, Mass.
 F. J. Cellarius, City Engineer, Dayton, O.
 J. L. Meyers, City Engineer, Ardmore, Okla.

The specifications of this organization covering these various subjects are now in the printer's hands, and will probably be ready for distribution in a few weeks. No authorized copy of them can be furnished before that time, as it is the purpose of the organization to copyright them to prevent their being used by manufacturers of, and dealers in, paving materials in an unwarranted manner.

NEW STANDARD BRICK RATTLER

Recommended by National Paving Brick Manufacturers' Association—Exact Instructions for Constructing Rattler and Abrasive Charge—Method of Testing

The National Paving Brick Manufacturers' Association has formally adopted and recommended for use a rattler for testing brick practically identical with that described in our issue of November 16, 1910; also the spherical shot which the experiments referred to in that article indicated were preferable to cubical shot. As this rattler has now been formally recommended by the association, and we presume will be adopted by the several societies interested in the matter and by most cities using paving brick, we are presenting herewith the complete specifications for rattler and for shot.

The association will furnish without cost to probable users of paving brick complete drawings of the machine described in these specifications. In order that they might have definite information to give as to the cost of these machines, Mr. W. P. Blair, the secretary of the association, obtained from Hetherington and Berner, of Indianapolis, an offer to construct the machine for the following prices: Barrel, including plate liners and head liners, \$76.65; frame and mechanism generally, \$73.35; or \$150.00 for the rattler complete. For the plate liners they charge \$8.40 for a set of fourteen; and for the head liners \$16.25 for a set of two. For a set of 25 large spheres and 325 small spheres they charge \$22.50, or 4½ cents a pound.

Secretary Blair informs us that the Board of Control of the association has appointed a committee to carefully consider and revise the "Directions No. 1" brought out by the association two or three years ago for laying vitrified brick street pavements, with a view to correcting any failures in the original directions to clearly and concisely express their ideas as to the best method of laying brick pavements.

THE RATTLER

The machine shall be of good mechanical construction, self-contained, and shall conform to the following details of material and dimensions, and shall consist of barrel, frame and driving mechanism as herein described.

THE BARREL

The barrel of the machine shall be made up of the heads, head liners and staves.

The heads shall be cast with trunnions in one piece. The trunnion bearings shall not be less than two and one-half inches ($2\frac{1}{2}$) in diameter or less than six inches (6) in length.

The heads shall not be less than three-fourths inch ($\frac{3}{4}$) thick nor more than seven-eighths inch ($\frac{7}{8}$). In outline they shall be a regular fourteen-sided (14) polygon inscribed in a circle twenty-eight and three-eighths inches ($28\frac{3}{8}$) in diameter. The heads shall be provided with flanges not less than three-fourths inch ($\frac{3}{4}$) thick and extending outward two and one-half inches ($2\frac{1}{2}$) from the inside face of head to afford a means of fastening the staves. The flanges shall be slotted on the outer edge, so as to provide for two (2) three-fourths inch ($\frac{3}{4}$) bolts at each end of each stave, said slots to be thirteen-sixteenths inch ($\frac{13}{16}$) wide and two and three-fourths inches ($2\frac{3}{4}$) center to center. Under each section of the flanges there shall be a brace three-eighths inch ($\frac{3}{8}$) thick and extending down the outside of the head not less than two inches (2). Each slot shall be provided with recess for bolt head, which shall act to prevent the turning of the same. There shall be for each head a cast-iron head liner one inch (1) in thickness and conforming to the outline of the head, but inscribed in a circle twenty-eight and one-eighth inches ($28\frac{1}{8}$) in diameter. This liner or wear plate shall be fastened to the head by seven (7) five-eighths inch ($\frac{5}{8}$) cap screws, through the head from the outside. These wear plates, whenever they become worn down one-half inch ($\frac{1}{2}$) below their initial surface level, at any point of their surface, must be replaced with new. The metal of which these wear plates are to be composed shall be what is known as hard machinery iron, and must contain not less than one per cent (1%) of combined carbon. The faces of the polygon must be smooth and give uniform bearing for the staves. To secure the desired uniform bearing the faces of the head may be ground or machined.

THE STAVES

The staves shall be made of six-inch (6) medium steel structural channels twenty-seven and one-fourth ($27\frac{1}{4}$) inches long and weighing fifteen and five-tenths pounds (15.5) per lineal foot.

The channels shall be drilled with holes thirteen-sixteenths inch ($\frac{13}{16}$) in diameter, two (2) in each end, for bolts to fasten same to head, the center line of the holes being one inch (1) from either end and one and three-eighths inches ($1\frac{3}{8}$) either way from the longitudinal center line.

The space between the staves will be determined by the accuracy of the heads, but must not exceed five-sixteenths inch ($\frac{5}{16}$). The interior or flat side of each channel must be protected by a lining or wear plate three-eighths inch ($\frac{3}{8}$) thick by five and one-half inches ($5\frac{1}{2}$) wide by nineteen and three-fourths inches ($19\frac{3}{4}$) long. The wear plate shall consist of medium steel plate, and shall be riveted to the channel by three (3) one-half inch ($\frac{1}{2}$) rivets, one of which shall be on the center line both ways and the other two on the longitudinal center line and spaced seven inches (7) from the center each way. The rivet holes shall be countersunk on the face of the wear plate and the rivets shall be driven hot and chipped off flush with the surface of the wear plate. These wear plates shall be inspected from time to time, and if found loose shall be at once riveted, but no wear plate shall be replaced by a new one except as the whole set is changed. No set of wear plates shall be used for more than one hundred and fifty (150) tests under any circumstances. The record must show the date when each set of wear plates goes into service and the number of tests made upon each set.

The staves when bolted to the heads shall form a barrel twenty inches (20) long, inside measurement, between wear plates. The wear plates of the staves must be so placed as to drop between the wear plates of the heads. These staves shall be bolted tightly to the heads by three-fourths inch ($\frac{3}{4}$) bolts, and each bolt shall be provided with lock nuts, and shall be inspected at not less frequent intervals than every fifth (5th) test and all nuts kept tight. A record shall be made after each such inspection, showing in what condition the bolts were found.

THE FRAME AND DRIVING MECHANISM.

The barrel should be mounted on a cast-iron frame of sufficient strength and rigidity to support same without undue vibration. It should rest on a rigid foundation and be fastened to same by bolts at not less than four (4) points.

It should be driven by gearing whose ratio of driver to driven should not be less than one (1) to four (4). The counter shaft upon which the driving pinion is mounted should not be less than one and fifteen-sixteenths inches ($1\frac{15}{16}$) in diameter, with bearings not less than six inches (6) in length and belt driven, and the pulley should not be less than eighteen inches (18) in diameter and six and one-half inches ($6\frac{1}{2}$) in face. A belt of six-inch (6) double-strength leather, properly adjusted so as to avoid unnecessary slipping, should be used.

THE ABRASIVE CHARGE

(a) The abrasive charge shall consist of two sizes of cast-iron spheres. The larger size shall be three and seventy-five-hundredths inches (3.75) in diameter when new and shall weigh when new approximately seven and five-tenths pounds (7.5) (3.40 kilos) each. Ten shall be used.

These shall be weighed separately after each ten (10) tests, and when the weight of any large shot falls to seven pounds (7) (3.175 kilos) it shall be discarded and a new one substituted; provided, however, that all of the large shot shall not be discarded and substituted by new ones at any single time, and that so far as possible the large shots shall compose a graduated series in various stages of wear.

The smaller size spheres shall be when new one and eight hundred and seventy-five thousandths inches (1.875) in diameter and shall weigh not to exceed ninety-five hundredths pounds (0.95) (0.430 kilos) each. Of these spheres so many shall be used as will bring the collective weight of the large and small spheres most nearly to three hundred pounds (300), provided that no small sphere shall be retained in use after it has been worn down so that it will pass a circular hole one and seventy-five hundredths inches (1.75) in diameter, drilled in a cast-iron plate one-fourth inch ($\frac{1}{4}$) in thickness or weigh less than seventy-five hundredths (0.75) pounds (or 0.34 kilos). Further, the small spheres shall be tested by passing them over such an iron plate drilled with such holes, or shall be weighed after every ten (10) tests, and any which pass through or fall below specified weight shall be replaced by new spheres, and provided, further, that all of the small spheres shall not be rejected and replaced by new ones at any one time, and that so far as possible the small spheres shall compose a graduated series in various stages of wear. At any time that any sphere is found to be broken or defective it shall at once be replaced.

(b) The iron composing these spheres shall have a chemical composition within the following limits:

Combined carbon—Not less than 2.50%.

Graphitic carbon—Not more than 0.10%.

Silicon—Not more than 1%.

Manganese—Not more than 0.50%.

Phosphorus—Not more than 0.25%.

Sulphur—Not more than 0.08%.

For each new batch of spheres used the chemical analysis must be furnished by the maker, or be obtained by the user, before introduction into the charge, and unless the analysis meets the above specifications, the batch of spheres shall be rejected.

THE BRICK CHARGE

(a) The number of brick per charge shall be ten (10) for all bricks of the so-called "block size" whose dimensions fall between from eight (8) and nine (9) inches in length, three (3) and three and three-fourths ($3\frac{3}{4}$) inches in breadth and three and three-fourths ($3\frac{3}{4}$) and four and one-fourth inches ($4\frac{1}{4}$) in thickness. No block should be selected for test that would be rejected by any other requirements of the specifications.

The brick shall be clean and dried for at least three hours (3) in a temperature of one hundred (100) degrees Fahr. before testing.

THE TEST

The rattler shall be rotated at a uniform rate of not less than $29\frac{1}{2}$ nor more than $30\frac{1}{2}$ revolutions per minute, and 1,800 revolutions shall constitute the standard test.

A margin of not to exceed ten (10) revolutions will be allowed for stopping.

STOPPING AND STARTING

Only one (1) start and stop per test is regular and acceptable.

A counting machine shall be attached to the rattler for counting the revolutions.

THE RESULTS

The loss shall be calculated in percentage of the original weight of the dried brick composing the charge. In weighing the rattler brick any piece weighing less than one (1) pound shall be rejected.

RECORDS

(a) The operator shall keep an official book, in which the alternate pages are perforated for removal. The record shall be kept in duplicate, by use of a carbon paper between the first and second sheets, and when all entries are made and calculations are completed the original record shall be removed and the carbon duplicate preserved in the book. All calculations must be made in the space left for that purpose in the record blank, and the actual figures must appear. The record must bear its serial number and be filled out completely for each test, and all data as to dates of inspection and weighing of shot and replacement of worn-out parts must be carefully entered, so that the records remaining in the book constitute a continuous one. In event of further copies of a record being needed, they may be furnished on separate sheets, but in no case shall the original carbon copy be removed from the record book.

GRANITE BLOCK SPECIFICATIONS

A CONTRACT has just been let for paving fifteen blocks of Fourth Avenue, New York City, with granite blocks under specifications which "are quite a departure," says Chief Engineer Tillson, "from any that have been used before in this city, and the department thinks that they will give the best granite pavement that has ever been laid in the country." The most noticeable clauses of the specifications are as follows:

Paving Cement

The paving cement to be used in filling the joints between and around the paving blocks and bridgestones, as hereafter provided, shall be of the best pitch, obtained either from the distillation of coal tar or from asphaltic oils, and must have the following properties:

Paving Filler from Coal Tar.—Its specific gravity shall not be less than 1.23 at 60 deg. Fahr. Its melting point shall be not less than 130 deg. nor more than 140 deg. Fahr. It shall contain not less than 22 per cent nor more than 35 per cent of free carbon.

Paving Filler from Asphaltic Oils.—Melting point not less than 195 deg. Fahr. nor more than 210 deg. Fahr. Shall be soluble in carbon tetrachloride to the extent of 99.5 per cent. Shall have a penetration at 77 deg. Fahr. when tested with a No. 2 needle and 100-gram weight for five seconds of not less than 30 nor more than 40, and shall have a penetration at 32 deg. Fahr. when tested with a No. 2 needle and a 200-gram weight for one minute of not less than 18 nor more than 30.

The above determinations are to be made in accordance with the standard methods adopted by the laboratory of this bureau, descriptions of which methods are on file in the office of the Chief Engineer.

The Blocks

Where the contract calls for improved granite the stones shall be of equal quality as that specified for the ordinary granite. The size of the blocks, however, shall be as follows: not less than 7 nor more than 11 inches in length; not less than 3½ nor more than 4½ inches in width, and 5 inches in depth. A variation of ¼ of an inch each way will be allowed in the depth of the blocks. The blocks are to be rectangular, with tops and sides uniform in thickness, to lie close and with a fair and true surface; free from bunches and so cut or dressed that when laid stone to stone the joints shall not exceed ⅜ of an inch in width. The head of the block shall be so cut that it shall not have more than ¼ of an inch depression from a straight edge laid in any direction across the head and held parallel to the general surface of the block. Over special constructions the blocks may be of dimensions other than above specified when approved by the engineer.

The stones from each quarry shall be piled and laid separately in different sections of the work, and in no case shall the stone from different quarries be mixed. The blocks must be separated before they are brought upon the work into two classes, one from 3½ to 4 inches and the other from 4 to 4½ inches in width, and so delivered on the street.

Laying

On a sand bed one inch in thickness placed upon the concrete shall be laid the stone blocks at right angles as may be directed. Each course of blocks shall be of the same width and laid straight and regularly, making with the end joints a lap of at least 3 inches, and in no case shall stones of different widths be laid in the same course except on curves. The blocks shall be laid stone to stone, so that the joints may be as small as possible. After the blocks are laid dry sand shall be spread over the surface of the pavement and broomed into the joints in such quantity as to fill same to within 3 inches from the top.

Ramming

The blocks must then be thoroughly rammed and the ramming repeated until they are brought to an unyielding bearing with a uniform surface, true to the given grade and crown. No ramming shall be done within 20 feet of the face of the work that is being laid.

Temperature of Paving Cement

The boiling paving cement, heated to a temperature of 300 deg. Fahr. and of the composition hereinbefore described, shall then be poured into the joints until the same are full and remain full. The joints shall be poured a second and third time, if necessary, so that they shall remain permanently filled with the paving cement.

The appliances for heating paving cement shall be sufficient in number and of such efficiency as will permit the pourers to closely follow the back rammers, and all joints of the finally rammed pavement shall have been filled with paving cement, as above noted, before the cessation of the work for the day or any other cause.

No Carting on Pavement

No horse, cart, truck or vehicle of any description shall be permitted to stand on, or pass over, the pavement until the joints have been finally poured with cement as above and the same has had time to harden, and, by car tracks, the contractor shall furnish men to pass cars thereover.

Maintenance

The contractor shall immediately repair and make good to the satisfaction of the engineer any settlement or any depression in the pavement which shall occur at any time during the period of one year from the date of the acceptance of the whole work; * * * and if the termination of the said period of maintenance shall fall within the months of December, January, February or March, then, and in that case, the said months of December, January, February and March, or such part thereof as the president may determine, shall not be included in the computation of the said period of one year during which the work is to be kept in repair by the contractor, and in that case the payment to be made under the provisions of this contract shall not be made before the first of April next thereafter, unless otherwise specially permitted by the president.

In case there are railroad tracks in any street or public place within the limits of this contract, then this maintenance clause shall not apply to those portions of the street or public place between such tracks, between the rails of the tracks and for 2 feet in width outside of the tracks.

The Borough President reserves the right to allow any railroad company to pave the railroad area by special contract.

The contractor shall have the right, in the case of trenches, to provide against settlement by covering the surface of the cut with broken stones and maintaining the surface for six days.

During the period of maintenance the contractor shall, within five days after the receipt of notice so to do, restore the pavement over all openings made by corporations or plumbers for making new service connections, or repairing, renewing or removing the same, and over all trenches made for carrying sewers, water or gas pipes, or any other subsurface pipes or conduits, for the building or laying of which permits may be issued by the president, for the sum of \$3.50 per square yard for all openings less than 10 square yards in area, and \$3 per square yard over all trenches measuring more than 10 square yards in area, and \$3.50 per square yard for restoring the pavement over all openings between or alongside of surface railroad tracks which shall exceed 10 square yards in area, except that in case of an injury to the surface of the pavement, caused by fire or accident, it shall be replaced for the sum of \$2.50 per square yard. The concrete foundation as relaid shall be 6 inches in thickness. It shall consist of 1 part of the best quality of Portland cement, 3 parts of sand and 6 parts of broken stone. All materials to be of the same quality and mixed in the same manner as specified in this contract. The contractor shall not demand additional or further payment on account of repairing any injured or sunken pavement laid over the repairs above described.

The period of maintenance shall be in force through the year, irrespective of any changes that may occur in traffic conditions, on or across said streets, whether due to the widening of said roadway or to the construction, reconstruction or rearrangement of new or existing surface or subsurface constructions thereon, or to any other cause.

The amount included in this contract is 22,190 square yards. It was awarded to the Republic Construction Company, the lowest bidder, at \$3.55 per square yard; the highest bid being about 37 per cent greater.

It will be noticed that the blocks specified are to have no greater variation from a plane surface than ¼ inch on the head, and practically the same on the sides. This is a much more regular block than that heretofore specified and used.

With these narrow joints gravel could not be used for filling them, and sand and pitch or asphaltic filler will be used. It is considered impracticable to use Portland cement filler, since this would require the closing of the street to all traffic for a week or ten days and this the department does not believe the citizens would "stand for," nor could it be enforced without a squad of police at every cross street.

OILING SHELL ROADS

In his annual report for 1910, city engineer J. H. Dingle, of Charleston, S. C., states that one of the shell roads of that city was oiled at a cost of 5½ cents per square yard, but the results of this were not as satisfactory as of oiling macadam. The shell, after being thoroughly compacted by rolling and traffic, absorbs the oil to a very limited depth only, and the shell is soon abraded to this depth and blows away.

WOOD BLOCK PAVEMENTS OF ATLANTA

The Earlier Pavements—Modern Treatment and Construction —Statistics Showing Extent and Cost of Pavements and General Conclusions

By JAMES NISBET HAZLEHURST, Consulting Engineer

ATLANTA'S first advertisement and entry into national notice came through Sherman's famous march to the sea. The torches which lighted the desolation of war focused general attention to this section. This unsolicited and gratuitous advertisement was followed by an influx of new population and in 1880 Atlanta's civic pride and the first industrial exposition, following that of the Centennial at Philadelphia, resulted. These two occurrences were epochs commemorating an awakened spirit and progressive tendencies growing like the proverbial mushroom. Pressing demand for better roadways resulted in the laying of many miles of Belgian block pavements, quarried from the famous "Stone Mountain," one of the most remarkable granite formations in the United States, and located less than twenty miles from the city of Atlanta. This stone pavement was laid only on a sand cushion and cost less than \$1.50 per square yard. It was badly laid and maintained, and during the past ten years the imperative need for better streets to accommodate increasing traffic resulted in the laying of the first modern rectangular treated block pavements. Some ten or twelve years before the present time a pioneer citizen of Atlanta succeeded in enlisting the sympathy of the city officials in a wood block pavement on one of the principal avenues of the city. The construction of this pavement followed that then in vogue at Paris, France, and other continental cities, but also partook of some of the features of the old Nicholson block. The material consisted of untreated timber sawed into cubes of about 6-inch dimensions; these were laid upon board foundations, were grouted in with a tar filler and then heavily coated with sand sprinkled over the top and rolled to a smooth surface. As might be expected at this time, this street is in bad condition and will shortly have to be entirely relaid.

The first creosoted wood block pavement was placed in 1904

upon one of the highway bridge floors, but it was not until 1905 that a well prepared and well laid wood pavement was introduced into the city of Atlanta. This came about through a private enterprise. The Candler Investment Company, then completing a marble seventeen-story office building, said to be second only in attractiveness and general utility to the Frick Building of Pittsburgh, determined to take up at their own expense the granite block which surrounded two sides of this structure and to replace this material with the best and most modern type of pavement. The materials were purchased by

HOUSTON STREET, CANDLER BUILDING ON THE LEFT

the Investment Company and were laid under the direct supervision of Hon. Henry L. Collier, then Commissioner of Public Works of the city. The blocks were of the long leaf yellow creosote-resinate process of treatment. They were laid upon six inches of 1-3-6 concrete, upon a thin mortar bed, the blocks being pressed to position by templet. (An illustration shows this section of pavement, the street being elsewhere surfaced with granite.) The traffic at this corner is hardly so great as that upon the streets adjacent, but still the pavement is subject to considerable travel. A careful examination shows no visible deterioration or evidence of wear.

Below appears a table giving the statistics of Atlanta's modern wood block pavements, and from which it will be noted that

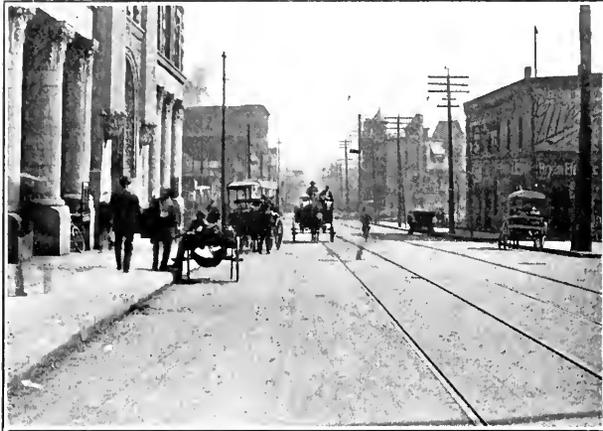

MARIETTA STREET AT INTERSECTION WITH NORTH FORSYTH STREET

since 1907 there has been laid by the city approximately 434 miles of creosoted wooden block pavements totaling 92,418 square yards, at an average price of \$2.75 per yard, making a total expenditure of \$252,301.11 during the past four years:

STATISTICS OF WOOD BLOCK PAVEMENTS

EDGEWOOD AVE., LOOKING EAST FROM PRIOR ST.

An analysis of the table will show a radical difference in the cost of the pavement since the year 1910, and this can be accounted for largely by the fact that at this time there is in operation a local treatment plant, whereas before the blocks were shipped from creosoting works along the Gulf coast.

CONSTRUCTION

The foundations for the pavement under the existing specifications require the base to be of Portland cement concrete in proportions 1-4-8, to be mixed and laid in the usual manner. They reserve the right to lay the block at such angles with the curb as the engineer may elect, but except at intersections the practice is to place them in parallel courses at right angles to

the curb, the blocks in adjoining courses breaking joints. Three courses are laid next to and parallel with the curb, at which point three expansion joints 1/2 inch in width are provided for, to be filled with No. 6 coal tar paving pitch poured at a temperature of 300 deg. Fahr. Other expansion joints may be constructed as directed by the engineer, and in general such joints are placed along the line of the street at intervals of about 50 feet. The blocks are laid upon a cushion of clean sand evenly spread over the foundations to a depth of 1/2 inch and rolled to a surface with a steam roller. After rolling a sand filler is swept into the joints.

The surfacing material must consist of wood blocks of the following dimensions: 3 or 3 1/2 inches in depth, 3 inches in width and from 6 to 8 inches in length, with the fiber of the wood running in the direction of the depth. The wood from which the blocks are to be made must be long leaf yellow pine, 90 per cent of which shall be heart, the blocks shall be well manufactured and free from the usual objectionable defects. No block shall vary in width and depth more than 1/16 of an inch from other blocks used on the same street or contract. The specifications provide that all blocks shall be treated with creosote or some approved antiseptic or waterproof mixture, and each block shall contain at least 20 pounds of such compound per cubic foot of wood, provided that where a block contains much natural pitch it shall receive as much of the mixture as can be forced into it under the usual treatment. The preservative specified is the dead oil of coal tar or coal tar product. It must not contain more than 3 per cent of water and a correction shall be made in the amount of creosote used to correspond to the water found in the oil. Only traces of acids are permitted. Its specific gravity at 68 deg. Fahr. shall be not less than 1.12 nor more than 1.15; the oil with which the blocks are treated shall not contain more than 2 per cent free carbon, nor more than 2 1/2 per cent insoluble in benzole.

The crown of the streets paved with wood ranges from 6 inches on 40-foot streets to 12 inches on 100-foot roadways. There is no maximum grade limit for wood pavements, but so far as known no such pavement has been laid upon grade steeper than 4 per cent. In observing the traction conditions during wet weather, the writer has noted the fact that where a team is approaching a steep grade, as for instance the maximum 4 per cent, the tendency to slip and to slide does not seem to be in the direction of the pull, but at right angles thereto. On a street 40 feet wide with 6 inches crown the slope is 3 feet per 100 at right angles to the line of direction, and as the animals are pulling against each other as they go up the rise, the

BROAD STREET, LOOKING NORTH FROM VIADUCT

tendency seems for one or the other to slip so as to fall under its companion. In other words, the slip is toward the side of the roadway rather than in its direction. From this it might be argued that the cross-section should be considerably modified where wood block pavement is used as a surfacing material.

Captain R. M. Clayton, M. Am. Soc. C. E., is city engineer and prepared the specifications and supervised the construction of this work. It might be mentioned that up to about a year ago the standard specifications provided for an oil of 1.07 gravity. There was a conflict over this provision in which rival companies and interested citizens succeeded in holding up the work and securing an investigation, the net result being a change in the specifications as hereinbefore written.

At the present time the negro is the prevailing unskilled laborer with ruling wages for such work of \$1.50 per day of ten hours. Broken stone delivered along the street may be had for \$1.50 per cubic yard; concrete sand, \$1 per cubic yard, and cement, \$1.25 net per barrel. Teams are worth \$4 per day with able drivers; foremen, \$4 for ten hours' time.

CONCLUSION

According to the United States census of 1910 the city has a population of 154,000. The business streets are generally from 40 to 50 feet in width, but one of them, Marietta Street, is 100 feet between curb lines. Traffic upon these streets is generally shown by the illustrations, although no statistics are available showing the extent and character of same. The street work included in the table has been laid within the congested district of the city and has been subject to the heaviest traffic due to this fact. There has been no expense for maintenance to this time and no repair work done beyond removing and replacing a small amount of this work on Edgewood Avenue along the street railway tracks, which have rails of the 7-inch grooved girder type. The blocks abut directly against the rail and an insufficient foundation to these tracks at this particular point is given as the cause of the slight trouble.

Since the commencement of the modern wood block pavement in this city no other type has been used so far as known, with the exception of certain streets which are paved by the County Commissioners with a bituminous pavement and a few streets which have been cherted or laid with a tar macadam in outlying districts. In general both the city officials and the taxpayers are entirely satisfied with the materials furnished and work performed, and at this time wood block is the most popular of the street surfacing materials in this city.

OIL MACADAM IN CALIFORNIA

AN interesting discussion on the construction of oiled macadam roads was held at the thirteenth annual convention of the League of California Municipalities. Mr. John Beyer, of Pasadena, opened the discussion by describing the method employed in that city. They put in 6 inches of material for the foundation, experience having shown that it will roll down one-third or to 4 inches. While the base is being rolled, screenings are thrown on the surface to fill all the voids and make it quite dense, but not so much so that the second course will not readily unite with it. Three-fourths of a gallon of oil per square yard is applied to the base after the first rolling, following which it is rolled again and No. 2 rock (from ¾-inch to 1¼-inch size) is spread and graded perfectly to a smooth surface. Following this, three-fourths of a gallon of oil to the square yard is applied to the second course. It is then rolled and a ¾-inch top surface is put on and graded. "If you have a competent man on your grader he can make almost as true a surface of the street as a board run through a planer in a mill." On this, again, oil is applied to the extent of ¼ to ¾ gallon, on which screenings are spread and the street is given a final rolling and is then ready for traffic.

In response to questions, Mr. Beyer stated that they sprinkled the oil with water, "More, perhaps, so that we can get right into it with the roller without picking it up at all. I think it also has a tendency to spread oil throughout the base. At any rate, we can go right into the base with a wagon without the

oil sticking to the roller and that gives us a chance to put on the succeeding layers and run our roller without trouble." Replying to another question as to whether there was not a tendency to use too much oil, Mr. Beyer stated that this was often the case, instancing one street where the property owners insisted on the use of more oil, which was finally consented to, but the contractor was told to keep his oil good and hot and leave as little on the street as possible. Although he carried out these instructions, in less than two weeks it was necessary to apply more sand, and two or three weeks later the grader with its blade ground perfectly sharp was used to shave off some of the oil.

The cost of such a road in Pasadena, 6 inches thick was 10 cents a square foot. The work cost \$1.90 a cubic yard, delivered on the street. The oil used had a gravity of 10 to 11 and carried less than 75 per cent asphalt.

WOOD BLOCK PAVING IN ABERDEEN

Tamarack with Sixteen-Pound Creosote Treatment—Laid at Angle with Curb—Low Crown—Swelling of Blocks—Laying Along Rails

By R. B. EASTON, Jun. Am. Soc. C. E., City Engineer

ABERDEEN, S. D., is a thriving western metropolis of approximately 11,000 inhabitants as shown by the latest United States census and is fast becoming a great jobbing and distributing point for all the western country recently opened up by the Puget Sound line of the Chicago, Milwaukee and Puget Sound Railroad, and all of that vast new country which is rapidly springing into prominence looks toward Aberdeen for its supplies of every description. Nine lines of railroad, a clearing house record of over \$20,000,000.00 for 1909, which was exceeded in 1910, together with a wholesale business of \$12,000,000.00 in 1909, and which also was exceeded in 1910, are all evidence of the vast amount of business done in the city.

The importance of the city as a transfer point for freight, together with the progressive attitude of citizens, led to the first paving, which was laid in 1907 under the supervision of Mr. D. C. Washburn, Mem. Am. Soc. C. E., then city engineer, and the writer, then assistant city engineer. The material was a three-inch block of Norway pine or tamarack having a sixteen-pound creosote treatment. The blocks were laid on a five-inch foundation of 1:6 pit run sand and gravel concrete on top of which was a one-inch sand cushion of sifted sand. The crown of the pavement laid in 1907 is about 2 per cent of the width of the street between curbs and the transverse section is a parabola. The blocks were laid at an angle of about 22½° with the curb and were rolled to a true crown with a five or six-ton steam roller, after which pitch was poured on hot so as to entirely fill all the joints as well as an expansion joint of about one inch along either curb. This pitch was spread with an ordinary hand scraper under rigid inspection. After the pitch had cooled a thin layer of fine sand was spread over the entire pavement to take up the surplus pitch on top of the blocks.

During the block laying two inspectors were kept busy searching for poor blocks having rotten centers or wind shakes, and these together with all blocks whose length was less than three inches were thrown to one side and not used.

The 1907 paving, amounting to 31,125.1 square yards, was laid by the Kettle River Company, of Minneapolis, Minn., at a cost to the city of \$92,888.55. The cost per yard was \$2.84, to which was added a ten-year guarantee of 5 per cent, making the actual cost to the city \$2.98 per square yard. The cost of the paving, with the exception of the street intersections which were paid out of a general fund, was assessed on the abutting property in the manner common to special assessments.

In 1908 other business streets were paved under practically the same specifications by Messrs. Flinn and Hanlon, of Sioux City. The total amount laid in 1908 was 14,336 square yards and the cost to the city was \$39,280.55. The cost per square

yard was \$2.74 and there was no guarantee. The cost of paving the intersections was paid from a general fund.

In the year 1909 the people, not yet being satisfied, asked for still more paving and accordingly some 42,600 square yards were laid of creosote block as before and under about the same specifications. A portion of the work was given a crown of about $2\frac{1}{2}$ per cent. The total cost of the 1909 paving was about \$112,040.00 or at the rate of \$2.63 per square yard. The entire cost was assessed against the abutting property and none was paid for from the general fund.

In 1910 paving was laid under the supervision of the writer and some departure was made from the specifications of former years. Considerable trouble had been experienced from the slippery condition of the older paving, particularly that laid in 1909 and crowned about $2\frac{1}{2}$ per cent, which paving was often extremely slippery in cold weather or when the streets were being sprinkled. At either time pedestrians occasionally fell and many horses and teams secured hard falls, in some cases injuring the horses severely. Accordingly the crown was not allowed to exceed 2 per cent of the width of the street between curbs and was made slightly less wherever possible. This, while not draining the street quite so rapidly, secures a roadway every foot of which is a driving way and which is free from danger to pedestrians and horses.

Another change also was made in the filler used and in the expansion joints. The pitch used on the older pavement becomes very sticky in warm weather and fails to provide the necessary expansion during late winter when the days are warm and the nights quite cold. Accordingly "Pioneer Asphalt" filler was used, being put on in the same way as the pitch filler. A transverse expansion joint at every hundred feet was added in addition to the usual expansion joint along the curb. Considerable trouble was experienced in heating the asphalt sufficiently to thoroughly enter all the joints, the melting point of the asphalt filler being much higher than for the pitch. While the asphalt filler is yet new it seems to be the superior of the two classes of filler, during recent warm days this filler being soft and elastic, while the pitch was yet hard and glassy, and in addition the asphalt tends to make the street still more noiseless than does the other filler. It was noticed recently that the asphalt had been crowded out of the expansion joints by the expansion of the blocks so that it stood up in ridges, showing that it was performing its function in proper manner. While it is too early to tell which will be found the superior filler in the long run the asphalt so far shows several points of advantage. Taken altogether, the low-crowned street with the asphalt filler seems to please those who use it more than the older streets, and they more than any one else deserve a careful hearing.

It is contended by some that the lower crown will not provide rapid enough drainage to the gutter, but it would seem that the traffic using the street should receive prior consideration, for it is with this traffic in view that the streets are paved; and if it is found that the paving will not drain satisfactorily and prevent decay then a change must be made for another kind of paving which will meet the requirements.

However, the question of the longevity of the pavement and the maintenance expense is worthy of serious consideration; 108,607 square yards of pavement representing an investment of \$207,424.00 is no small item of expense in the development of a city of this size and its life and maintenance cost become vital factors in the determination. While our pavement is all too new to decide from it the advisability of its use, the following observations may prove interesting. Traffic over our streets is large; the immense amount of transfer and wholesale freight shipped in and out of the city is all teamed over this pavement and as a result traffic on our streets compares favorably in amount with that in many larger cities. So far no wear whatever is apparent on any of the blocks. In one case, along the side of a railroad freight house a gutter was formed some five or six feet from the building, the paving being sloped upward from the gutter toward the building rather too sharply so that heavy teaming which took place along the side of the

freight house crushed and misplaced some of the blocks, but this was due to too sharp a slope rather than to the fault of the blocks themselves.

A considerable amount of trouble has been and is being experienced with the bulging of the 1907 and 1908 paving during wet weather, and also at the present season when the days, being warm, allow the ice and snow to melt, while the nights are cold. The street department is kept busy at such times taking up and re-laying these places and while the blocks themselves do not seem to be injured the expense is considerable. It might seem that the blocks were laid too closely when first put down, but such was not the case. The real cause seems to be a combination of rather sluggish drainage combined with the considerable expansion of wood upon becoming wet. Our topography is very flat, necessitating gutters on grades of one-third of one per cent and sometimes less. The only remedy or partial remedy for the trouble during the present season of the year would seem to be in carting the snow from the streets after each storm, thereby preventing the formation of ice which must remain and melt on top of the pavement.

During the past year street car tracks have been laid through a considerable part of the 1907 and 1908 paving. During the progress of this work opportunity was afforded for the inspection of the sub-grade and in a few cases settlement was noted in the material in house connection ditches showing the need for extreme care in back-filling and tamping these.

In re-laying the blocks between the car tracks the blocks in contact with the "T" rails, being three inches thick, fitted into the channel between the head and base of the rail and were laid in that manner, the balance of the blocks being laid so that the section of the pavement between the rails was crowned slightly between them. It is expected that this arrangement will prove unsatisfactory, for placing the block in contact with the rail in the channel formed by the head and base of the rail forms too deep a groove in the pavement inside the rail, causing teams much trouble in getting the wheels out of the groove and endangering light or old wheels. The solution of the trouble will perhaps be in a block specially cut to fit alongside the track and preventing so deep a groove.

From our experience here it is quite evident to the writer that the street to be paved should be prepared one season and the paving laid the next. Adequate ordinances should be passed specifying when and how public corporations should perform their work in the streets; sufficient help should be afforded the engineering department to see that the ordinances are enforced; the city should see to it that all public sewers and water mains are in; power should be given the engineering department to have curbing changed and re-built where necessary to make a more perfect street gradient, and with this necessary work done a season ahead of the paving the resulting street when paved would be better in every respect and the economy in the long run be considerable.

WOOD JOINTED GRANITE BLOCKS

DURING the year 1910 there was tried in several cities, including Boston, Mass.; Baltimore, Md.; Jersey City, N. J., and Brooklyn, N. Y., a pavement which is believed to be novel in one of its features. This consists of a granite block paving in which the blocks are wedged apart and held in place by oak wedges driven into the joints. According to Mr. L. K. Rourke, Commissioner of Public Works, then Superintendent of Streets, of Boston, old granite blocks were used and these, when being laid, were left with joints sufficiently open to permit the use of the white oak wedges, and these wedges were driven into the joints between the blocks of successive rows until the top of the wedge projected about $\frac{1}{4}$ inch above the tops of the blocks, the projecting part of the wedge being broomed down by the traffic so as to more or less fill the depressed parts of the pavement formed by the rounded edges of the blocks. It was thought that these wedges would serve several purposes, not only preventing the blocks from rocking, but also making the pavement much less slippery and deadening the noise to a considerable extent.

TERMS USED IN BITUMINOUS ROAD WORK

Definitions by United States Office of Public Roads of the Various Bitumens Used for Road Treatment, Their Essential Constituents and Characteristics — Terms Used in Testing and Distillation

ONE of the most welcome pamphlets which has been issued recently by the Department of Agriculture is Circular No. 93, of the Office of Public Roads, in which Mr. Prevost Hubbard, chemist of the office, defines the various terms used in bituminous road construction and maintenance, especially the materials used therein. Certain of the terms therein defined are those over which committees on bituminous nomenclature have been struggling for a year past, among them being *artificial asphalt*, *artificial bitumen*, *asphalt*, *bitumen* and *bituminous*. Most of them are terms which are continually appearing in articles treating of bituminous road construction, the meaning of some of which is probably not well understood by many engineers; among these being *Baumé*, *carbènes*, *malthas*, etc. Of so much value is this that that we offer no apology for publishing it entire, as we believe that a great many of our readers will be glad to have a brief and authoritative glossary of terms of this nature for reference.

Mr. Logan Waller Page, Director of the Office of Public Roads, states in reference to these definitions: "In view of the newness of the subject and lack of complete data, some of the statements made may in the future require modification. This circular will, therefore, be revised from time to time in order to keep it abreast with the latest information possible."

GLOSSARY OF BITUMINOUS ROAD CONSTRUCTION

So much confusion exists among road engineers and others interested in bituminous road binders concerning the meaning of certain terms as applied to these materials that it has seemed advisable to present in brief form the definitions of such terms as at present used by the United States Office of Public Roads. It should be understood, however, that these definitions are at present more or less arbitrary, owing to wide differences of opinion held by those who are considered authorities on the subject of bitumens. Notwithstanding these facts, it is hoped that this circular will furnish highway engineers and other interested persons with a foundation for acquiring and systematically classifying further information along the lines herein indicated. To aid them in this matter a brief discussion of the value of the various materials used in road construction has been given in addition to the definitions.

Acid Sludge.—A mixture of sulphonated hydrocarbons resulting from the treatment of bitumens with sulphuric acid; usually a waste or by-product obtained in this manner from the purification of tar and oil distillates. When sufficiently concentrated these sulphonated products become viscous and gummy. They are readily attacked by water and are therefore unsuitable for use as enduring road binders.

Anthracene.—A waxy crystalline hydrocarbon having the chemical formula $C_{14}H_{10}$, found in tars, principally coal tars which have been produced at high temperatures. Anthracene is believed to be of no practical value in road binders.

Artificial Asphalt.—See *Asphalts* and *Oil Asphalts*.

Artificial Bitumens.—Hydrocarbon distillates and residues produced by the partial or fractional distillation of bitumens, and hydrocarbon distillates produced by the destructive distillation of bitumens, pyrobitumens, and other organic materials, such as wood, bone, etc. Native bitumens which have been treated merely for the removal of water and extraneous organic and inorganic materials should not be classed as artificial products, but as refined native bitumens.

Asphalts.—Solid or semisolid native bitumens, consisting of a mixture of hydrocarbons of complex structure, largely cyclic and bridge compounds, together with a small proportion of their sulphur and nitrogen derivatives, but free from any appreciable amount of solid paraffins, melting* upon the application of heat and evidently produced by nature from petroleum containing little or no solid paraffins. Solid or semisolid residues produced from probably similar oils by artificial processes are sometimes called asphalts, but should more properly be termed oil asphalts. The more common types of native asphalts are known by the name of the locality in

which they occur, such as Trinidad, Bermudez, Maracaibo, Cuban, California, etc. Native asphalts with few exceptions contain water, extraneous organic or vegetable matter, and inorganic matter, such as clay, sand, etc. A large proportion of these impurities is removed by a rough refining process without otherwise changing the character of the asphalt.

Native asphalts are usually too hard to be used as road binders without first fluxing them with a heavy petroleum residuum and thus producing an asphaltic cement. Artificial asphalts are, as a rule, brought to suitable consistency during the process of manufacture.

Asphaltenes.—A term commonly applied to those hydrocarbons in petroleum, petroleum products, malthas, asphaltic cements, and solid native bitumens which are soluble in carbon bisulphide but insoluble in paraffin naphtha. As a rule paraffin naphthas of different specific gravities and boiling points dissolve different amounts of hydrocarbons in a given bitumen, and the heavier the naphtha and the higher its boiling point the greater is its solvent action. It is evident, therefore, that the percentage of asphaltenes will vary with the gravity and boiling point of the naphtha, and for this reason it would seem well to substitute for the term asphaltenes, "bitumen insoluble in paraffin naphtha," with a statement of the gravity of the naphtha used and the temperatures between which it boils. The presence of naphtha insoluble hydrocarbons is supposed to give body to the product in which they occur and to be accountable to a great extent for its binding value. They show no binding value, since many of them are hard and brittle, but they produce adhesive mixtures when fluxed with certain heavy oils. As a rule, for a given type of bitumen hardness increases with the percentage of bitumen insoluble in a given naphtha. The so-called asphaltenes are not found to any extent in native bitumens with a paraffin base, but occur principally in asphalts, malthas, asphaltic petroleum, and in blown petroleum residues. They vary chemically and physically with the products in which they occur, and, therefore, do not represent definite chemical compounds.

Asphaltic Petroleum.—Asphaltic petroleum, or asphaltic oils, are petroleum containing an asphaltic base, i. e., they are capable of producing residues very similar to native asphalts if evaporated or distilled down to the consistency of such asphalts. They contain little or no solid paraffins and are thus differentiated from paraffin petroleum. Native asphalts are probably produced from such oils by natural processes.

Asphaltic Cement.—The term asphaltic cement was originally applied to a product obtained by fluxing an asphalt with a sufficient quantity of heavy residual oil or flux to produce a binder of suitable consistency for paving purposes. In its broadest sense it may be applied to all semisolid bitumens of an asphaltic nature which are of suitable consistency for use as binders in street or road construction, whether prepared by fluxing a solid native or artificial bitumen or by reducing an asphaltic or semiasphaltic petroleum by distillation or other process.

Baumé Gravity.—An arbitrary scale of specific gravity or density of liquids, usually expressed as degrees Baumé or ° B. This scale is commonly used in connection with oil products. For liquids lighter than water the scale begins at 10° B., which represents the specific gravity of water, or 1.0000. As the Baumé degrees increase the specific gravity decreases. The following formulæ are used in converting Baumé degrees for liquids lighter than water into direct specific gravity and vice versa:

$$\text{Sp. gr.} = \frac{140}{130 + \text{° B}}$$

$$\text{° B} = \frac{140}{\text{Sp. gr.}} - 130 \text{ at } 17.5\text{° C}$$

For liquids heavier than water the scale begins at 0° B., which represents the specific gravity of water, or 1.0000. In this scale the degrees Baumé increase with the specific gravity. The following formulæ are used in converting Baumé degrees for liquids heavier than water into direct specific gravity and vice versa:

$$\text{Sp. gr.} = \frac{145}{145 - \text{° B}}$$

$$\text{° B} = 145 - \frac{145}{\text{Sp. gr.}} \text{ at } 15.5\text{° C}$$

*See Bitumens.

Benzol.—A volatile colorless fluid hydrocarbon of characteristic odor having the chemical formula C_6H_6 . It occurs mainly in crude coal tars and water-gas tars, and boils at $80.4^\circ C$, so that it is removed in the first fraction when these tars are subjected to the process of distillation. Benzol is an active solvent for most bitumens. It is sometimes called benzene, but should not be confused with benzine, which is the term applied to the lighter and more volatile fractions of petroleum.

Bitumen.—Bitumens are mixtures of native or pyrogenetic hydrocarbons and their derivatives, which may be gases, liquids, viscous liquids, or solids. If solids, they melt more or less readily upon the application of heat and are soluble in carbon bisulphide, chloroform, and similar solvents. They may be divided into two main classes: (1) native bitumens and (2) artificial bitumens. Bitumens, being mixtures of hydrocarbons, can have no melting point, although this term is often used to denote the temperature at which they soften sufficiently to flow.

Bituminous.—A term applied not only to materials or objects which contain bitumen, such as bituminous rock, bituminous macadam, etc., but also to certain pyro-bitumens, such as bituminous coal, which give rise to the formation of bitumens upon being subjected to the process of destructive distillation.

Blown Petroleum.—Blown petroleum, which are often called blown oils, are petroleum residuums through which a jet of air has been passed during or just after distillation. The blowing process causes certain chemical reactions of a complicated nature to take place and results in thickening or increasing the consistency of the oil to an extent depending upon its temperature and the amount of blowing which it receives. Semi-solid and solid products are thus often formed from fluid residuums. If the oil is asphaltic or semiasphaltic in nature, asphaltic cements may be produced in this manner. Blown oils are characteristically short or nonductile when semi-solid, although they may possess considerable binding value if not originally of a paraffin nature. Blowing an oil usually increases its percentage of hydrocarbons insoluble in any given paraffin naphtha.

Carbenes.—A term commonly applied to those hydrocarbons in petroleum, petroleum products, malthas, asphaltic cements, and solid native bitumens which are soluble in carbon bisulphide but insoluble in carbon tetrachloride. The presence of an appreciable amount of these hydrocarbons indicates that the material in which they occur has been subjected to unnecessarily high temperatures. Cracked oil residuums show an increase in carbenes in proportion to the extent of cracking and the formation of these products is evidently a near step to coking. But little is known of their effect upon the value of a bitumen for road construction, but they are generally looked upon with suspicion and, in certain specifications for asphaltic cements, their presence has been limited to a low percentage.

Carbon Bisulphide.—This substance, sometimes called carbon disulphide, is a volatile and extremely inflammable compound of carbon and sulphur, boiling at $47^\circ C$. and having the chemical formula CS_2 . Pure carbon bisulphide is a colorless mobile liquid having an ethereal odor. It is one of the most active solvents for bitumens and is commonly employed for this purpose in the determination of total bitumen.

Carbon Tetrachloride.—A volatile non-inflammable compound of carbon and chlorine, boiling at $76^\circ C$. It is a colorless mobile liquid with an odor similar to that of chloroform, to which it is closely related, and has the chemical formula CCl_4 . It is an excellent solvent for bitumens, but is not usually as powerful as carbon bisulphide. It is employed in bitumen analysis for the determination of carbenes or hydrocarbons soluble in carbon bisulphide but insoluble in carbon tetrachloride.

Coal Tar.—A mixture of hydrocarbon distillates, mostly unsaturated ring compounds, produced in the destructive distillation of coal. Crude coal tar is a black, more or less viscid fluid having a gassy odor and varying in specific gravity from 1.10 to 1.25 and sometimes higher. It always contains a certain amount of ammoniacal water which makes it unsuitable for use as a road binder. When reduced to proper consistency by distillation, coal tar makes an excellent bituminous road binder, providing it does not carry too high percentages of free carbon and naphthalene. The composition of coal tar varies according to the coal from which it is produced and the method of distillation. Tars produced at high temperatures contain a large amount of free carbon and usually run high in naphthalene, while those produced at low temperatures carry less free carbon and as a rule less naphthalene. Low temperature coal tars are therefore most suitable for the preparation of road binders.*

Coke-Oven Tar.—Coal tar produced from by-product coke ovens in the manufacture of coke from bituminous coal. This

*See refined tar.

process of coke manufacture is essentially the same as that of coal gas. Larger charges of coal are, however, carbonized in the former, and as a rule carbonization is conducted at a lower temperature than in the manufacture of coal gas. The resulting tar therefore contains a smaller amount of free carbon, averaging from 3 to 10 per cent, and is better suited for the preparation of road binders than most gas-house coal tars.

Cracked Oil.—The term cracked oil, as applied to road binders, refers to petroleum residuums which have been overheated in the process of manufacture. Overheating causes a breaking down of certain constituents of the oil, which results first in the formation of carbenes and later of coke or free carbon. Badly cracked residuums are believed to be inferior road binders.

Cracking.—The process of breaking down a hydrocarbon molecule by the application of heat. This may result either in the formation of other hydrocarbon molecules, at least one of which is unsaturated and shows a higher ratio of carbon to hydrogen than the original molecule, or else in the disruption of the molecule into its elements, hydrogen and carbon. In the latter case the process is said to be destructive. The more volatile and chemically stable hydrocarbons can be cracked only at temperatures above their boiling points. In the distillation of oils this is accomplished by causing condensation to take place in the still and allowing the condensed oils to fall back into the residue, the temperature of which is considerably higher than their boiling points. In carbureted water-gas manufacture, oils are cracked by vaporizing them at a much higher temperature than their boiling points. The heavier oils will, however, crack at temperatures below their normal boiling points, and this is particularly true of asphaltic oils, which have to be distilled very carefully, sometimes under reduced pressure, in order to produce residuums which are not cracked.

Cut-Back Products.—Petroleum or tar residuums which are cut back, or fluxed, to the desired consistency with a distillate. Volatile distillates are employed for this purpose in the preparation of road binders, when it is desired to have the binder increase in consistency or become harder after application. In such cases a residuum of proper consistency for a road binder is cut back merely for the purpose of facilitating application.

Dead Oils.—Heavy oils distilled from tars at between 170° and $270^\circ C$. with a density greater than water. These oils, if free from naphthalene, serve as an excellent flux in the preparation of cut-back road binders from tar pitches, which are too brittle for this purpose.

Destructive Distillation.—A process of distilling organic materials in which the identity of the material distilled is destroyed, resulting in the formation of tarry distillates and a coke residue.

Dehydrated Tar.—Crude tar from which all water has been removed by distillation and mechanical contrivances known as separators.

Emulsions.—Oily substances made miscible with water through the action of a saponifying agent or soap. Petroleum and tars may be emulsified by this means and such emulsions, if properly prepared from good materials, are often serviceable in the treatment of roads. The majority of road emulsions can be considered only as dust palliatives and temporary binders.

Fixed Carbon.—The residual coke obtained upon burning hydrocarbon products in a covered vessel in the absence of free oxygen, according to an arbitrary method. As applied to bituminous road materials, the determination of fixed carbon would seem to be of value in connection with petroleum and asphaltic products only. Paraffin hydrocarbons produce little or no fixed carbon, while those of asphaltic character show a very considerable amount, depending upon the percentage of asphaltic compounds present and the consistency of the material. The fixed carbon determination therefore indicates the mechanical stability and body of such materials. It is not, however, an extremely accurate determination and should not be too strongly relied upon. Since fixed carbon is a product formed by ignition, it should not be confused with free carbon, which is a material already existing in suspension. The presence of any considerable quantity of free carbon vitiates a fixed carbon determination.

Flux.—As applied to road binders, this term covers fluid oils and tars which are incorporated with asphalts and semi-solid or solid oil and tar residuums for the purpose of reducing their consistency. Fluid petroleum residuums are commonly employed as fluxes in the preparation of asphaltic cements. A good flux produces an absolutely homogeneous bituminous mixture. Both petroleum and tar fluxes will produce such mixtures with native and artificial asphalts, but most fluid petroleum products will not flux tar pitches satisfactorily.

Free Carbon.—Organic matter in tars which is insoluble in

carbon bisulphide. This material is an inert black powder, which is held in suspension by the tar proper, and probably consists, not only of free carbon, but also of hydrocarbons extremely rich in carbon. It has no binding value and serves no useful purpose in a road binder other than to act as a filler. It gives the tar in which it occurs a false consistency, reduces the binding capacity of the tar, and probably interferes with its penetration into and absorption by the road stone or road surface. The maximum allowable limit of free carbon in road binders would seem to be about 20 per cent.

Gas-House Coal Tar.*—Coal tar produced as a by-product in the manufacture of illuminating gas from coal. The modern gas-house coal tar is usually produced at high temperatures and therefore carries a percentage of free carbon varying from 20 to 30 per cent and higher. Unless it is produced at low or medium temperatures and contains less than 20 per cent free carbon, it is not well suited for the preparation of a dust palliative or road binder by direct distillation. High-carbon tars may, however, be combined with low-carbon tars in such proportion as to produce, when distilled to proper consistency, excellent road binders carrying less than 20 per cent free carbon.

Gilsonite.—A very pure solid native bitumen possessing many of the characteristics of asphalt. It differs from most of the native asphalts by being more brittle, having a higher melting or softening point, and being much less soluble in 86° B. paraffin naphtha. When fluxed with certain petroleum residuums it produces excellent asphaltic cements. In the preparation of road binders it is extensively used for the purpose of reinforcing blown oils, with which it combines to form rubbery semisolid mixtures. Such preparations are sometimes termed mineral rubber.

Grahamite.—A pure solid native bitumen, black and brittle, which does not melt readily, but intumesces at high temperatures. It is differentiated from gilsonite and the native asphalts by the fact that it is almost insoluble in paraffin naphtha. It has been produced at high temperatures, as evidenced by the percentage of carbenes which it contains, and some varieties closely approach the pyro-bitumens in characteristics. It has been used to some extent in the preparation of asphaltic cements, but up to the present has been little used in the manufacture of road binders.

High-Carbon Tars.—Tars containing a high percentage of free carbon—above 20 per cent. High-carbon tars are produced at high temperatures during the destructive distillation of coal and are of inferior quality for use as dust palliatives and road binders.

Hydrocarbons.—Chemical compounds composed of the elements hydrogen and carbon. There is practically an unlimited number of such compounds, which vary greatly in physical and chemical characteristics. Complex mixtures of hydrocarbons constitute by far the greater proportion of all bitumens.

Low-Carbon Tars.—Tars containing a low percentage of free carbon—less than 10 per cent. Low-carbon tars are produced at comparatively low temperatures during the destructive distillation of coal, and also by cracking oil vapors during the manufacture of carbureted water gas. As a rule they are more suitable than high-carbon tars for use as dust palliatives and road binders, or for the preparation of such substances.

Malthas.—Malthas are very viscous semiasphaltic or asphaltic native bitumens holding an intermediate position between the petroleum of an asphaltic nature and the native asphalts. As a rule they possess excellent binding properties. They constitute the binding material of many bituminous rocks or rock asphalts, and in this capacity often serve as valuable road binders. Many malthas have a tendency to harden rapidly when exposed to atmospheric conditions, and this property, while accountable for an increase in binding value, makes them unsuitable for use as a flux in the preparation of asphaltic cements.

Malthenes.—A term commonly applied to those hydrocarbons in petroleum, petroleum products, malthas, asphaltic cements, and solid native bitumens soluble in both carbon bisulphide and paraffin naphtha, but not readily volatile at temperatures lower than 163° C. (325° F.). This class of hydrocarbons serves as a valuable permanent fluxing medium for the so-called asphaltenes or naphtha insoluble bitumen in asphaltic cements, giving the cement any desired degree of softness when present in the right amount. It is evident, therefore, that the consistency of asphaltic bitumens, and particularly stable asphaltic cements, is largely dependent upon the relative proportion of naphtha soluble and naphtha insoluble hydrocarbons. The same objection to the use of the term "asphaltenes"† applies to the use of the term "malthenes."

Mineral Rubber.—A term sometimes applied to artificial bitumens of rubbery consistency, usually composed of a mixture of gilsonite and blown petroleum residuum.

Naphthas.—Mixtures of hydrocarbons of low boiling points occurring rarely in nature, commonly obtained from the fractional distillation of certain bitumens. When this term is applied to low-boiling coal-tar distillates, it is usually prefixed by the words "coal tar." The word "naphtha" by itself is generally applied to low-boiling petroleum products. Different grades of naphtha are differentiated not only by their boiling points but also by their specific gravities, which are commonly given in Baumé degrees. Those of very low boiling points and specific gravities are called petroleic ethers. Naphthas vary not only in the two properties above mentioned but also with the type of petroleum from which they are obtained. Those derived from paraffin petroleum are quite different chemically from naphthas obtained from asphaltic petroleum. The former are much less powerful solvents for asphaltic substances than the latter. Paraffin naphtha is used as a solvent for the separation of certain classes of hydrocarbons in asphaltic substances.

Naphthalene.—A solid crystalline highly volatile hydrocarbon occurring principally in coal tars and having the chemical formula $C_{10}H_8$. Its presence in excessive quantities in road tars is believed to be detrimental, as it possesses no binding value and gradually volatilizes from the tar, leaving it hard and brittle.

Native Bitumens.—Mixtures of hydrocarbons occurring in nature, which may be gases, liquids, viscous liquids, or solids, but if solid melting* more or less readily upon the application of heat and dissolving in carbon bisulphide, chloroform, and similar solvents. The native bitumens that are of use as road materials are petroleum, malthas, asphalts, and other solid products such as gilsonite and grahamite. Native bitumens often contain impurities such as water, inorganic matter in the form of clay, silt, sand, etc., and extraneous organic or vegetable matter.

Oil Asphalts.—Artificial oil pitches or asphaltic cements produced as a residuum in the distillation of semiasphaltic and asphaltic petroleum. Many of these products are blown and are therefore known as blown oils.

Oil Pitches.—More or less hard oil asphalts.

Oil Tars.†—Mixtures of hydrocarbon distillates, mostly unsaturated ring compounds, produced in the cracking of oil vapors at high temperatures. Oil tars are usually by-products of the manufacture of oil gas or carbureted water gas.

Paraffin Naphthas.—Naphthas consisting of a mixture of light volatile hydrocarbons of the paraffin series, ordinarily obtained as light distillates of paraffin petroleum.

Paraffin Petroleum.—Petroleum the base of which is composed principally of the paraffin or open-chain series of hydrocarbons; it is thus differentiated from asphaltic petroleum which are composed largely of cyclic or ring hydrocarbons. Paraffin petroleum and the unaltered residues produced by their distillation are of inferior value as dust palliatives and road binders.

Paraffin Scale.—Solid paraffins recovered by distillation and precipitation of the distillates of petroleum and similar materials. The percentage of paraffine in bitumen is usually determined in this manner.

Paraffine.—The term paraffine covers a number of greasy crystalline hydrocarbons of the paraffin series occurring as dissolved wax in certain classes of petroleum. When these products are recovered from petroleum they constitute the commercial product paraffine. Paraffine is believed to be detrimental to road binders in which it occurs, and it is certain that its presence in excessive amounts indicates inferiority in the binding value of the material. It is probable, however, that heavy liquid hydrocarbons of the same chemical series as solid paraffine exert a much more injurious effect.

Petrolenes.—An ambiguous term sometimes applied to those hydrocarbons described under malthenes, which are soluble in carbon bisulphide but insoluble in paraffin naphtha, and sometimes to hydrocarbons in petroleum and petroleum products volatile at or below 163° C. (325° F.). Owing to misconceptions which may occur, it would seem advisable to eliminate the use of this term.

Petroleums.—Petroleums, or mineral oils, are fluid native bitumens of variable composition, depending largely upon the locality in which they occur. There are three general types of petroleum found in the United States: (1) Paraffin petroleum, (2) semiasphaltic petroleum and (3) asphaltic petroleum. Paraffin petroleum occurs mainly in the eastern part of the United States and are typified by the Pennsylvania oils. The semiasphaltic variety occurs in the Southern and Middle Western parts of the United States. Texas is one of the main sources of this type. Asphaltic petroleum occurs in the western part of the United States, particularly in California. Petroleum, if of semiasphaltic or asphaltic character, may make excellent dust palliatives and road binders when properly treated.

*See Coal tar.

†See Asphaltenes.

*See Bitumens.

†See Water-gas tar.

Petrolic Ethers.—Very light volatile naphthas obtained from petroleum.

Pitches.—Semisolid or solid residues produced in the evaporation or distillation of bitumens. This word is often prefixed by the name of the material from which it is derived, such as oil pitch, coal tar pitch, etc. As a rule, the term pitch is confined to the harder residuums, most of which are too hard for use as road binders unless fluxed with a more fluid product.

Pyrobitumens.—Mineral organic substances which are but slightly acted upon by the solvents for the bitumens, but which, upon being subjected to destructive distillation, give rise to the formation of bitumens. Pyrobitumens are derived in nature both from bitumens and direct metamorphosis of vegetable matter. Among the former class may be mentioned Albertite and Wurtzilite, and among the latter peat, lignite and bituminous coal.

Pyrogenetic.—Originating from the action of heat. Coal tar is thus a pyrogenetic bitumen.

Reduced Petroleum or Reduced Oils.—Residual oils produced from crude petroleum by the removal of water and the more volatile oil constituents, without chemically altering the base by cracking or other means. These residues are often made by distilling the crude oil under reduced pressure. Such products are of little value for road treatment unless formed from semiasphaltic or asphaltic oils.

Refined Tar.—A more or less viscous tar which is produced by evaporation or distillation of crude tar until the residue is of the desired consistency. This term also includes blown tars and cut-back products produced by fluxing tar pitches with volatile or non-volatile distillates. Refined tars are of value both as dust palliatives and as road binders in the treatment of macadam roads. Their binding value is proportional to their hardness within certain limits.

Residual Petroleum or Residual Oils.—Heavy viscous residues produced by the evaporation or distillation of crude petroleum until at least all of the burning oils have been removed and often some of the heavier distillates as well. Residual oils grade into the artificial asphalts and oil pitches as their hardness and viscosity increase. The more fluid products, if obtained from semiasphaltic or asphaltic petroleum, serve as excellent dust palliatives and semipermanent road binders for the surface treatment of roads. The more viscous products are often suitable for the surface treatment of roads if applied hot, but are seldom of value in road construction unless produced from semiasphaltic or asphaltic oils.

Residual Tars.—Heavy viscous residues produced by the evaporation or distillation of crude tar until all of the light oils have been removed. Residual tars grade into the tar pitches as their hardness and viscosity increase. If they do not contain an excess of free carbon they are, as a rule, well adapted for use as binders in the construction of macadam roads.

Rock Asphalt or Bituminous Rock.—A term applied to a great variety of sandstones and limestones more or less impregnated with maltha. Deposits of such material are widely distributed over the United States and vary from rock which is friable and wholly dependent upon the bitumen to hold the mineral fragments together to solid rock having merely its interstices filled with bitumen. The former type is of value for use as a surface binder in the construction of roads when the maltha shows good binding value and amounts to not less than 6 per cent of the weight of rock asphalt.

Semiasphaltic Petroleum.—Semiasphaltic petroleum or semi-asphaltic oils are petroleum containing a semiasphaltic base, i. e., petroleum whose residues produced by evaporation or distillation, while composed mainly of asphaltic hydrocarbons, contain also a certain percentage of paraffin wax. They thus show a mixed base. If their percentage of heavy paraffin hydrocarbons is not excessive they may be made to produce good dust preventives and road binders.

Short.—A term applied to bituminous materials which are non-ductile.

Tar Pitches.—Semisolid or solid residual tars. Owing to the general brittleness of tar pitches, only the softer varieties are of value in their natural conditions as road binders. The harder pitches may, however, be used for this purpose if fluxed to suitable consistency with heavy or dead oil distillates of tar.

Tars.—Tars are artificial or pyrogenetic bitumens produced as distillates by the destructive distillation of bitumens, pyrobitumens and other organic material.

Water-Gas Tars.—Mixtures of hydrocarbon distillates, mostly unsaturated ring compounds, produced by cracking oil vapors at high temperatures in the manufacture of carbureted water gas. Crude water-gas tar is a thin, oily liquid having a specific gravity lying usually between 1 and 1.10. As a rule, it contains a considerable quantity of water, which is, however, largely removed by mechanical devices before the tar is placed upon the market. This water is not ammoniacal, as in the case of crude coal tars. The composition of water-gas tar varies with the character of the oil which is carbureting and with varying conditions attending the carbureting process. It always shows a low percentage of free carbon, usually less than 2 per cent, and contains little or no naphthalene unless previously used for scrubbing coal gas. Crude water-gas tar has practically no binding value and is serviceable only as a dust palliative in the surface treatment of roads. When reduced to proper consistency by distillation, however, it shows certain desirable properties for use as a road binder both for surface treatment and macadam construction. Water-gas tar may also be used in the preparation of road binders from high-carbon coal tars. When this is done the two crude tars are mixed in such proportion that when distilled to the desired consistency the mixture will contain less than the maximum limit of free carbon allowable.

PAVING IN 1910 AND 1911

Data Collected This Month from Four Hundred and Sixty Cities — Amounts of Various Kinds of Pavements Laid Last Year—What Is Contemplated This Year—Grades—Guarantees

As has been its custom for several years past, MUNICIPAL JOURNAL AND ENGINEER has collected for this number figures concerning the amount of paving done in the United States during the past year, and in addition such figures as are yet available concerning the work which the various cities are expecting to do during the year 1911. Naturally the latter figures are incomplete, since a great many of the cities have not yet decided upon what paving work they will carry out this year.

Reports were received from about 460 cities. Table No. 1 contains the figures of 350 of these, the remaining cities having replied that no paving work had been done by them during the year 1910. The other tables do not contain the additional data from all these cities, since the information was not furnished in many cases, probably because in most of these it was not available.

In obtaining this information cards were sent to the city engineers or street officials of all cities of the country, a reproduction of which card is presented herewith. We have chosen this particular card in order to call attention to the remarkable neatness with which the figures have been filled in. The cards returned to us from time to time vary in this respect, some being hardly legible or intelligible, but we believe this is the best piece of work of this kind which has reached our office.

These data show that in the cities represented approximately

1,000 miles of paving was done last year. This table includes most of the larger cities, and it is probable that fully 75 per cent of the work done is represented therein.

Reports from some of the States indicate that practically every city did more or less paving, while in other States a considerable percentage did no paving last year. Of nineteen cities in Massachusetts all report doing more or less paving, and the same is true of the seven Oklahoma cities, five Oregon cities, the three Rhode Island cities, the four Tennessee cities and the ten Connecticut cities. Of twelve California cities only one had done no work, and of the seventeen New Jersey cities only two. Of thirty-one Illinois cities seven had done no paving and three of the twenty-four in Indiana, six of the twenty-three in Iowa, four of the seventeen in Kansas, six of the thirty-one in Michigan, six of the seventeen in Minnesota, six of the nineteen in Missouri, seven of the thirty-two in Ohio, twelve of the forty-two in Pennsylvania and ten of the thirty-three in New York reported no paving during 1910.

Although but three cities of the twenty-four reporting from Indiana reported no paving, one or two references were made to the unsatisfactory paving law in that State, and it was said that had this law been more satisfactory a considerably larger amount of paving would have been done in that State during the year; and that this law would also limit to a minimum the

amount done this year.

A glance at table No. 1 shows that of the permanent pavements brick is by far the most popular, asphalt being second, wood block third, stone block fourth and asphalt block fifth. Bituminous macadam (with which are included bitulithic and bituminous concrete pavements), which may be considered as a semi-permanent pavement, is seen to have been used quite generally in all sections of the country. In fact, there would appear to have been fully as much of this kind of paving as of plain macadam during the past year.

The above statement refers to the number of cities using the pavements rather than to the total amounts of pavements laid. If the latter be made the basis of comparison, the large quantities laid by the larger cities will cause those pavements to take precedence which are most popular for streets in such larger cities. On this basis of quantity laid we find the order somewhat changed, asphalt leading, with brick a close second, after which, but with a long interval, come stone block, wood block and asphalt block in the order named.

In figuring up the total quantities of the several kinds of pavements it has been necessary to reduce all to either miles or square yards, since some officials reported the quantities in one unit and some in the other. In doing so it was necessary to make some assumption concerning the average width of roads. We have assumed this to be 36 feet, on the more or less common basis of a 60-foot street with two 12-foot sidewalks, leaving a 36-foot roadway. On this basis we find the following results:

The total amount of asphalt paving done in 1910 in the cities reporting was 341 miles; of brick, 316 miles; of stone block, 68 miles; of wood block, 36 miles, and of asphalt block, 31 miles. Of the less permanent pavements, plain macadam leads with 260 miles, bituminous macadam follows with 149 miles and gravel with 91 miles. Of the miscellaneous pavements there

were 58 miles, practically all of these being permanent pavements, of which concrete formed a considerable percentage. This gives a total of about 850 miles of permanent pavements and 500 miles of bituminous and plain macadams and gravel. The figures for the three less permanent pavements would undoubtedly be greatly increased were the figures for county and state work included. The same also is true of the use of dust layers, which the cities reported using on about one thousand miles of streets.

BY CITY LABOR

Of this 1910 work the amount which was performed by the municipalities by day labor rather than by contract was as follows, the pavements being considered in the order of the percentage done by the municipality: Of the gravel roads 70 per cent was done by city labor, or 64 miles out of 91. Of plain macadam 61 per cent was done by day labor, or 159 miles. Of asphalt block 39 per cent was done by city labor or 12 miles. Of stone block 28 per cent was done by city labor or 19 miles. Of wood block 25 per cent was done by city labor, or 9 miles. Of bituminous macadam, bitulithic, etc., 23 per cent was done by city labor, or 34 miles. Of brick pavements 4¾ per cent was done by city labor, or 15 miles. The smallest percentage done by city labor was sheet asphalt, the amount being 11 miles, or 3¼ per cent of the total.

MAXIMUM GRADES

The table of grades gives the grades of the pavements which were laid in 1910, and thus is not a correct indication of the grades of all the paved streets to be found in the several cities. It is believed, however, that it is even more valuable than a statement of the grades of old as well as of new pavements, since it would seem to more probably represent the conclusions which

(Continued on page 376.)

had been reached by past experience as to grades permissible or unobjectionable. The steepest grades reported were paved with stone block, these being 20 per cent at McKees Rocks, Pa.; 19.5 per cent at Seattle, and 18 per cent at Tacoma and Ashtabula, O.

The next steepest grades were found on macadamized streets, there being a 17 per cent grade at Springfield, O., 16 at Troy, N. Y.; 14 at Everett, Mass., and 13 at De Soto, Mo. Brick is found on streets almost as steep, however, there being a 16.5 per cent grade at Ottumwa, Ia., 14 per cent at Spokane, 13 per cent at Seattle and Atchison, Kan.; 12 per cent at N. Braddock and Oil City, Pa., and 11.5 at McKeesport, Pa. Bituminous macadam also was laid on one street with a 15 per cent grade at Cape Girardeau, Mo.; 13 per cent at Phillipsburg, N. J., and 12 at Asheville, N. C.

There is very little difference between the maximum grades used for wood block and sheet asphalt, respectively, the maximum grades given the latter being 8.7 at Scranton, Pa.; 8.5 at Vicksburg, 7 at Seattle, 6.8 at East Orange, N. J., and 6 per cent in Oakland, Cal.; Washington, D. C.; Louisville, Knoxville and Appleton, Wis.; while wood block was laid on an 8 per cent grade in South Omaha and 7 per cent in Albert Lea, Minn. Aside from those two, however, wood block was not laid on grades greater than 3 or 4 per cent, 4 per cent grades being found at Americus, Ga.; Ottumwa, Ia.; Minneapolis, Cincinnati, and Watertown, N. Y.; while 3 per cent grades were found at Ames and Perry, Ia.; Cape Girardeau, Mo.; Paterson, N. J., and St. Louis. The flattest maximum grades are found on the asphalt block streets, the maximum being 6 per cent in Bronx Borough, New York City, and in Springfield, Mass.; 5.1 per cent at Springfield, O., and 4 per cent at East Orange, N. J.

LENGTH OF GUARANTEES

The data concerning guarantees indicates that the move toward the abolishing of guarantees for pavements has already

produced results in a considerable number of cities. Twenty-one states contain some cities which called for no guarantee at all on the pavements laid last year, and in California, Florida and South Dakota this was true of all the cities reporting. In certain other cities guarantees were not demanded on certain classes of pavements but were on others. In one case the abolishing of guarantees applied to stone block only, in two cases to brick only, in one case to wood block only and in six cases to macadam only. Altogether 72 cities reported requiring no guarantee, four of these, or 6 per cent, being for sheet asphalt; one, or 7 per cent, for asphalt block; 7, or 19 per cent, for stone block; 27, or 17 per cent, for brick; 6, or 18 per cent, for wood block; 14, or 20 per cent, for bituminous macadam, and 13, or 43 per cent, for plain macadam.

Five-year guarantees are still required in the great majority of cities, there being 242 of these, as against 72 requiring no guarantee, 49 requiring one year, 17 requiring two years, 16 requiring ten years, 14 requiring three years, 3 requiring seven years and one requiring eight years. It is perhaps significant that plain and bituminous macadam lead in the percentage of pavements for which no guarantee is asked, while sheet asphalt and brick lead in those for which ten year guarantees are asked. There does not seem to be any geographical distribution of the several periods of guarantee, each being pretty generally distributed all over the country. For instance, all the California cities reported asking no guarantee, while two Washington cities report ten year guarantees and three report five year guarantees. One New Jersey city reports a six months' guarantee.

TRAFFIC CARRIED

Information was also collected concerning the traffic on the streets in question, those replying being requested to state whether this was "heavy" or "light." These terms, of course, are not subject to definition or limitation, since our knowledge concerning street traffic is as yet in its infancy. It was therefore necessary to leave the decision as to what was light and what was heavy traffic to the individuals themselves. While there would undoubtedly be great differences of opinion on this point, depending upon the experience which each had had with the heavy traffic of large cities, it is believed that these would to a certain extent average up, although it is probable that the kinds of pavement which are found in greatest abundance in the smaller cities would be given credit for a heavier traffic than those more common in the larger cities. For instance, an engineer in Chicago or Minneapolis might report the traffic on a certain stone block pavement as being moderately light, which traffic, if it occurred in a small city, would be reported as very heavy. One engineer only gives any definite figures as to traffic, City Engineer Christopher Harrison of Everett, Mass., reporting the traffic on a stone block pavement as amounting to 40 tons per lineal foot per hour. Possibly a few others might have been able to give figures, but such figures are so few in this country that it seemed not worth while to ask for them from cities generally.

Taking up the data classified under the heads of the several pavements, we find that traffic on the sheet asphalt pavements was reported to be heavy in 19 per cent of the cities, medium in 34 per cent, and light in 47 per cent. Traffic on asphalt block was reported to be heavy in no case, to be medium in 47 per cent and light in 53 per cent. Of the stone block pavements 65 per cent were reported to carry heavy traffic, 21 per cent medium traffic, and 14 per cent light traffic. Of the brick pavements 31 per cent were reported to carry heavy traffic, 33 per cent medium traffic and 36 per cent light traffic. Of the wood block pavements 51 per cent were reported to carry heavy traffic, 25 per cent medium traffic and 24 per cent light traffic. Of the bituminous macadam pavements 25 per cent were reported to carry heavy traffic, 28 per cent medium traffic and 47 per cent light traffic. Of the plain macadam roads 18 per cent were reported to carry heavy traffic, 18 per

cent medium traffic and 64 per cent light traffic. Of the gravel roads 21 per cent were reported to carry heavy traffic, 17 per cent medium traffic, and 62 per cent light traffic. An inspection of these figures shows that stone block and wood block pavements seem to be considered especially adapted to heavy traffic, the macadams to light traffic, sheet asphalt and asphalt block to light and medium traffic; while brick seems to be considered equally well adapted to all classes.

Arranging the several pavements in the order in which they are chosen for heavy traffic we find them classified as follows: Stone block, wood block, brick, bituminous macadam, gravel, sheet asphalt, plain macadam, asphalt block. If, on the other hand, we arrange them according to their preference for light travel, giving such preference in the inverse order so as to make it more comparable with the other list, we have the following order: Stone block, wood block, brick, bituminous macadam, sheet asphalt, asphalt block, gravel, plain macadam. It is seen that so far as permanent pavements are concerned the two lists give exactly the same order to the several pavements.

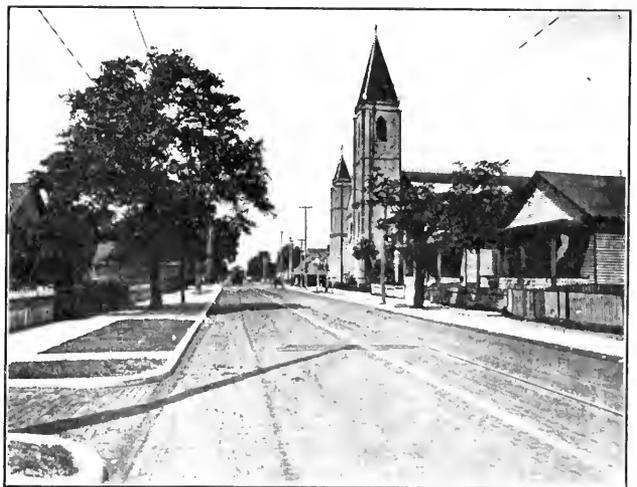

While there is nothing novel or startling in the conclusions just stated, it serves to confirm the general impression that not only stone block but also wood block are especially adapted to heavy traffic, and that brick, while not generally chosen for the heaviest traffic, is quite popular as a general all-around pavement; this being especially true in the Mississippi Valley. The table from which these conclusions were drawn we are expecting to publish in next week's issue.

WOOD BLOCK PAVING IN PENSACOLA

Streets with Flat Grades on Low Ground—Cement Mortar Cushion—Expansion Joints Between Tracks—Settled with Light Roller

By GEORGE ROMMEL, JR., Pensacola, Fla.

Pensacola, Fla., is a city of approximately 30,000 people situated on the Gulf of Mexico. Prior to 1909 the only permanent pavement in the city was a small stretch of brick approximately one-half mile in length which was laid in 1896. All of the other streets were of sand, with a few exceptions which had been hardened with clay. Under a bond issue the city advertised for bids on various kinds of pavements, the total work to be done being approximately 175,000 square yards. Contracts were awarded to the United States Wood Preserving Company of New York for wood block and to the Southern Paving and Construction Company of Chattanooga, Tenn., for brick, each company securing about half the work. The work has now been completed and Pensacola has about 11.5 miles of permanent pavement. Contracts will soon be let for an additional 10 miles so that the major portion of the city will be well provided for.

PENSACOLA STREET CONTAINING CAR TRACKS

Prior to the letting of the contracts, a great deal of opposition to wood block arose, owing to the experiences of our neighboring cities. The climate here is quite damp, as the prevailing winds are from the Gulf, and it was thought that the conditions were such that a wood block pavement could never be a success. Again, the lower part of the city is quite flat and low—the mean elevation 3500 feet from the harbor being only 0.4 above the mean low water. This section was originally a swamp and as the drainage facilities were not of the best the argument was advanced that this wet sub-soil would be very injurious to a wood block pavement. However, considerable of this opposition was overcome and practically all of the pavements laid in this district were of wood block. No trouble has been experienced from swelling or expansion, although the pavement has been down for about a year. The surface is as good, if not better, than when it was laid, and I see no reason to believe that we will ever have any trouble whatsoever. The traffic conditions are favorable, as 80 per cent of the streets are 25 feet wide, except that where there are car tracks the width is 30 feet. There have been no definite traffic records kept, but the hauling is of the mean business class, no great amount of heavy hauling being done here. Of course, with these widths, the pavement gets a uniform service which tends to keep the surface in good condition.

The blocks are of first growth long leaf yellow pine, $3\frac{1}{2}$ inches deep, by 6 to 8 inches long by 3 to 4 inches wide. The original specifications called for 90 per cent heart, but it was found that it was almost impossible to secure this grade of timber, so the requirements were changed to 75 per cent heart, which gave very satisfactory results. The blocks were subjected to a treatment of heavy creosote oil in the amount of 20 pounds per cubic foot of wood and no charge was accepted which absorbed more than 3 per cent of water after 24 hours drying and 24 hours immersion. A very rigid inspection was maintained at the plant and also on the work and an excellent quality of block was obtained. The blocks were made and treated by the Southern Creosoting Company of Slidell, Miss.

The blocks were laid on concrete foundation 4 inches in thickness, the concrete being in the proportion of 1:3:6. A very good grade of gravel was used in the concrete, gravel being much cheaper than crushed stone in this locality. The cushion coat consisted of a mixture of one part of Portland cement to three of sand, mixed dry and spread on the concrete to a depth of $\frac{1}{2}$ inch or greater. This cushion coat was formed by a template so that its surface was parallel with the finished surface of the pavement. The mortar was dampened with sprinkling cans immediately in advance of the block laying, care being taken not to have it too wet. After the block had been laid and before any initial set had taken place in the mortar bed, the surface was rolled with a light roller until all irregularities had been rolled out. Tamping was tried at first, but much more satisfactory results were obtained by rolling. A sand cushion was also tried but was soon abandoned as the mortar cushion gave much better results.

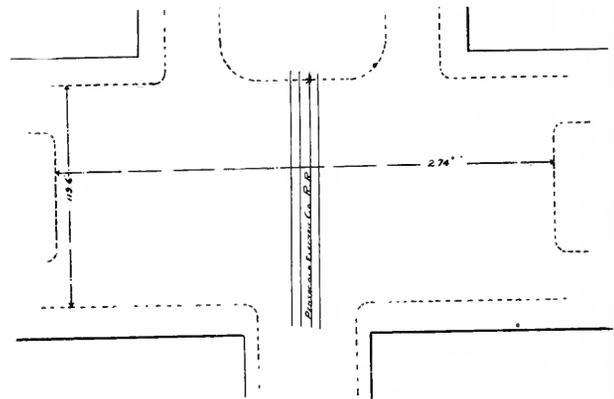

INTERSECTION WITHOUT EXPANSION JOINTS

The blocks were laid at right angles to the curb, with two longitudinal courses next to each curb. Expansion was taken care of by three expansion joints along each curb and transversely by one joint every 50 feet. The greatest trouble was experienced around these transverse joints. The expansion between the rails was provided for by staggering block-end expansion joints diagonally from one rail to the other and back to the first, with about 10 feet between apexes.

This method was tried as an experiment and gave such satisfactory results that we have adopted it in all our work.

One rather remarkable piece of work is an intersection shown in photograph and illustrated by accompanying sketch. This intersection contains about 2700 square yards and the grades at this point are very flat. The intersection was laid

SKETCH OF INTERSECTION

in small sections due to the fact that the blocks did not arrive fast enough to complete the whole section in one operation. The only expansion provided in the entire intersection is that along the rails and along the curbs. The surface to-day is perfect and no water stands anywhere in the whole section.

In conclusion, I wish to state that wood block pavement in Pensacola has been an unqualified success and many of those who were originally doubtful of this pavement are now its strongest advocates. I have no hesitation whatever in stating that the wood block pavement in climates such as Pensacola will be perfectly satisfactory, if care is taken in the selection of timber, proper treatment, and rigid inspection both at the plant and on the work.

UNTREATED WOOD BLOCKS

While most cities have abandoned the laying of the old round cedar blocks, there are still a few being laid in the country. Detroit, Mich., in 1910 laid 144,586 square yards of such pavement as new paving and 5,798 as resurfacing. This was laid on 6 inches of concrete, covered with a $1\frac{1}{2}$ -in sand cushion, and consisted of cedar blocks 4 inches long, of the best quality of sound, selected, live timber, stripped of all bark, between $4\frac{1}{2}$ and 9 inches in diameter. The spaces between these was filled with broken stone or gravel, which was thoroughly tamped into place. The pavement was then rolled and the spaces between the stones filled with pitch. One-half-inch of fine, sharp gravel was then spread over the surface.

IRON-CONCRETE PAVING BLOCKS

A novel French pavement consists of blocks made by filling moulds with matted iron shavings, or iron excelsior, and then pouring in cement sufficiently fluid to penetrate the entire mass. The blocks have great strength, resistance to abrasion and elasticity under blows or jarring. Tests have shown a resistance of 150,000 pounds per square inch, and a strength four times as great as that of ordinary cement. It is claimed that joints may almost be eliminated in this paving—an important advantage, as this takes away the parts of greatest wear and destruction.

Best Pavements in Demand

Street paving interests are given exclusive attention in the general reading pages of this issue, and among the articles will be found specifications for modern stone block pavements and for the latest improved brick rattler, and a glossary of practically all terms in common use relating to bituminous materials used in road construction and treatment. The statistics of pavements constructed and to be constructed this year give a very accurate birdseye view of the paving work of all kinds which is being done throughout the country. The greatest amount of space, however, it will be noticed, is given to descriptions of wood block pavements and specifications for them. This is not because they are the most important or most generally used pavement, but because this class of pavement seems to be coming into general use in the larger and some of the smaller cities, and because there are certain questions concern-

ing both the material to be used and the method of using it which are open to and are receiving more discussion possibly than any other kind of pavement at the present time. This again is an indication of the fact that cities are reaching the point where they are willing to spend more money on their pavements; wood block pavement being among the most expensive of any in common use. Another indication of the same thing is found in New York City, where it is said that the Borough President of Manhattan proposes substituting for asphalt, which costs \$3.34 a square yard, smoothly dressed stone block pavements at a cost of 20 cents per square yard greater.

Cost of Pavements

THE latest report of the Census Bureau dealing with the expenditures of American cities is that for the year 1908, and a few figures from this may be of interest as showing the amount of money spent by American cities for street construction during that year. These figures include only cities of more than 30,000 population, but it is probable that the total expenditures of cities smaller than those would add only a small per cent—probably not more than ten—to these totals.

The total expenditures for highway construction by cities of more than 30,000 population was \$87,442,195, which was an average amount of \$3.63 per capita. In the sixteen cities having more than 300,000 population the per capita outlay was \$3.78; in the thirty cities having between 100,000 and 300,000 population the outlay per capita was \$4.14; in the forty-seven cities having between 50,000 and 100,000 population the per capita outlay was \$2.80, and in the sixty-five cities having between 30,000 and 50,000 population the per capita outlay was \$3.03.

The variation between the average per capita outlays in these four groups is about 50 per cent between the second and third groups, which show the extremes, but when we examine the figures for the individual cities we find much greater variations. Among the cities of the first group the maximum per capita outlay was that of Washington, D. C., \$7.04. Pittsburgh was second with a rate of \$5.83, with Cincinnati a close third with \$5.62. Chicago's expenditures were only \$2.02 per capita, while New Orleans had a minimum rate of \$1.06.

In the second group the variations were still greater, Portland, Ore., having a maximum rate of \$16.29 and Providence, R. I., a minimum of \$0.54. It is possible that Seattle, Wash., should have been given a rate higher than that of Portland, the total expenditures for the year having been \$3,199,270, but no per capita rate was determined by the Census Bureau "because no reliable estimate of population could be made." It is probable that these and some of the other high rates were due largely to expensive grading and opening up of new streets fully as much as to the construction of pavements.

In the third group Salt Lake City leads with a rate of \$7.23 per capita, and the minimum rate in this group is that of Hoboken, N. J., 25 cents per capita.

In the fourth group we find the greatest variation of all, the maximum rate being that of Oklahoma City, Okla., \$19.18, and the minimum being 8 cents, which is attributed to Macon, Ga., the total expenditure for the year in that city being only \$2,507. Here again it is probable that the high rate in Oklahoma City was due to the rapid growth and enormous amount of new streets opened up and graded.

While these figures do not distinguish between money spent in opening up streets and that spent in paving them, it is probable that in the largest cities, at least, much the greater part of the expenditure was for paving and pavement repairing, and it is probably a conservative estimate that \$75,000,000 was spent on paving streets of cities of more than 30,000 population in 1908. If we allow for the amount spent by the smaller cities and also for the increased amount of the more permanent and expensive pavements being put down each year, it probably would not be far out of the way to estimate that about \$100,000,000 will be spent this year for paving purposes in the United States.

The total amount of outlays by the cities included in the Census Report of 1908 was \$275,000,000, or a little more than three times the amount spent on highways. It is probable, therefore, that the expenditures for pavements constitute approximately 25 per cent of the total outlays of all such cities. The Census Bureau defines outlays as being "the accrued costs, paid or payable, of lands and other properties more or less permanent in character, and thus available for more than a single use, which are owned or used by municipalities in the exercise of their governmental functions or in connection with the business undertakings conducted by them." They, therefore, do not include such items as street cleaning, the maintenance of schools, etc., although they would include school buildings. For comparison it may be noticed that the only other class of outlays which at all approached those for highways is the amount spent for public service enterprises such as water works, street lighting, etc., which amounted to \$80,260,139; school buildings and other educational investments coming third with a little over \$40,000,000.

PAVEMENTS IN GRAND FORKS

First Pavements of Untreated Round Cedar Blocks—Modern Wood Block, Blome and Bitulithic Now Used—Methods of Construction

By H. G. LYKKEN, City Engineer

The first pavement laid in Grand Forks, N. D., was 12.6 miles of cedar blocks put down in 1898 to 1900. This pavement consisted of a 3-inch sand base on top of the heavy clay which constitutes the soil of the city, next a 2-inch pine planking on top of which the cedar blocks were placed. These blocks were cut 6 inches long (or high, as laid in the pavement), of material varying from 5 to 10 inches in diameter. The round blocks were placed as close together as possible, with the fibers vertical and with the spaces between filled with sand and gravel.

This pavement did good service for about six years before any repairs became necessary. Where the traffic was heaviest the blocks wore round at the edges, giving a cobble-stone effect to the street. After about eight years repairs were no longer possible in the business portion of the city. Decay as much as anything else brought about a total failure at about this period in the life of the pavement. The rate of deterioration seemed to be about the same for both the block covering and the plank foundation. The pavement did not fail on account of the rotting out of the plank, yet, on the other hand, the planks were fit only for firewood when removed.

As a general conclusion, the untreated cedar block gives a rough pavement even with moderate traffic after five years' service. I have seen them tried on concrete foundation with no better result than on the untreated plank foundation used in Grand Forks. After about eight years the pavement breaks down completely and is almost impassable after ten years, even in the light traffic of a residence district.

In 1908 the city instituted a policy of putting all pavements on a 6-inch concrete foundation mixed one part of cement to from eight to nine parts of gravel aggregate. The first year 44,000 yards of creosoted blocks were laid to which 50,000 yards have been added since. In addition, the city has constructed in the past three years 20,756 yards of R. S. Blome concrete pavement, and 75,837 yards of bitulithic and similar pavements.

The creosoted block used is 3½ inches deep and treated with 20 pounds of oil to the cubic foot of wood. Both Norway pine and tamarack wood have been used, with no perceptible difference noticed. The blocks are laid on a sand cushion about 1 inch thick. A filler of coke oven pitch tempered with a lighter tar has been used altogether. After the blocks are laid and rolled and the filler poured while as hot as possible a layer of sand is spread over the surface. This sand is kept on for several weeks, being sprinkled with water from time to time to keep it from blowing off. This seems to have eliminated all trouble from bleeding of the blocks and from the tar filler.

The first pavement laid gave much complaint from the tracking of tar onto the sidewalks and into the houses, as the precaution of keeping the sand on was not observed. Later experience leaves no doubt, however, that the sand overcomes this difficulty.

The streets are perfectly smooth with no signs of wear or deterioration perceptible even with heavy wholesale traffic of farm traction engines and threshing machinery. Extremes of temperature as we have it here do not seem to affect the blocks, nor has there been any tendency for the pavement to swell or heave, even where the full paved width is 50 feet. No estimate of the life of the pavements can be given at this time but it is my opinion that they will give a serviceable street for 20 years, with a minimum of repair.

The only objections to the pavement is its hardness and slipperiness. The blocks are as hard and smooth as concrete. When the pavement is wet, and especially when frosted, a horse cannot stand up unless very well shod. But in spite of the hardness the blocks are not as noisy as brick blocks, the sound being deader.

The special feature of the Blome or concrete pavement is the use of hard granite or trap rock screenings for the wearing surface, which is mixed one part of cement to one and one-half parts of screenings which range from ½-inch down to ⅛-inch mesh. The pavement is blocked off into rectangles 4½ inches by 9 inches to give proper foothold to traffic. This pavement gives eminent satisfaction on account of its pleasing appearance, ease of cleaning and sanitary condition at all times. It is not affected by the climatic conditions, nor is it noisy as would be supposed. Our experience with it is in a quiet residence district where there is no through traffic or fast driving with horses. My opinion is that it is an ideal pavement for such conditions. I would not recommend it for business streets or streets of considerable through traffic and subject to rather fast driving with horses. It is not slippery but its hardness must be objectionable for horses.

Nothing need be said with respect to the other pavement, as its wide distribution and similarity to asphalt, as far as appearance and general qualities are concerned, make it familiar to all. A tar or asphalt concrete, as a general term applicable to all such pavements, when correctly constructed, makes a pavement suitable for almost all kinds of traffic. Its resilience commends it to horse-drawn traffic. Climatic conditions seem to have no deleterious effect on asphalt, bitulithic or similar pavements where the local condition of extreme cold is taken into consideration in tempering the binder.

BRIDGE FLOORING

After some 25 years of experience with replanking its bridges and the never-ending expense and generally poor condition of the covering, the city a year ago paved the largest one with creosoted blocks. The joist and 3-inch plank covering, which were put in new, were boiled for about three minutes in coal tar, the crude product direct from the gas retorts being used. The blocks were tamarack 3½ inches deep, treated with 20 pounds of oil to the cubic foot.

The special feature of the pavement was the use of a sand and asphalt mortar for the joints. This mortar, a mixture of sand and an asphalt tempered in such a way as to retain its adhesiveness and ductility in the wide range of temperature we have here, was mixed on a hot plate and used hot. The blocks were put in place with a push joint of the mixture to insure not only a full joint of the mortar, but a cementing of the blocks to the planking below. The blocks were put on the planking without a cushion except a possible film of the mortar.

This construction has entirely overcome the frequent trouble with blocks coming loose on bridges. Subsequent attempts to remove blocks have proven the impossibility of their coming loose. The blocks will break rather than come loose from the mortar.

A slight crown was given the pavement by springing the plank covering over the joist. The results have been eminently satisfactory and a great saving is expected over continual replanking.

WOOD PAVING IN AMERICAN CITIES

One Hundred Cities Have Laid It—Pavements in Boston, Chicago and Philadelphia—Description of the Original Creo-Resinate Process—Chicago Specifications for Treating Blocks—Some Early Creosoted Wood Pavements

The general history and specifications of wood paving in New York City form the theme of the leading article in this issue. The other large cities of the country, however, have all used more or less modern wood block pavement. Boston, Mass., is generally cited as the first city in the East in which modern wood block pavement was laid (see, however, statements further on in this article), and more or less of this is laid every year. During 1910 something over 3,000 square yards were laid. The first pavement in Boston was laid in 1900 on Tremont street in front of the upper end of the Common. At the convention of the American Society of Municipal Improvements in 1901 Mr. B. T. Wheeler, superintendent of streets of Boston, stated that the amount laid that year was 1,360 square yards. He further described the blocks as being uniformly 4 inches wide, 4 inches deep and 8 inches long, of long leaf Georgia yellow pine. The blocks had been placed in an air-tight cylinder and subjected to a dry heat of 215 degrees F. for one hour, after which the heat was increased and pressure applied, both being raised gradually during two hours until 285 degrees and 90 pounds pressure were reached, to which the blocks were subjected for another hour. During the next hour the heat was reduced to 250 degrees and the pressure to about 40 pounds, following which a vacuum of 26 inches was created, and while under this vacuum a mixture of one-half creosote and one-half resin was run into the cylinders, after which pressure was applied which gradually reached 200 pounds per square inch, at which it was maintained until from 21 to 22 pounds of the mixture per cubic foot had been absorbed by the wood. The wood was then placed in another cylinder and subjected for one hour to milk of lime applied under a pressure of 200 pounds at 150 degrees temperature. These blocks were laid on a one-inch sand cushion and the joints filled with dry screened sand, the pavement then rolled with a five-ton steam roller and the joints finally filled with a creo-resinate pitch heated to 300 degrees and covered with $\frac{1}{4}$ inch of clean, sharp sand. In the following year at the convention of the same society Mr. McClintock, a consulting engineer of Boston, stated that he had never noticed any slipping of horses on this street; and a representative of this Journal was recently informed by the policeman on the beat that there was no trouble of this kind on this stretch of wood block.

Probably the largest amount of wood block paving found in any one city is approximately 800,000 yards in Minneapolis, Minn. The next largest is apparently New York City with nearly 700,000 square yards. Indianapolis is said to have about 500,000 square yards; Cincinnati, 300,000, and Chicago about the same. Besides these, Mobile, Ala.; Pensacola, Fla.; Toledo, O., and probably some other cities have each more than 100,000 square yards of modern wood block pavement.

CHICAGO

One of the most comprehensive plans for wood block paving is that of the city of Chicago, which proposes to lay this kind of pavement upon practically all of the streets of what is known as the "loop district"—the business district of the city. During 1910 five contracts for wood block paving were carried out, one for 5,700 square yards at \$3.16; another for 10,600 square yards, at \$3.35; a third for 5,200 square yards, at \$3.35; a fourth for 6,300 square yards, at \$3.42, and a fifth for 5,300 yards, at \$3.45. In constructing these pavements the subgrade was rolled with a ten-ton three-wheeled roller. Following this there was laid an 8-inch Portland cement concrete foundation, mixed 1:3:6; and this was covered with a sand cushion to receive the blocks. This sand cushion was intended to be one-inch thick; but, owing to the fact that in spite of all

precautions the surface of the concrete had not been brought parallel to the finished surface, the sand cushion varied in thickness from $\frac{1}{2}$ inch to several inches, it being necessary in some cases to chip off the concrete in order to secure the $\frac{1}{2}$ inch of sand. Where more than one inch was used it was found that the blocks did not hold their surface well. The blocks were of long leaf yellow pine, $3\frac{3}{4}$ inches wide, 4 inches deep and from 5 to 10 inches long. These were treated with creosote oil, the specifications for which were as follows:

MADISON STREET, CHICAGO. WOOD BLOCK PAVING.

The oil shall be a pure coal-tar product, free from any adulteration. It must not contain any petroleum oil or any product obtained from petroleum and shall contain not more than 5% of matter insoluble in benzole and chloroform. No oil obtained wholly or in part from water-gas tar or oil tar will be accepted.

The specific gravity of the oil shall be at least 1.10 at 25° C.

The oil shall be subject to a distilling test as follows:

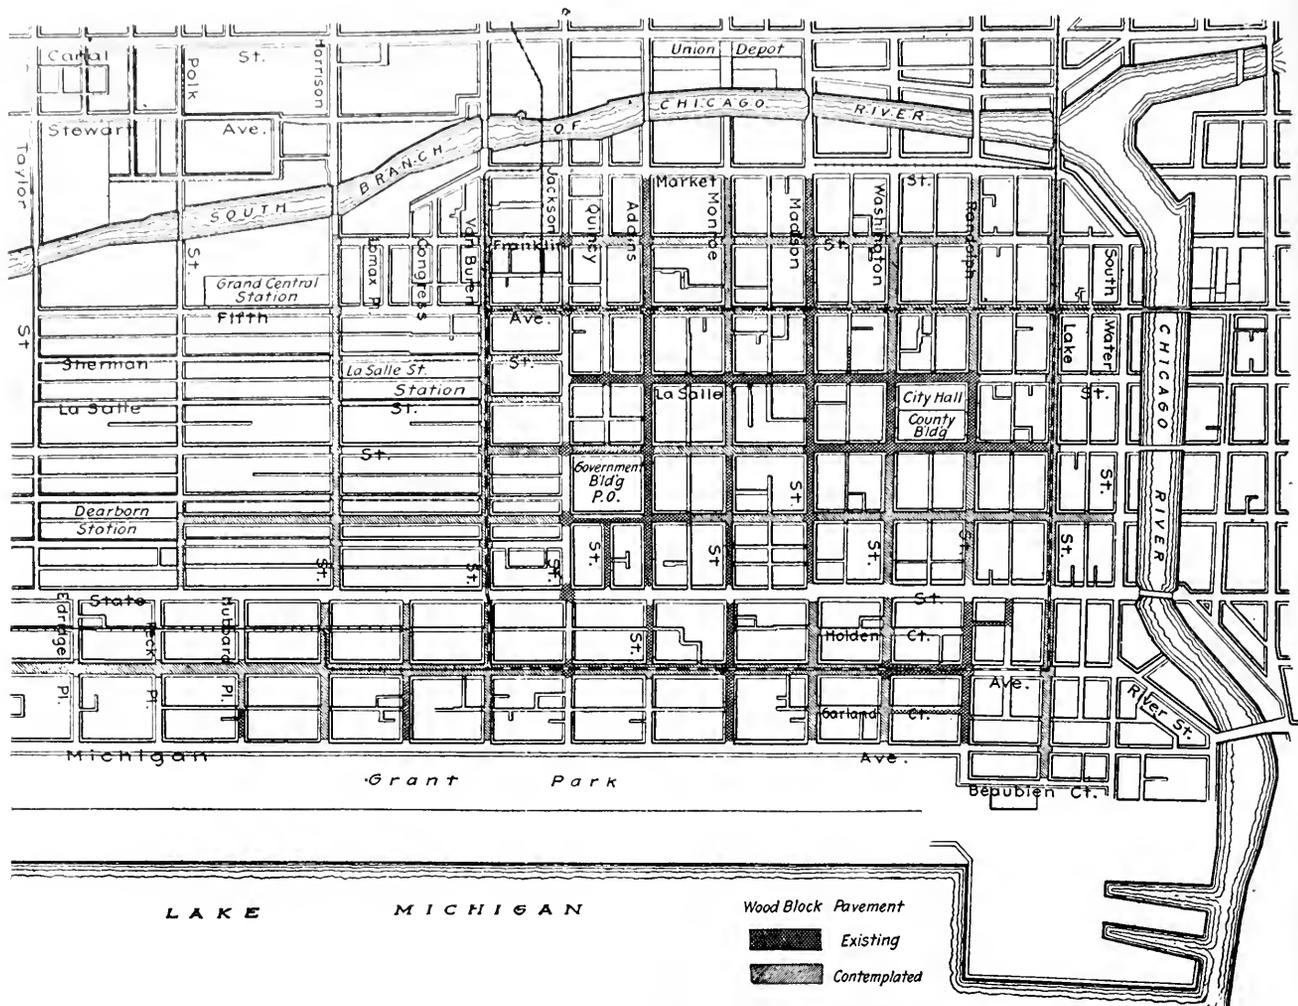

The apparatus for distilling the creosote must consist of a stoppered glass retort having a capacity, as nearly as can be obtained, of 8 oz. to the bend of the neck, when the bottom of the retort and the mouth of the off-take are in the same plane. The bulb of the thermometer shall be placed $\frac{1}{2}$ in. above the liquid in the retort at the beginning of the distillation, and this position must be maintained throughout the operation. The condensing tube shall be attached to the retort by a tight cork joint. The distance between the thermometer and the end of the condensing tube shall be 22 inches and during the process of the distillation the tube may be heated to prevent the congealing of the distillates. The bulb of the retort and at least 2 inches of the neck must be covered with a shield of heavy asbestos paper during the entire process of distillation, so as to prevent heat radiation, and between the bottom of the retort and the flame of the lamp or burner two sheets of wire gauze each 20 mesh fine and at least 6 inches square must be placed. The flame must be protected against air currents.

The distillation shall be continuous and uniform, the heat being applied gradually. It shall be at a rate approximating one drop per second, and shall take from 30 to 40 minutes after the first drop of distillate passes into the receiving vessel. The distillates shall be collected in weighed bottles and all percentages determined by weight in comparison with dry oil. When 100 grams of the oil are placed in the retort and subjected to the above test, the amount of distillate shall not exceed the following:

Up to 150° Centigrade.....	2%
Up to 210° Centigrade.....	10%
Up to 235° Centigrade.....	20%
Up to 315° Centigrade.....	40%

The contractor shall deliver to the Board of Local Improvements an affidavit setting forth that all oils used for treating the blocks for this contract are oils obtained wholly and entirely from coal tar and free from all adulteration, and that there is no material not a product of coal tar mixed with it.

Sixteen pounds of this was used per cubic foot. (West Taylor street had been laid in 1904 with blocks containing 12 pounds, and although a very heavy traffic was carried on a

THE "LOOP DISTRICT" OF CHICAGO, SHOWING WOOD BLOCK PAVEMENTS

38-foot roadway, in which is located a double-track street railway, the pavement has shown no signs of failure.)

A strip 18 inches wide along railroad tracks, about the same width next to the curb and for a short distance around all manholes was laid with tar filler; but for the rest of the surface fine sand was used in the joints and the surface was covered with $\frac{1}{4}$ inch of coarse sand after completion of the pavement. Expansion joints were placed along each curb and transverse joints at intervals of 25 feet, except in portions of Randolph street and Wabash avenue, where the transverse expansion joints were placed 50 feet apart. These joints were composed of one inch of paving pitch specified to be the direct result of the distillation of "straight run" coal tar.

The pavements built in 1910 were given a crown of not to exceed 8 inches on roadways 60 feet wide, or 7 inches on roadways 48 feet wide. The reason for the flat crown was to prevent slipping on the smooth pavement. As the street grades were very flat, numerous sewer inlets were provided to draw off the water as rapidly as possible. The blocks were laid at an angle of 45 degrees with the line of the street, this being the general practice in Chicago; except that between railway tracks they are laid at right angles to the street. The blocks were laid as close together as possible and frequently straightened out into line with a sledge. In addition, the blocks in each line were pried into close contact with an iron bar and held in this position by substituting a longer block for a short one in the row. In spite of this, it was noticed that after applying the sand the joints opened up sufficiently to take a considerable amount of this. The blocks were rolled with a drum roller weighing about five tons when loaded with coal and water, the wheels being 41 inches wide. A good many blocks were broken in this rolling, and it was believed by the engineer that better satisfaction would be obtained if two rollers be

TOP VIEW OF BLOCK SHOWN BELOW

LONG LEAF PINE PAVING BLOCK, AFTER 28 YEARS' USE
Laid on Market St., Galveston, in 1875. Removed in 1903. Creosoted.

used, one a light roller, such perhaps as is used for asphalt paving, and the second a heavy roller, weighing at least ten tons.

The total amount of wood block laid in 1910 in Chicago was 63,857 square yards. It is not known yet just how much wood block paving will be laid this year, but the chief engineer reports that probably it will reach about the same amount.

Although the Tremont street pavement in Boston, laid in 1900, is sometimes cited as the first modern wood block pavement, Mr. Linn White stated last year before the American Society of Municipal Improvements that in 1898 a piece of wood block pavement was laid on Michigan avenue, Chicago, which was stated by the manufacturer to have been impregnated with not more than 14 pounds of creosote to the cubic foot. This pavement was down for ten years, and when taken up in 1908 on account of widening the street was apparently as good as when laid.

An even earlier instance of creosoted wood block paving is reported, such a pavement having been laid on Market street, Galveston, in 1875, and removed in 1903. This was creosoted long leaf pine, but we understand that the blocks were not rectangular nor was the pavement in other respects equal to the modern pavement.

PHILADELPHIA

In 1909, after the completion of a subway in Market street, Philadelphia, the merchants on that street, after considerable canvassing of the question, requested the authorities to use wood block in repaving. The first section so paved included about 58,000 square yards, which was begun on September 13 of that year and finished on December 11. In this pavement were used wood blocks which the specifications required to be treated with 20 pounds of creosote oil per cubic foot; but it was also required that they should not absorb more than 3 per cent of water, and to meet this requirement it was found necessary to use an average of 24 pounds per cubic foot, according to Mr. A. W. Dow. The blocks were 4 inches wide, 4 inches deep and from 5 to 10 inches long. They were laid on a sand cushion on a 6-inch foundation. A one-inch expansion joint was provided at each gutter and ½ inch transverse expansion joints at intervals of 100 feet, these joints being filled with bituminous cement. The pavement was rolled with a ten-ton roller. The contract price was \$3.49 per square yard. In 1910 about 0.7 of a mile of wood block was laid under a ten-year guarantee.

CITIES WHERE WOOD BLOCK HAS BEEN LAID

Including these instances of large amounts of wood block paving and also all cities where any amount whatever has been laid, we have prepared the following list which is believed to include practically all cities in this country which had laid any wood block paving up to the beginning of this year. It is possible that certain of those listed as having wood block paved streets have used this paving on bridges only, although an effort was made to list such cases separately under the head of wood block paved bridges.

CITIES HAVING WOOD BLOCK PAVED STREETS

ALABAMA—Mobile.
 ARKANSAS—Pine Bluff.
 CONNECTICUT—Bridgeport, Hartford, New Haven.
 FLORIDA—Pensacola.
 GEORGIA—Atlanta.
 ILLINOIS—Chicago, Decatur, East St. Louis.
 INDIANA—Indianapolis, Mishawaka.
 IOWA—Ames, Clinton, Des Moines, Ft. Dodge, Indianola, Mason City, Ottumwa, Perry, Shenandoah, Sioux City.
 KANSAS—Wichita.
 KENTUCKY—Lexington, Louisville, Winchester.
 LOUISIANA—New Orleans.
 MARYLAND—Baltimore.
 MASSACHUSETTS—Boston, Springfield.
 MICHIGAN—Calumet, Detroit, Grand Forks, Houghton.
 MINNESOTA—Albert Lea, Austin, Duluth, Little Falls, Minneapolis, Moorhead, Red Wing.
 MISSOURI—Cape Girardeau, Kansas City, St. Joseph, St. Louis.
 MONTANA—Billings, Great Falls.
 NEBRASKA—South Omaha.
 NEW JERSEY—Hoboken, Jersey City, Paterson.
 NEW YORK—Geneva, Jamestown, New York, Poughkeepsie, Rochester, Utica, Watertown.
 NORTH DAKOTA—Fargo, Grand Forks.
 OHIO—Cincinnati, Delaware, Springfield, Toledo.
 PENNSYLVANIA—Easton, Harrisburg, Philadelphia.
 SOUTH DAKOTA—Aberdeen.
 TENNESSEE—Bristol.
 TEXAS—Dallas, Houston.
 VIRGINIA—Norfolk.
 WASHINGTON—Seattle.
 WISCONSIN—Appleton, Beloit, La Crosse, Milwaukee, Superior, Watertown.

WOOD BLOCK PAVED BRIDGES

MONTANA—Missoula.
 NEW YORK—Baldwinsville, Ithaca, Mt. Vernon, Oswego, Seeley Creek.
 OHIO—Akron, Columbus, Mansfield, Montpelier, Newark, Philo, St. Marys, Stryker, West Milton.
 PENNSYLVANIA—Lykens, Tyrone.

LAYING WOOD BLOCKS ON MARKET STREET NEAR TENTH STREET, PHILADELPHIA

NEWS OF THE MUNICIPALITIES

Current Subjects of General Interest, Under Consideration by City Councils and Department Heads—Streets, Water Works, Lighting and Sanitary Matters—Fire and Police Items—Government and Finance

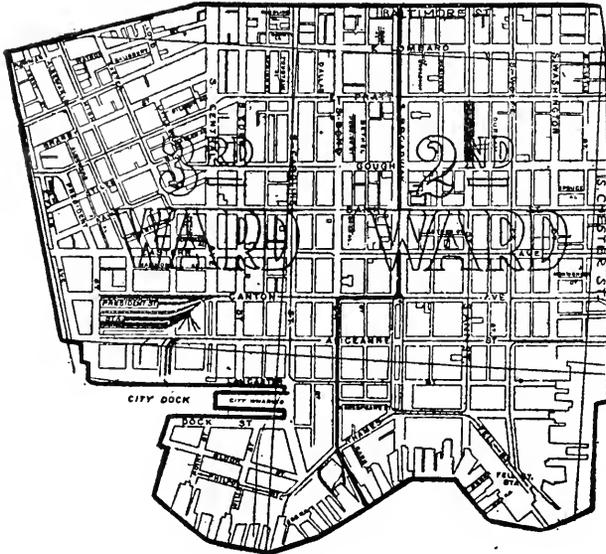

ROADS AND PAVEMENTS

Street Committee to Inspect Street Work

Atlanta, Ga.—The Street Committee of Council will devote a day to making a trip of inspection in automobiles throughout the city in order to see how the new street work is going forward and to decide where other work is needed. The Chief of Construction will accompany the Committee on this trip. The Committee will have a look at every piece of new street work that is being done in Atlanta, and will inspect every street for which improvements have been asked. The inspection will be one of the most thorough that any street committee has ever made. Bright and early the Committee will start on its trip and throughout the day will continue its inspection.

Inadequacy of Past Paving Plans Explained

Baltimore, Md.—The *Baltimore News* is publishing daily a series of maps of the city wards showing the futility and purposelessness of the present method of paving the city's streets from the inadequate general levy. The heavy black

MAP SHOWING YEAR'S PAVING

line shows the paving done and paid for by the city in the Second and Third Wards in 1909. The dotted black line indicates paving done in 1909 in the wards the expense of which was borne in whole or in part by abutting property owners.

Would Sprinkle Streets with Calcium Chloride

Duluth, Minn.—Alderman L. A. Barnes has received from the Board of Public Works a communication with recommendations for sprinkling the streets at West Duluth providing that the business district be kept free from dust at all times. This includes Central avenue from Main to Cody streets and Grand avenue from Central to Fifty-eighth avenue west. The communication also recommends that all streets not having a hard surface be sprinkled two or three times during the season with calcium chloride, which, it is believed, will assist greatly in laying the dust in the residence sections.

Extensive Street Improvements for New London

New London, Conn.—General street improvement is awaiting action of the Legislature, granting authority to issue bonds. If the authority is granted it is intended to lay granolithic walks five feet wide over a large section of the city and assess one-half the cost on the abutting property.

Good Road Nearing Completion

St. Augustine, Fla.—Within 30 days the county will be able to boast of a stretch of 66 miles of rock road, better than any road in the State of Florida. This will be when the contractors complete the county rock road through to Homestead. The last bond issue, carrying \$75,000 for new roads, \$15,000 for each of the five commissioners' districts, has all been expended or will have been when the work to Homestead is completed. There remain only about two miles more to be built to connect Homestead with the present rock road and a stretch of six miles to Silver Palm. The roads of the county will then be practically all new, with a few exceptions. There are a few stretches between Miami and Fort Lauderdale that need renewing, but about 85 per cent of the main highways are in good condition.

Details of Du Pont Offer to Build Road

Wilmington, Del.—T. Coleman Du Pont has offered to finance the building of a highway across the State. He proposes to organize a company which should have power to condemn a right of way one or two hundred feet wide. The proposition contains the proviso that a portion of this right of way shall be reserved for the construction of a trolley line, pole lines for electric light and power lines and conduits for water, oil, gas, steam or anything desirable. The paved roadway would vary from 12 to 18 feet, according to travel anticipated in each section of the road. Space would be allowed for planting trees. On the completion of the road this strip, 30 feet wide, would be deeded to the State.

Street Paving Held Up

Walla Walla, Wash.—By the decision of Judge Thomas H. Brents, making permanent a temporary injunction restraining the carrying out of a paving contract, the construction of new pavements will be held up for several months, at least. Assessment paving has been done in Walla Walla under a law by which a quarter of the cost of the work was charged against a certain city fund. This fund became exhausted and the work of paving was continued, the property owners paying the whole cost. Recently a case came up in which property owners disagreed as to the material to be used and in consequence the matter got into the courts. The court holds that work cannot proceed under the law unless the city at large pays its share of the cost.

Improving Ohio State Highway Laws

Youngstown, Ohio.—Placing the State Highway Commissioner's office on a plane commensurate with the dignity of the State, systematizing existing legislation, repealing conflicting statutes and providing a better outlook for the good roads movement is the intent of a bill introduced in the State Senate by Senator S. B. McGuire, of Tuscarawas County. The measure bears every indication of being one of the most far reaching and important efforts at legislation during the present session of the Legislature and is of peculiar interest in Youngstown, where considerable opposition has developed to the policy of the good roads commission and where further roads work is now tied up by court proceedings. The movement for better roads in Ohio is being backed by the Ohio Good Roads Federation, a non-partisan, non-political organization, the members of which, business men, farmers and others, have no ax to grind and no motive other than making Ohio better in a business way by improving old and opening up new highways so essential to the mercantile and agricultural welfare of the Buckeye State. Compulsory education of county commissioners, township trustees, county engineers and road supervisors will be provided by a meeting to be held at least once a year in each county seat which would be presided over by the State Highway Commissioner, one of his deputies or a department engineer.

New Specifications for Street Paving

Dallas, Tex.—City Engineer J. M. Preston has prepared a new set of specifications and bidding sheet in the place of those that have been in effect for three years. The kinds of pavement provided for include creosoted wood blocks, bitulithic, asphalt, asphaltic concrete, rock asphalt and brick.

Fort Worth Interested in El Paso's Paving Plan

El Paso, Tex.—Fort Worth is interested in El Paso's revolving paving fund system. City Attorney W. M. Coldwell has received a letter from the authorities of that city asking that a copy of the charter of El Paso be forwarded. It is explained that Fort Worth anticipates the creation of paving districts and desires to follow the example of El Paso. Will Rand, of the bitulithic company, said recently: "El Paso's revolving fund is the best ever. With the original \$200,000 over \$400,000 worth of paving has already been laid."

Digging up Streets Presents Problem

Los Angeles, Cal.—How to properly fill, or to have filled, excavations made in the streets by contractors is a problem which just now is worrying the members of the Board of Public Works. Streets which have been dug up by contractors for the purpose of laying gas mains, sewer pipes, etc., and for connecting them with residences often show signs of never having been properly resurfaced and are filled with ruts and depressions. W. M. Humphreys, inspector for the board, explained that there are two ways in which the matter can be handled. One way is to either have the city fill all excavations and put the surface of the street in proper repair or else have city inspectors watch every excavation to see that it is properly filled. The other way is to make every contractor responsible for the condition of the street after he leaves it. The first-named plan of having the city do the work itself, or have every excavation inspected, would necessitate establishing an entirely new department of the city government and would result in large expense. The other plan is the one which is being followed now as nearly as possible, contractors who excavate being required to take out permits and then putting up either a certain amount of money or a bond to insure the street staying in good condition for at least a year. Inspector Humphreys informed the board that many streets which came under his observation would stay in good condition for a year after being excavated, and then would begin to show the effects of having been dug up. He thought the time of responsibility for the contractors should be extended as long as the life of the pavement.

Provision Made for Double Inspection

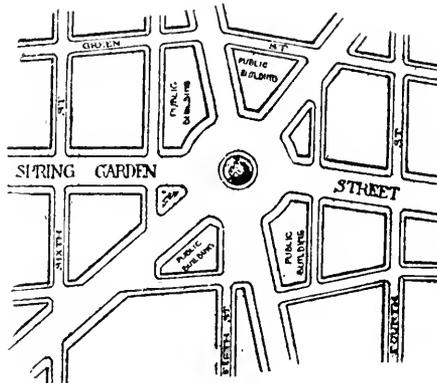

Cincinnati, O.—The final form of the new street paving specifications has been agreed upon at a conference between Public Service Director Sundmaker, City Engineer Shipley, Director Miles and Engineer Barlow, of the Bureau of Municipal Research. Most of the changes made were of a technical character. Provisions were inserted in the specifications for the appointment of an unofficial inspector by the service director, who shall have the same rights at the wood block manufacturing plants as the City Inspector except that of condemnation. It is agreed that samples may be shipped away for analysis, the only provision being that the City Inspector shall receive a sample from the same batch of oil shipped away, so that the city and the outside chemist will make their tests of the same quality of material. Director Miles declared after the conference that the specifications as amended were perfectly satisfactory to the bureau.

Able-Bodied Men Must Work on Roads

Cleveland, O.—The law made prominent by the recent decision of the Supreme Court to the effect that road superintendents and directors of public service can order able-bodied male residents of a community out on the roads for two days' work each year will not be met with an overflow of substitutes as was at first proposed, at least not in Cleveland. Mayor Baehr said that if it came to a show-down he himself would be ready to go out on the street for two days a year to work out his tax instead of turning over the \$3 for the pay of a substitute.

Improvements at Intersections of Diagonal Avenues

Philadelphia, Pa.—Upward of fifty neighborhood centers connected by diagonal avenues as proposed by the Comprehensive Plans' Committee, will form the basis of the general scheme for future development to be taken up shortly by the Board of Surveyors. The general project has been plotted, and hereafter ordinances for the opening of streets or striking others from the city plan proper will be considered in the light of the diagonal and neighborhood center

PROPOSED TREATMENT OF IMPORTANT INTERSECTION

recommendations of the Comprehensive Committee. There are already eight great diagonal avenues which run through 36 of the 47 wards, and new avenues will be laid out. The centers will be used for different purposes. In some will be located the headquarters of many branches of the city government. Some of the proposed centers are of such size as to furnish sites for schools and hospitals. In the congested districts playgrounds, drinking fountains, band stands and monuments may be located. The illustration shows one of the larger centers.

Camden Wins Paving Suit

Camden, Pa.—By the Court of Appeals affirming the assessment for the paving of Broadway, below Bulson street, Camden won a big victory in its controversy with the Manufacturers' Land and Improvement Company, after the matter had been in litigation for over three years. One of the points raised by counsel for the land company, outside of testing the constitutionality of the paving act, was that the street had been paved once by the land company and that the paving for which the assessment was made in 1908 was repaving, and that the city could not therefore make an assessment for it. City Council Bleakly insisted that there was a material benefit to the land from the new and improved asphalt pavement, and that the amount of this benefit was a lien upon the land and that if the Council had not made the assessment they would have neglected their duty. It is admitted that in the past Camden has not made assessments in these cases.

Planning to Call Roads Conference

Los Angeles, Cal.—A conference of supervisors of Southern California counties probably will be called in Los Angeles for the near future to take steps to secure for Southern California what is considered a just proportion of the \$18,000,000 road bonds voted by the people at the last general election. The question was raised at the supervisors' meeting by a communication from Ventura county supervisors suggesting that the Los Angeles board take the initiative in calling such a conference. The Ventura board suggested the coast road as one for general improvement. Members of the board unofficially endorsed the suggestion, and the matter was referred to R. W. Pridham, chairman of the board, to investigate.

Fifty Miles of Streets to Be Treated with Oil

Santa Monica, Cal.—The completion of three oil-paving contracts in the hill districts gives Santa Monica a total of about 50 miles of streets thus improved. The total mileage of open and traversable streets is 165, in a condition as a whole, says C. B. Pettis, Street Superintendent, that ranks the north beach city among the first for good roads in Southern California.

SEWERAGE AND SANITATION

No Lead Pipe to Be Used in Soda Fountain Connections

Denton, Tex.—State Pure Food and Dairy Commissioner J. S. Abbott, of this city, has issued a ruling that the use of lead pipe in making connections in sodawater fountains will be held a violation of the pure food and drug law of Texas.

Enforcing Sanitary Laws

Fort Scott, Kan.—State Pure Food Inspector Kleinhaus spent several days at Chetopa, making an investigation of the sanitary condition of some of the local places of business, and as a result a restaurant, a grocery store and a bakery were ordered closed until the proprietors complied with the sanitary laws.

Complete Sewer System for Long Beach

Long Beach, Cal.—Plans for the complete sewerage of the city have been submitted to the Board of Public Works by City Engineer Dewey. It is estimated that it will cost the taxpayers \$343,454.18 for this extensive addition to the present sewer facilities.

Bar Sewage to Protect Water

Toledo, O.—Action against property owners on the river road between the Children's Home and Delaware Creek has been taken by Service Director Cowell to enforce his orders that no more sewage from the included district shall be dumped into the Maumee. The purpose of the order is to protect the city water supply. The order includes the Children's Home, a county institution, and the Country Club. Twenty-three sewers empty into the river within the district included. Some of them lie below the intake of the filtration plant, but the infirmity director asserts that frequently the wind blows back beyond the intake crib the sewage coming from them. The law gives the Service Director power to prevent pollution of the stream from which the water supply is taken for a distance of 20 miles above the intake.

Towns Arrange for Exchange of Sewerage Facilities

Lynn, Mass.—A public hearing was recently held on a bill to authorize the city of Lynn and the town of Swampscott to make an agreement for the disposal of certain sewage. The act will affect about 30 citizens who live in the city and town where sewer entrance is possible only into a sewer under the control of the place in which the land is not assessed. The cost of the service is left to mutual agreement of the municipal authorities. The assessments will be levied in the municipality in which the property is located. There was no opposition to the passage of the bill.

WATER SUPPLY

Filter Ready at Jonestown

Lebanon, Pa.—Within a few days, it is expected, the great filter plant at Jonestown of the Lebanon Valley Consolidated Water Supply Company will be so far advanced toward completion as to permit the delivery of filtered water to the company's patrons in the suburbs of this city. The plant is said to be one of the finest water filtration systems in the country. On it and the pipe lines it will supply have already been expended over \$300,000, and the total to be expended on the system when complete will be in the neighborhood of half a million dollars. The system takes the Swatara water at a point not far north of the Jonestown railway station, and after passing through a settling or sedimentation basin that takes out of it the impurities in suspension the clear liquid is taken through the regular filters and completely purified. Later it goes to a closed well, concrete lined, from which it is pumped up the four-mile grade to the big concrete reservoir on Sand Hill. The Sand Hill Reservoir is a big closed basin. From the time the water enters the filters until it is delivered in the home of the consumer it is not exposed to the light of day. The Sand Hill Reservoir is so constructed that the water in it is kept constantly in motion in a concrete covered reservoir.

Fight Filtration Order

Lima, Ohio.—Mayor Dyer, Director Rowlands and City Solicitor McLaughlin visited Cincinnati, where they met with the State Board of Health and filed an appeal from the recent order of that Board commanding the city to build a filtration plant.

January Record of Cincinnati Filtration

Cincinnati, Ohio.—Superintendent Laidlaw has received the report on the chemical analysis of the Ohio River water for January. The report showed that the highest number of bacteria was found on Jan. 3, when the count was 360,000 to the cubic centimeter. The lowest was on Jan. 26, with a count of 6,700, and the average for the month was 63,000 to the cubic centimeter. The average for the filtered water was 11 to the cubic centimeter, showing a filter efficiency of 99.98 per cent. On four days no bacteria was found in the filtered water; on five days only one to the cubic centimeter was found; on one day two, on two days three and on seven days but four. On the day of the greatest impurity in the raw water the count for the filtered water went to 110, which is but 10 above the standard German average of 100.

Cranford Has Water Supply

Cranford, N. J.—Cranford apparently has located a sufficient water supply for the town, and within 10 days' time a complete report from Special Engineer Fuerties is expected by the Township Committee on the number of gallons the two driven wells will supply and the cost of building a complete water plant. The question of municipal ownership of a water plant will be submitted to the voters in April. Engineer Fuerties reported to the township officials that the first well driven to a depth of 216 feet flows within three feet of the top and that the new well was completed at a distance of 220 feet, with over a thousand gallons of water flowing over the top in a day's time. Engineer Fuerties reported that the second well had every prospect of yielding better than the first one. The first well produced 300,000 gallons a day on a six-day test.

Long Beach Citizens Voice New Water Rate Objections

Long Beach, Cal.—During a recent discussion of water rates by the City Council and citizens who crowded the Council chamber, there were openly expressed hints at having the people take the fixing of rates out of the Council's hands by means of the initiative and referendum. It was a very lively and interesting session and resulted in the Council postponing action for one week. The chief cause for complaint voiced by the citizens was the alleged reduction offered in water for domestic uses where meters are used. The present rate is 20 cents per thousand gallons. The new ordinance proposes the same rate for quantities less than 10,000 gallons; 15 cents between 10,000 and 90,000 gallons, and 8 cents per thousand for users of more than 90,000 gallons.

Filtration Plant a Success

Toledo, Ohio.—After almost a year's operation Service Director Cowell and water works officials have found the process of the Toledo filtration plant to be entirely satisfactory. After a number of minor structural changes have been made the Norwood Engineering Company, which built the plant, will be released from its \$240,000 guaranty bond at the expiration of the year's period, March 23. The matter has been discussed by the Service Director and W. A. Stevenson, representative of the company, and the changes to be made were ordered. None of them, Mr. Cowell said, is of great importance. Mr. Stevenson said that work on the erection of the 14 additional units of the filtration plant will be begun as soon as the plans are completed and approved by the State Board of Health.

Court Stops Reservoir Work

Tyrone, Pa.—Alleging that the big reservoir which a water company is building to supply Tyrone is a menace to the citizens because the breast is not of sufficient strength to hold the contents with safety, the Borough Council has applied to the Court for an injunction restraining further work on it. A preliminary injunction was granted.

STREET LIGHTING AND POWER**Explosion in Power Plant**

Niagara Falls, N. Y.—Without a moment's warning a terrific explosion wrecked a penstock at the power house of the Ontario Power Company, near Queen Victoria Park, on the Canadian side, killing three men instantly, fatally injuring two and seriously hurting five others. General Superintendent Hugh H. Wilson stated that the loss aside from the fatalities would be trivial, possibly not exceeding \$5,000. Discussing the probable cause of the disaster, Mr. Wilson said that so far as could be ascertained at this time the explosion was due to a leaking gas pipe. There is a small gas line within the penstock for heating purposes and it is thought that gas escaping from this pipe produced the fatal combustion.

Grounding of Secondary Wires Advised

Hingham, Mass.—Wm. L. Puffer, Consulting Engineer, Boston, has made a report to the Municipal Lighting Board recommending the grounding of secondary wires. In answer to a specific question, "grounding" is defined as the deliberate connection of one of the secondary wires to as good earth as can be found. The report states that it is desirable to ground these wires wherever there is a possibility of exposure to stray currents coming from dangerously high voltage wires. The wires carrying the railway currents, the series street light currents and the primary currents of the lighting system are classed by Prof. Puffer as dangerous. He advises the grounding of the secondary systems to the cast-iron water pipes as near the transformers as possible at all services where it can be done conveniently. In other sections of the city where the water pipes are not cast iron and subterranean water is known to exist, pipes should be driven into the ground and the secondary wires connected to them. These pipes should be tested to see that the ground connection is sufficiently good before the wires are connected.

Columbus May Abandon Arches and Adopt Clusters

Columbus, Ohio.—Columbus business men are positive in expression of opinions for and against the present system of High street electric arches, many being in favor of abolishing the present arches and adopting a more up-to-date plan. Several state that the old style arches have long ago passed their days of usefulness and it is time for something newer and better. South High street business men, where the first arches were erected, still favor the present arches, but it is generally felt that some other kind of lights would be preferable. Cluster lights such as have been installed on East Main street and which are generally used for up-to-date street lighting are suggested.

Mayor and Aldermen Take up Subscription to Pay Contempt Fine

Clay Center, Kan.—The costs of the contempt case of Mayor Hanna and the City Aldermen of Clay Center, which the United States Supreme Court recently ordered the men to pay, will be raised by popular subscription among citizens here. No one will be permitted to give more than a dime. The costs are \$27.60. The municipal officers last November cut down the poles of the Williamson Electric Light Company here before a decision of the Supreme Court of Kansas against the company had stood the necessary 30 days to become effective. Thus did they get into contempt. No penalty besides the payment of the costs was exacted.

Learn the Cost of Street Lights

Lansing, Mich.—When Secretary W. B. Kirby, of the Water and Electric Light Board, reported that the first cost of the Tungsten lighting system now in use in the business districts was but \$11,407.36, general satisfaction and surprise were expressed. In all, the system includes 263 poles, of which 77 have a cluster of five lights and the other 186 three lights. The cost of each pole was \$18; the cost of the cable from pole to pole was \$11.54. The painting, wiring, globes, etc., made the total cost for the three-light poles \$42.30, while that of the five-light poles is \$45.92.

FIRE AND POLICE**Mayor's Gift to Town**

Branchville, N. J.—Mayor John H. Nelden formally presented the hose cart he purchased some weeks ago to the borough at a meeting of the Council last week. Councilmen D. L. B. Smith, Truman Compton and Wilbur F. Dye, in turn voiced their thanks on behalf of the town.

Jersey City Has Auto Fire Truck

Jersey City, N. J.—Jersey City's newest fire station, at the Boulevard and Van Nostrand avenue, Greenville Heights, was opened for duty last week. It is equipped with automobile fire fighting apparatus of the latest design and the first to be used in this city. The automobile equipment consists of a combination truck, which carries a 40-gallon chemical tank, 2,000 feet of hose and two extension ladders of 25 feet each. When light this truck weighs 5,500 pounds and is driven by a 50-horsepower motor, with a guaranteed speed of 50 miles an hour. Battalion Chief Chambers will be in command.

Ordinance Regulates Sale of Firearms

Louisville, Ky.—Chief of Detectives Capt. John P. Carney has prepared an ordinance regulating dealers in firearms. The measure provides that stores dealing in firearms or ammunition must register every sale, giving the number of the arm sold, the make, the caliber, the amount of ammunition purchased and the name and address of the purchaser. Captain Carney says that there is no law of the kind now in force in Louisville. He feels certain that such a law would be a great benefit to the police and detective departments in reducing crime. Captain Carney points out that the dealers would benefit by the passage of the ordinance, inasmuch as they would know the number of their firearms and could furnish them to the police department in the event that they were stolen, thus helping the department to trace them. In cases of murder or suicide the name of the owner of the weapon would be a valuable assistance to the police. The police would also be in possession of the names of all the firearm owners in the city.

Policemen to Wear Uniforms at All Times

Rochester, N. Y.—As a result of a recent discussion of the affairs of the Rochester Police Department by Commissioner of Public Safety Charles S. Owen and Chief of Police Joseph M. Quigley, it will be suggested to the members of the department, and especially to those above the rank of patrolman, that uniforms be worn in public at all times, except when permission is given by the Chief to policemen to appear in citizens' clothes. All members of the Police Department, except the detectives and patrolmen assigned to plain clothes details, are now required to wear their uniforms when on duty. The patrolmen and officers of the department may wear civilian clothes on their days off duty and on furlough, upon being given permission by the Chief to do so.

Some of the patrolmen who are on duty in the day time have a habit of appearing in public in their civilian clothes in the night time. Some of the captains and the lieutenants also have acquired the habit of leaving off their uniforms when quitting the station houses for their meals. Some even occasionally appear on duty without their uniforms.

Million Dollar Fire in Minneapolis

Minneapolis, Minn.—Losses of more than a million dollars were suffered in a fire which swept the Syndicate Block, Nicollet avenue, Sunday morning, March 5. More than a score of lives were imperiled and thrilling rescues were made by the firemen. The Donaldson block caught fire, but was saved by the sprinkler system. The buildings across the avenue were saved with difficulty, as it was, the roof and upper story were burned. Three fire companies came to the aid from St. Paul. Chief Strapp made the trip from the business district in St. Paul in 15 minutes. Crowds of people visited the scene on Sunday afternoon and were surprised to see among other things that the ornamental Corinthian lighting standards stood intact, although the building on the opposite side of the street was severely scorched.

Installing Danger Signals

Portsmouth, Va.—Danger signals are being installed at High and Court streets, Effingham and London streets, and Washington and South streets by Superintendent Smith of the city's fire alarm telegraph system. The signals are intended to light simultaneously with the fire tap of the fire alarm gongs in the engine houses of the Chambers Fire Company, No. 2, in Court street, the Park View Engine Company, No. 3, and the Independent Fire Company, No. 1, and are to warn approaching street cars of the movements of fire apparatus. The signals consist of two red electric incandescent globes suspended over the center of the roadway and the traction tracks.

Hauling Steam Engine with Auto

Walla Walla, Wash.—Fire Chief William Metz and the firemen have been testing out the Metropolitan steam engines as to their state of efficiency so that in case of emergency the fire-fighting equipment of the city will all be in trim for immediate use. Instead of hauling the engines about with horses they were trailed behind the 80-horsepower fire auto and the big car shows the drawing capacity of a locomotive. One of the steamers was taken up East Alder street behind the auto at the rate of 15 miles an hour, and so far as could be judged, without any strain on its motive power.

Policemen Receive New Book of Rules

Providence, R. I.—The Board of Police Commissioners has distributed a new book of rules among the members of the force. Included in the advice to a young policeman are the following recommendations:

"Remember that you are the servant of the people."

"If you don't like your job, resign, but don't attempt to influence anyone to make your duties easier."

"Don't forget that when you were appointed there were many others who would gladly have taken the position given to you."

"Accept no favors from anyone, pay for what you get, and don't be chummy with loafers or lawbreakers."

"Vote as you please, and don't think you can merit or secure promotion by being a politician."

Girl Fire Chief of City

Port Tampa, Fla.—Miss Maggie Harris, daughter of the late Fire Chief A. J. Harris, of Tampa, has the distinction of being the first girl in the world to be called upon to organize a fire department. Miss Harris will organize a volunteer department for Port Tampa City. Several severe fires recently have awakened the citizens and officials to the need of protection. About 40 men have volunteered their services. The men selected will be thoroughly drilled by Miss Harris. The late Chief Harris resided in Savannah for a number of years, during which time he was connected with the old volunteer department. He moved to Tampa when the Tampa department was reorganized and became its chief. Miss Harris was secretary to her father during his career, and took a deep interest in fire-fighting.

New Apparatus Given Test

Janesville, Wis.—The new chemical apparatus recently purchased by the city and placed on the fire chief's auto, has been tested for its efficiency. The tank was charged and put in operation and a nozzle an eighth of an inch in diameter was used with the hose coming with the equipment. The charge lasted for about fourteen minutes, but lost a good deal of its strength after the apparatus had been used about ten minutes. A pressure of 155 pounds was secured at the outset of the trial. It has been decided a large stream will be of more service in fighting small blazes and hereafter a three-sixteenths inch nozzle will be used. This, it is expected, will throw a stream of sufficient force for about four minutes, by which time the fire wagons or the fire patrol will be at the scene of the fire, or if necessary the reducer attached to the equipment on the chief's auto and a stream of water used in extinguishing the blaze. The auto with the equipment was weighed this morning and tipped the scales at 3,350 pounds. The auto alone weighs 2,720 pounds, making the weight of the chemical apparatus 630 pounds.

New Auto Engine Makes Good Record

Paterson, N. J.—Engine No. 10, the new automobile fire engine, covered 52 miles while answering fire alarms during the month just passed, and in many cases, although a long distance from the fires, came in not far behind the regular apparatus. In some cases it would have been able to get to the scene first but racing is forbidden by the rules of the department so that if it were last in the stretch it was obliged to retain its position. During this time 16 alarms of fire were answered.

New Chemical Engine Used for First Time

Two Harbors, Minn.—The Fire Department was called out one day last week to put out a fire at the Carey residence on Sixth avenue. It was only a small fire, caused by sparks falling on the roof, and was easily extinguished. For the first time the chemical engine purchased by the city was used and proved very successful, 100 pounds pressure being generated in about four seconds.

GOVERNMENT AND FINANCE

Wants Smaller Council

Richmond, Va.—Holding that the two branches of the Council are too large and are unwieldy, Councilman Clyde H. Rotchiffe has proposed a resolution to reduce the number from 64 to 24. He proposes to divide the city into three wards, instead of eight, allowing each ward three members of the Board of Aldermen and five Councilmen.

Many of the politicians oppose the plan because they will lose their prestige, while the business men favor the change. The possibility of the city changing to the commission form of government may have something to do with the suggestion at this time. The charter of the city would have to be amended to secure the result desired by Mr. Rotchiffe.

Chief of Statistics Calls Municipal Financiering Reckless

Boston, Mass.—Charles F. Gettemy, Chief of the Massachusetts Bureau of Statistics, has reported to the Senate that in 15 cities and 156 towns examined by his Department in response to an order of the Senate there is a total of \$1,124,231.98 municipal indebtedness and no provision for meeting it. Wholesale and indiscriminate borrowing from individual, trust funds, cemetery funds, Chief Gettemy reports, has plunged the cities and towns of the commonwealth into hopeless confusion from which the Legislature will have to rescue them. Mr. Gettemy intimates that there is a shadow of illegality resting upon some of the loans made apparently in accordance with the law. Borrowings amounting to nearly half a million are made from trust funds left for town improvements, but appropriated by the towns for current expenses. Towns are paying 6 per cent upon these misappropriated funds. Several towns have asked for legislative permission to refund. In some cases, however, refunding must be gradual so as not to financially wreck the present taxpayers. The proposition for a State finance commission is urged to meet the situation. The ruling of ex-Attorney-General Malone that towns which have borrowed in this way must regard such borrowings as narrowing their debt limit makes it impossible for them to borrow further without legislation.

Favors Municipal Ownership of All Public Facilities

Columbus, Ohio.—Mayor Marshall has declared for municipal ownership of all public utilities in a speech on the gas rate matter. At present there is municipal ownership of the light, water, sewage and garbage disposal plants, but the Mayor hopes also to effect ownership of gas, telephones and street railways.

Elect Councilman by Toss of Coin

York, Pa.—After four ballots taken by the West York Borough Council for the election of a successor to Councilman C. L. Green found the body still deadlocked, John Shive was chosen for the vacancy by the unusual method of flipping a coin. His opponent for the office was John Horner. Each of the candidates had received three votes in the four different ballots and after Burgess Luther E. Newcomer had tossed up the penny which decided the contest the action was made legal by the taking of another ballot in which all votes were for Shive.

STREET CLEANING AND REFUSE DISPOSAL

Garbage Disposal Faulty

Erie, Pa.—While City Health Officer J. W. Wright believes the backbone of the typhoid epidemic has been broken, a secondary outbreak may be even worse unless action is taken immediately relative to garbage disposal. The present system, he says, is a menace to the city. Three months work and \$75,000 will be required to establish a new system. The Water Commission has voted \$10,000 to assist in waging war against the epidemic. Every trained nurse that can be secured in Northwestern Pennsylvania is being employed here, and many are being brought from Pittsburg, Philadelphia, Buffalo and Cleveland. Between Jan. 1 and March 1 the fever claimed 84 victims, one for every 750 persons in the city. There were 744 cases.

Plan to Make Garbage Haul Itself by Rail

Atlanta, Ga.—A plan whereby the city's garbage can be made to haul itself to the crematories which the city is going to build in the near future will be considered by the special committee having the matter in charge. The plan is to install at each of the two proposed crematories a plant consisting of boiler, steam engine and electric dynamo, and by the joint operation thereof to develop power sufficient to run electric garbage trains on tracks to be built by the city from receiving stations at opposite ends of town to the crematory plants. It is estimated that the burning of the garbage at each crematory would produce ample heat to drive an electric plant powerful enough to pull the garbage trains.

Garbage Will Be Removed by City

Portsmouth, Va.—The Street Committee of the Council has taken over the work of the removal of garbage, and C. E. Murden has been engaged to supervise its collection. Heretofore the work of removing garbage has been done by contract, but the Street Committee believes that it can save money to the city by taking the work over and the new plan will be tried for a year.

City May Build Reduction Plant

Cincinnati, Ohio.—Mayor Schwab and Service Director Sundmaker are securing data in an investigation of the advisability of constructing a municipal reduction plant, when the present contract with the Cincinnati Reduction Company expires in June, 1913. The Mayor is of the opinion that the collection and reduction of garbage by the city might be done at a reduced cost from what is paid in the contract. The Mayor's attention was called to the matter when the hospital commission made arrangements for garbage incinerators for the new Avondale Hospital. They have secured a furnace which reduces all classes of garbage to ashes at a slight cost and without any offensive odors. The cost of the contract with the present contractor has steadily advanced each year from \$76,000 in 1903 to \$93,000 last year.

Recommends Incineration of Rubbish for Columbus

Columbus, Ohio.—Superintendent I. S. Osborn has made a report to Mayor Marshall outlining a plan for the disposal of rubbish, ashes and manure. He figures that \$63,380 will pay for collection and \$5,836 for disposal as compared with \$150,000, the estimated cost of disposition by private contract. By operating the plant in connection with the workhouse \$4,000 more may be saved. The present cost of removing rubbish is estimated on a cost of \$3.77 per residence for 40,000 residences. The item cost of collection includes \$18,600 for collecting manure, which Director Holton says can be made self-sustaining. To accomplish the results stated by Osborne an incinerator and utilization plant will have to be built. The incinerator is figured to cost \$36,000, and the utilization plant, which will consist of a building, conveyors, etc., where the portions of the waste which have value, such as rubber, leather, bottles, etc., may be picked out. The cost of operating incinerator and utilization plant is \$16,120, revenue from steam generated and sale of valuable materials, \$10,284; net cost, \$5,836, as stated. Mayor Marshall states that 100 deaths a year from communicable diseases will be avoided if the street sweepings and rubbish are disposed of in a sanitary manner.

Wants Change in Garbage Contract

Huntington, Ind.—To change the time of the expiration of city garbage collection contract to June 30 is a plan considered by Councilman Harmon Hendricks and he will probably introduce a resolution in the Council to bring about such a change after the present year. According to the present custom, the garbage collector assumes the task January 1, a time at which the work is the most difficult of the year. Before a plan of disposing of the refuse is well worked out, residents in some parts of the city usually bring in complaints of neglect. It is to correct this and to give the new man an opportunity to commence work during the warmer weather that Hendricks proposes the change.

Bill Purposes Economy in Street Cleaning Work

St. Louis, Mo.—A bill reorganizing the street cleaning divisions of the Street Department by combining the cleaning of hard pavements and the block patrol was introduced in the House of Delegates last week by Delegate Hildenbrandt at the request of Street Commissioner Travilla. The bill reduces the number of employees from 71 to 60 and the salary roll from \$67,464 to \$56,640, a decrease of \$10,824. Street Commissioner Travilla states that with the addition of three automobile runabouts to the equipment of the departments its efficiency would be largely increased. The bill substitutes for two superintendents at \$150 a month each, one superintendent at \$200 a month and makes similar combinations in the lower positions. The two departments can very readily be combined, as the inspectors cover the same areas while inspecting different matters.

To Demonstrate Incinerator Plant

Mason City, Iowa.—W. H. McGuire, of Oklahoma, is expected in the city shortly to demonstrate his incinerator plant. The sewage of the city as it now is empties into Lime Creek, and when the water is low a protest goes up from residents far down the stream. There has been talk of injunction proceedings time and time again, but nothing has been done. The system has been put in at a very heavy expense, but there can be no question that some other plan to take care of the sewage must be made soon.

Garbage Reduction Resumed at Bridgeport

Bridgeport, Conn.—The garbage reduction plant to be operated by C. C. Fischer, York, Pa., has been got in condition promising the beginning of active work March 15. Beginning that date it is expected that everything will be in readiness to receive garbage for reduction. For the past ten months the city has been obliged to bury its garbage. The town farm has been used for this purpose.

The operation of Fischer's plant will be watched with interest by East Side residents. Fischer's contract has a clause making a limit for the odor zone and, judging from the opinions of East Side residents, this clause will be enforced. There is a difference of opinion as to whether John B. Livingston, former head of the Bridgeport By-Products Company, or the city, will press their heavy damage suits. Nothing has been done concerning them for a long time and interest has somewhat been overshadowed by speculation as to how Fischer will succeed.

Municipal Garbage Plant

Winnipeg, Manitoba.—Chief W. J. Bailey, Department of Sanitation, who has been in charge of a 100-ton Dixon crematory for a short time—with the aid of convict labor, by the way—says in his report, in part: "From the first of the month to the present date we have consumed on an estimated average of from 6 to 75 tons of mixed refuse daily, all loads being dumped into the machine, and all non-combustible refuse, etc., being hauled from the machine the following morning with the ashes. We are burning coal in this machine, for which we pay the sum of \$3.65 per ton in lots as we require it. We have two paid men at work, all other labor being furnished by the city prisoners, they being worked by this department. Our highest rate of operation per ton of garbage, etc., consumed thus far has been \$0.219. The percentage of ashes, tin cans, etc., is about 15 to the 100 loads.

RAPID TRANSIT

City of Trenton Gains Decisive Victory for Good Trolley Service

Trenton, N. J.—Under orders and recommendations issued by the Board of Public Utility Commissioners of New Jersey to the Trenton Street Railway Company, the city of Trenton gains a decisive victory in its efforts to have the trolley service of the city materially improved. The orders are of such a character that safe and adequate service is guaranteed throughout the city within two years and the recommendations provide suggestions to the company, which, if adopted, will prevent a return to the present conditions. All of the reconstruction work ordered must be started on or before April 5 and completed during the year 1911. All of the rest of the work ordered must be started on or before April 5 and completed before the close of 1912. The orders demand complete reconstruction of parts of the system of tracks of the company on Hamilton avenue and South Broad street, and the repair of all joints in tracks in seven sections of the city. It prescribes the manner in which the joints shall be repaired in order that depressions which now exist shall not recur.

Municipal Ownership Bill Dies in Committee

Columbus, O.—The Geleerd bill which would have given the people of the municipality the right to own and operate its own street railway lines was defeated in the House cities committee last week. The defeat of the bill was in a large measure due to the exposure of the rider incorporated in its provisions, giving municipally owned street car lines rights to public streets without the consent of abutting property owners. This rider was similar to the one discovered in the Krause bill, which will probably meet a similar fate when it comes up for a third reading in the Senate this week.

MISCELLANEOUS

Gift of 10,000 Catalpa Trees to Woonsocket

Woonsocket, R. I.—James M. McCarthy, head of the McCarthy Dry Goods Company, of this city, who has been greatly interested in the subject of the benefit resulting from the intelligent work in recent years of Tree Warden Edwin O. Ronian, announces that the McCarthy Company will present to the city through the school children of Woonsocket 10,000 hardy Alice Catalpa trees. They will be ready for distribution in time to be planted next Arbor Day, which comes on May 12. They will be one year old and 12 to 15 inches high. The hardy catalpa trees are especially valuable for their rapid growth and shade-giving branches. According to the offer made by Mr. McCarthy to Superintendent of Schools Frank E. McFee, and which will be announced at the next meeting of the school committee and to the parochial schools, there will be cards of instruction as to planting and care of the trees attached to each tree. The trees that will be distributed grow rapidly. Their growth keeps pace with that of the individual and by the time some of the children who plant them attain manhood or womanhood they will find their tree abundant with foliage and 40 feet high. The only stipulation that accompanies the gift is that each child receiving a tree must plant it and promise to care for it. This gift will lend an unusual significance to a notable anniversary and the fruit of it will be apparent in Woonsocket for generations yet to come. Alice Catalpa tree roots well and thrives in almost any kind of soil.

South Bend Plans New Zoological Garden

South Bend, Ind.—In preparation for the launching of plans for the new \$3,500 animal zoo for Leeper Park, members of the City Park Board spent a day last week in Chicago on a tour of inspection. The Park Commission spent the greater portion of the day at Lincoln Park, where many valuable hints were secured for the construction of a thoroughly modern zoo in Leeper Park. The Common Council has appropriated the amount for the improvement in its annual budget and work will begin on the new building in a short time. An architect is to make plans of the building immediately.

New Municipal Dock Opened

Tacoma, Wash.—Tacoma's temporary municipal dock has been formally opened, several thousand persons—men, women and children—participating in a big house warming to celebrate the occasion. The affair was notable in point of interest displayed and members of the Business Men's Dock Committee were more than delighted with the success of the event, according to E. R. Rogers, chairman of the committee. Following an inspection of the building—and no nook nor corner was overlooked—the visitors gathered in the big freight room, and, standing, listened for an hour and a half to a program of addresses by prominent men.

Woodlawn Opens City Hall

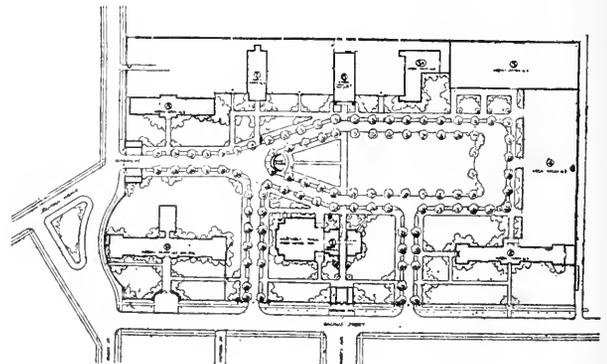

Woodlawn, Pa.—The new borough hall at Woodlawn was opened to the public last week and 1,800 persons, including 600 school children, marched through the building. Officials of the Jones & Laughlin Steel Company were present, and a band of employees of the company furnished music. The building is a three-story buff brick structure, erected at a cost of \$29,000.

Macon Plans for Child Welfare

Macon, Ga.—Macon will be among the first of Southern cities to establish a municipal playground for its youthful population. The field secretary of the National Playground Association has begun the work of inaugurating the playground on Tatnall Square. The city has already appropriated \$3,000 for improving Tatnall Square for this purpose.

Plan of Rochester's New Exposition Park

Rochester, N. Y.—The plan of the new Exposition Park, one of Mayor H. H. Edgerton's favorite schemes, was made by Architects Gordon & Madden. The landscape work is being done by Pitkin & Weinrighter. The improvements will cost about \$150,000. The new park will be about 15 acres in extent and the stone wall by which it is surrounded will be removed and an ornamental iron fence substituted. The Bloss street extension will be in the form of a convex curve, which will leave plenty of space in front of the old Girls' Dormitory. The driveway at the main entrance on Bloss street will be 30 feet in width and will divide at the bandstand and run northerly 20 feet wide on either side

EXPOSITION PARK

of an esplanade, which will front the three exposition buildings, numbered two, three and four. The esplanade will be 304 feet long and 148 feet wide. Trees and walks along the lawn will make it one of the prettiest spots in the city. There will be nearly a mile of cement walk and about one-half mile of driveway in the new park. Building No. 6 will be the aquarium and No. 7 will be the zoo building. Building No. 8 will be used as a vocational school. No. 3-a will probably be used for storage purposes. The Mayor admits he has a plan for the utilizing of Building No. 9, but declines to say anything about the matter, except that when finished it will be one of the most attractive buildings in the park. Building No. 1 will be the Assembly Hall, with a seating capacity of 1,200. Besides the main entrance on Bloss street there will be two entrances to the park from Phelps Street.

Foreign Labor Not Wanted in Centralia

Centralia, Wash.—Following the decision by the City Council of Chehalis that none but American citizens could work on city improvements, a large number of aliens have come to Centralia to endeavor to get employment in the public work that will shortly start here.

Centralia does not take undesirable foreign labor any more than Chehalis, and it is expected that this matter will come up before the Aldermen at the next meeting.

Fresno Yields to Street Speakers

Fresno, Cal.—The controversy over the right to speak on the streets of Fresno has been settled by Mayor Rowell and the City Council ratifying the action of the citizens' committee in granting to members of the Industrial Workers of the World permission to speak on K street and in Chinatown. The compromise provides that the 86 convicted Industrial Workers of the World now serving 40 days in jail for violating the street-speaking ordinance of the city shall be paroled, and the 30 unconvicted prisoners charged with the same offense shall be released immediately. The speaking will be governed by the permit system, the police to be instructed to grant permits to the Industrial Workers of the World to hold meetings on K street next to the Court House Park, and on Tulare street, in the Oriental quarter.

Petitions Urging Municipal Band Circulated

Pasadena, Cal.—Special effort is being made to secure 500 signatures on the petition asking the City Council to put up to the people at the next city election an ordinance establishing a municipal band at a cost of \$32,000 or less per year.

Smoke Ordinance Arouses Interest

Youngstown, O.—There has been perhaps no local legislation of recent years that has caused such general interest as the proposed smoke ordinance now in the hands of a committee of Council. This ordinance, which aims to make Youngstown a smokeless city, will demand a departure in established methods of installing fire grates and firing boilers, since all stacks in the city which emit a dense smoke, with the exception of dwelling chimneys, will come under the ban, and means must be provided for eliminating this nuisance. A violation of the ordinance is liable to a fine of not less than \$10 or more than \$50 for the first offense and a fine of not less than \$20 or more than \$100 for the second offense. Each day in which any provisions of the ordinance is violated shall constitute a separate and distinct offense.

Quiet Fourth of July for Monroe

Monroe, Mich.—Following the example of Toledo and Detroit, the Common Council has enacted an ordinance prohibiting the sale of giant fire crackers, dynamite canes, toy or blank pistols or anything else containing explosives, the ordinance to take effect in 20 days. For violating the ordinance a fine of not less than \$50 nor more than \$100 or imprisonment up to 90 days in the county jail is fixed.

Improvement Association Asks for Wooden Park Benches

Los Angeles, Cal.—Stone or cement seats for Central Park will be too cold, according to a petition filed by the Federated Improvement Association, which asks that the Council install wooden benches, with perhaps an iron framework, instead of the kind proposed by the Park Commission. The petition has been referred to the supply committee, which has the matter in charge.

Vote to Open Parks for the Public

Hackensack, N. J.—The Improvement Commission has voted to open three new parks, Anderson Park, the Park on the Green and Fairmount Park to the public. The question of cost could not be estimated. Accordingly the resolution was referred back to the committee to investigate and report at a later meeting. The resolution authorized a suitable tablet in Anderson Park to commemorate the donor. This question has been up for consideration before, but previously it has been impossible to obtain a favorable vote.

Hagerstown Plans for Cleaner City

Hagerstown, Md.—That the visit of Mrs. Caroline Bartlett Crane, of Milwaukee, to this city some time ago is about to bear fruit in the way of a vigorous campaign to improve the material and moral welfare of Hagerstown is evidenced by a call issued for a meeting of the Hagerstown Civic League. The invitation is extended to all citizens who are interested in promoting the sanitary, aesthetic and educational condition of the city. It is proposed to start at once the practical work of the league according to methods outlined by Mrs. Crane, who is an expert in "civic housecleaning." It is expected that hundreds of citizens will become members of the league.

Pittsburg to Have Free Bridges

Pittsburg, Pa.—Pittsburg is to have free bridges. Within ten days there is likelihood that one may travel to the Northside and back again without having to pay for the privilege. That is the construction placed by all concerned on the decision of Secretary of War Dickinson that the bridges need not be raised. Whether or not the bridges must be raised in the future—and the river interests have not given up the fight—is beside the question. The decision of the Secretary has made action possible and the Board of Commissioners has met and authorized Attorneys Hay and Vail to begin condemnation proceedings. The attorneys have all the papers prepared. They have asked the court for the appointment of viewers. And from that time on the County Commissioners are convinced things will proceed with neatness and dispatch. And the decision of Secretary Dickinson means the paving the way not for the freeing of three or four bridges, but for all five over the Allegheny in the city limits—five bridges capitalized at \$1,820,000, divided as follows: Sixth Street Bridge, \$625,000; Seventh Street Bridge, \$750,000; Ninth Street Bridge, \$150,000; Sixteenth Street Bridge, \$95,000; Thirtieth Street Bridge, \$200,000.

That they have been and are money makers is evidenced by the fact that the Sixth Street Bridge pays annual dividends of 15 per cent on par value of \$25 a share; the Seventh Street Bridge, 6 per cent on par value of \$50 a share; Ninth Street Bridge, between 11 and 14 per cent on \$50 par value; Sixteenth Street Bridge, 20 per cent on \$50 par value, and Thirtieth Street, 6 per cent on par value of \$50. The bridges are owned by 645 stockholders, a large percentage being estates. The Sixth Street Bridge has 327 stockholders, holding 24,411 shares of stock, more than 17,000 of these being held by women and children and trust estates. The Ninth Street Bridge has 93 stockholders, including 37 estates. There are 100 stockholders in the Seventh Street Bridge, 100 in the Sixteenth and 25 in the Thirtieth Street Bridge.

Municipal Shows Meeting with Success

Hartford, Conn.—The municipal exposition under the auspices of the joint committee of the Municipal Art Society and the Civic Club is meeting with popular favor. The different departments of the city government have been industriously engaged for several weeks in preparing their exhibits. The general public will find a lot of information at this exhibition about the city government that it did not possess before. The plans of Carrere & Hastings for the development and beautification of the city, which will be forwarded from New York this week, will be displayed.

Toledo, O.—Toledo's first municipal show is giving citizens the opportunity to inspect the work of all the various departments. The hall is open each afternoon with moving pictures and a musical program each evening as added attractions. There is no admission charge. For the purpose of giving many persons the unusual opportunity to see the legislative branch of the city government in actual operation, the session of council will be transferred one night to the stage of Memorial Hall.

To Popularize Central Park

New York, N. Y.—The question of the popularization of Central Park, which raised much opposition last year, was taken up by the Aldermen last week, and a resolution passed requesting Park Commissioner Stover to proceed at once with the construction of the playground, wading pool, etc., in the northern end of the park authorized in the budget for this year.

LEGAL NEWS

A Summary and Notes of Recent Decisions—Rulings of Interest to Municipalities

Illegal Removal of Fire Chief

Leonard vs. City of Terre Haute.—Under the express provisions of Burns' Annotated Statutes 1908, the chief of the fire department is an appointee of the board of public safety whom the board cannot remove for political reasons, nor in any other manner than as therein provided. When a de facto officer is in the possession of an office and discharging his duties under color of right, a person claiming to be de jure entitled to the same office cannot sue for the salary or fees of the office without first establishing his right to the office by quo warranto, as otherwise it would permit him to try the title to an office in a collateral proceeding to which the holder of the office under color of right was not a party. Where a statute makes provision for the chief of fire force and firemen, their appointment, mode of compensation and proceedings for removal, their duties are of a public nature, and so far official that one holding a position either as chief or fireman is entitled to his salary as an incident to the position, whether he performs the duties of such position or not. Acts done under coercion cannot be held to be an abandonment of office. Appellate Court of Indiana, 93 N. E. R., 872.

Legislative Control—Municipal Property

Board of Handley Trustees vs. Winchester Memorial Hospital et al.—Acts 1895-96, entitled "An act to enable the city of Winchester to accept the bequest of John Handley," etc., provided for a board of trustees to carry out the objects and the benefactions, instead of the Common Council, and provided that the trustees should superintend and direct the investment of the fund, etc., but that no plan for the ultimate application of the fund should be valid unless approved by the Common Council. Held, that the act deprived the Common Council of all power to charge the fund for services rendered by an attorney in litigation which arose concerning it. Supreme Court of Appeals of Virginia, 70 S. E. R., 133.

Paving Assessment—Review

City of Decatur vs. Brock.—Questions relating to certain clauses of a paving contract and the extension of time for the completion of the work are not questions of record or jurisdiction to be reviewed by a common-law certiorari to review an assessment therefor, especially in view of Laws 1907, giving a right of appeal. Supreme Court of Alabama, 54 S. R., 209.

Vacation of Streets—Evidence

Gatie vs. City of Cedar Rapids.—The court in determining whether there should be a vacation of streets in proceedings under Code, authorizing the vacation of plats and streets and alleys thereon, must consider reasonable future requirements, and the fact that the streets are considered necessary for use by the city for water and sewer pipes shows that they will also be needed for use by the general public, and they should not be vacated. Supreme Court of Iowa, 129 V. W. R., 737.

Paving Assessment—City Park

Newberry vs. City of Detroit.—Under Detroit City Charter, providing that for the purpose of an assessment for paving a street the lots and parcels of real estate situated on the street and fronting the portion improved constitute one local assessment district, and the assessment thereof shall be according to their frontage, a park owned by the city and fronting thereon is not exempt from assessment. Supreme Court of Michigan, 129 N. W. R., 699.

Defects in Streets—Lighting

Blain vs. Town of Montezuma.—Under Code, giving to cities and towns the power, but not expressly imposing on them the duty, to light their streets, no absolute obligation is imposed, either as to the extent or mode of lighting, and the inefficiency of a system of lighting installed does not constitute negligence. Supreme Court of Iowa, 129 V. W. R., 808.

Dangerous Trees—Question for Jury

Wright vs. City of Chelsea.—Where a shade tree in a city street has plainly, for over a year, been in a condition making it a menace to the public and the defect can only be remedied by removal of the tree, and not by trimming it, and the officer charged with care of the streets takes no steps to report the defect to the proper authorities, looking to its removal, as required by Revised Laws, section 10, nor to warn the public of the danger, the city is liable for injuries to a traveler by the fall of a limb. Whether a tree was dangerous because of decay and liability to fall, and whether a city has used due care to protect the public, as required by Revised Laws, providing for the removal of such trees, are jury questions, in an action against the city for injuries received by the falling of such tree. Supreme Judicial Court of Massachusetts, 93 N. E. R., 840.

Street Commissioner—Term of Office

Otto vs. City of Detroit et al.—Under Completed Laws 1897, providing that all appointive officers shall hold until the second Monday in April after their appointment and until their successors are qualified, unless a different term be prescribed, and that officers appointed to fill vacancies shall hold until the next annual election and until their successors are elected and qualified, one appointed village street commissioner would hold the office de jure until his successor qualified and entered upon his official duties, so that the invalidity of a subsequent reappointment of such appointee could not prevent him from recovering his salary for the time he held the office until such successor qualified and entered upon his duties. Supreme Court of Michigan, 129 N. W. R., 731.

Attorneys—Compensation

Moore et al. vs. City of Detroit et al.—Where the president of a village made a contract for the services of attorneys, the agreement covering also a retainer, which contract was beyond his power, and the village by resolution of the Council subsequently appointed the attorneys to the position of attorneys for the village, but provided for no specified compensation, the attorneys were entitled only to reasonable compensation for services actually rendered, and hence, in an action by the attorneys for compensation, the jury should have been charged that no retainer could be recovered. Where the value of an attorney's services, outside those covered by the retainer, which he was not entitled to recover, as testified to by the plaintiff, was something over \$2,000, and the difference between this sum and the amount of the judgment was practically the amount of the retainer during the period of employment, there can be no doubt that in making up their verdict the jury allowed the plaintiffs a sum equivalent to the retainer, so that failure to charge that plaintiff could not recover for the retainer was prejudicial. Supreme Court of Michigan, 129 N. W. R., 715.

Contracts—Use of Public Money

McManus et al. vs. City of Petoskey et al.—A provision of a lease by a city of its land that the city shall deposit with a third person a sum of money belonging to the city, to be paid over to the lessee when a new building to be erected by the lessee for manufacturing purposes is completed, and which fixes the interest of the city in the building, is invalid as an attempt to use public money for the furtherance of a private enterprise. Supreme Court of Michigan, 129 N. W. R., 681.

Suspension of Employee—Compensation

Hoyt vs. City of New Rochelle.—The voluntary reinstatement, after a suspension of 13 or 14 months, of a sewer inspector appointed under the civil service laws, without proceedings by him to secure reinstatement, do not establish a wrongful discharge in the first instance, and do not entitle him to compensation for the period during which he was suspended. The suspension by the Board of Public Works of a city of a sewer inspector, appointed under the civil service laws, because of lack of work and lack of funds, the inspector being put back in his position as soon as there was work for him to do and money with which to pay him, was not a wrongful act and showed no bad faith on the part of the board. New York Supreme Court, 127 N. Y. S., 223.

Use of Streets—Automobile Races—Accident Liability

Bogart vs. City of New York.—A City Council has no power to authorize the use of public streets by an automobile club for automobile races to be held within certain hours on a particular day, and such use of the street is illegal. Where a spectator was voluntarily present to witness automobile races on a public highway, illegally authorized by the City Council, his administrator could not recover against the city for his death, resulting from being struck by an automobile swerving in its course and leaving the highway, on the theory that the contest was illegal in the absence of proof of negligence. Court of Appeals of New York, 93 V. E. R., 937.

Incorporating of Cities—Statutes

Kuhn, Atty.-Gen. vs. Common Council of City of Detroit.—Under Constitution Annotation, 1908, providing that under general laws the electors of each city may frame, adopt, and amend its charter, and Public Acts No. 279, providing for the incorporation of cities and authorizing, in section 21, amendments proposed by the legislative body or by initiatory petition, a revision of an existing charter of a city as authorized by the act of 1909 must precede proceedings to amend the charter in the manner prescribed in the act. Supreme Court of Michigan, 129 V. W. R., 879.

Defective Sidewalk—Contributory Negligence

Stodd et al. vs. City of Philadelphia.—The parents of a boy $4\frac{1}{2}$ years old of ordinary intelligence who lived in a large city, are not chargeable with negligence as matter of law for permitting the child to play on the sidewalk without an attendant, although having knowledge of a defect in the walk likely to cause a child passing over it to fall, but, in an action for an injury to the child from such defect causing his death, the question of contributory negligence of the parents is one for the jury. United States Circuit Court, 183 F. R., 659.

Street Widening—Removal of Buildings

Wheeler vs. City of Sault Ste. Marie.—A city contracting to buy land to widen a street could not undertake with the owner to move his building, make a fill on land retained by him, re-establish fences, etc., nor to indemnify him against risks in moving the building as to persons and property. A city has only such powers as are given it by the Legislature. In acquiring land to widen a street, a city is limited by the modes prescribed by statute and its charter. A city cannot indemnify risks for individuals or other corporations. Supreme Court of Michigan, 129 N. W. R., 685.

Contracts—Fraud—Interest of Officer

Mayor, etc., of City of Ensley vs. J. E. Hollingsworth & Co.—Where in an action on a contract for the construction of sanitary sewers for a city it appeared that the contractor was a firm, a partner of which was a member of the City Council at the time of the execution of the contract, evidence of other bids on the same work was relevant on the issue of fraud in procuring the contract. Where in an action on a contract for the construction of sanitary sewers for a city a plea averred that plaintiff's bid had been fraudulently changed from a bid of 40 cents per wye to \$1.40 per wye after the making of the contract, the testimony of a bidder that his bid of 80 cents per wye was the highest bid, was admissible to show that plaintiff's bid had been changed. A contract by a City Council with a firm, a partner of which is a member of the Council, for public work is not invalid, in the absence of a statute, where it is free from fraud, and where the partner did not vote on the proposition nor take any part in behalf of the city in making the contract. Code 1907, providing that no alderman or officer of a municipality shall be directly or indirectly interested in any work, the expense of which is paid from the treasury, does not apply to a contract made before the adoption of the statute. Supreme Court of Alabama, 54 S. R., 95.

Ordinance—Two Subjects—Review

Lonsinger et al. vs. Ponca City.—Where it is not apparent that the title of an ordinance contains two subjects and the same is not pointed out, the ruling of the trial court upholding the validity of the ordinance will not be disturbed in this court. Supreme Court of Oklahoma, 112 P. R., 1006.

Injuries to Servants of Independent Contractor

Huey et al. vs. City of Atlanta.—The operation of a system of water works is not such a governmental function as that a city is not liable for injuries resulting through negligence in the maintenance thereof. While this business is quasi public, it is not essentially governmental. If the proprietor of premises on which machinery is located employs an independent contractor to repair a particular machine, and the proprietor knows, or by the exercise of ordinary care should know, not only that the machine is out of repair, but that there is some extraordinary latent danger or perilous condition attaching upon the service, and the independent contractor sends a servant to make the repairs (the servant being actually or constructively ignorant of the extraordinary danger), it is the duty of the proprietor of the premises to warn the servant thereof; and for a breach of this duty, resulting in injury to the servant, the latter has a cause of action against the proprietor of the premises. Court of Appeals of Georgia, 70 S. E. R., 71.

Village Election—Insufficient Notice

In re Village of Lynbrook.—A notice of an election on the question of the incorporation of a village, which provides that the election shall be held on a designated date between the hours of 1 o'clock in the afternoon and sunset, is insufficient under Village Law, as amended by Laws 1910, requiring that the polls shall be open from 1 o'clock in the afternoon until 8 in the evening, where on the designated date the sun set 20 minutes after 7, and the election must be set aside, though the notice need not specify the hours during which the polls shall remain open, but, where it purports to do so, it must comply with the statute. The act of the town clerk of a town in leaving on the counters of tradesmen notices of election on the question of the incorporation of a village and in hanging up one notice in a shop is not a compliance with Village Law (Consol. Laws, c. 64), section 10, as amended by Laws 1910, providing that the notice shall be posted in conspicuous places. New York Supreme Court,

Licenses—Exemptions—Charitable Societies

City of Mobile vs. Kiernan.—An indorsement on the back of a petition to the Mobile City Council for exemption from payment of a license fee and for the return of the amount paid, "We will vote to grant this petition," signed by nine members of the Council, was of no legal effect; the legislative authority of the city being vested in the Council as an organized body, whose will could be expressed only as prescribed by law, the members acting severally being able to do nothing. Mobile City Charter empowers the City Council to collect a license tax from all persons or corporations trading or carrying on any business, trade or profession, by an agent or otherwise, within the corporate limits. A charitable society contracted with an amusement company to hold a street fair in the city, the society to furnish the license and to receive a percentage of the receipts. The amusement company was a purely business concern. Held, that the business was subject to a license as well as any other, even if charitable enterprises were exempt. Supreme Court of Alabama, 54 S. R., 103.

Control of Streets—Railroads

City of Memphis et al. vs. St. Louis & S. F. R. Co.—Under the provisions of the charter of the city of Memphis giving it entire control over all the city streets and power "to permit and regulate the laying off of railroad tracks and iron and the passage of railroad cars," vesting in the City Council charge and control of the granting of all franchises and special privileges, and providing that "no franchise shall be granted or sold to any commercial railroad . . . or other quasi-public corporation except by ordinance fully guarding and protecting the rights of the public," in the absence of direct legislative authority, a railroad company has no right or authority to build or maintain a track within the city and over its streets without the consent of the Council, and where the Council has granted such right by an ordinance, subject to certain conditions, one of which is that the company shall file a written acceptance of its provisions, such ordinance is an entirety, and its acceptance is a condition precedent to the grant. United States Circuit Court of Appeals, 183 F. R., 529.

TANKS AND STREET KETTLES

NEED OF STORAGE CAPACITY

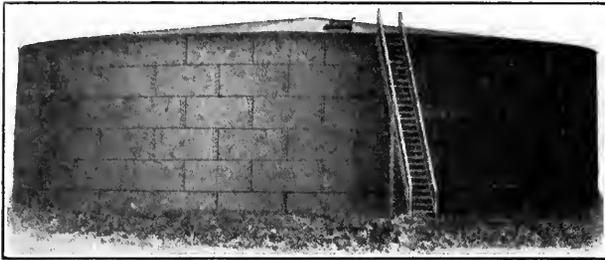

The remarkable increase in the amount of bituminous road construction brings to the front the question of ways and means of handling the bitumen. In the discussions of road making the value of asphalt and tars depending on their physical and chemical constitution is argued ad infinitum, but possible economies through the choice of the best means for handling the bituminous materials are generally overlooked. Ordinary construction tools and machinery play a subordinate part in the new method of road making and an unfamiliar class of appliances are of the greatest importance—namely, tanks. That the supply of this

tank cars and kept standing, under a demurrage charge to the owner of the tank. If the amount of work under control is large and likely to be duplicated in succeeding years, as in the case of a well established local contractor or a municipality doing its own work, the use of one or more storage tanks will be found to pay. In addition to security of supply, if the tank is properly placed there is considerable economy effected in handling from the car in which the material arrives to the tank wagon or whatever device is used to deliver it on the work.

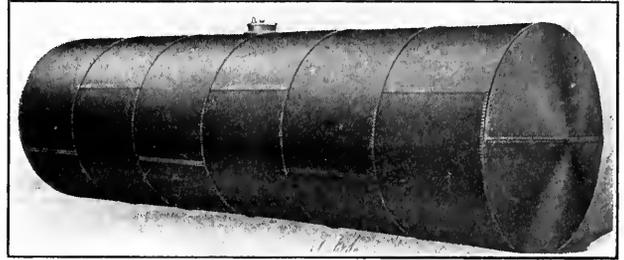

GENERAL CONSIDERATIONS

In choosing storage tanks the shape and number of tanks has to be consid-

though a light oil or tar is used, heating will facilitate the work in cold weather, permitting construction to go on under conditions otherwise impossible. A drip to draw off water should be provided. The amount of water that condenses in such a tank is surprisingly large, and if the material is to be heated up to 212° F. the trouble with foaming may be such as to stop the work. Of course if the bitumen is handled at a lower temperature than 212° F., the water will do no harm. But in a permanent installation both contingencies should be provided for. The choice of a valve for drawing off has to be considered. Gate valves are objectionable, as they may stick, and a workman in

LARGE STORAGE TANK MADE BY THE PETROLEUM IRON WORKS CO.

6,000 TO 12,000-GALLON STORAGE TANK, MADE BY WARREN CITY TANK AND BOILER CO.

sort of equipment has not kept pace with the demand is the evidence of contractors who have had work to do, particularly in places far from the great cities.

Of course if details are gone into fine enough no two jobs are alike or require the same equipment. There are few pieces of bituminous road work, however, that can be carried on without some provision for storage. Lack of storage means idle men and needless expense or the disintegration perhaps of a well organized force of men when the supply gives out. The need of storage may be supplied by keeping barrelled material on hand on vacant lots along the line of the work. Or the tar or asphalt may be purchased in

ered. The shape will depend on the location, the difference in level between receiving and shipping points, as well as considerations of cost of the different styles. Whether one tank is sufficient is another question to be decided. For an equal storage capacity, one tank is the cheapest. But if two or more tanks are set up, different kinds of material, as tar and asphalt, may be handled at the same time. As to the size of storage tank, considerably more than the capacity of one railroad tank car, about 7,000 gallons, should be provided. Ten thousand gallons is the least capacity worth considering, and where anything like continuous work is in sight twenty thousand gallons is not any too much, even for a town of moderate size.

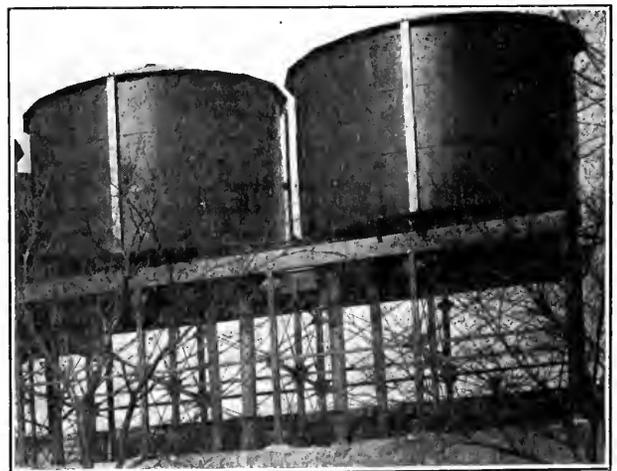

Among the important accessories of a storage tank are steam coils, for even

his hurry may twist off the stem. A common plug valve is cheaper and better.

Probably the first inclination of a contractor or city official who has decided to buy a storage tank for road oil is to direct inquiries to the nearest boiler maker. This, however, is not likely to be the best thing to do. Tank making is not ordinary boiler making. Tanks are made of quarter-inch steel, or about that thickness, furnished in large plates, five feet wide and from six to nine feet long. The large sheets, besides making a better tank, avoiding chance of leakage, are more desirable economically, as requiring less riveting. A tank maker may have the sort of tank that is required on hand, at any rate he is in a position to make it promptly. The prospective purchaser might think that the item of freight would prohibit any but the nearest tankmaker from being a successful bidder, but such is not necessarily the case. Manufacturers frequently supply tanks to points hun-

ELEVATED STORAGE TANK, 6,000 TO 12,000 GALLONS, MADE BY WARREN CITY TANK AND BOILER CO.

STORAGE TANKS ELEVATED ABOVE RAILROAD, MADE BY CANTON BOILER AND ENGINEERING COMPANY

hundreds of miles distant from their plants. The accompanying illustrations show a variety of storage tanks built by companies to whom the *Municipal Journal* has directed inquiries. Most of the manufacturers state that they build tanks to meet the requirements and under the specifications of the purchaser. The Warren City Tank & Boiler Company, however, state that they keep on hand at all times cylindrical tanks of from 6,000 to 12,000 gallons capacity. Some of these are already equipped with heating coils of proper design. Among the companies that state that they are ready to supply at short notice tanks of from five barrels to 65,000 barrels capacity are the Petroleum Iron Works Company, the Treadwell Construction Company, the Canton Boiler and Engineering Company and William Graver Tank Works.

A peculiar system of storing and handling road bitumens has been developed by S. F. Bowser & Co. A heavy steel tank is buried underground located so that it can be filled immediately by gravity from the tank car—a quick and cheap method. A Bowser rotary pump is recommended for drawing the liquid from the storage tank into wagons or kettles which are to carry it to the work. The pump need not be installed close to the tank. This system is in use in Milwaukee.

TANK WAGON

From the storage tank, in the ordinary routine of work, the bituminous material is transferred to smaller tanks which serve as heaters, as means of transportation and as distributors or for all these purposes to a varying extent. A tank made by the Barrett Manufacturing Company, of which a reproduction and diagram are shown, answers all these purposes very well when it is convenient to handle so much material at one time. Its capacity is 600 gallons. This outfit consists of an ordinary but very substantial running gear carrying on semi-elliptical springs, a framework, suitably braced, of which the principal parts are two 6-inch I-beams, 10 feet 7½ inches long reinforced with a wooden filler. As the whole equipment with load weighs nearly 9,000 pounds the heavy springs and frame are essential to durability. The tank is 9 feet long and 42 inches in diameter. It sets up above the I-beams, being supported by four brackets on each side, riveted to the tank. There is a firebox under the tank at the rear and a flue running the whole length and a stack at the front side of the driver's seat to give proper draft. As the tar is delivered into the tank hot only a small fire is necessary and the direct exposure of the tank to the heat does no harm. The firebox is of cast iron, 23 inches deep and 20 inches wide. The pipe for drawing off is placed as near the bottom of the tank as possible. On top of the tank is a manhole for use during cleaning, a plug and flange at the opening

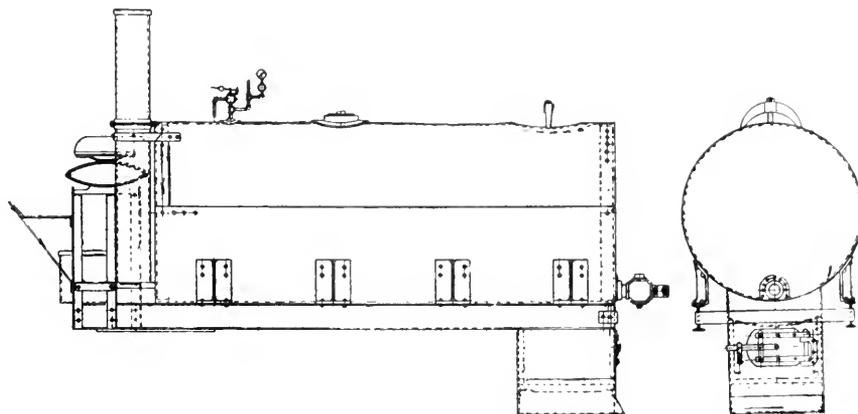

DIAGRAM BARRETT MFG. CO.'S TANK WAGON, WITH FURNACE

where the tank is filled, a pressure gauge, a blow-off valve and connections for compressed air or steam.

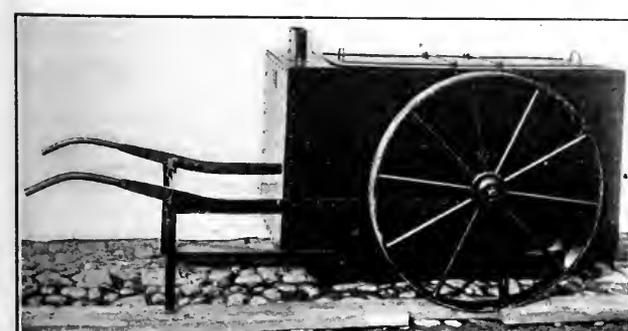

The reproduction shows a side view of the tank wagon which is being drawn by a road roller spreading heavy tar via with special spray nozzles, using air pressure. A galvanized iron hood, to protect the spray from wind, covers the nozzles. This arrangement spreads a strip about 7 feet wide. The quantity used per square yard is regulated largely by the speed of the roller.

The distinction between this Barrett tar wagon and an ordinary watering cart used for transporting and distributing oil is perhaps rather a line one. For if the tank of the watering cart is of steel and strong enough to stand a pressure of 20 pounds to the square inch the function performed may be the same. In fact, the Barrett wagon is frequently used in this way without any fire and the wagons are also built without the fire box. But as this article is confined to the consideration of storage tanks and kettles, tank wagons, having no means of heating attached, will not be further considered.

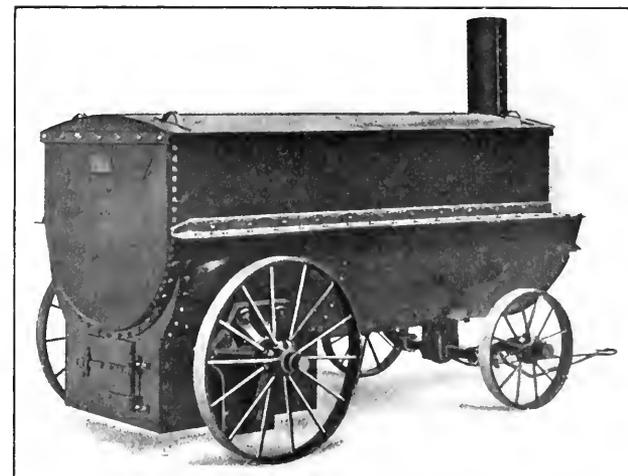

CAPACITY AND SHAPES OF STREET KETTLES

Before taking up the different types of street kettles, in the more restricted meaning of appliances for heating and aiding in the distribution of tar and asphalt, some general considerations should be borne in mind. First, there is the question of capacity—this means both quantity contained and amount that can be heated, depending on the efficiency of the firing arrangements—grate area and area of surface exposed to the heat. In making quick estimates of capacity certain units easily kept in mind are sufficiently accurate for rough estimates. The amount of bituminous material needed is best figured in fractions of a gallon per square yard

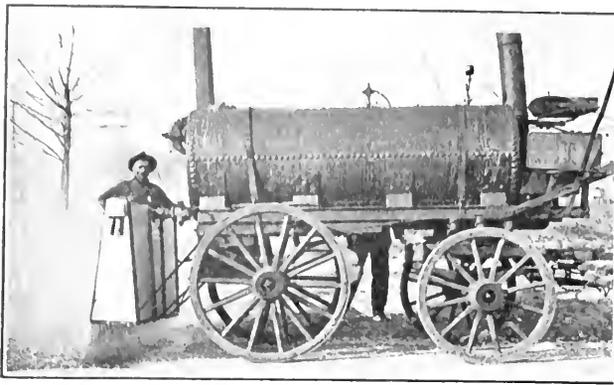

of work. In figuring the capacity of the tank a barrel, assumed to measure fifty gallons, is the ordinary unit. One-barrel tanks are the smallest used and ten-barrel tanks the largest. How many times a tank may be heated up in a day is hard to say, as skill in handling and the nature of the materials vary so much. Three hours allowed for the first tank in the morning and two hours for the succeeding tanks would be fair work. The first tank should be fired up by the watchman and ready for use when the men come to work. About five tanks a day should accordingly be heated. Referring to our units then, with a ten-barrel tank on work requiring half a gallon to the square yard, 1,000 square yards of roadway should be covered for each tank used. The matter of the durability of the tank is an important one. In this connection, it is interesting to note the great improvement made in street kettles in recent years. The weak points of all kettles are the running gear, including the handles or device by which it is drawn, including the joint to the axle, and the bottom of the kettle which is exposed to the heat. Old style kettles were rectangular, drawn on four wheels with frame and kettle proper riveted in one structure. The wheels were small and wore out at the axles. The handle and hooks were continually breaking and the bottom when it burned out was expensive to replace. After one or two years' time extensive repairs were necessary. In the kettles illustrated, these defects have been to a large extent overcome. In small kettles two large wheels are now used. This not only decreases the wear on the axles and hubs, but decreases the strain on the handle and hooks during transportation. In the case of

F. H. EVANS' RECTANGULAR STREET KETTLE.

JOS. HONHORST'S 500-GALLON STREET KETTLE

BARRETT MFG. CO.'S TAR WAGON IN OPERATION

four-wheeled kettles larger wheels than formerly are used and a substantial fifth wheel added. To decrease the danger of burning out the bottom of the kettle, the pot, is made detachable so that it can be taken out, heated over a fire or burned out with the aid of kerosene. In one of the kettles described a cast iron bottom is used, and in all cases the material chosen for the melting pot is carefully selected.

CARE OF KETTLES

A few words regarding the care of kettles with a view to prevent burning out. The destructive influences at work on the bottom of the kettle are the same as those which tend to destroy a steam boiler, and the remedy is the same, namely, keep the metal clean. To keep it absolutely clean is hardly possible, to keep it practically clean only requires due attention and the use of proper tools. All tars and most asphalts contain dirt and carbon which settle to the bottom and form coke. Besides, street dust blows in and adds to the sediment. Coke even to a considerable depth may accumulate in the kettle, unsuspected by a superintendent not thoroughly familiar with the peculiarities of tar kettles. The scale cannot be detected by ordinary sounding with a bar. Even if the tank is emptied and observed it is not easy to distinguish between the coke and the steel bottom. Use of a cold chisel and a hammer will disclose the facts. For cleaning kettles a chisel-faced tool two or three inches wide with a handle about two and a half feet long is very useful. The kettle should be cleaned daily with such a tool, and once or twice a week, according to the nature of the materials used, it should be removed from the frame and completely burned out and

gone over with a chisel and hammer. The saving in fuel will pay the cost of cleaning, to say nothing of the life of the kettle, which could be prolonged indefinitely if kept absolutely clean.

LARGE STREET KETTLES

The largest portable kettles made are of 10-barrel or 500-gallon capacity. We illustrate two of these, both of which answer the same purpose, but vary in construction and design. The Jas. Honhorst Co.'s four-wheeled tar wagon is constructed of 1/4-inch steel plate throughout. The firebox is large in size, made to burn coal or wood and is provided with heavy cast iron grate bars and heavy inside lining of 3/8-inch steel plate. The front end of firebox extension has double doors hinged on so that the space between kettle bottom and inside can be thoroughly cleaned from end to end. The rear end has large size fire door hinged on with full length strap hinges and latch. The smoke stack is fitted over nozzle, riveted to top of firebox projection at front. The shell of firebox extends semi-circular up around the sides of kettle, thus making a quick and easy heater. The kettle is semicylindrical in shape with end heads flanged and riveted in and is stiffened on each side full length, with 2 1/2-inch angle iron, also around the top with 1 1/2-inch angle and cross-stayed with two 1/2-inch rods passing through pipe. The kettle is bolted to firebox at side angles and the front end has a 2-inch flange with nipple and draw-off cock. The rear axles are of heavy cast-iron bracket type, with larger taper machine steel spindles cast in by having the casting poured around same, in mold. These are securely bolted to sides of firebox through the outside shell and the inside 3/8-inch lining. The front axle is a 2 1/4-inch square steel forging with eye at center and a steel pin passing through fifth wheel, which is so constructed that the weight on same is distributed between the shell of firebox and the bottom of kettle. The wheels are 24-inch and 42-inch diameter, all-steel, with extra long hubs, bored to suit taper of axles, staggered wrought spokes and welded rims with extra steel tire shrunk over outside and riveted. This outfit is furnished complete with a cover made of

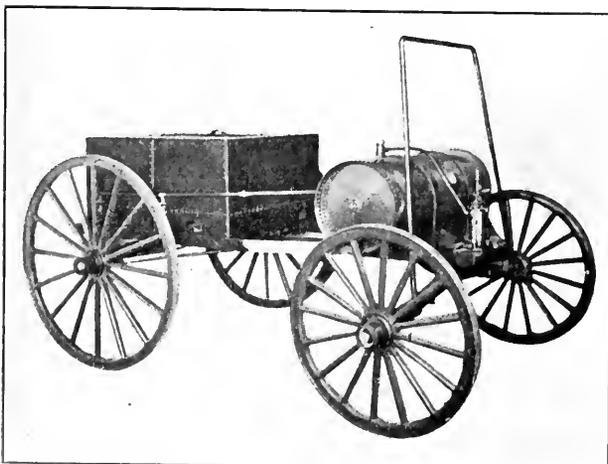

TIDEWATER IRON WORKS 500-GALLON STREET KETTLE

sheet steel, arched and reinforced underneath and edges projecting over sides and ends. Each part of cover has two handles. The front axle has a yoke or tongue attached to clips and with turned eye in middle for coupling to rear of supply or tool wagon.

The other kettle of the same class is made by the Tidewater Iron Works whose officers have been closely associated with the paving business for many years, with the result that their design embody many ideas of practical men. The kettle is so made that horses can be quickly attached to it. Racks for carrying wood, which have been built on top are a great convenience, providing means for overcoming the difficulty of keeping material hot on long hauls. The boiler can be replaced without sending whole kettle to shop for repairs. Both running gear and kettle are substantially constructed throughout.

The Tide Water Iron Works also make a combination tar kettle and gravel heater which might be useful in road work as well as for repairs to granite paving, for which it was built. One fire furnace both hot tar and gravel. Over the firebox in front of the kettle proper is a structure made of perforated iron plates, showing in cross-section like an inverted V. Baffle plates arranged outside of this form pockets for the gravel or broken stone. These baffle plates, however, are not brought close to the perforated plates, but an opening is left so that the gravel, thrown in cold at the top, is taken heated from the bottom. The whole apparatus is mounted on two large wheels and can be drawn about easily.

A peculiarly constructed kettle is made by Walter Macleod & Company. The tar is heated by means of oil burners placed

WALTER MACLEOD COMPANY'S OIL-HEATED STREET KETTLE

SMALL ELLIPTICAL KETTLE, TIDE WATER IRON WORKS

CANNERY & CO.'S SMALL ELLIPTICAL KETTLE

der a tank. The capacity of these machines varies from 50 to 200 gallons. An tank is carried in front of the wagon; pressure supplied by a hand pump feeds the fuel to the burners. The ordinary consumption of kerosene is stated to be two or three gallons per hour. The price is claimed to eliminate the smoke nuisance which often makes street kettles so offensive. However, the nuisance of a tar or asphalt kettle is caused almost wholly by the practice of burning the staves of the barrels in which the material comes. This is easily avoided by burning the staves. When fuel costs money and barrel staves are to be had for nothing, it is hardly in human nature to use them. With the oil-burning kettle they cannot be used.

SMALL KETTLES

In connection with road construction there are thousands of gallons, perhaps, used daily, it would seem at first sight that small kettles of one or two barrels capacity would be of no use. Wherever there is new work there are always roads to follow, and even in new construction there are small sections to do, as at intersections. For this reason there seems to be no doubt that small kettles find an extensive use. The cost of transportation and the deterioration of material when heated for a long time make large kettles undesirable for doing all pieces of work. The type of kettle that have been developed in connection with asphalt paving repair work will probably best answer the purpose, as they have been built to meet the conditions. The small kettles herewith de-

IROQUOIS IRON WORKS' SMALL ELLIPTICAL KETTLE

scribed will, therefore, interest those who have the construction and maintenance of bituminous roads under their charge.

The Iroquois Iron Works makes a rectangular heating kettle of one, two or three barrel capacity, equipped with two steel wheels 48 inches in diameter, with 4-inch rim and wrought-steel spokes. The wheels are mounted on a heavy steel axle fastened securely to the bottom of the kettle. The furnace is provided with sheet-steel bottom, No. 12 gauge. A tongue is riveted to the tanks at the proper height for hauling the kettle, and a wrought-iron rest with a foot is provided. The most frequently encountered difficulty in working with kettles, namely, clogging of the faucet by cold material, has been overcome by placing the faucet inside the kettle. This is shown in the cut. The three sizes of kettles weigh 650, 750 and 910 pounds, respectively.

Iroquois asphalt and tar kettles are also made elliptical in form, of 1/4-inch tank steel, riveted to heavy angles at the top and bottom and are made in 100-gallon capacity. General dimensions: Length, 44 inches; width, 33 inches; depth, 30 inches. Fire door of sheet steel is located at rear near bottom, and is equipped with heavy wrought-iron hinges, lugs, latch, etc., and has an opening of 13 1/2 by 8 1/2 inches. A cast-iron elbow is riveted to kettle on front end at top, to which is attached the smoke stack, which is of No. 16 steel, 36 inches in height, with properly designed supports. The kettle is equipped with cast-iron grates. The asphalt tank is made of same material as kettle and is supported by angles, tank dimensions being 27 1/2 inches wide by 38 inches long by 28 inches in depth; bottom is of cast iron having raised in center and properly ribbed to prevent warping, and is riveted in. The weight of the elliptical kettle, two-barrel capacity, is 1,420 pounds.

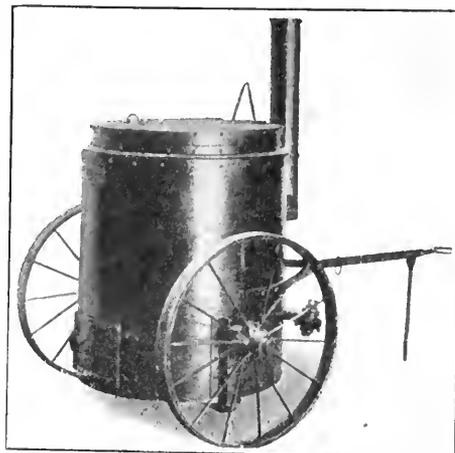

Cannery & Company make a 100-gallon wheel kettle which weighs 625 pounds. It is 42 inches high, made of No. 12 firebox steel and has a 2-inch solid crank axle. The sides are reinforced. The wheel track is 5 feet 2 inches wide. Wooden wheels are also furnished if preferred. This company also makes a 150-gallon rectangular kettle with four wheels.

F. H. Evans, who has been manufacturing kettles for roofers for 25 years, makes a portable tar heater shown in the illustration. The angle-iron frames are welded and the sides are double. They are claimed to be very rapid heaters. There is a 2-inch valve to draw off pitch, not shown in the illustration.

The Tide Water Iron Works make a rectangular kettle which they claim is the most substantially built one on the market. It is built of No. 12 steel throughout. The firebox measures 30 by 24 inches. The wheels are 11 inches in diameter and have 3-inch tires. This kettle is made in three sizes, 50, 100 and 150 gallons capacity.

Joseph Honhorst Company makes two styles of elliptical kettles, A and C. The best of these, style C, is shown in the illustration. It is made in 50, 60, 75, 90, 100 and 125-gallon sizes.

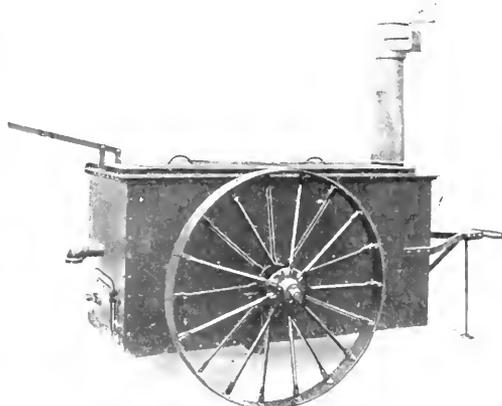

The outside shell or firebox is made of one continuous plate of special firebox steel thoroughly riveted and reinforced at bottom and top with angle-iron ring riveted in place. The bottom is covered with heavy sectional cast-iron grate bars, which rest on and are secured to bottom angle bearing bar. The front has a cast-iron smoke elbow connected to shell near top and fitted with full length 6-inch sheet-steel smoke stack. This ar-

JOS. HONHORST'S SMALL ELLIPTICAL KETTLE

angement causes all the heat to travel up and around the kettle before escaping. The back of firebox has a large size plate-iron fire door hinged on with wrought iron strap hinges and fitted with lever latch. The doors on small size kettles are equipped with drip guard over top to prevent contents of kettle splashing into fire. The kettle is made of blue annealed soft tank steel, and has a tapered shape with heavy boiler-plate bottom securely riveted in. All seams and joints are thoroughly riveted and caulked proof against leaks of melted tar. The top edge of kettle is reinforced with heavy angle-iron flange on outside which fits into top of firebox, thus suspending kettle so that heat has full play on all sides and bottom. A 2-inch draw-off flange with nipple and stop cock is fitted to shell of kettle close to bottom, which does away with the old method of dipping out over top of kettle. The kettle has a hinged cover of heavy sheet iron which is provided with bracket rest and handle. The outfit is mounted on a heavy square steel drag-axle which passes under firebox, so that there is no danger of kettle tipping back or upsetting.

The wheels are all-steel design, having welded wrought-steel felloes with 3-inch welded wrought-steel tires shrunk over outside and riveted. The spokes are oval wrought steel, staggered into hubs and swaged and riveted into felloes so that grease, heat and vibration have no destructive effect. Front of kettle has a wrought-iron tongue securely riveted to shell of firebox and provided with large eye at outer end for coupling to rear of tool or supply wagon. This tongue is fitted with improved safety locking tongue rest, which prevents the kettle from moving while in use. The tongue shaft also has a loose link for holding rest while kettle is in motion.

IROQUOIS IRON WORKS' SMALL RECTANGULAR KETTLE

NEWS OF THE SOCIETIES

Good Roads Association of Livingston County, N. Y.—The largest good roads meeting of the year in New York State was that held at Geneseo, March 3, in the Village Building. Frank McGuire, of the State Highway Department, speaking of culverts, said that it was a waste of money to construct concrete culverts where roads have not been improved and that only temporary culverts should be built. C. B. Perry, State Highway Department, spoke of dangerous places in highways. The proper placing of a guard rail where there were ditches concealed by vegetation would have prevented many accidents last year. Mr. Perry made the interesting statement that 90 per cent of the State aid money came from the cities.

Northwestern Cement Products Association.—The seventh annual convention was held at Minneapolis, Feb. 28-March 1. The meetings were well attended and much interest was shown. The address of welcome was made by Wallace G. Nye, secretary of the public affairs committee of the Commercial Club. President H. E. Murphy responded. The following addresses were made: Ernest McCulloch, Chicago, on the subject of stucco finishes. C. M. Powell, assistant engineer Portland Cement Company, on cement tile drain. A. A. Pollard, Minneapolis, on economies in concrete construction. Martin T. Roche, on marketing cement products. Capt. George W. Freeman, United States Engineer, gave an account of the proposed high dam on the Mississippi River between Minneapolis and St. Paul. The dam will have the lock on the Minneapolis side, and power house on the St. Paul side, and will develop about 15,000 horsepower for 228 days a year. The estimated cost is \$800,000. Charles E. Sims, Worthington, Minn., spoke on the manufacture of cement drain tile. James G. Houghton, inspector of buildings, Minneapolis, spoke on reinforced concrete construction. W. E. Martin discussed the question of the proper paint for concrete surfaces.

Congress of Technology.—Among the papers to be presented at the fiftieth anniversary of the granting of the charter to the Massachusetts Institute of Technology will be the following: "Sewage Disposal with Respect to Offensive Odors," by George M. Fuller, M. I. T., '90, hydraulic and sanitary engineer, New York City; "The Massachusetts Institute of Technology's Part in Water Purification and the Present Status of the Science," by George C. Whipple, '89, consulting engineer.

American Institute of Architects.—A committee of the Washington, D. C., Chapter has made a report and recommendations to the Chamber of Commerce regarding the future development of Washington. Besides recommending that the spirit of the Park Commission's plan be carried out in the development of Washington, the committee specifically urges that the Lincoln memorial be placed on the bank of the Potomac River, on the axis of the Capitol and the Monument; that Rock Creek Valley be made a park, and that the banks of the Potomac River be acquired as part of the Appalachian forest reserve provided for in a bill passed by Congress. Steps will be at once taken to enlist the aid of the commercial bodies of the United States in influencing Congress to favor the plan.

Massachusetts Civic Conference.—The Conference held its annual meeting March 2 with sessions at the rooms of the Twentieth Century Club and an evening session in Channing Hall, Unitarian Building, Boston. The time was occupied with discussions of play, physical education and playgrounds. At the evening session Joseph Lee presided. Dr. Edward W. Stitt, district superintendent of public schools of New York City, spoke on the use of the public school buildings as recreation centers, saying: "Hitherto not enough use has been made of the public school buildings. In most cities they are used only about 1000 hours a year. This amount must be increased at least 200 per cent."

Dr. Stitt urged as the objects:

To keep children and young people from street dangers; to prevent formation of habits of idleness; to teach city children organized play; to encourage reading of good books, magazines and morals of young people in places where bad language and evil companions are forbidden; to make children play fairly, honorably and honestly; to bring real happiness to many children who are deprived of the pleasures which are the rightful heritage of children.

Dr. Stitt's suggestions were:

"Install bowling alleys in waste places in cellars of large school buildings; make larger use of auditoriums for public meetings; encourage mixed dancing classes in school halls; give moving picture shows at least once a week; maintain information bureaus in many schools from 7 to 9 p. m.

Dr. Howard Bradstreet, director of the bureau of recreation, park department, New York City, spoke on "A System of Public Recreation for a City." He said in part:

"The playground is more than a place for amusement. It can and should be a factor in constructive development of citizenship. While the city may easily provide pure water, milk, police or fire protection, it is not easy to make appeal to the free will of a very self-willed part of the community, and more than a commissioner is necessary. The governing board should contain a citizen representation."

At the morning session the speakers were Joseph Lee, president of the Playground Association of America, whose subject was "What Play Means," and Ernest Hermann, superintendent of playgrounds and director of physical education in Cambridge, who spoke on "Playgrounds for Children Under 10."

Association of County Highway Commissioners of Wisconsin.—An association with this title was formed at Madison, Wis., March 3. The following officers were elected: President, George F. Post, Spring Green; vice-president, F. M. Sargeant, Ladysmith; secretary and treasurer, Prof. W. O. Hotchkiss, Madison.

The association listened to Senators J. S. Donald, of Mount Horeb; Timothy E. Burke, of Green Bay, and E. E. Browne, of Waupaca, who explained the highway bills pending before the Legislature. Assemblyman L. E. Gettle, of Edgerton, also spoke on the subject. The association appointed a committee which drafted resolutions expressing the views of the association on the creation of an unpaid state highway commission and the subject of good roads.

Kensington, Pa., Board of Trade.—Clean streets and more lights were leading subjects of discussion by members of the Kensington Board of Trade at their annual meeting last week. The reports of William T. Weir, Jr., secretary, and Robert McNeil, treasurer, show the organization to be in excellent condition. Among the improvements pointed out in the secretary's report were the 19 new electric lights that have been secured for Front street and Kensington avenue, the opening of North Front street, the opening of Pennsylvania station at Front and North streets and a general increase in business. The following were elected officers: President, A. C. Keeley; first vice-president, Samuel Reinheim; second vice-president, Gustav Lischuetz; third vice-president, John Reynolds; treasurer, Robert McNeil; secretary, William T. Weir, Jr.; corresponding secretary, Harry Derbyshire.

Playground Association of America.—April 6, 7 and 8 have been chosen for the Playground Association of America as the dates for the playground institute to be held in Minneapolis, Minn. At this meeting representatives will be present from Wisconsin, Illinois, Iowa, Kansas, Missouri, Nebraska, North and South Dakota and Minnesota. Prominent speakers will lecture on the organization and administration of the association from different cities where they are now located and visiting members will discuss topics of general interest. Those prominently connected with the national association are President Theodore Roosevelt, Hon. Joseph Lee, Mrs. Lovell White, Jack Riis and many other noted social and educational workers.

Montclair Municipal Art Commission.—The Art Commission organized as a subsidiary to the Montclair Civic Association, has submitted its final report to the directors of the parent body. The report, which was prepared by Emerson P. Harris, told for what purpose the commission was organized—the beautifying of Montclair—and said that there was no further need for its existence. The Montclair Art Association, the report stated, had taken charge of the \$50,000 gift for an art museum made by Mrs. Lang. The further work, it was stated, could best be done by a special committee of the Civic Association named for this purpose. The report was accepted and the commission discharged, with thanks.

Massachusetts Highway Association.—Added interest in the coming conference on street cleaning, to be held in this city in May, is occasioned by a announcement that the quarterly meeting of the Massachusetts Highway Association will take place here on the same day and in connection with the conference. The committee of arrangements has decided on May 11 as the date of the conference and the headquarters of the Board of Trade as the place. There will be morning and afternoon sessions and possibly a special event in the evening. The members will meet in Worcester and travel by automobile over roads built last year by the Highway Commission, Springfield. There will be a paper read at the afternoon meeting on "City Ordinances, Police Control in Street Cleaning Work," prepared jointly by James H. Sullivan, Division Engineer, Boston Street Department, and Superintendent Arthur A. Adams, Springfield.

Calendar of Meetings

ch 21-22.
New York State Railroad Association.—Quarterly Meeting, Syracuse, N. Y.—Gordon Real, Secretary, Kingston, N. Y.
 11 6-8.
American Electrochemical Society.—Annual Meeting at New York City.—Secretary, Joseph W. Richards, Lehigh University, South Bethlehem, Pa.
 7.
City Commission Congress.—Meeting. Galveston, Tex.—Mayor Lewis Fisher, Chairman of Committee, Galveston, Tex.
 11.
Massachusetts Highway Association.—Quarterly Meeting in conjunction with the New England Conference on Street Cleaning, Springfield, Mass.
 7 18-19.
Ohio Society of Mechanical Steam and Electrical Engineers.—Annual Convention, Youngstown.—F. E. Sanborn, Secretary, Ohio State University, Columbus.
 7 29-June 3.
National Electric Light Association.—Annual Convention, Engineering Societies Building, New York, N. Y.
 e 6-10.
American Water Works Association.—Thirty-first Annual Convention, Powers Hotel, Rochester, N. Y.—John M. Diven, Secretary, 14 George street, Charleston, S. C.
 e 11-16.
International Association of Chiefs of Police.—Eighteenth Annual Convention, Rochester, N. Y.—Major Richard Sylvester, Superintendent of Police, Washington, D. C., President.
 e 13-18.
New York State Association of Chiefs of Police.—Annual Convention, Rochester, N. Y.
 e 13-16.
American Society of Civil Engineers.—Annual Convention, Chattanooga, Tennessee.—Charles Warren Hunt, Secretary, 20 West 57th St., New York.
 ober 4-6.
League of American Municipalities.—Annual Convention, Atlanta, Ga.—John MacVicar, Secretary, Des Moines, Ia.

PERSONALS

BURD, W. E., has been appointed Treasurer of the Asphalt Block Paving Co. Toledo, Ohio.
 COLLINS, WALTER L., has been elected President of the Boston City Council.
 DONKIN, DENNIS P., Assistant Fire Chief of Saratoga Springs, is dead.
 CRAIG, WILLIAM J., has been re-elected Mayor of Victoria, Tex.
 DALLACH, A. C., has been chosen Mayor of Wenatchee, Wash., by the City Council, succeeding C. B. Halbert, resigned.
 DILLMAN, S. M., a civil engineer of Toona, Pa., has been appointed by the Mayor to assist in making tests of paving brick to be used in the city.
 DOBBINS, JOHN W., has resigned as a member of the Board of Health of New York, N. Y.
 DUNWOODY, C. E., a chemist of the Inselear Institute, of Troy, N. Y., has been appointed to take charge of the purification plant at Erie, Pa.
 ELVERSON, JAMES, JR., has been appointed a member of the Park Commission of Philadelphia, Pa., to succeed his father, the late James Elverson.
 ENGLAND, CHARLES, has been elected Chairman of the Sewerage Commission of Baltimore, to succeed the late General Leary, Jr.
 FERGUSON, CHARLES S., former City Engineer, has been appointed Superintendent of the City Water Works of Dayton, Ohio.
 FORD, FREDERICK L., City Engineer of Hartford, Conn., who has been in the service of the city for the past fifteen years, has resigned his position, to take effect April 1, and will go into business as a member of the engineering firm of Ford, Buck & Sheldon.

FORSYTHE, DR. A. A., has been re-elected Mayor of Monroe, La.

FROMELL, DR. BERTHA F., has the distinction of being the first woman ever elected to the Board of Health of Fairhaven, Mass.

FUERTES, J. H., of New York, an expert hydraulic engineer, has been engaged in making an examination of conditions in Cumberland, Md., in connection with a new water supply, and has made his recommendations to the Mayor.

GAILBREATH, W. M., has been elected Mayor of Gainsboro, Tenn.

GOLDEN, P. N., of New York City, has been appointed Superintendent of the Middletown, Conn., electric plant.

HAYES, ROWLAND B., has been appointed Playground Expert by the Playground Association of America. He will spend most of his time in New York, but will visit cities all over the country with a view to giving assistance and helpful suggestions. He will shortly visit Utica, to make an investigation.

KELLY, DAVID I., has been appointed an Assistant Fire Marshal of New York City.

KLOPFER, HENRY, has been appointed Chief of Police of Fremont, Ohio.

SMITH, THOMAS S. A., has been appointed Street Commissioner of Metuchen, N. J.

NAKUINA, MRS. EMMA M., an American woman now living at Kalihi, has made herself a power in Hawaii. She holds an unusual position in the Territorial Government. She is a water rights commissioner, acting as judge to decide cases where the rights are in litigation, and is considered an able and just official. She is the great-granddaughter of Captain Metcalf, of the *Eleanor*. Of distinguished ancestry on both sides, well educated and possessing literary ability, she is deeply interested in the welfare of the Hawaiian people.

PARKER, J. C., has been re-elected Mayor of Bemidji, Minn.

STECKLER, CHARLES, has been appointed by the Mayor as a member of the Court House Commission of New York City, an honorary body appointed to select the site for the proposed new county court house.

SMALLEY, JOHN D., of Hammond, Ind., for six years controller of Hammond, has been advanced to the office of Mayor, with the appointment of Lawrence Becker as judge of one of the new superior courts.

WALLACE, JOSEPH McD., has retired as Assistant Cashier of the Boyle Bank and Trust Company, after having held the position for forty-three years, to become Mayor of Danville, Ky. He has been chosen by the City Council to succeed Mayor Woolfolk, who resigned.

WARNER, C. A., has been appointed City Engineer of York, Pa.

WAY, GUY, Chief of the Fire Department of Muncie, Ind., has resigned.

MAYORALTY ELECTIONS

MAINE

Auburn—Irving L. Merrill.
 Bath—Frank A. Small.
 Eastport—Walter J. Garnett.
 Ellsworth—Chas. A. Leland.
 Gardner—Bert E. Lamb.
 Hallowell—Emory O. Veane.
 Lewiston—Frank A. Morey.
 Rockland—G. Herbert Blethen.
 Saco—Walter J. Gilpatrick.
 South Portland—John A. S. Dyer.
 Waterville—Wm. R. Pattangal.

VERMONT

Burlington—Robert Roberts.
 Montpelier—S. S. Balarid.
 Rutland—P. W. Clement.
 St. Albans—S. V. Green.

TRADE NOTES

Cast Iron Pipe.—Chicago: There is an increased demand for pipe from small municipalities. Gas companies are purchasing freely. Quotations: 4-inch, \$25.50; 6 to 12-inch, \$24.50; 16-inch and up, \$24. Birmingham: Announcement of a number of large lettings from Southern cities has been received and the demand for small lots continues good. It is expected that producers will insist on higher prices than have been quoted heretofore. It is understood that all plants will soon resume operations at normal capacity. Quotations: 4 to 6-inch, \$22; 8 to 12-inch, \$20; over 12-inch, average, \$19. New York: The general demand continues quiet. Prices appear to be no stronger. Quotations: 6-inch, car loads, \$21 to \$22.

Lead.—Market decidedly unsatisfactory. Quotations: New York, 4.40c.; St. Louis, 4.25c.

House Fly Campaign.—The Educational Exhibition Company, 70 Waterman street, Providence, R. I., have prepared material for use in sanitary campaigns against the house fly. The simplest of these are rubber stamps, for which various uses are suggested, such as prizes for essays by school children. A set of 35 lantern slides has been prepared for illustrating lectures.

Auto Patrols.—The Police Department has put in commission two auto-patrol wagons, made by the Studebaker Brothers Manufacturing Company, South Bend, Ind. Each machine can carry 12 people. Other details are: Speed, 45 miles per hour; horsepower, 48; wheel-base, 120-inch; wheels, 36-inch diameter; tires, 5-inch; length, 20 feet; height, 8 feet. The wagons are painted dark blue and have lettering and trimmings of gold.

Wagons.—The Ft. Worth Wagon Company was recently organized at Ft. Worth, Tex., with a capital stock of \$150,000. The incorporators are Warren Heaton, C. Hightower and John F. Shelton.

Steam Rollers.—Indicating that there is to be no cessation of road construction and improvement in the Philippines, the Iroquois Iron Works, Buffalo, N. Y., has just received an order for six 10-ton macadam steam rollers for immediate shipment to Manila. At the same time the United States Government ordered a 10-ton Iroquois macadam roller for delivery at Washington, D. C.

Street Car.—A new pay-as-you-enter type of street car, built by the Brooklyn Rapid Transit Company, was recently put in commission. The greatest advantage claimed for the car is the safety which it affords to passengers. The doors of the rear platforms fold inward upon the operation of a lever by the conductor. When the doors are closed by him from within, the platform step automatically folds up close to the platform, so that no one can board the car while it is in motion. The front door and steps are similarly operated by the motorman. Other features of the car include an anti-telescoping bumper.

Water Company.—George L. Smith, Louisville, Ky., has purchased a controlling interest in the Cadiz Water Company, Cadiz, Ky., terminating a stockholders' fight which has been on for several months. Mr. Smith has become president of the company, and is planning improvements in the plant.

Refuse Destructors.—The Destructor Company, 111 Broadway, New York, advises that the Heenan Destructor, which they are building for the City of Montgomery, Ala., is nearing completion, and that the following cities have placed contracts with them for Heenan high-temperature destructors:

San Francisco, Cal., two complete plants, one for Islais Creek district of 120 tons capacity per day, the other for North Beach district, of 360 tons capacity per day. These two plants are designed on the unit principle, the former containing two 60-ton destructors, and the latter designed to contain six 60-ton units, only two of which, however, are being constructed at this time.

New York City, one 90-ton plant for the Clifton district, containing two 45-ton units. It is interesting to note that this plant has been contracted for after three years' use of the 60-ton plant which was installed for this city in the West New Brighton district.

Havana, Cuba, has also placed a contract for one of the largest destructor plants ever built. This has a capacity of 500 tons per 24 hours, and consists of four Heenan destructor units of 125 tons each.

Seattle, Wash., is also duplicating the plant which they have used with success for the past five years. This plant is of the high-temperature type, following the Meldrum design.

Road Machinery.—Within a few weeks the J. I. Case Threshing Machine Company, Racine, Wis., will issue their first catalogue of road-building appliances. The catalogue will cover 64 pages, and will include the following lines: The 10-ton power steered road roller, municipal tractor engines, contractors' hauling engines, Troy bottom dump wagons, Troy reversible wagons, Troy dump boxes, Case rock crushers, Case rotary stone screens, Case perfection road graders, road drags, road plows, township plows, fuel and water engine tenders, stationary engines, etc.

Catalogues and Price Lists.—An American consulate in South Africa is in receipt of a request from a large local firm for catalogues and price lists descriptive of cable conveyors, the information being desired for a client and probable purchaser of such machinery. This and numerous other requests for catalogues and price lists of American products illustrate the value to American manufacturers of having on file at consular offices catalogues and other literature descriptive of their goods and also the names of their representatives, if any, to whom inquiries could be referred. This consulate now has a large number of catalogues of American manufacturers and is constantly adding to the list, but the more generally American concerns avail themselves of the opportunity to be thus represented at consular offices the greater will be the benefits accruing to American trade. Address No. 2620, Bureau of Manufacturers, Washington, D. C.

Engineering Firm.—Lewis & Kitchen, Engineers, 1200 Michigan Boulevard, Chicago, Ill., announce a change in their copartnership. S. R. Lewis, son of E. C. Lewis, has become a member of the firm. Lewis & Kitchen are engaged in the business of designing and constructing septic tanks, garbage crematories and sewage disposal works. The business will be conducted under the same name with offices in Chicago and Kansas City, Mo. The factory is in Kansas City, Mo.

Large Gas Engines.—The Wisconsin Engine Company, Corliss, Wis., has made a very considerable addition to its equipment and working capital in order to allow it to enter new lines of manufacture. The principal business of the company is the manufacture of Corliss engines, which may be operated at higher speeds than the ordinary design of Corliss engine. The new business, however, is principally the manufacture of Adams gas engines, which will be made in sizes from 200 to 3,000 horsepower in a single unit.

Somers System of Taxation.—The Somers system of real estate valuation for taxation purposes probably will be used in Milwaukee, Wis., this spring. The special committee on taxation of the Common Council has decided to recommend the adoption of the system. The Somers system, as proposed, will be used only to value real estate, the portion of the proposition relative to the valuation of buildings having been turned down by the committee. According to the agreement signed by the representatives of the Manufacturers' Appraisal Company, Cleveland, O., owner of the Somers patents, the company will grant to the city the use of the tables, rules and mechanical devices needed during 1911 and will provide experts who will instruct the city officials in the system, and supervise the work. The city will pay the company 11 cents for each parcel of land valued by the system, the total not to exceed \$9,000. The experts of the Appraisal Company will begin work on May 1, and the work must be finished by the last Monday in June.

Large Water Meter Factory.—The Gannon Company, Newark, N. J., manufacturers of the Watch Dog water meter, have moved from their old factory, 81 Mt. Prospect avenue, to a new plant, 282-296 South street, Newark, which is said to be the most modern and up to date in the world used exclusively for the manufacture of water meters. The plot occupied is 200 by 209 feet, and space is reserved for contemplated additions to the plant. The main building is 208 feet long by 30 feet wide, and the foundry extension is 25 by 50 feet. Columns have been entirely omitted, steel beams spanning from wall to wall, and the floors are of mill or slow burning construction, especially suited for factory buildings. Power will be electric current, furnished by the Public Service Corporation, driving a number of motors located in various parts of the building and the heating will be done by steam. The building was built rapidly, ground having been broken November 28, last. A. W. Jacobi was the engineer.

Drilling Wells.—F. A. Champlin, of East Longmeadow, Mass., one of the best-known drillers of artesian wells in New England, has had a large increase in his business during the last year over that of the year preceding. In 1909 he drilled 65 wells, while during 1910 the number went to 100. The eight wells drilled for Smith & Wesson, of Springfield, were put down 500 feet, and yield 100 gallons a minute. The eight wells for the Hotel Kimball, in Springfield, are 445 feet deep, and yield an equal amount. These are among the deepest wells drilled, although eight wells for the Farr Alpaca Company, of Holyoke, were drilled 500 feet deep. The deepest well drilled in the year by Mr. Champlin was for Francois Marcail, of Holyoke, and is 584 feet deep. Some of the wells, however, are only 50 feet deep and some even less.

Garbage Wagons.—The Barron & Company, Franklin street and W Broadway, New York, recently supplied six garbage wagons to the city of Passaic, N. J., of which the following description: They are of the bottom dump style, with a capacity of 4 cubic yards. The inside is lined with 12-gauge steel and at the front and rear of top there is a semi-circle of wood with a pole running between. The wagon is fitted with attachment for a canvas cover over this pole so that dry garbage can be loaded if desired. All four wheels have tires 4 x 5/8, and the wheel base is 9 feet 10 inches. The wagons are also equipped with brakes, and the woodwork had two coats of paint and two coats of red lead. The body is made a slate color and the wheel dark red. The lettering on the wagon was D. P. W., City of Passaic, and they were numbered from 1 to 6.

Chief's Motor Car.—The Viele, made at Moline, Ill., has been undergoing tests by the Boston Fire Department as a chief's car. The automobile was placed in actual fire service last week, carrying Battalion Chief Madigan about on his regular duties, responding to all alarms for inspection work throughout the Fire Department's route. It was driven by three different drivers to prove the ease in handling the machine. The Viele as a municipal service car has been used by Superintendent of Streets, Lowell, Mass., and by the sheriff at Providence, R. I., as a patrol.

Kyrock.—The Wadsworth Stone Paving Company, Pittsburgh, Pa., owners of the process of laying Wadsworth macadam, have registered the name Kyrock for use in connection with their business. The Wadsworth macadam new construction consists of a roller stone base, 6 inches deep, made of stone varying from 2 to 4 inches in diameter, an upper course 2 1/2 inches deep of stone exceeding 2 1/2 inches in diameter, a top dressing 3/4 inch deep, loose measure, of pulverized Kentucky sandstone rock asphalt. In resurfacing old macadam roads the base stone is omitted and the upper course made of such thickness as will make a suitable contour for the finished road.

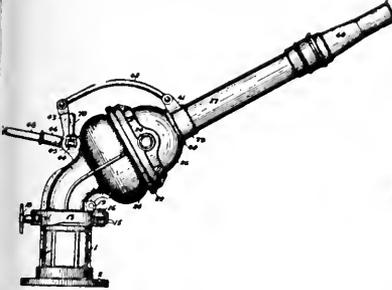

Pumps.—The Harris Pump & Company, Pittsburgh, Pa., has increased its capital stock from \$60,000 to \$100,000.

Smoke Consumers.—Manufacturers of smoke consumers will be able to market their devices to better advantage in the South, as many municipalities have taken up an active campaign to reduce smoke emission. The Board of Trade of Louisville is working on this project, while Nashville and Knoxville, in Tennessee, have strict ordinances under consideration. In connection with the formation of the National Smoke Preventer Company, Louisville, is of interest. It will sell a smoke preventer manufactured by H. Long, a local launderer. W. Davis, sales agent for a number of iron and steel companies, is interested in the project.

Fire Alarm.—The Gamewell Fire Alarm Telegraph Company have completed the installation of the new manual system for Grand Rapids, Mich. There will be no more muddled alarms that have worried the firemen and filled the citizens of Grand Rapids with apprehension lest the whole system should fail. The new system is the non-interfering system with manual transmitt

PATENT CLAIMS

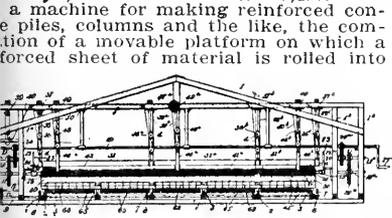

557. **HIGH-PRESSURE NOZZLE.** Henry H. Gorter, San Francisco, Cal. Serial No. 519,035.
 A high-pressure nozzle the combination of a tubular outer portion formed in its inner surface with a lower runway for a nozzle, a sleeve within said outer portion carrying the nozzle, a ring secured

in the lower end of said sleeve, a ring secured between said ring and runway, a sleeve having at its upper end a flange, and rollers carried by said flange, the ring against the side of said tubular portion adjacent to the nozzle, the axis of said rollers being parallel with the axis of the sleeve, substantially as described.

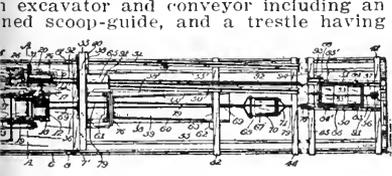

553. **FIRE-EXTINGUISHING COMPOSITION.** William S. Rheem, Oakland, Cal., Marvin L. Chappell, Berkeley, and John Black, Stege, Cal., assignors to Standard Oil Company, Richmond, Cal., a Corporation of California. Serial No. 532,105.
 A charge for fire extinguishers comprising glue, and separated solutions adapted to be brought together to produce a foam which is incombustible and a non-supporter of combustion, and to form a foam with the glue, said glue being an ingredient of at least one of said solutions.

547. **MACHINE FOR MAKING REINFORCED CONCRETE PILES, COLUMNS AND THE LIKE.** Alexander Crawford Chenoweth, New York, N. Y., assignor of one-half to John McNamee, Brooklyn, N. Y. Serial No. 407,276.
 A machine for making reinforced concrete piles, columns and the like, the combination of a movable platform on which a sheet of material is rolled into

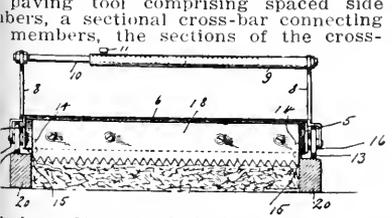

a compact body, means for rolling the sheet into a body, reels or bobbins for receiving wire adapted to be attached to the free end of the reinforcing part of said sheet of material, whereby when the body has been rolled into form the continued rotation of the said body serves to wind said wires upon the exterior of the body.

546. **SCRAPING EXCAVATOR AND CONVEYOR.** Joseph L. Potter, Indianapolis, Ind. Filed Nov. 1, 1909. Serial No. 525,674.
 A scraping excavator and conveyor including an inclined scoop-guide, and a trestle having

rails thereon arranged in a plane intersecting the plane of the scoop-guide.

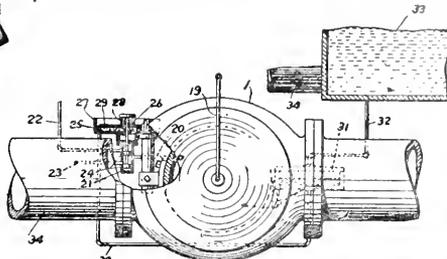

514. **PAVING TOOL.** Aaron W. Croyer, Durham, N. C. Filed Oct. 4, 1910. Serial No. 585,177.
 A paving tool comprising spaced side members, a sectional cross-bar connecting the members, the sections of the cross-

being adjusted relatively to each other in the direction of their length, means for adjusting the sections in adjusted position, and a scraper blade carried by the cross-

984,820. **VALVE MECHANISM.** John Ledoux, Swarthmore, Pa. Serial No. 464,940.

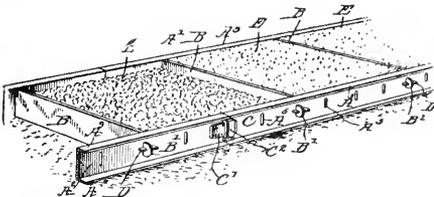

In a valve mechanism, in combination with a conduit and a reservoir with which said conduit is connected, a casing having a port in said conduit, a piston valve disposed in said casing so as to be operated by the pressure of liquid in said conduit to open said port, a pipe for conveying pres-

sure to said casing to cause said valve to close said port, a valve for controlling the flow through said pipe, a vessel, a float in said vessel, means for connecting said valve last named with said float, and means for connecting said vessel and reservoir whereby said float is operated by changes of head in said reservoir.

985,035. **FORM FOR THE CONSTRUCTION OF CONCRETE WALKS, FLOORS, CURBS, GUTTERS AND LIKE STRUCTURES.** Mark Stewart Hotchkiss, Binghamton, N. Y. Serial No. 596,075.

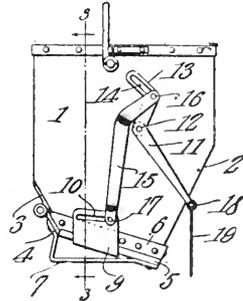

A sectional form comprising metal side bars provided with interlocking end-engaging means on a side face of the side bars, and slots intermediate the ends of said side bars, transverse division plates

having shoulders adapted to abut against the said side bars and tongues adapted to be inserted through the slots in said bars, and means engaging said tongues to secure the parts in position, said bars and division plates making a guide for striking-off, substantially as described.

985,578. **BOTTOM-DOOR DUMP BUCKET.** George Focht, Hoboken, N. J. Filed Dec. 24, 1909. Serial No. 534,775.

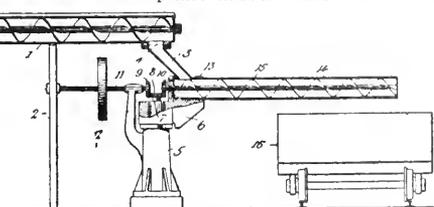

A bucket comprising a body, a door hinged to the body, a lever fulcrumed upon

the body, and a link slidably and pivotally connected with both the lever and the door.

985,436. **CAR AND VEHICLE LOADER.** William D. Mount, Saltville, Va. Filed Mar. 24, 1910. Serial No. 551,264.

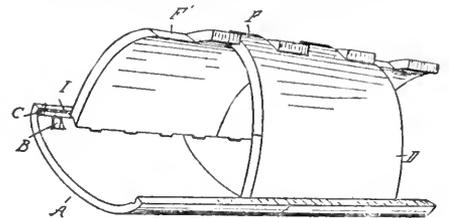

A car loader comprising an upright standard, a conveyor having a swiveled connection therewith, and adapted to rotate in a horizontal plane around said standard

as an axis, a fixed conveyor located above said standard, and an inclined chute having a swiveled connection at one end with said fixed conveyor and terminating at its opposite end in said movable conveyor with its rotating axis coinciding with the axis of the movable conveyor.

985,539. **CULVERT.** Frank Ottney, Charlotte, Mich. Filed May 7, 1910. Serial No. 560,028.

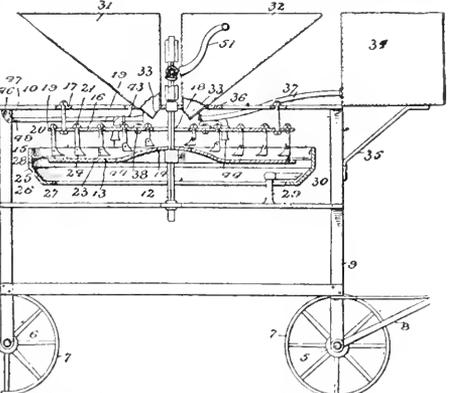

A sectional culvert, comprising a base section having a plurality of apertures along each of its longitudinal marginal edges, side sections provided with lugs at their lower ends for engaging said apertures and at their upper ends with interlocking projections, said base section and

each of said side sections being provided with a tongue and groove engagement for locking the side sections to the base in the assembled relation of the parts, one of the co-operating portions of the tongue and groove engagement being formed upon the base intermediate the longitudinal marginal edge of the latter and said apertures, and the other upon the side section above said lugs.

985,602. **CONCRETE MIXER.** Walter L. Jones, Thomson, Ill. Filed June 22, 1909. Serial No. 503,743.

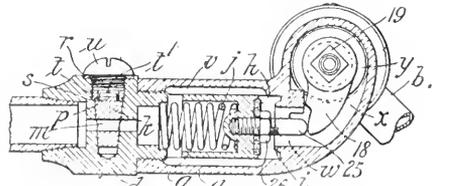

A mixing machine including a supporting frame, a stationary mixing member, a movable mixing member spaced from the stationary member, a receiving trough surrounding the lower mixing member and

movable therewith, agitation fingers depending from the stationary member and adjustable to either retard or accelerate the flow of material to the receiving trough, and a stationary scraper for removing the material from the receiving trough.

985,166. **SANITARY DRINKING FOUNTAIN.** John Hall, Jr., West Springfield, Mass. Filed Feb. 26, 1910. Serial No. 546,128.

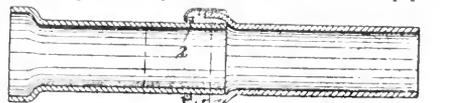

A drinking fountain having in combination with a barrel element, a valve mounted thereon, an arm-piece for conveying the

liquid, and an adjustable connection between the arm-piece and said valve, whereby any wear therebetween may be compensated for, as described.

985,182. **JOINT-PROTECTOR FOR SEWER-PIPES.** Frederick W. Lang, Minneapolis, Minn. Filed July 7, 1910. Serial No. 570,745.

The combination with pipe sections, the one having a large end telescoped over the smaller end of the other, of a pliable packing ring telescoped on to the smaller pipe

end, adjacent to the larger pipe ends, an annular metal shield telescoped over the said packing ring and the large pipe end, and cement contained within said shield and forming a tight joint between the pipe sections, substantially as described.

Alabama.....	Wetumpka.....	Apr. 4, 11 a.m.	Grading and surfacing about 30 miles of sand-clay road.....	Henry Albertson, County Auditor.
North Dakota.....	Rugby.....	Apr. 5, 2 p.m.	Metal culverts and road machinery for year 1911.....	H. T. Wanamaker Au'l. Island Co.
Washington.....	Coupeville.....	Apr. 5,	Improving Hinman Road No. 32.....	Henry Lloyd, Chm. St. Imp. Co.
Maryland.....	Cambridge.....	Apr. 6, 11 a.m.	Grading, paving and curbing various streets.....	Constructing Quartermaster.
Maryland.....	Ft. Howard.....	Apr. 7, 11:30 a.m.	Constructing cement walks.....	Wilmer Egee, Mayor.
New Jersey.....	Swedesboro.....	Apr. 15,	Constructing Railroad Avenue.....	
SEWERAGE				
Pennsylvania.....	Williamsport.....	Mar. 17, noon	Building sewer in East End: Penn St. and Gradius run route.....	John B. Otto, City Engr.
Maryland.....	Ft. Washington.....	Mar. 20, 1:30 p.m.	Constructing sewer outlet and outfall.....	Capt. R. B. Kelton, C. Q. M. U. S.
Connecticut.....	Stamford.....	Mar. 20, 8 p.m.	Constructing various sewers.....	Jos. H. Provost, City Clerk.
Ohio.....	Grandview Hghts.....	Mar. 21,	Constructing sewer and outlet.....	John Hinterschied, Village Clk.
West Virginia.....	Moundsville.....	Mar. 21, 10 a.m.	Constructing 26 miles of sewers.....	Oscar B. Bonar, City Clerk.
Ohio.....	Columbus.....	Mar. 21,	Constructing sewer and outlet at Grand View.....	John Hinterschied, Clerk.
Ohio.....	Akron.....	Mar. 22, noon	Constructing sewers in various streets.....	John W. Gauthier, Dir. Pub. Se.
Wisconsin.....	Burlington.....	Mar. 24, 2 p.m.	Constructing about 2,000 lin. ft. vitrified pipe sewer; 290 lin. ft. sanitary sewer, 7 manholes 18-10-in. 1/4 bends.....	P. J. Hurtgen, Chm. Bd. Pub. W.
Connecticut.....	Putnam.....	Mar. 24, 4 p.m.	Constructing about 10,000 lin. ft. of sewers.....	Geo. W. Perry, Engr. Sewers.
North Dakota.....	Minot.....	Mar. 27,	Constructing four miles of sewers.....	Board of City Commissioners.
Ohio.....	Cleveland Hghts.....	Mar. 28, noon	Constructing sewers in various streets.....	H. H. Canfield, Village Clerk.
Iowa.....	Indianola.....	Mar. 29, 7 p.m.	Blg. sewer system in North Indianola.....	A. H. Gilliland, City Engineer.
Sask., Can.....	Moose Jaw.....	Apr. 10, 8:30 p.m.	Furnishing and laying about 30,700 lin. ft. tile pipe sewer, building manholes, etc.; separate bids. Con. sewage disposal plant, etc.....	W. F. Heal, City Clerk.
California.....	San Jose.....	July 3	Construct septic tank for County hospital.....	City Clerk.
WATER SUPPLY				
Illinois.....	Aurora.....	Mar. 17, 5 p.m.	Constructing 160 ft. brick chimney at pumping station; and furnishing two 230 H.P. Babcock & Wilcox type boilers.....	Board Public Works.
New Mexico.....	Fort Bayard.....	Mar. 18, 4 a.m.	Furnishing motor driven submerged type centrifugal or impeller type pump capacity 200 gals a minute.....	J. R. McAndrews, Con. Q. M., U. S.
Wisconsin.....	Watertown.....	Mar. 18, 7 p.m.	Laying c. i. pipe and spec. and construct. manholes for w. wks.....	Win. F. Voss, Secy. Bd. W. Comr.
Pennsylvania.....	Bristol.....	Mar. 20,	Constructing water works and filtration plant.....	Jos. R. Grundy, Chm. Com.
Ohio.....	Fernbank.....	Mar. 20, noon	Furnishing water pipe and special castings.....	W. Ellwood, Wynn, Clerk.
South Dakota.....	Gettysburg.....	Mar. 20,	Constructing water works.....	F. M. Wright, City Auditor.
New York.....	Westbury.....	Mar. 20,	Constructing water works.....	Thos. J. McCord, Chm. B. W. Com.
Manitoba, Can.....	Souris.....	Mar. 20,	Laying about 31,500 ft. standard c. i. water pipe and similar amount vit. sewer pipe; construct. building, furn. pumps, machinery etc.....	V. H. Williams, Town Engr.
Iowa.....	Nevada.....	Mar. 20, 7:30 p.m.	Extending city water plant.....	R. A. Davis, City Clerk.
New York.....	New York.....	Mar. 21, 11 a.m.	Constructing drainage equipment for underwatering the shafts and tunnel of the Roundout siphon of the Catskill Aqueduct.....	Chas. Straus, Pres. Bd. Water S.

Utica, N. Y.—Board of Contract and Supply has rejected all bids received for pavements on seven streets.

Kings Mountain, N. C.—Kings Mountain Precinct, No. 4 Township, has been authorized to call election on \$25,000 bond issue for road construction. J. M. Patterson, Highway Commissioner, is interested.

Barberton, O.—Street Committee has recommended paving of 3d st.

Bucyrus, O.—The Road Commissioners of Road District No. 1 in Crawford County are planning improvement of several highways, at estimated cost of \$15,000.—G. F. Ackert, County Auditor.

Hamden, O.—The State Highway Department and Commissioners of Vinton County are considering construction of pike from McArthur to Hamden, distance 7 miles.—S. R. Walker, County Surveyor.

Hamilton, O.—Improvement of Fairgrove ave. is being considered; cost is estimated by Engineer F. E. Weaver at \$3,606.

Marletta, O.—City Engineer E. F. Oates has prepared plans and estimates for rais-

ing Front, Putnam and Greene sts. to a higher level; work includes 67,000 cu. yds. curth fill, \$13,000; 26,700 sq. yds. repaving, \$10,000; 9,950 lin. ft. curb reset, \$2,500; relaying water mains, including new 10-in. main on Front st., \$1,700; concrete retaining walls, \$5,100; storm water sewers and street inlets, \$1,000; raising sanitary sewer openings to grade, \$500; relaying sidewalks, \$9,000; engineering and contingencies, \$7,300; total cost, \$80,100.

Junction City, Ore.—Council is considering laying of concrete paving on main streets in spring.

Portland, Ore.—Street Committee has rejected bid of Montague-O'Reilly Co. for paving East Morrison st. with wood blocks; also bids of Oregon Hassam Paving Co. for paving three streets; bids will be re-advertised.

St. Johns, Ore.—City is considering paving Jersey st. for 13 blocks with Westrumite; cost about \$25,000.

Altoona, Pa.—Board of Public Works will ask bids for paving at cost of \$75,000.

Hickory, Pa.—Road Supervisors of Mount Pleasant Township will build additional brick roads this summer.

Philadelphia, Pa.—If parking plans of Comprehensive Plans Committee are realized city will ultimately have 133 miles of park drives, exclusive of those in Fairmount Park, connecting numerous parks of city.

Pittsburg, Pa.—City is considering widening of Smithfield st. bridge.

Wilkes Barre, Pa.—Permission for improvement of the road between this city and Harvey's Lake will be asked of next Grand Jury by County Commissioners.

Providence, R. I.—Council has passed resolution appropriating \$80,000 for widening Eddy st.

Latta, S. C.—Bids will be received for paving sidewalks; either per sq. yd., contractor furnish material, or per sq. yd., town to furnish sand, cement and rock.

Chattanooga, Tenn.—Board of Aldermen has voted \$45,000 bonds for paving purposes.

Greenfield, Tenn.—City will petition Legislature for authority to issue \$30,000 of bonds for street improvement.—J. N. Ray, Mayor.

Knoxville, Tenn.—City will have at least three improvement districts to pave this year.

Angleton, Tex.—Brazoria County will vote March 28 on \$150,000 bonds for road improvements in District No. 1.

Austin, Tex.—Council has decided to pave 4th st., Colorado to Trinity st.; bids will soon be asked.

El Paso, Tex.—City Engineer F. H. Todd has estimated cost of paving East San Antonio st. with bitulithic at \$22,511.62.

Luling, Tex.—Election on \$50,000 road bonds is being considered.

Price, Tex.—City will at once put into effect ordinance allowing levy of taxes for street and sidewalk improvements.

Salt Lake City, Utah.—Senate has passed bill providing for the issuance and disposal of bonds in sum of \$260,000 or \$10,000 for each county excepting Salt Lake, for building of roads and bridges in the State, and apportionment of the money to various counties in State.

St. Albans, Vt.—Citizens have voted \$15,000 for street improvements.

Bristol, Va.—Building of macadamized highways out of city into Washington County, will begin this spring.

Newport News, Va.—City Engineer Pearce has reported that it will cost \$6,459 to put crushed rock on all unpaved streets in city where curbing and guttering have been laid.

Hillyard, Wash.—Paving of Market st. for distance of 16 blocks is being considered.

Seattle, Wash.—Bids have been rejected for paving McClelland st.; Independent Asphalt Paving Co., low bidder, \$28,155.20.

Seattle, Wash.—Board of Public Works has received following estimates for improvements: Lucille st., plank roadway, \$3,370; Seattle blvd., wood walks, \$9,100; Brandon st., grading and curbing, \$51,200.

Spokane, Wash.—City will pave Wall st. with asphalt macadam pavement from Garland to city limits.

Beloit, Wis.—Council has ordered brick pavement in west side fountain square.

Milwaukee, Wis.—Asphalt mixing plant costing about \$10,000 and portable asphalt repair plant costing about \$3,500 are desired by Department of Public Works.

Medicine Hat, Alta., Can.—Council has passed by-laws to provide for the following street improvements: Concrete sidewalks, \$83,500; curbs and gutters, \$17,500; sidewalks, \$5,500; sewers, \$51,500.

New Westminster, B. C., Can.—Plans and specifications are being prepared for large amount of proposed paving.

St. Lambert, Que., Can.—Citizens have voted \$225,000 bonds for street improve-

CONTRACTS AWARDED

Birmingham, Ala.—To Southern Bitulithic Co., Nashville, Tenn., for paving Ave. F' from 18th to 27th st. with bitulithic \$15,000.

Santa Monica, Cal.—Grading, paving, constructing cement curbs, sidewalks and catch basins in Vicente Terrace Tract, to Fred H. Stout, 3246 S. Grand ave., Los Angeles, \$7,065.

Greensburg, Ind.—Paving Main st. with brick, to Daniels, Lyst & Douglas, Anderson, \$70,600.

Indianapolis, Ind.—Contract for not less than 600 tons nor more than 750 tons of asphalt for municipal asphalt repair plant to California Asphaltum Sales Agency, by Board of Public Works, at \$24 per ton; contract is for Maltha California asphalt.

Lapel, Ind.—Building cement walks along Pendleton ave., to A. W. Doan, \$5,812.

Louisville, Ky.—Laying 200,000 vit blocks, to Peebles Paving Block Co. Portsmouth, O., \$15 per M; laying unlimited number of vit. brick, to Kentucky Vitified Brick Co., city, \$12 per M.

Fort Andrews, Mass.—Constructing roads, walks, gutters, catch basins and drain, to Thomas Fitzgibbons, Beverly.

Haverhill, Mass.—Supplying cement for street department use during season, to Haverhill Cement Stone Co., \$1.49 per bbl.

New Bedford, Mass.—Block paving of Purchase st., to Simpson Corporation \$7½¢ per sq. yd.; city will provide granite block.

St. Louis, Mo.—Paving: To G. Eyermann & Bro., 1216 S. Grand ave., a portion of Fassen st. with brick, \$6,080; to Ruecking Construction Co., Marine ave. and Gasconde st., portions of Liberty and S. Dakota sts. with brick, \$2,545 and \$3,970, respectively; to Granite Bituminous Paving Co., Pierce Bldg., Destrehan st., from 19th st. to Florissant ave., with bitulithic, \$11,116, and 13th st., from Cass ave. to 11th st., with bitulithic, \$68,589; to Perkins Bros. Construction Co., 3237 Carter ave., Destrehan st., from 2d to 11th sts., with brick, \$6,520; to Skrainka Construction Co., Security Bldg., a portion of Clarence ave. with brick, \$9,394; to John F. McMahon, Wainwright Bldg., with brick, Leffingwell ave., Angelica st., Destrehan ave. from Hall to 2d st. and 19th st. from Branch to Salisbury st., at total of \$42,327; to G. A. Heman, with asphalt, portions of 16th and 17th sts., 23d st. from O'Fallon to Madison st., and 19th st. from Washington ave. to Carr st., at total cost of \$100,320; to Harry F. Heman, 721 Olive st., 19th st. from Carr to Madison st., with brick, \$17,566, and 23d st. from N. Market to Hebert st., with brick, \$23,384; to Parker-Washington Co., 4506 Duncan ave., with wood blocks on several portions of 18th st., total cost \$54,691.

Jersey City, N. J.—Improving 14th st., to Nolan & Hornung, \$26,058.

Newark, N. J.—Re-paving asphalt streets in the city for years 1911, 1912 and 1913: To Standard Bitulithic Co., \$1.15 per sq. yd. for resurfacing and \$1.19 per sq. yd. for repairs; furnishing broken stone for road repairs for the years 1911, 1912 and 1913, to Frederick Van Keuren, Harrison, \$2.05 per cu. yd.

New York, N. Y.—Flagging, etc., Muscoota st., to Ames Transfer Co., Kingsbridge ave., Bronx, \$41,638; repairing asphalt block pavement, to Harlem Contracting Co., 2 Rector st., \$43,235.

Alva, Okla.—To Rackliffe-Gibson Construction Co., St. Joseph, Mo., for 23,000 sq. yds. Hassam pavement.

Muskogee, Okla.—To Hemans Construction Co. for street improvement work in District No. 104 which embraces certain blocks on Columbus ave., Galveston and East Side bldg., \$27,734.42; Trinidad Lake asphalt will be used.

Carbondale, Pa.—Grading Powderly road, to John Booth, 50¢ per cu. yd. for removal and filling in with dirt, \$2.50 for rock excavating.

Pittsburg, Pa.—Furnishing cement, to Universal Portland Cement Co., \$1.41 for the barrel, or \$1.01 by sack; the Standard Bitulithic Co. will resurface Hulston road with Warrenite, 37¢ per sq. yd.; Verona road will be resurfaced by the Pittsburg Amiste Co., 85¢ per sq. yd.; ballast, to the Clydesdale Stone Co., Morrison & Co., Booth & Flinn and the Pope Stone and Brick Co.; delivering ballast, to James Creese, Edward Vero, Seebolt & Skiles, H. F. Caley, Hotel & Brown, Wolf & Thompson and W. S. Bedall, at prices depending on length of haul.

Dallas, Tex.—Paving Main st., Ervay st. to Houston and Texas Railroad, to Texas Bitulithic Paving Co.

Lynchburg, Va.—Laying tar macadam on Wise st., to S. B. Bennington, city, \$16,517.30; other bidders: Long & Miller, New York, \$17,211.50; J. R. Ford & Co., city, \$17,952.80; J. L. Meem Engineering Co., city, \$21,861; paving three streets with bit-

ulthitic, to Atlantic Bitulithic Co., Richmond, \$30,000.
Norfolk, Va.—Paving Bank st., Freemason and Queen sts., with wood block, to United States Wood Preserving Co., New York, for which William A. Young is Norfolk agent, \$2.85 per sq. yd.
Roanoke, Va.—To T. Wright & Co., J. T. Muddleman, C. Markley and Vaughan Construction Co. for the construction of macadam streets and concrete curb and gutters throughout city at total cost of \$180,000.
Spokane, Wash.—Paving Hamilton st. with asphalt, to Barber Asphalt Paving Co., \$65,448.
Ghent, W. Va.—Laying about 8,500 sq. yds. of vit. brick on Olney road and Botecourt st., to Louis S. Lawson, \$3 per sq. yd.

BIDS RECEIVED

Boston, Mass.—Furnishing 400,000 gals. of emulsified oil and 400,000 gals. of emulsified road oil, Standard Oil Co., 26 Broadway, New York, 4c. per gal., 4.95c. per gal.; Texas Oil Co., 4.9c.; Gulf Refining Co., 3 3/4c., 4.75c.

Y., sheet asphalt, California \$1.59, sheet asphalt Trinidad \$1.63, sheet asphalt Bermuda \$1.66, asphalt macadam, California \$1.21, asphalt macadam Trinidad \$1.24, asphalt macadam Bermudas \$1.29.
Lorain, O.—Sidewalk contract, H. A. Schallon, city, lowest bidder, \$11,557.65; detail bid was as follows: new stone, 2-in. stone laid with base, about 61,000 sq. ft., 93c. per sq. ft.; 3-in. stone, 100 sq. ft., 133c.; 1-in. stone, 100 sq. ft., 17c.; 5-in., 20 sq. ft., 22c.; 6-in., 6,100 sq. ft., 25c.; relaying, 2-in. stone, including base, 50,000 sq. ft., 34c.; 3-in., 2,000 sq. ft., 34c.; 4-in., 400 sq. ft., 4c.; 5-in., 20 sq. ft., 5c.; 6-in., 6,700 sq. ft., 6c.; new concrete walk, 4-in., laid in base, 1,000 sq. ft., 16c.; 5-in., 1,000 sq. ft., 17c.; vit. pine, 8-in. laid, 100 lin. ft., 16c.; 10-in., 100 lin. ft., 22c.; 12-in., 100 lin. ft., 30c.; 15-in., 50 lin. ft., 37c.; 18-in., 50 lin. ft., 50c.; 24-in., 20 lin. ft., 80c.; grading, 3,000 cu. yds., 40c.; extra planning, 45c.; extra labor, 224c.; totals of other bidders: A. Graepner, city, \$11,635.20; H. N. Oberlander, Bucyrus, \$11,912.22; M. J. Jackson, city, \$11,942.75; Aaron Best, city, \$12,032.80, and McHugh Bros., Springfield, \$19,524.41.

Dallas, Tex.—Paving with asphalted macadam Jefferson st., Tenth to Tyler, Oak Cliff; two bids were opened, as follows: Standard Engineering & Construction Company, \$1.26 per sq. yd. of surface, without maintenance, including subgrade excavation, with \$1.00 per cu. yd. for rock excavation above grade; John C. Underwood, \$1.35 per sq. yd.
Kenosha, Wis.—Paving Lake ave., (a) asphalt macadam, (b) brick, (c) sheet asphalt, (d) wood block; Chris Petersen, (a) \$20,000, (b) \$31,700, (c) \$30,860, (d) \$13,460; White Construction Co., Milwaukee, (a) \$29,288 (c) \$31,528; John Brigan, Green Bay, (a) \$33,148, (d) \$42,528; C. P. Flatley, Green Bay, (b) \$31,371; Western Improvement Co., Racine, (a) \$32,381, (b) \$32,524, (c) \$33,641, (d) \$10,641; McCugo Bullock Co., Waukegan, Ill., (b) \$31,685, (d) \$39,245; Kelley Co., Chicago, Ill., (a) \$30,589, (c) \$31,429.
Seattle, Wash.—North half of Grand Blvd. from 15th ave. W. to 20th ave. W., plank-ing, Donaldson & Johnson, 3926 Aurora ave., \$11,889.66; Rufus Buck, \$15,324.68; N. D. Johnson, \$15,806.80; 6th ave. S. et al., asphalt top, independent Asphalt Paving Co., \$22,019; Barber Asphalt Paving Co., 144 Henry Bldg., \$30,990.
SEWERAGE
Berkeley, Cal.—Citizens have voted \$250,000 bonds for installation of storm sewers.
Calexico, Cal.—Bids are being received for construction of sewer system requiring 1,335 ft. of 15-in., 2,281 ft. of 17-in., 1,256 ft. 10-in., 15,271 ft. 8-in. and 9,310 ft. of 6-in. sewer, two concrete settling tanks, man-holes, etc.—J. B. Hoffman, City Clerk.
Los Angeles, Cal.—Streets and Boulevard Committee of Council has decided to recommend immediate repairing of the Sacatella storm drain, Western ave. to Wilton pl.; cost about \$3,500.
San Bernardino, Cal.—Bids will soon be asked for constructing vit. pipe sewers in Second, B and other streets.
Denver, Col.—Board of Public Works will soon order construction of lateral sanitary sewers in portion of Subdistrict No. 3; cost about \$141,246.
Springfield, Ill.—Sewerage system will be installed in near future.—H. Lang Mack, Village President.
Mt. Vernon, Ind.—City Engineer G. W. Sarlls is preparing plans for sewers for eastern section of city; cost about \$5,000.
Newcastle, Ind.—Council has obtained services of John H. Petri, Marion, to draw plans and specifications for arched sewer to carry stream flowing through center of city and known as Bowery Brook; the work will cost not less than \$60,000.
Mansfield, Mass.—Town has voted to adopt enabling act of Legislature whereby it may build system of sewerage.
Marion, Mass.—Town has appropriated \$3,000 to build sewer pumping station.—Geo. F. Richards and H. C. Luce, Commissioners.
Duluth, Minn.—Construction of sanitary sewer in Lake ave., distance over two miles, is being considered.
Jersey City, N. J.—Citizens will vote on \$75,000 bonds to improve drainage and water system.
New Brunswick, N. J.—Advisory Sewage Disposal Commission appointed by former Mayor W. E. Florance has recommended erection of three sewage disposal plants at estimated cost of \$105,000, exclusive of cost of the land upon which plants are to be erected, for treating sewage of the city by the chlorine process, bonds to be issued for work.
Ocean City, N. J.—Citizens will vote April 25 on \$75,000 bonds, to be used principally in providing surface water drainage.
Paterson, N. J.—Board of Finance has decided on \$27,550 appropriation to enable Board of Public Works to construct proposed sewers.
Trenton, N. J.—Consulting Engineer Rudolph Hering, 170 Broadway, New York City, will prepare plans for construction of proposed sewage disposal plant to cost from \$350,000 to \$500,000.
Frankfort, N. Y.—Vrooman & Perry, Gloversville and Canajoharie, are preparing revised plans for sewer system and sewage disposal plant.
Scarsdale, N. Y.—Survey is being made for sewer system to benefit southern end of county seat and town.
Black Mountain, N. C.—Citizens will vote on \$15,000 bonds for construction of sewerage system and water works.
Bowling Green, O.—Council has decided to construct lateral sewer in South Enterprise st.
Ironton, O.—Council has decided to issue bonds for construction of sewers in about eight streets and alleys.
Kennedy Heights, O.—Council has passed ordinance providing for construction of sewers in District 1; also authorized Engineer Jas. A. Stewart, Traction Bldg., Cin-

cinnati, to complete plans for sewers in Districts 2 and 3; cost of each sewer about \$23,000.

Newport, Ore.—Louis C. Kelsey, Selling Bldg., Portland, Ore., has been engaged as Consulting Engineer in the designing and construction of sanitary sewerage system.—E. B. Davis, City Engineer.

Lebanon, Pa.—Council has sold \$110,000 sewer plant bond issue to Graham & Co., Philadelphia.

Providence, R. I.—Committee on Sewers has presented following resolutions ordering sewers to be constructed: Elk st., \$37,261.48; Union ave., Laurel Hill ave. to Pocasset ave., and What Cheer ave., Laurel Hill ave. to Pocasset ave., \$8,179.27; President and Cole ayes., \$3,353, assessments, \$1,952; Geneva and Powdermill sts., \$1,185.59; Tell st. and Atwell's ave., Harris ave. to new sewer, Kinsley ave. extension, \$1,254.10; Pocasset ave., \$9,313.19; 10th st., \$2,767.10; Langham road, Ivy st. to Mope st., \$2,612.88.

Honea Path, S. C.—Council has adopted ordinance providing for issuance of \$25,000 of bonds for construction of sewer system.

Aberdeen, S. D.—Benecette Williams, Chicago, Ill., has been selected as Consulting Engineer to work with R. B. Easton, City Engineer, in construction of the \$200,000 worth of sewer extension and sewage disposal plant, and W. P. Mason, New York, N. Y., a bacteriologist, will also be employed to assist in work.

Maryville, Tenn.—City has petitioned Legislature for authority to issue \$100,000 of bonds for construction of sewerage system and water works.

Montross, Va.—Citizens have voted \$50,000 bonds to improve sewer and water system.

Milwaukee, Wis.—Department of Public Works is planning to build \$50,000 relief sewer in Thirteenth Ward.

CONTRACTS AWARDED

Colorado Springs, Col.—Construction of sewers in Storm Sewer District No. 1, to the Westcott-Doan Co., Denver, about \$31,000.—T. L. Waggner, City Engineer.

Washington, D. C.—Constructing sewers, to Warren F. Brenner Construction Co., Washington, as follows: Sewers in the vicinity of Potomac Heights, \$7,787; Georgia ave. trunk sewer, \$5,958.—Asa E. Phillips, Superintendent Sewer Department.

Belvidere, Ill.—Constructing sewers, to Schuyler Vandewalker, about \$3,000.

Bement, Ill.—Constructing system of storm sewers and also outflow drain, to Arthur Bert, Decatur, \$22,145; other bidders: Henry Rees, Quincy, \$25,200; Henning Vineyard Co., Evansville, Ind., \$22,729; R. E. Goodwin & Jno. W. Ryan, Springfield, \$22,318; Samuel F. Ferguson, Danville, \$22,236.

New Bedford, Mass.—Supplying sewer pipe for year, to Chas. Warner Co.

Niagara Falls, N. Y.—Building sewers in South ave., to John Rinaldo, 20 days, \$1,792.84; other bidders: Reach, Morello & Co., 15 working days, \$2,139; Cosano & Dower, 25 working days, \$1,883.50; William Rufran, 25 working days, \$2,126.10; Antonio Fiorilla, 25 days, \$2,074.80; Nick Nolfe, 25 days, \$2,014.90.

Hamilton, O.—Constructing sanitary sewers on 2d st. alley and 2d st. to Black for \$1,150.25 and on F st., Park ave. to Ross st., for \$985.40, to Frank J. Davis.

Clinton, Okla.—Construction of sewers, to J. W. Rooks, McAlester, at the following bid: 27,848 ft. 8-in. No. 1 vit. pipe, 28c.; trenching and refilling, 25,274 ft. 6 to 18 ft. deep, 18 to 49c.; 26,173 ft. pipe laying, including cement, etc., 6c.; 23 standard manholes, 7 ft. and under, 35c.; 4 extra for each drop to manhole, \$10; 68 extra for each additional foot of manhole, \$5; 39 combined flush tanks and manhole, \$100; 22 lamp-holes, 7 ft. and under, complete, \$1; 101 deep-cut house connections, \$4; 9,470 ft. galvanized 3-in. pipe, laid, 20c.; 29 taps off water main, \$4; total, \$22,781; other bidders: Hunter & Hunter, Poole Valley, \$30,535; E. M. Eby, Wichita, Kan., \$31,614; Stone Construction Co., Clinton, \$31,262; Connelly Construction Co., El Reno, \$34,206.

Stoughton, Wis.—Constructing complete sewer system, to E. R. Harding Co., Racine, \$69,999; work includes 13 1/4 miles of sewer, varying from 6-in. to 18-in. pipe, and a septic tank 9x25x10 ft.—L. C. Currier, City Clerk.

BIDS RECEIVED

Long Beach, Cal.—Sewer construction in 2d and other streets, Peter Grbovach, Los Angeles, \$7,900; S. Zarubica, Los Angeles, \$7,889; Frank H. Thomas, city, \$10,963; White & Gaskill, city, \$15,953.

Los Angeles, Cal.—Building sewer in Savannah st., Krist Radich, \$27,443; W. N. Hendricks, \$29,500; J. Zarubica, \$26,638; R. N. Nikojevich, \$32,915; John Baleh, \$31,000;

Geo. A. Rogers, \$26,873; Peter Grbovach, \$33,990; Geo. Wujacich & Co., \$33,207; M. S. Cummings, \$47,753; Joe Chlutuk, \$29,420.

Rock Island, Ill.—Installing west section of Seventh Ward sewer system, P. F. Trenkenschuh, city, \$60,429; Tri-City Construction Co., \$62,565; the E. R. Harding Co., \$69,000; the D. E. Keeler Co., Davenport, \$55,697.

Sigourney, Ia.—Detail bld of Bash & Gray, Joplin, Mo., successful bidders for constructing proposed sanitary sewers: 36,645 lin. ft. 8-in. pipe, 48c.; 5,351 lin. ft. 10-in., 52c.; 312 lin. ft. 12-in., 60c.; 100 lin. ft. 10-in., less than 4 ft. deep, 49c.; 407 lin. ft. 10-in., 4 to 6 ft. deep, 49c.; 247 lin. ft. 10-in., 6 to 8 ft. deep, 49c.; 153 lin. ft. 10-in., 8 to 10 ft. deep, 59c.; 216 lin. ft. 10-in., 10 to 12 ft. deep, 59c.; 146 lin. ft. 10-in., 12 to 14 ft. deep, 69c.; 50 lin. ft. 10-in., 14 to 16 ft. deep, 69c.; 44 lin. ft. 12-in., less than 4 ft. deep, 56c.; 100 lin. ft. 12-in., 4 to 6 ft. deep, 56c.; 883 lin. ft. 12-in., 6 to 8 ft. deep, 66c.; 474 lin. ft. 12-in., 8 to 10 ft. deep, 66c.; 229 lin. ft. 12-in., 10 to 12 ft. deep, 66c.; 120 lin. ft. 12-in., 12 to 14 ft. deep, 76c.; 367 lin. ft. 15-in., less than 4 ft. deep, 53c.; 853 lin. ft. 15-in., 4 to 6 ft. deep, 63c.; 905 lin. ft. 15-in., 6 to 8 ft. deep, 78c.; 648 lin. ft. 15-in., 8 to 10 ft. deep, 95c.; 544 lin. ft. 15-in., 10 to 12 ft. deep, 95c.; 483 lin. ft. 15-in., 12 to 14 ft. deep, 95c.; 130 lin. ft. 15-in., 14 to 16 ft. deep, \$1.25; 24 lin. ft. 10-in. c.-i. pipe, \$1.75; 42 brick piers, \$10; 41 flush tanks, \$60; 8 lampholes, \$4; 104 regular manholes, \$33; 7 drop manholes, \$35; 1 septic tank, West plant, \$2,400; 1 septic tank, East plant, \$2,500; 1 septic tank, South plant, \$300; 1 set of filters, West plant, \$1,200; 1 set filters, East plant, \$1,200; 1 filter, South plant, \$200; total, \$39,741.

Baltimore, Md.—Sanitary Contract No. 62, Pratt st. trunk sewer, and Sanitary Contract No. 63, lateral sewers in District 15; Sanitary District No. 62, McCay Engineering Co., 9 East Lexington st., \$2,752; John Muller, 120 Law Bldg., \$85,117; W. H. & C. F. Thompson, \$92,765; Ryan & Reilly, 405 Coleman Bldg., Philadelphia, Pa., \$95,036; B. F. Sweeten & Sons, 320 Sharp st., \$107,427; the Whiting-Middleton Construction Co., \$15,585; Sanitary Contract No. 63, William McCarthy & Co., \$75,187; M. J. Beach, \$79,890; B. F. Sweeten & Sons, 320 Sharp st., \$95,524; David M. Andrew Co., \$96,804; W. H. & C. F. Thompson, 627 Law Bldg., \$100,654; the Whiting-Middleton Construction Co., \$108,680.

Niagara Falls, N. Y.—Building sewers: Lafayette ave., Reach, Morello & Co., 30 working days, \$5,781; Cosano & Dower, 50 working days, \$5,389.75; W. A. Shepard & Co., 40 working days, \$5,755.25; William Rufran, 150 working days, \$5,117.50; Antonio Fiorilla, 25 working days, \$4,328.30; Nick Nolfe, 90 working days, \$5,280.20.

Watertown, N. Y.—Construction of a sanitary trunk sewer in the Second Ward from the Black River to Huntington st., Charlebois Bros., city, \$24,608; Lon E. Cleveland, city, \$23,001; W. S. Seisper, city, \$21,618; C. D. Hodge & Co., city, \$21,275; Philip Thomas, Syracuse, \$20,966; Samuel Brown, Syracuse, \$20,209; Burns Bros. & Haley, city, \$19,343.

Seattle, Wash.—Twenty-third ave. S. et al., sewers: Krogh & Jessen, \$29,790.30; D. McGarry, \$29,806.50; Young & Ulrich, \$29,455.80; T. I. Peterson, 324 24th ave. S., \$27,254.40; Nelson & Carlson, \$30,858.30; Becker & Walker, \$27,577.30; Virginia st. trunk sewer, (a) brick, (b) concrete, Walker & Placky, (a) \$20,245, (b) \$20,245; Hayden & Sons, (a) \$17,391.90, (b) \$17,391.90; Dan McGarry, (a) \$17,172.40, (b) \$16,268.40; Rounds Hurson Co., (a) \$16,121.60, (b) \$17,665.60; A. Peterson, 601 American Bank Bldg., (a) \$16,030, (b) \$16,030; B. H. Graff, Montera P. O., (a) \$17,473.88, (b) \$15,390.60.

WATER SUPPLY

St. Petersburg, Fla.—Plans are being prepared for construction of reservoir, capacity 225,000 gals.—C. B. McClung, Chairman Water Works Committee.

Salmon City, Ida.—Citizens have voted to purchase water works system; \$15,000 will be spent in improvements.

New Athens, Ill.—C. A. Redinger, Chemical Bldg., St. Louis, Mo., is preparing plans for proposed water works; cost about \$28,000.

Auburn, Ind.—City will gradually reequip present municipal water works and electric light plant.

Evansville, Ind.—Board of Public Works has decided to install water works pump at cost of more than \$10,000.

Indianapolis, Ind.—Council has appropriated \$1,045 for fire cistern.

Monticello, Ind.—Board of Public Works is considering asking for bids for improvement of water works.

Burlington, Ia.—Citizens Water Co. will enlarge filter plant and install additional engine.—E. P. Eastman, President.

Cumberland, Md.—J. H. Fierces, Expert Hydraulic Engineer, New York City, has made recommendations for bettering water supply; three sources of supply available; eight different plans for plants of 6,000,000 and 12,000,000 gals. capacity; cost from \$402,700 to \$1,082,850.

Cumberland, Md.—Council has adopted plan advanced by Engineer J. H. Fierces to take water supply from Ewitt's Creek; cost of the improvement will be in neighborhood of \$470,000.

Andover, Mass.—Town has voted \$20,000 appropriation for water extension.

Brockton, Mass.—Plan for twin reservoirs, each of 4,000,000 gals. capacity, have been prepared by City Engineer Charles R. Felton.

Tewksbury, Mass.—Citizens have defeated proposition to establish water plant; company will be formed to install system.

Lynn, Mass.—City Engineer George I. Leland is working on plans for extension of storage system for water supply.

Grand Rapids, Mich.—City has awarded \$75,000 water main extension bond issue to Harris Trust Co., Chicago; new bids will be asked for \$20,000 filtration bond issue.

Grand Rapids, Mich.—Bids will be received March 13, 4 p. m., for \$200,000 rapid sand filtration bonds.—Jas. Schurer, City Clerk.

Cole Camp, Mo.—Citizens will vote in April on \$10,000 water works bonds.

Columbia, Mo.—H. B. Shaw, Consulting Engineer, will purchase about 44,000 ft. 6-in. and 14,000 ft. 4-in. c.-i. pipe for water works extensions.

Diller, Neb.—Citizens have voted \$15,000 bonds for the construction of water works.—J. Smith, Village Clerk.

Dundee, Neb.—Citizens have defeated proposition to issue \$49,000 bonds to install independent water plant.

Kensaw, Neb.—Citizens have voted proposed water bonds.

Jersey City, N. J.—Citizens will vote on \$75,000 bonds to improve water and drainage systems.

Las Cruces, N. M.—Council will order election on bonds for construction of water works system.

Tucumcari, N. M.—Citizens will vote April 27 on purchase of water works plant.

Irondequoit, N. Y.—Governor Dix has signed bill legalizing a bond issue of \$20,000 for the construction of water works system at Summerville by this town.

Lyonville, N. Y.—Citizens will vote March 21 on \$25,000 bonds to install water works.

Portland, N. Y.—Engineer Wilder, Fredonia, has prepared preliminary estimates for water works.

St. Johnsville, N. Y.—Citizens will vote on \$5,000 appropriation to purchase and install system of water works.

Black Mountain, N. C.—Citizens will vote on \$15,000 bonds for construction of water works and sewerage system.

Charlotte, N. C.—Citizens will vote on \$350,000 bonds to bring water from Catawa River, 12 miles distant.

Baker City, Ore.—Estimates will be made on constructing of 3,000,000-gal. capacity reservoir near the present one.

Pendleton, Ore.—Water Commissioners will call election on bonds for installation of gravity water system; mountain water will be piped from the foothills of the Blue Mountains, the source of supply being the Thorne Hollow Springs, 14 miles distant; water will be brought to city in 18-in. pipe for a part of the distance and 20-in. pipe for the remaining distance.

Erle, Pa.—Dr. J. L. Leale, 158 Ellison st., Paterson, N. J., has estimated cost of installing proposed filtration and sterilization plant at \$250,000.

Franklin, Pa.—Consulting Engineer L. E. Chapin, Pittsburg, has recommended \$15,000 appropriation for improvements at water works.

New Kensington, Pa.—State Board of Health has ordered New Kensington Water Co. to submit plans for filtration plant not later than June 1.

Bancroft, S. D.—Election on bonds for installation of water works system is being considered.

Carter, S. D.—Council has decided to construct municipal water system; cost \$7,000.

Morristown, S. D.—Bonds have been voted for construction of water works.—J. Peter Healy, Town Clerk.

Clarksville, Tenn.—Water Committee has recommended improvements to cost over \$50,000, including erection of building for the pumping station to be built above high water and to cost approximately \$12,500; erection of another standpipe, 124 ft. in height; clear water concrete basin; installation of meter throughout city; extension of mains to sections of city not served, and such additional pumps as may be required to supply and protect city.

Maryville, Tenn.—City has petitioned Legislature for authority to issue \$100,000

bonds for construction of water works and sewerage system.

Snerman, Tex.—City has decided to improve water works plant.—Harne McDuffie, Superintendent.

Timpson, Tex.—Citizens will vote on \$20,000 of bonds for construction of water works.

West, Tex.—West Water, Power and Light Co. has decided to erect brick water station.

Salt Lake City, Utah.—City Engineer G. F. McGonagle is preparing plans for construction of additional water system.

Montross, Va.—Citizens have voted \$50,000 bonds to improve water and sewer system.

Seattle, Wash.—Board of Public Works is taking bids on a brick and concrete pumping station to be built at Interbay; plans prepared by City Engineering Department.

Tacoma, Wash.—City is preparing to call for bids for the construction of pipe line from McMillan to Tacoma and of \$100,000,000-gal. reservoir at McMillan.—Victor Lawson, Commissioner of Light and Water.

Frederic, Wis.—Citizens will vote April 4 on \$2,000 bonds to erect 50-ft. steel tower and 20,000-gal. steel tank.

La Crosse, Wis.—City Engineer Geo. P. Bradish has recommended improvements to water distribution system at cost of \$56,298.

CONTRACTS AWARDED

Ontario, Cal.—Constructing domestic water system from plans of F. E. Trask, Homer Laughlin Bldg., Los Angeles; laying pipe, to Joe Chutuk, Los Angeles, \$18,882; screw pipe and specials, Crane Co., Los Angeles, \$70,375; riveted pipe and specials, Western Pipe and Steel Co., Los Angeles, \$16,398.

San Francisco, Cal.—Furnishing, testing and delivering gate and check valves for auxiliary water system for fire protection, to Union Machine Co., \$11,593; furnishing and delivering bolts, tie rods, etc., for same, to Union Iron Works Co., \$106 per ton of 2,000 lbs.

New Haven, Conn.—Furnishing water pipe, to R. D. Wood & Co., \$22.08 per ton; other bidders: U. S. C. I. P. Co., \$22.45 per ton; Standard Pipe Co., \$22.68 per ton; Charles Miller & Son, \$22.70 per ton; M. J. Drummond, \$24.10 per ton; Lynchburg Foundry Co., \$24.50 per ton.

Augusta, Ga.—Furnishing 11,700 lin. ft. c.-i. pipe, to the General Pipe and Foundry Co., Atlanta, \$21.75 per ton; other bidders were Dimmick Pipe Co., Chattanooga, \$22.25; American Cast Iron Co., Birmingham, Ala., \$22.50; laying pipe, to Hallahan & Costello, Augusta, 12-in. 33c., 10-in. 25c., 8-in. 25c., 6-in. 18c.; only other bidder for this contract was T. G. Brittingham, Augusta, 12-in. 33c., 10-in. 32c., 8-in. 25c., 6-in. 20c.

Apple River, Ill.—Constructing water works, to T. H. Iglehart, Chicago, \$15,400.

Kingston, Ill.—Construction of water works system, to Belis & Gale, Oregon, Ill., \$3,855; work includes 1 10-h.p. gasoline engine, 1 4x6-in. compressor, 1 6-in. pump, 1 8x36-ft. pressure steel tank, 3,200 ft. of 4-in. water pipe with 9 hydrants containing two openings, 1 2½-in. and 1 2-in., to be placed at each street crossing.

Logansport, Ind.—Improvements to city water works, including engine, pump and other equipment: Hoovens-Rentschler Co., Hamilton, O., \$15,420; Snow Steam Pump Co., Chicago, Ill., \$17,745; Platt Iron Works Co., Dayton, O., two bids, \$15,500 and \$14,095; Allis-Chalmers Co., Milwaukee, Wis., 2 bids, \$13,995 and \$15,495; Prescott Steam Pump Co., Chicago, Ill., \$16,380.

Adair, Ia.—Water works and electric lighting improvements, to the Des Moines Bridge and Iron Co., Des Moines, \$28,460.—W. K. Palmer Co., Dwight Bldg., Kansas City, Mo., Engineers.

Atlantic, Ia.—Water works and electric lighting improvements, to the Joseph A. Bortenlanger Co., Omaha, Neb., \$43,000.—W. K. Palmer Co., 717 Dwight Bldg., Kansas City, Mo., Engineers.

Iola, Kan.—Installation of three new boilers, to United Iron Works, city, \$6,844.

Wymore, Neb.—Constructing municipal water and lighting plant, to Elkhorn Construction Co., Fremont, laying water mains, \$3,150; to Frank Wheeler, Havelock, Neb., constructing electric line, \$1,150; to St. Mary's Machine Co., Ohio, machines for general power, \$4,250.

Bayonne, N. J.—Laying 10-in. water main in Constable Hook yards of Standard Oil Co., to E. M. Mullen & Co., \$1,157.01.

Perth Amboy, N. J.—Furnishing engine and blower for water works at Runyon, to Engineering Co., \$775; to the same company for balanced draft system in connection with boilers for new pump, \$495.

Rochester, N. Y.—Furnishing stop valves for water works department, to Rensselaer Valve Co., \$540 for larger valves to \$8.20 for smaller sizes.

Canton, O.—To Chicago Bridge and Iron Co., Chicago, Ill., for constructing 1,000,000-gal. reservoir, \$23,200.

Euclid, O.—To Gould & Maybach, Cleveland, for improvement of Montclair road, by constructing a 6-in. water main, \$1,177.—F. A. Pease Engineering Co., 931 Williamson Bldg., Cleveland, Engineer.

Hamilton, O.—To Darling Pump Manufacturing Co., Williamsport, Pa., for 6-in. gate valves at \$11 each, and to Scioto Valley Supply Co., Columbus, for furnishing 4-in. wrought iron gas pipe at \$26.15 and 6-in. pipe at \$47.30 per 100 ft.

Toledo, O.—Furnishing year's supply of water pipe for water works department, to United States Cast Iron & Foundry Co., Chicago, \$22.80 a ton; department will use approximately 1,500 tons during season.

Nashville, Tenn.—Supplying city with 45,000 ft. of 6-in. and 3,000 ft. of 12-in. water pipe, to U. S. C. I. Pipe and Foundry Co., Chattanooga, \$20.95 f. o. b. per ton.

BIDS RECEIVED

Fort Terry, N. Y.—Construction of (a) reinforced concrete reservoir, (b) extension to water main: Sperry Engineering Co., New Haven, Conn., (a) and (b) \$11,110; A. Benvenuti, New London, Conn., (b) \$1,400; Connecticut Engineering and Contracting Co., Norwich, Conn., (a) \$6,750, (b) \$1,050; Francis J. Boas, Philadelphia, Pa., (a) and (b) \$14,300; John J. Fitzpatrick & Sons, Plattsburg, N. Y., \$13,578, (b) \$1,700; Alexander Johnstone Building Corporation, Waterbury, Conn., \$13,772; Amity Construction Co., New York City, \$9,636; F. H. Redden Construction Co., New London, Conn., (a) and (b) \$11,670; R. H. Whipple & Co., Worcester, Mass., (a) and (b) \$10,973; F. H. Schwiers, Jr., Co., New York, (a) and (b) \$12,000; alternate of F. H. Schwiers, Jr., Co., \$11,415; Neil Farnham, Inc., New York, (a) and (b) \$21,980; M. L. Bayard & Co., Philadelphia, Pa., (a) and (b) \$17,000; alternate of M. L. Bayard & Co., \$15,000; Pierson Engineering and Construction Co., Bristol, Conn., (a) and (b) \$12,500.

Coshocton, O.—Construction of either 3,000,000 or a 4,000,000-gal. steam pumping engine or a 3,000,000-gal. centrifugal electrical driven pump for water works department as follows: Platt Iron Works, Dayton, steam, 3,000,000-gal. pump, \$24,715; steam, 4,000,000-gal., \$25,430; each to be completed in six or seven months; 2-unit electric, 3,000,000, \$26,600; 4,000,000, \$10,060; four months on each: Holly Mfg. Co., Buffalo, N. Y., steam, 3,000,000, \$17,980; 4,000,000, \$19,130; each six months: electrical, 3,000,000, \$11,800; Allis-Chalmers Co., Milwaukee, Wis., steam, 3,000,000, \$22,485, 5½ months; 4,000,000, \$26,467, six months; electrical, 3,000,000, \$12,500; American Well Co., Chicago, Ill., electrical, 3,000,000, \$6,237; 4,000,000, \$8,175; each 95 days: Dravo-Doyle Co., electrical, 3,000,000, \$7,700; 4,000,000, \$8,000; each 110 days.

Dallas, Tex.—Erection of the White Rock standpipe, 70 ft. high and 20 ft. inside diameter; bids are for the placing of the foundations of concrete and for the necessary excavations for that work: Dallas Boiler Works, by J. F. Thrash, erection of the standpipe \$4,615, with 45c. per cu. yd. for earth excavations, \$2.50 for rock and \$7.60 for the concrete work; O. J. Gorman, erecting of the standpipe \$5,200, with \$1.680 for foundation work and \$2.60 per cu. yd. for rock excavation; Memphis Steel Construction Co., erecting of standpipe \$4,340, with earth excavation at 30c. per cu. yd., \$1.60 for rock excavation and \$6.60 to \$7 for concrete; F. B. Godley, standpipe erection \$5,559, with \$1 for earth work, \$2 for rock and \$6 for concrete, or a lump sum for the foundation work of \$1,360; Smith & Whitney, erection of the standpipe 5,375, with \$1 for earth work, \$2 for rock and \$6 for concrete, or a lump foundation sum of \$1,350; Chicago Bridge and Iron Works, standpipe erection \$6,795, with rock excavation at \$1 per cu. yd.; as an alternate bid the company offered to erect steel tank holding 165,000 gals., 12 ft. to the first expansion joint and 42 ft. to maximum water line, for \$5,900, with deduction if a valve is used of \$800.

LIGHTING AND POWER

Etna Mills, Cal.—Power house, which is owned by the Scott River Dredging Co., which furnishes town of Callahan with light, has been completely destroyed by fire.

Imperial, Cal.—C. S. Chestnut, Redlands, is interested in construction of electric light plant.

Los Angeles, Cal.—Citizens have declared in favor of municipal distribution of electrical power, which will be generated by the 250-mile Owens River aqueduct, as against proposal that it is leased to the existing power corporations.

Porterville, Cal.—The Home Gas Co. has decided to reconstruct plant; high-pressure

line is to be installed to cover entire city.—W. B. Phillips, President.

San Bernardino, Cal.—Lytle Creek Light and Power Co., holder of present lighting contract, has submitted offer to sell their system to the city for the establishment of municipal lighting plant desired by city officials.

Yreka, Cal.—The Siskiyou Electric Power and Light Co. is considering enlargement of plant.—J. W. Churchill, President.

Bridgeport, Ill.—R. D. Donnelly, W. E. Beyhau and V. H. Lytle have incorporated Bridgeport Light and Power Co., capital \$25,000, to furnish light, heat and power.

Waukegan, Ill.—North Shore Electric Co. is planning to erect addition to plant.

Fort Wayne, Ind.—Board of Public Works will within next few weeks receive bids on both tungsten and the magnoteite systems of illumination for ornamental posts to be installed on Calhoun st.

Terre Haute, Ind.—Citizens Mutual Heating Co. will erect power plant between 5th and 6th sts.; cost \$100,000.

Humeston, Ia.—Leon Electric Light Co. is considering extension to wires to light town.

Jeffersonton, Ky.—Commercial Club and Town Board are interested in formation of company to install \$15,000 lighting plant.

Louisville, Ky.—Kentucky Electric Co. has purchased additional site for erection of proposed \$1,000,000 power plant.

Kensington, Md.—Council will grant to Potomac Electric Power Co., Washington, 35-year franchise; company will extend its lines at once.

Clinton, Minn.—Citizens have decided to install electric light plant either by giving the franchise to private parties or by municipal ownership.

Byhalia, Miss.—Council is considering \$10,000 bond issue to purchase and install electric light and water plants.—C. M. Henry, Mayor.

Malta, Mont.—H. E. Wharton has asked Council for franchise to install electric light plant.

Franklin, Neb.—City proposes to construct electric light plant to cost \$7,000 to \$8,000.—H. Whitmore, City Clerk.

Gordon, Neb.—Citizens have voted bonds for installation of electric light, sewer and water works systems.

Cape May Court House, N. J.—The Wildwood, Angelsea and Holly Beach Gas Co. has been granted right to lay mains through streets of Cape May Court House and leading highways of Middle Township.

Columbus, N. J.—Township Committee is considering proposition to light village with gas.

New York, N. Y.—Public Service Commission, Second District, has received application from the Long Island Lighting Co., a new corporation, asking for its approval of the purchase of entire property and franchise of the Amityville Electric Light Co., the Sayville Electric Co., the Northport Electric Light Co. and the Islip Electric Light Co., and their merger into the Long Island Lighting Co.; new construction, additions and betterments to the amount of practically \$300,000 are proposed.

Richville, N. Y.—Village will vote March 21 on proposition of raising money to light streets.

Hankinson, N. D.—H. G. Squires, Galesburg, Ill., has applied for franchise to operate electric light plant.

Minot, N. D.—Burns & McDonnell, Kansas City, Mo., are investigating feasibility of installing municipal electric light plant.

Mott, N. D.—Council has granted 20-year franchise to J. Blaine Little for operation of an electric light plant.

Brookville, O.—Bids are now being received by village for electric power, commercial and street lighting.—H. E. Wheaton, Corporation Clerk.

Cleveland, O.—The Star Electric Co. has been organized, capital \$10,000, to furnish electric current for lighting and power purposes.—D. H. Tilden, A. A. McCorkin, Marjorie Ferrall, J. M. Brug and Elmer G. Derr, Incorporators.

Albany, Ore.—Electric Light Co. will expend \$100,000 in improving light and water systems.

Baker City, Ore.—City Commissioners have decided that under Commissioner Henry, City Engineer prepare estimates for pipe line from Elk Creek to Salmon Creek to replace flume now in; pipe line is to furnish power for electric lighting plant to be owned by city and the City Engineer was also instructed to estimate cost of such plant.

Salem, Ore.—Council is making arrangements for establishing cluster system if illuminating streets.

Hamburg, Pa.—Electric light plant has been destroyed by fire; loss \$10,000.—Morgan Ford, Engineer.

Lock Haven, Pa.—Council has instructed Light and Sanitary Committee to ask for bids for lighting streets by electricity; also

for bids for construction of electric plant to be owned and operated by city.

Dillon, S. C.—Electric Light Commission has decided to rebuild electric light plant.

Honea Path, S. C.—Council is considering \$11,000 bond issue for construction of electric light system.

Draper, S. D.—Council will grant 25-year franchise for installation of electric light plant.

Jackson, Tenn.—City will expend nearly \$20,000 for improving lighting system.

Lynnville, Tenn.—Board of Aldermen is considering application for franchise for construction of electric light and ice plant.

Memphis, Tenn.—Mayor Crump and Commissioner of General Utilities Thomas Dies are preparing to leave for Seattle, Wash.

ington, Portland, Detroit and Cleveland to investigate municipal lighting plants as a preliminary step toward establishing municipal lighting plant in this city.

Baird, Tex.—T. A. Ward, Comanche, has decided to construct electric light system.

New Braunfels, Tex.—The W. K. Palmer Co., Engineers, 717 Dwight Bldg., Kansas City, Mo., will prepare plans for installation of proposed municipal hydroelectric plant.

Ogden, Utah.—Engineer Strauss is preparing plans for proposed electric power plant to be constructed by Merchants Light and Power Co.

Olney, Va.—Peninsula Light and Power Co. has been incorporated by Thomas R. James, B. W. James, W. C. Fox, W. J. Milliner and R. S. Milliner to construct electric light plant.

Seattle, Wash.—Bids on Subdivision No. 1 of the Third ave. cluster light contract have been rejected by the Board of Public Works upon the recommendation of Assistant City Engineer Dimock; bids were on clearing, excavation, hand holes, concrete walks, iron pipe, fibre pipe and secondary cable; low bidder was Meacham & Babcock at \$20,157.80; new bids will be called for.

Albany, Wis.—Electric light plant has been destroyed by fire.

Beloit, Wis.—Council has taken steps to order all downtown telephone and electric light wires underground.

Racine, Wis.—Plant of Racine Electric Light and Railway Co. has been destroyed by fire with loss of \$125,000.

Superior, Wis.—Great Northern Power Company has issued call for bids for supplying apparatus that will be needed in construction of new electric transmission line from power plant at Thompson to Superior.

Sun Prairie, Wis.—Citizens have voted \$9,000 bonds for installation of electric light system.

CONTRACTS AWARDED

Willows, Cal.—Erecting 20,000-ft. gas holder for Northern California Power Co. to Davis & Farnum Manufacturing Co., Waltham, Mass.

Dalton, Ga.—By Council, for extension of electric light system, to John W. Ash, Austell, for reinforced concrete power house, electric light and pumping station, etc., \$16,500.—H. S. Jaudon Engineering Co., Box 582, Savannah, Engineer in Charge; W. M. Carroll, City Clerk.

East St. Louis, Ill.—To East St. Louis Light and Power Co. for furnishing 100 additional electric arc lights, \$50 per light.

Stanton, Ill.—To Wesco Supply Co., St. Louis, Mo., for installation of electrical apparatus in municipal electric light plant, \$6,725.

Adair, Ia.—Electric lighting and water works improvements, to Des Moines Bridge and Iron Co., Des Moines, \$28,460.—W. K. Palmer Co., 717 Dwight Bldg., Kansas City, Mo., Engineers.

Atlantic, Ia.—Electric lighting and water works improvements, to the Jos. A. Bortelanger Co., Omaha, Neb., \$43,000.—W. K. Palmer Co., 717 Dwight Bldg., Kansas City, Mo., Engineers.

Baltimore, Md.—Furnishing gas for municipal lighting for one year, to Consolidated Gas, Electric Light and Power Co., 70c. per 1,000 cu. ft. for street lighting and 80c. for lighting municipal buildings.

Newton, N. J.—By Newton Gas and Electric Co. for constructing new plant, to O'Donnell & McNaniman, Newton; cost about \$15,000.

Yonkers, N. Y.—Lighting streets for five years, to Westchester Lighting Co., \$28 per lamp.

Swansea, R. I.—Town has voted appropriation of \$1,000 a year for five years for erection and maintenance of a public street light system and voted to empower Board of Selectmen to execute contract with the Fall River Electric Light Co. to furnish electrical current and equipment.

FIRE EQUIPMENT

Texarkana, Ark.—Council has rejected all bids for furnishing auto fire apparatus.

Berkeley, Cal.—Citizens have voted \$85,000 bonds for fire department; three fire houses will be erected, fire house on Durant rebuilt and modern equipment purchased.

Willows, Cal.—Trustees have sold \$40,000 bonds for purchase of fire apparatus and site for city hall to E. H. Rollins & Co.

Fort Tampa, Fla.—Volunteer fire department will be organized.

St. Petersburg, Fla.—City will erect proposed fire house at 3d st. and 2d ave. East.

East Freeport, Ill.—Need of auto hose cart is being urged.

Goshen, Ind.—Council has decided to erect proposed central fire station at 3d and Jefferson sts.

Indianapolis, Ind.—Board of Public Works is considering plans prepared by Architects H. L. Bass & Co. for erection of three engine houses.

Newcastle, Ind.—Council will erect \$8,000 engine house at South 18th st. and Grand ave.

Hammond, La.—Purchase of motor chemical engine is being considered.

Searsport, Me.—Town has voted \$250 for hose and authorized Selectmen to purchase rubber coats for firemen.

Hyattsville, Md.—Town is about to erect fire department and municipal building.—J. Frank Rushe, Fire Chief.

Gloucester, Mass.—Council is considering purchase of auto chemical combination wagon. Address Chief Engineer Crowe.

Marblehead, Mass.—Town has appropriated \$9,000 to install larger fire alarm switchboard.

Monson, Mass.—Town will consider purchase of auto truck.

Newburyport, Mass.—Town will remodel engine at cost of \$1,300 and purchase 3,000 ft. of hose.

Rockport, Mass.—Town has voted to appropriate \$800 for purchase of fire hose.

Saugus, Mass.—City proposes to build fire station to cost \$20,000, also to spend \$2,500 for truck, \$1,200 for four horses, \$5,500 for auto combination wagon and \$1,000 for fire alarm extension.

Southbridge, Mass.—Fire department is urging need of 1,000 ft. of hose.

Grand Rapids, Mich.—Board of Fire Commissioners has recommended that motor-driven apparatus be installed at No. 1 engine house.

Duluth, Minn.—Oneota Improvement Club is urging erection of fire house and establishment of combination hose and chemical wagon.

Stephen, Minn.—Chief Jacob Peters is securing data on chemical engines.

Benson, Neb.—Citizens have voted \$5,000 bonds to purchase of fire apparatus.

Hempstead, N. H.—Town has organized fire department with H. W. Tabor as captain; purchase of chemical fire engine is being considered.

Manchester, N. H.—Board of Mayor and Aldermen of Council has asked for appropriation of \$6,000 for auto chemical to be stationed at the Fire King.

Morristown, N. J.—Fire Chief Trowbridge has recommended purchase of auto truck.

Ocean City, N. J.—Council has ordered purchase of 1,500 ft. of hose for fire department.

Paterson, N. J.—Board of Fire and Police Commissioners will ask bids for the converting of engines and hose wagons of steamer companies Nos. 1 and 5 to motor-propelled engines, and also for purchase of a motor hook and ladder truck.

Phillipsburg, N. J.—Council is considering purchase of chemical fire engine.

Clayville, N. Y.—Village will vote March 21 on \$1,500 bonds to erect engine house.

Hamburg, N. Y.—Fire Chief John Salisbury has recommended erection of fire station and purchase of 1,000 ft. of hose.

Little Falls, N. Y.—Fire and Police Board has asked permission to purchase hose wagon.

Mamaroneck, N. Y.—Citizens will vote March 21 on \$12,500 bonds to erect fire station.

Marathon, N. Y.—Village will vote March 21 on purchase of chemical fire engine; option has been obtained on suitable engine at price of \$665.

Niagara Falls, N. Y.—Taxpayers will vote in April on proposition to expend \$12,500 for two new fire halls, three pieces of automobile apparatus, and for protecting fire alarm system from injury by fire.

Pelham Manor, N. Y.—Citizens will vote on \$10,000 appropriation for purchase of motor fire engine.—J. Lewis Cunningham, Fire Chief.

Port Leyden, N. Y.—Citizens will vote on \$350 appropriation for chemical engine.

St. Johnsville, N. Y.—Citizens will vote on \$500 appropriation for fire alarm system.

Utica, N. Y.—Plans have been prepared by Architect Hobbes for erection of \$15,000 fire station at Elizabeth st. and Post ave.

Cincinnati, O.—Safety Director Small, Mayor Schwab and Fire Chief Archibald have decided on extensive improvements and additions to fire department, including installation of three auto fire engines and several auto combination hose and chemical engines.

Marietta, O.—Plans have been prepared for erection of house for Hose Co. No. 1.

Warren, O.—Council has passed bond ordinance for \$4,500 with which auto fire truck will be purchased for central department.

Chester, Pa.—Good-Will Fire Co. is planning to erect addition to engine house.

Erie, Pa.—Fire Commissioners have asked Council for \$20,000 appropriation for purchase of apparatus.

Hazleton, Pa.—Fire Chief Thos. Burkhart has recommended purchase of triple auto, engine, chemical and hose fire apparatus to be stationed at central station, also two auto combination chemical engine and hose wagons.

Meadville, Pa.—Need of auto truck for Davis Hose Co. is being urged.

Pittstown, Pa.—Town has appropriated \$5,000 to erect fire station.

Providence, R. I.—Fire Commissioners have recommended gradual substitution of motor-driven apparatus for horse-drawn.

Sumter, S. C.—Committee, Alderman J. F. Glenn, Chairman, is considering need of auto apparatus.

Puyallup, Wash.—George Barry, Chief Fire Department, is in favor of city purchasing combination automobile chemical hose and hook and ladder wagon and of having up-to-date fire alarm system installed.

Tacoma, Wash.—City will purchase site at E. 26th and C sts. for erection of fire station.

Tacoma, Wash.—Municipal Committee has voted to purchase fire engine for station at N. 25th and Proctor sts., type, size and cost not yet determined.—L. W. Roys, Commissioner.

Beloit, Wis.—Council has ordered overhauling of fire alarm system and installation of 11 new boxes at cost of \$1,500.

CONTRACTS AWARDED

Pueblo, Col.—Furnishing auto fire truck, to American-La France Fire Engine Co., Elmira, N. Y., \$5,750.

Millville, N. J.—Eureka Fire Hose Manufacturing Co., 13 Barclay st., New York, has been awarded contract for 500 ft. of two-ply fire hose, \$1.00; company informs us that item in issue of March 8 stating that Paragon hose was furnished was in error.

Hazleton, Pa.—Furnishing auto chemical engine for Diamond Fire Co., to Robinson Fire Apparatus Co., St. Louis, Mo.

Columbia, S. C.—Furnishing auto hose wagon and chemical engine and automobile fire engine, to Webb Company and American La France Company combined, price being \$13,000.

BRIDGES

Macon, Ga.—Bibb County will vote May 10 on \$200,000 bonds for bridge improvements and new bridges.

East Peoria, Ill.—Village Board has voted to advertise for bids preparatory to erection of concrete bridge over Coles Creek at Washington st.; cost about \$4,000.

Moline, Ill.—Plans have been completed by Landscape Architect Henry C. Klehm, Arlington Heights, for erection of \$1,500 concrete bridge over West Lake.

Mt. Vernon, Ind.—County Council has appropriated \$20,000 for bridge and road construction in Posey County.

Washington, Ind.—Council is considering plans and specifications by Hugh O'Neill for construction of proposed bridge at North East 1st st.

Holyoke, Mass.—Board of Public Works has instructed City Engineer to submit estimates for bridge over second level canal at Cabot st.

Benton Harbor, Mich.—City is considering construction of a viaduct to connect East and West High sts.; preliminary plans have been prepared, providing for structure 825 ft. long and 28 ft. wide, with 4-ft. sidewalks and 20-ft. roadway.

Taylor's Falls, Minn.—L. P. Wolff, St. Paul, is preparing plans for bridge to be constructed over St. Croix River.

Omaha, Neb.—Plans have been prepared for erection of proposed 11th st. viaduct; cost \$100,000.—Geo. Craig, City Engineer.

Passaic, N. J.—Freeholders of Passaic and Bergen counties are considering erection of \$75,000 bridge across Passaic River at Rutherford ave.

CONCRETE MARKET HOUSE, FORT WAYNE, INDIANA. CITY HALL IN THE DISTANCE

FORT WAYNE MARKET HOUSE

Constructed Entirely of Concrete, Except Roof—Method of Constructing Columns and Pavilions—Concrete Surfaces of White Cement and Roofing Gravel—Constructing Market Tables of Concrete

By EDWARD P. BAILEY

The city of Fort Wayne, Ind., has recently completed a market house which is constructed entirely of concrete, and in which successful effort has been made to produce excellent architectural results. The farmers' market has been a feature of the city for a number of years. Until the completion of this market-house three days a week were designated as market days, but no satisfactory accommodation had been furnished for the market men.

The new market-house extends for a block and a half along Barr street; from the rear of the city hall one-half block to Wayne street, and an entire block from Wayne to Washington street. There is an entrance into each of these sections from Wayne street and into the longer section from Washington street, a pavilion being provided at each entrance. The two pavilions facing each other on the opposite sides of Wayne

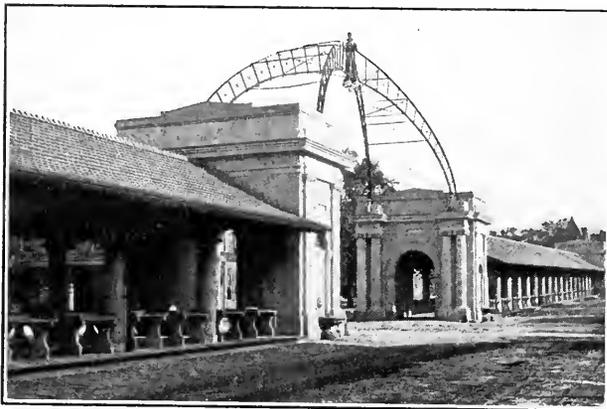

street are connected by steel arches, from which electric lights are suspended. The entire length of the market is 450 feet and the width from curb to curb is 26 ft. 8 in. The teams back up to these curbs, outside the structure, while the purchasers use the passage through it.

The pavilions are of the Ionic order of architecture. The capitals of the columns were cast in glue molds, as were also the lions' heads over the drinking fountains, while the other architectural features, such as rosettes, keystones, etc., were cast in plaster molds and set in place as the structure went up. The drinking fountains were cast in place, all pipes, etc., being placed in position beforehand. The walls of the pavilions were built upon a core of brick work, presenting an unbroken surface of concrete made of white sand and Medusa white cement, with an aggregate of birdseye or roofing gravel. When the forms were removed the surface was scrubbed with wire

brushes exposing the aggregate, and the general effect is very pleasing. The columns were cast in place in the same manner as the columns of the main part of the structure. These pavilions contain the market master's office as well as the public toilet rooms.

In the main part of the structure there are 54 round columns, and two square columns at the end next to the City Hall. The round columns have shafts 8 ft. 9 in. high, each resting on an octagonal base which varies in height with the elevation of the ground surface. The shafts are each 24 inches in diameter at the base and 21 inches at the top, and each is surmounted with a plain molded capital and square cap. These columns support the roof, and within the space enclosed by them are the tables used by the market men, and the passageway for purchasers.

In constructing the columns, a rough core was cast of concrete mixed one to five, which was 6 inches less in diameter than the finished column. When this core had hardened the forms were removed and the mold for the finished column was put in place around the core. This mold was built of wood, in four sections, with very carefully finished surfaces. Between this mold and the core was poured the concrete, of white sand, Medusa white cement and birdseye gravel, such as was used for the pavilions, the proportion being one cement, two sand

WAYNE STREET PAVILIONS, WITH CONNECTING ARCH

and three gravel. Medusa waterproofing compound was used in all of the concrete to the extent of about $1\frac{1}{2}$ or 2 per cent. of the amount of cement used. Twenty-four hours later the forms were removed and the surface brushed. In casting the columns long bolts were imbedded in the top of them in the line of their axes, and protruding for some distance, for the purpose of anchoring the roof to the columns. The caps of the columns were cast with circular openings in the center, through which the bolts would pass, and after the caps had been accurately adjusted to place this opening was filled with concrete, this serving the double purpose of holding the caps in place and giving additional anchorage to the bolts. The roof consists of a framework of wood covered with red roofing tile. A concrete floor is provided for the entire structure.

In line with the columns are placed 112 tables, two tables being placed in each opening between columns. These tables are entirely of concrete and are five feet long, two and one-half feet wide, and stand two feet ten inches above the floor. The tops rest upon two end supports of concrete cast solid, but of slightly ornamental design, 4 inches thick and about 2 ft. 8 in. high. They are reinforced with expanded metal and each was cast in a plaster mold made in four parts on a wooden frame, the mold consisting of these four sides clamped together and laid on a concrete floor, which had previously been covered with oil paper. The concrete was poured into this mold, and the top trowelled off smooth. In making these end supports two bolts were imbedded as dowels in the top of each, and holes were provided in the table tops for receiving these bolts. The bolt holes were countersunk in the top with a small trowel for receiving the nuts. The table tops are $1\frac{3}{4}$

inches thick, each reinforced with a sheet of Page woven wire and having a flange about 3 inches high extending around three sides. The tops were also cast on a concrete floor in a steel mold made for the purpose. All the concrete used in the tables was made of a one to two mixture of ordinary Portland cement and washed sand.

The architects for the market building were Mahurin & Mahurin, and the contractors were Borkenstein & Son, all of Fort Wayne, Ind.

GERMAN SYSTEM OF SEWAGE PURIFICATION

A system of treating sewage which has been introduced in Germany and is known as the Braun system, and which has been used in hospitals and military barracks, was described in a recent issue of the *Gesundheits Ingenieur*. It consists of two septic tanks, each of a capacity of 24 hours average flow of sewage, and a filter, with provision for aeration. The effluent from septic tank No. 1 is removed by a pipe and drops a short distance through the air into tank No. 2, during which drop the sewage is supposed to absorb oxygen from the air, and probably at least gets rid of a certain amount of the contained gases. From tank No. 2 the effluent passes to a filter bed which is usually from five to eight ft. deep, and consists of loosely packed large hard clinkers, furnace slag or coke without any small particles or sand.

The most novel feature of the plant is the method of distributing the sewage onto the filter. For this purpose a pipe from septic tank No. 2 discharges the sewage into a main distributing gutter which is carried over the filter for its entire length. Immediately below this gutter and at right angles to it are so-called "drip pipes," which are placed above the entire surface and 20 inches apart. The pipes are of a special construction in cross-section, in that the top at the center is depressed lower than the sides or edges. The edges are provided with slots at intervals of about six inches. Long wicks of an absorbent material are fastened in these slots, one end hanging for a short distance outside of the pipe. These wicks suck up the septic effluent, which drops from the outer end of the wick onto the filter.

The filter material is supported by a grating composed of small reinforced concrete beams between which are slots running the entire length of the bed. Beneath this grating is an open chamber from which air passes up into the filter. The bottom of this chamber is inclined about 2 per cent., and gutters in it collect the filter effluent and lead it into a collecting tank, from which it is finally discharged. The entire plant is enclosed.

It is stated that these plants give a purified, odorless effluent. Experience in England and this country would lead one to anticipate serious difficulties in connection with the system for distributing the effluent to the filter, the most probable being the choking up of the slots and coating of the wicks by mycelial or other growths. Several classes of trouble might also be expected, due to the continual dropping of the sewage at fixed points about a foot apart, among these being local clogging and low efficiency of filter action.

OIL ON ASPHALT STREETS

In a discussion on pavement maintenance before the American Society of Engineering Contractors, the subject of the effect on asphalt and bituminous macadam streets of oil from automobiles was discussed. Concerning this Mr. Geo. C. Warren said: "If the distribution of the oil is very excessive it would be very injurious. If, for instance, an automobile were standing for five or six hours a day dropping oil on a given area of pavement, the oil would in time soak in; but, on the other hand, a slight amount of oil dropped by moving automobiles on our excessively traveled boulevards is a protection to the pavement. The best asphalt pavement I have ever seen is in front of the Auditorium Hotel in Chicago. The only reason that I can conceive for that being better than the other

avements of its class is because of the large number of automobiles that have kept the surface of the asphalt at all times coated with a thin film of oil, which, I believe, has kept the immediate surface in a durable condition. Such a slight quantity of oil as drops from the engine, followed by the spreading of the oil by the automobile wheels, is, I believe, a great protection to a bituminous pavement surface."

SOUTH NORWALK MUNICIPAL ELECTRIC PLANT

The municipal electric plant of South Norwalk, Conn., was described by us in February, 1907, as one of the most successful in the country. In the spring of 1910 the growth of its business had been so great that it was necessary to increase the capacity of the plant, and \$29,881.66 was spent for this purpose. The new installation, which increases the former rated capacity of the plant about 22 per cent, consists of a brick extension with slate roof and concrete floor; a 225-h.p. American Diesel fuel oil engine; a 160-kilowatt 250-volt direct-current Fort Wayne generator, direct connected to the engine; a Norwalk air compressor driven by a 25-h.p. motor; a cooling water system consisting of two cooling towers, two motor-driven pumps, a receiving tank and an elaborate system of piping and valves; two switchboard panels, complete with all instruments, generator and motor connections; an extra engine and generator foundation, and a new trunk feeder.

This was all paid for from the profits of the plant for a little over a year, and the city now owns a plant valued at \$185,000, the debt on which has been reduced to \$50,000 by the profits from its operation. It is believed that the gross profits of more than \$25,000 a year will be increased with the added business this enlargement makes possible.

ELIZABETH TUNNEL, LOS ANGELES AQUEDUCT

By BURT A. HEINLY

THE "opening up" on February 27 of the Elizabeth Tunnel, which forms the most important strategic point in the construction of the new municipal water works of Los Angeles marks a chapter in the construction of that enterprise.

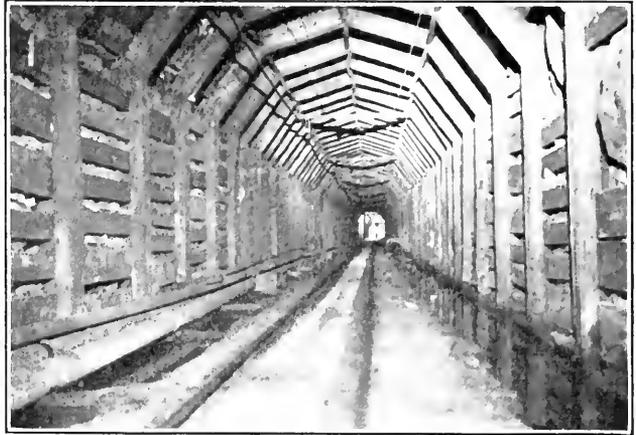

This tunnel pierces the crest of the Coast Range (Sierra Madre) with a total length of 26,872 feet, and is the second longest water tunnel in the United States. For the past eighteen months it has attracted the attention of the engineering world for the rapidity with which it has been constructed and the remarkably low cost of boring. All American tunnel driving records have been repeatedly broken, that of the Gunnison with 449 feet made in 1906 having been increased to 604 feet by the record of the Elizabeth south portal crews in May, 1910. The tunnel has been "opened up" more than a year ahead of the estimated time and the final cost will be approximately \$400,000 less than the sum set aside for the purpose. The total cost is now estimated at \$1,612,200.

The Owens River Project, or Los Angeles Aqueduct, of which this forms a part, is, as has already been described in MUNICIPAL JOURNAL AND ENGINEER, a plan of supplementary water supply being carried out by the municipality to conduct the snow waters of the eastern face of the Sierra Nevada Mountains through a concrete aqueduct 230 miles across the Mojave Dessert, beneath the Coast Range and into the San Fernando Valley at the mouth of which Los Angeles is built. The enterprise will provide a domestic supply for 1,000,000 people, irrigate 125,000 acres of land, and make possible the development of 100,000 horse-power of electrical energy by the fall in the aqueduct grade.

The Sierra Madre Range, which rises to a height of from 4,200 to 6,100 feet at the back of Los Angeles, was the great natural barrier to the construction of the aqueduct. This made necessary the boring of the Elizabeth Tunnel, located 67 miles north of Los Angeles, which will carry the water from the Fairmont Reservoir in the Antelope Valley on the north side of the range and deliver it on the south side of the mountain into the San Francisquito Canyon, thence into the San Fernando Valley.

The Gunnison, built by the United States Reclamation Service, is the longest water tunnel in the United States, with a length of 30,000 feet; after it comes the Elizabeth, then the famous Sutro, four miles long, and built in the late seventies to drain the Comstock mines.

The Elizabeth, after being faced with 8 inches of concrete, will have a height of 10 feet 10 inches and a width of 9 feet 6 inches. The grade is 5.28 feet to the mile and the capacity is 650,000,000 gallons per 24 hours.

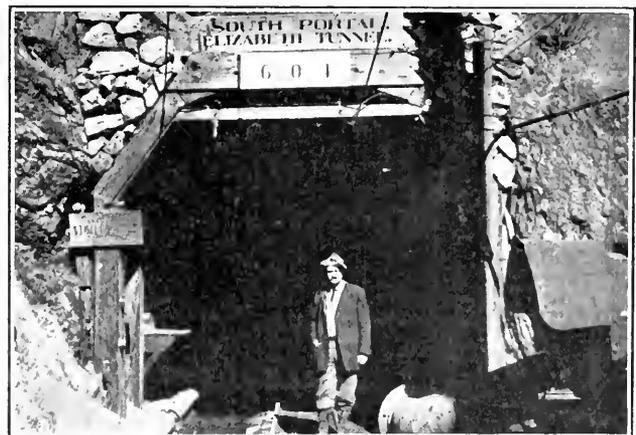

INTERIOR OF ELIZABETH TUNNEL
Showing timbering in place

Work was inaugurated October 5, 1907, at the south portal and November 2 at the north portal, and has been carried on by three shifts unremittingly from both ends excepting on several occasions when the men were driven from the north portal by floods of water.

Twelve hundred and forty days were required for the boring of the tunnel, and the cost was \$50 per foot. The concreting can be completed for \$10 per foot at outside cost, according to the Chief Engineer, making the completed tunnel cost \$60 per foot. The time required, as estimated by the board of consulting engineers, was 1,680 working days with a daily progress of 8 feet on each face, and the completed cost was figured at \$75.33 per foot.

Construction, as a rule, has been in hard granite, although the north portal heading has been driven through swelling earth, saturated sands and stiff clays with water pockets encountered on half a dozen different occasions. Despite these drawbacks the joining of the two headings was a distance of only 75 feet beyond the middle point of the tunnel.

All the work has been done by day labor under the supervision of the city's water superintendent, William Mulholland. The men were paid under the bonus system, by which they were rewarded for efficiency beyond the average and to this cause is given much of the credit for the remarkable speed attained.

SOUTH PORTAL OF ELIZABETH TUNNEL

DENVER STREET SIGNS

Denver, Col., has six classes of street signs, some of which are believed to be unique in their design. The old wooden signs nailed to telephone and telegraph poles are rapidly being discarded for combination iron poles and signs, and for ornamental bronze signs on certain streets. There are 1,050 of the iron signs, which were designed by Capt. Philips, of the Highway Department. These signs, with posts, cost approximately

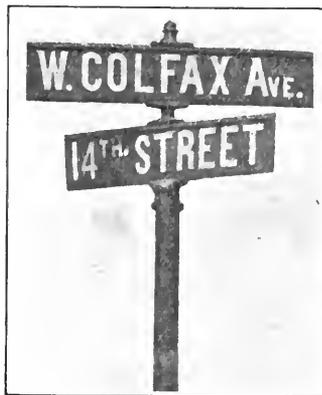

BRONZE SIGNS ON LIGHT STANDARD

\$9 each, including the labor of putting them into position. The pole is of wrought iron pipe and is set in a concrete foundation. The posts are 8 ft. high and the signs are of a superior quality of galvanized iron containing letters of brass enameled in white 3 inches high. The two sign plates, or three where there are three intersecting streets, are riveted to the poles in such a way that it is almost impossible to remove them.

On certain of the streets are ornamental signs which are attached to the combination light and trolley poles, completely encircling the pole. These signs are cast in two pieces, the name of the two intersecting streets occurring in each piece separated by a single ornamental projection containing the screw holes for fastening the casting to the pole. These are made of bronze, the letters being of polished bronze on a dark unpolished background. The double signs cost \$3.50 each, in-

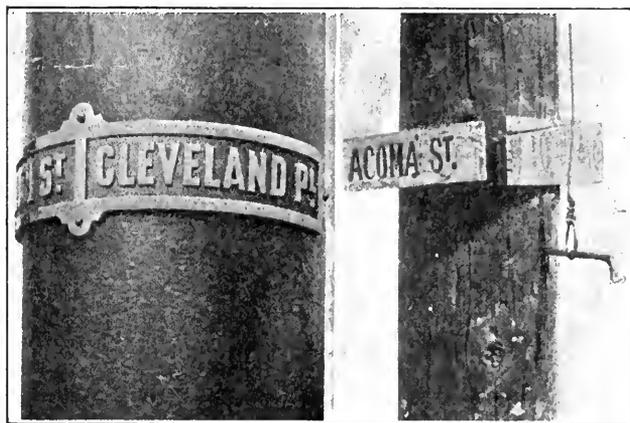

ILLUMINATED STREET SIGN—FLASHLIGHT TAKEN DURING SNOW STORM

IRON SIGNS GENERALLY USED IN RESIDENCE SECTIONS

cluding fastening in place. Another sign somewhat similar to this, for use on the lighting standards, is in the form of a flat bronze name plate, which fits into the base of the standard.

Of the sixth style of sign but one has yet been placed in Denver. The pole supporting the sign is connected with and receives current from electric wires above, and the sign, which

CIRCULAR BRONZE SIGN ON TROLLEY POLE

OLD WOODEN SIGNS

is in the form of a long narrow box, is lighted inside by means of an eight-candle power incandescent lamp. The light is reflected to the signs from the interior, the letters being on a background of mica. The illuminated letters can be seen for quite a distance and are arranged so that they can be removed without injury to the standard in case it should be desired to change the name. The lamp is said to be so arranged that it can not well be disturbed by mischiefmakers, but can be removed for cleaning or repair.

MUNICIPAL OWNERSHIP IN CALGARY

The city of Calgary, Canada, owns and operates the street railway, water works and electric light plants, which are operated by a commission of three. During the five years that the electric plant has been under municipal control the rates have been reduced 45 per cent. The street railway has been operating about eighteen months, and contracts have been let for 22 miles of new track this year. The water works plant was purchased from a private company several years ago in a very dilapidated condition, since when it has been largely reconstructed; 19½ miles of mains having been laid in 1910. This plant has cost about \$1,400,000. The electric plant has cost about \$500,000, and the street railway about \$530,000. During 1910 the net surplus was \$3,335 for the water works, \$22,407 for the lighting and power plant, and \$33,315 for the street railway. In figuring these allowance was made for interest, sinking fund and depreciation, except that apparently no depreciation is charged off for the water works. The interest rates are from 3 to 4½ per cent, and the sinking fund about 1.6 per cent for the water works and 1.8 per cent for the other two. For this information we are indebted to A. G. Gravel, Commissioner of Water and Electric Light.

METER INSTALLATION AND MAINTENANCE

In a paper read before the convention of the League of Nebraska Municipalities, Mr. H. D. Mead, Water Commissioner of Chadron, Neb., after discussing the value of meters, presented the following ideas and figures concerning the installation and maintenance of them:

Various plans are adopted by cities for the installation of meters.

1st. By ordinance, compelling the consumers to install meters at their own expense.

2nd. Meter installed by the city, requiring a deposit from the consumer while the meter is in service.

3rd. Meter installed by the city, exacting a small fee each month as rent until meter is paid for.

4th. Meter installed and kept in repair by the city free of cost to the consumer.

The last plan is considered the best, the commissioner becomes familiar with the construction and working of the particular make adopted, uniform parts are carried for repairs, ease in interchanging, records can be kept more complete. While requiring quite an outlay at the start, the results are quite satisfactory. Compelling consumers by ordinance to install at their own expense is a very unsatisfactory way to put the water system on a meter basis, the cost of installing a meter makes it a hardship on some, the consumer who is willing to put in a meter is taking the worst of it from his backward neighbor.

Quoting from a decision rendered by the Railroad Commission of Wisconsin, (on the complaint of a consumer against the Hudson, Wisconsin Water Works.) "The logic is overwhelming to the effect that meters constitute a part of the facilities incident to the services for which the management, whether public or private, is responsible. A meter is a part of the equipment of the plant. The city and that alone is responsible for the type of meter used and for their accuracy."

Durability

Tests have been made in several cities to determine the life of a meter and the cost of maintenance and repairs. Actual figures are available now to enable us to state that life on a high-grade meter is at least twenty-five years, with a good reason to believe that this figure will be largely increased in the future. This means a low depreciation figure. The cost of repairs of the high-grade meter of today is very low. Reports from several cities show that the maintenance account ranges from 5 to 20 cents per meter per year, varying with the quality of the water and other local conditions.

My own experience has shown, with about 480 meters in service, a maintenance account of 11 cents per year.

DISCUSSION OF WATER WORKS TOPICS

It is proposed that, at the convention of the American Water Works Association, which will be held in Rochester, N. Y., June 6 to 10, there be a general discussion on a number of topics, since it is realized that such general discussions are not infrequently of more interest and value than elaborate papers. A circular issued by the secretary gives a list of twenty-one questions concerning which discussion is requested, with the idea that members may prepare themselves beforehand with data and material for taking part in such discussions. The first of these deals with the treating of water to adapt it for boiler use, the question being whether it would be advisable to treat an entire supply which was suitable for all other purposes, or to furnish a separate supply for boilers! Other questions deal with the washing of mechanical filters, the use of oil for fuel, depth of mains necessary to prevent freezing, "red water" troubles, connection with independent factory fire services, superintendents' salaries, proper caulking of lead joints, metering free public supplies, preventing electrolysis, use of hypochlorite, use of leadite, unlawful use of water through fire

services, construction of valves, use of steam turbines direct connected to pumps, under-registration of water meters, and locating leaks in mains.

Those who cannot be present at the convention are requested by the secretary to send written discussions on these questions. If there are any who have not received his circular we know that he will be glad to send them a copy on request.

WATER RATES IN DULUTH

EDITOR MUNICIPAL JOURNAL AND ENGINEER, New York City.

Dear Sir: I have been considerably interested in the article appearing in your magazine in reference to Water Rates.

In the first place it is as impossible to have a uniform table of rates as it is to have uniform conditions.

A complaint in Duluth that our rates were discriminating in favor of the large consumer as against the small, has led to our making a very exhaustive study of this matter as it affects Duluth.

Our table of rates are as follows:

The first	8,000 cu. ft. each month,	17½c	per 100
" next	8,000 " " " "	10	" "
" "	60,000 " " " "	7½	" "
" "	100,000 " " " "	5	" "
All over	176,000 " " " "	2½	" "

Minimum monthly rate 50c.

Our income is as follows:

Water rates.....	\$231,000
Hydrant rentals.....	40,000

Our expenditures were:

Pumping water.....	28,855
Water services, which include all administration expenses, replacements, repairs, insurance, etc.....	51,124
Interest on outstanding bonds.....	105,627

Total\$185,606

The excess earnings are used in extending the plant. The hydrant rentals can be divided, in my opinion, as follows:

To apply on the interest.....	\$ 30,000
" " " " pumping.....	5,000
" " " " services.....	5,000

Leaving to collect of the consumer:

For pumping.....	\$ 23,855
" water services.....	46,124
" interest.....	75,627

As regards the cost of pumping, every gallon should be charged for at the same rate.

As regards the administration expenses, every service, whether affording a consumption of 300 feet or 300,000 feet, costs the same.

As regards the interest, were the works constructed simply to supply the present consumption and no more, it might be proper to charge that to each gallon at a fixed rate, but new works are so constructed. If the proper wisdom is shown, the plant, pumping works and mains, will have a capacity of four times the present consumption, simply to provide for the future.

As regards the surplus earnings which are to be devoted to new extensions, it certainly seems ridiculous to entertain the idea that the present consumers should pay for new extensions to the system for new consumers on the basis of their uses of water.

From this it appears that a sliding scale is just, and should be arranged to cover these various points; that is, if you can find a human mind capable of compassing it.

We estimate that we have about 10,000 family consumers; 3,346 paying not to exceed 53c per month; 6,288 paying not to exceed \$1.00 per month; 8,810 paying not to exceed \$2.00 per month; so out of the balance of the family consumers and from those who are using water for business and mechanical purposes comes the bulk of our receipts. This causes the charge of discrimination to collapse.

The board has concluded that our present rates are as fair and equitable as it is possible to make them, and particularly when so large an interest burden rests upon the department forcing a rather high rate that to apply as a flat rate of so much a gallon to all consumption would be prohibitory to our large business interests and the establishment of new ones, and would be like killing the goose that laid the golden egg.

Yours truly,

L. N. CASE,
Manager Water and Light Commission,
Duluth, Minn.

Commission Government in the Far West

Municipal voting with some unusual features took place in two Western cities last week. In Los Angeles amendments to the city charter were adopted which gave it the power to operate quarries, or plants for making or transporting any materials required in constructing or repairing public buildings or improvements; to supply the citizens with any means of heat, illumination, power or refrigeration, selling any surplus light, power, etc., to other municipalities or non-citizens. It may also own and operate any means of conveying passengers or freight by land or water (air is not mentioned) either within or without the city; also elevators, warehouses, tunnels and viaducts. A Board of Public Utilities is created with power to investigate public service corporations and establish rates subject to approval of Council. An unusual provision for a charter is one limiting to 150 feet the height of all structures except public buildings, monuments, and the chimneys, etc., of houses of public worship. In the election of public officers every candidate is to be put up by petition, all names being voted on at a primary election. The names of the two receiving the highest number of votes for each office will

be placed upon the regular ballot; but if any candidate receives a majority of the votes he will be considered elected without further balloting. At the final election there will therefore be but two names to vote on for each position. The fact that certain offices may be filled at the primary election is expected to give this sufficient importance to induce the great bulk of the voters to take part in it.

On March 14 five commissioners, elected on March 7, succeeded a Mayor and ten Councilmen as the governing body of Spokane, Wash. At this election women voted for the first time in that city. The new charter, which provides for commission government, contains a few unusual features, that most so being the provisions for electing the commissioners. The manner of doing this is as follows:

Twenty-five electors may nominate a candidate by taking an oath that he is a qualified and a desirable man and that they desire to vote for him. The ballot contains the names of all the candidates in alphabetical order, followed by spaces marked for first, second and third choice. The voters mark 15 crosses on the ballot, voting for five men as first choice, five others as second choice and five as third choice. However, they may vote for third choice the entire list after eliminating first and second choice.

The majority of all votes cast elects on the first choice. Then the votes for the candidates who are unsuccessful in the first choice column and are in the second choice column, are counted to select the rest. If five candidates having a majority of first and second choice votes are not elected, the votes of the third choice are counted with the stragglers of the other two and the third choice selections fill out the five. The third choice men are elected by a simple majority.

The Spokane plan varies from all others by making the contest a free-for-all and not designating the office sought. It provides that candidates must not spend more than \$250 during the campaign, also making it compulsory to submit an itemized statement of expenditures, and no paid workers, carriages or other conveyances are permitted on election day.

Party lines are absolutely obliterated and personalities are eliminated. The candidate must take an oath that he represents no political party in the election nor any special interests.

There were 97 candidates at the beginning of the recent campaign. Three declined to make the race and two withdrew just before the election.

New York Health Bulletin

The Health Department of the city of New York has begun publishing a monthly bulletin along the general lines of those issued by most of the states. The first of these has been issued within the past week or two and contains several very interesting articles, one of these giving statistics concerning the health and death rates of the city for the past 43 years; others describing the child welfare exhibit and the operations of the Sanitary Bureau during the past two years; and the report concludes with a directory of the department, giving the locations of the offices in the several boroughs, of the laboratories, tuberculosis clinics and those for eye diseases, the hospitals, etc.

The editor state that "the *Bulletin* will contain, in addition to statistical summaries, articles dealing with special phases of the city's health, a record of the more important of the department's activities, and such other items of timely interest as may furnish to each citizen information of value regarding the health and welfare of the community."

The department has issued a notice under date of March 15 stating that so many requests have been received for this first issue of the *Bulletin* that it will be impossible to comply with all of them, but that a regular mailing list is being established and that it is possible that another edition of the January number will be printed in order to meet all requests for it. Those who desire to have their names placed upon this mailing list can probably do so by addressing the Editor, *Bulletin* of the Department of Health, Fifty-fifth Street and Sixth Avenue, New York City.

NEWS OF THE MUNICIPALITIES

Current Subjects of General Interest, Under Consideration by City Councils and Department Heads—Street
Water Works, Lighting and Sanitary Matters—Fire and Police Items—Government and Finance

ROADS AND PAVEMENTS

City Has Right to Order Use of Patent Pavement

Indianapolis, Ind.—The Supreme Court has held that a City Council has a right to order a street paved with a patent pavement where the owner of the patent signs a written waiver of his rights under the patent upon the payment of a specified royalty on each square yard of pavement which may be laid under any contract awarded for the pavement, and where the owners of the property fronting the street have petitioned for the improvement of the street with the patented pavement.

The case arose from the order of the city of Indianapolis to pave Senate Avenue with bitulithic pavement, the contractor to pay the holder of the patent a royalty of 25 cents on every square yard of pavement laid, there being a petition by the majority of the resident property holders to use that kind of pavement. It was contended that the pavement used was only a common macadam and coal tar pavement and that the granting of the royalty tended to promote a monopoly. The Court holds that as long as the offer of the holder of the patent is so definite that he cannot use dictation, but merely receives a royalty for each square yard, and the resident property owners desire to accept the paving on those terms, there is in no sense a monopoly, the contract is valid and there was nothing showing the letters patent on the pavement were not legal letters patent from the United States and such that the city could consider them valid.

Paving Companies to Hustle for Signatures

Portland, Ore.—Any paving company which shall secure the largest number of signatures of property owners to its petition will be given the contract for paving all the streets in Sellwood. This is the decision of the Sellwood Commercial Club. W. C. Adams, of the paving committee, recommended the laying of bitulithic pavement, declaring he believed it the best to be had for the money. Those who favored hassam and asphalt paving disagreed with him and a heated discussion followed. The final decision was that each paving company shall circulate petitions among the property owners and the one securing the largest number of signatures shall be given the work. For the next two weeks there will be a scramble among paving companies for signers. The entire Sellwood district is to be paved.

Recommends Municipal Paving

Milwaukee, Wis.—The advantages of having the city do its own street improvement work as contemplated by the administration are pointed out by C. A. Mullen, Superintendent of Street Construction and Repair, in a special communication to the Council for consideration by the Committee on Streets and Alleys. In addition to effecting a saving of about \$250,000 annually, Supt. Mullen states that better streets will be the result. From the communication it is learned that practically no other but bituminous pavements will be laid in the future. This includes asphalt and the Milwaukee type which is similar to bitulithic. Block pavements, such as sandstone, granite, creosoted wood and vitrified brick materials, probably will be rarely used on the streets.

Will Test Oil and Calcium Chloride Sprinkling

Waukesha, Wis.—The Board of Public Works offered a resolution at a meeting of the Common Council which was adopted giving it the power to purchase 1,500 gallons of oil and three tons of calcium chloride. It is the intention of the board to use the substance for street sprinkling purposes as an experiment and the one that proves to be more beneficial than the other will be used hereafter, providing it proves itself to be superior and less expensive than water. It was stated by the city engineer that oil or calcium chloride will be used but once every two weeks.

Boulevard to Connect Leavenworth and Kansas City

Leavenworth, Kan.—A bill providing for the construction of a magnificent driveway from Leavenworth to Kansas City was put through the House by Representative Thomas, of Wyandotte County, and the bill has now received the Governor's signature.

Senator Stillings is entitled to the credit for this accomplishment. It means a beautiful macadam driveway 36 feet wide connecting the two cities. The inclines will be paved with brick and the curbing will all be of the big brick blocks such as are used on Fourth Street. The right of way is almost all arranged for. The work will commence at Lansing and the road will be pushed south a short distance and thence east directly to the bluffs where it will continue along the cliffs to Kansas City, Kan., connecting there with the new boulevard being laid out in that city. The people of Leavenworth will not at first realize the importance of this boulevard, but when it is once accomplished they will be astonished to see what they have gained.

Fine Driveways Will Soon Be Under Way

Leavenworth, Kan.—The long heralded improvement of Metropolitan Avenue, which has been proposed by the Department of Justice for the past two years, now appears to be near realization, as Warden McClaughry has received authority to begin work just as soon as it is possible to get everything in shape and start it. This authority and the plans for the work have been received from Washington. According to the plans the work when completed will furnish Leavenworth with the best styles of driveways to be found in the West and will prove of great benefit to owners of automobiles, affording them a drive which cannot be surpassed in beauty of scenery and road bed anywhere in the country. It is not decided what the driveways and new roads shall be made of, but it is believed that oiled macadam will be used, similar to that on Grant Avenue at the foot of Stone curbing will be used along both sides of Metropolitan Avenue. It is planned to do the work with the prisoners of both civil and military prisons. It will take at least two years to complete the work as outlined by the Department. The cost is expected to be \$50,000 at the least.

Cost of Street Work Decreases

Louisville, Ky.—The Board of Public Works has issued a comparative statement showing the steady decline during the years 1908, 1909, 1910 and 1911 in the cost of constructing granitoid sidewalks, vitrified block alleys, vitrified block streets and asphalt streets. The following are the 1911 prices per square yard and the decrease in price since 1908: Granitoid sidewalks \$0.92, decrease \$0.04; vitrified block alleys \$1.56, decrease \$0.0625; vitrified block streets, reconstruction, \$1.575, decrease \$0.04; asphalt reconstruction including foundation, \$1.7566, decrease \$0.0934; asphalt resurfaced \$0.93, decrease \$0.24.

Seek Aid for a Boulevard

St. Paul, Minn.—Aid from the State is being asked for building a lake shore boulevard 85 miles long from Port Arthur, Canada, to Duluth. Chris Murphy, county auditor of Lake County, was at the capitol last week in conference with G. W. Cooley, State Engineer. Plans have been made to co-operate with the Canadian authorities to make the boulevard one of the attractions of the State. There now is a State road laid out along the shore of which considerable work has been done. This road is cut from the rock along the shore in many places and the cost of construction is rather high. Mr. Murphy says the counties along the lake are ready to contribute a good deal of money toward the construction of the road and wants \$2,400,000 from the State, the limit to any one county under the present law of the highway commission. There are many demands for money, however, and it is doubtful if the full amount can be given Lake County. The matter will come up before the highway commission at its next meeting.

SEWERAGE AND SANITATION

Analyses of Water and Milk Disclose Good Conditions

Binghamton, N. Y.—During the month of February, according to the report filed with Commissioner of Health John E. Bloomer, by Assistant Food Inspector John L. Costello, 72 samples of milk were examined by the City bacteriologist. These samples were taken indiscriminately, and with the exception of six they were under the maximum bacterial count allowed by the department. Of these six the highest was 402,000. The large majority of samples showed traces of sediment in the milk, some revealing sediment in large particles. Health Officer D. S. Burr has received a report from the City Bacteriologist showing that an examination of the raw and filtered water used by the city from samples taken March 6 showed an excellent quality of water. Sewage bacteria could not be found in either the raw or filtered water and the efficiency of the filter is rated at 97 per cent. Usually at this season of the year traces of sewage bacteria are plainly discernible in the raw water.

City Faces Damage Suits

Spokane, Wash.—Union Park citizens are up in arms against the city because of flood waters which have inundated property in the district. Claiming that the city maliciously and with the sole purpose of safeguarding the city against damage suits," constructed culverts across the streets, citizens of the flooded section say that damage suits aggregating \$150,000 will be instituted against the city. It is claimed that the action of the city has resulted in great destruction of property. The city has expended \$10,000 in constructing these culverts across many of the streets. They are excavated four feet deep and 10 feet wide, walled in with stone and covered with heavy timbers at the level of the street grade, but they do not give any protection, it is claimed by the citizens of Union Park, and are inadequate to take the place of the natural drainage canal which has been filled up by the city.

Health Board Desires Laboratory for Tests of Food

Perth Amboy, N. J.—In connection with the efficient work of the present Board of Health several things have been suggested and thought of by the different members to add still more to the effectiveness of that body. One of the matters which has caused some informal discussion is the question of the desirability of a laboratory in connection with the work of the local board. This matter has been spoken of particularly in reference to the work of the milk and food committee. At present all this committee can do is to insure the sanitation of the surroundings under which the milk is produced. It has no means for testing the purity of the milk. There is also no means to test the purity of the food, the presence of disease germs, etc., and the multitude of similar phases which come up in the work of a Board of Health. It is possible that in a short time the local Board of Health will have a chemist installed in a suitable laboratory in the department's headquarters on the third floor of the City Hall.

Inspection of Eating Houses Leads to Improvement

Jacksonville, Fla.—The system of restaurant inspection inaugurated by the Board of Health is meeting with the co-operation of hotel and restaurant proprietors who evince their willingness to make needed improvements and take pride in raising their scores, which are published periodically in the local papers. In all 163 places have been scored during the past month. The total increase in the average score since the inspections were begun last September is 2.1 per cent, a marked improvement.

New Decatur's Sewer System

Decatur, Ala.—McPoland & O'Gara have just finished fourteen miles of sewer for New Decatur. This practically completes New Decatur's new sewerage system, and the total cost will be up in the hundred of thousands of dollars. A few minor contracts for sewerage are yet to be let, but the job is practically finished. This, it is said, gives New Decatur one of the best sewerage systems of any town of its size in the country.

Texas Sanitary Code Passed

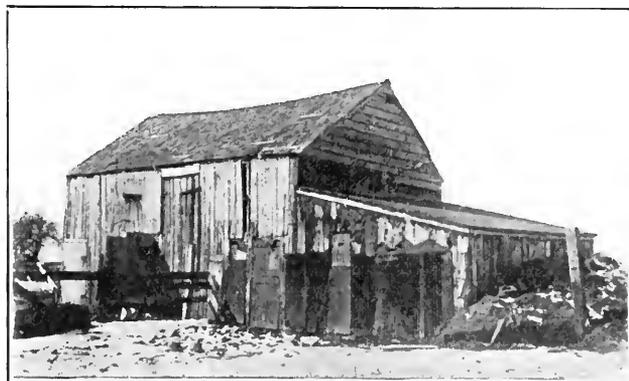

Austin, Tex.—The bill to enact into law the sanitary code bill for Texas has been passed by the Legislature. The measure will no doubt receive the signature of the Governor and become a law. It was prepared by the Attorney-General's Department under the direction of the State Board of Health.

When this new measure has received the Governor's signature affairs will take a different turn. The sanitary code which now becomes law provides for the protection and the promotion of the public health and for the general amelioration of sanitary and hygienic conditions within this State, for the suppression and prevention of infectious and contagious diseases and for the proper enforcement of quarantine, isolation and control of such diseases. It embodies all regulations relative to procuring and tabulating vital statistics.

The State Health Department will at once make earnest efforts to procure practically complete returns showing births and deaths. It is highly probable that Texas will soon attain the enviable distinction of being the only Southern State whose vital and mortuary statistics are accepted by the Federal Bureau at Washington.

Unofficial Dairies Within City Limits

Newark, N. J.—The Newark News has been investigating the subject of dairies within the city limits, and has found that unsanitary dairies exist which are not recorded as dairies on the books of the Board of Health. They are there designated simply as permits to keep cows. Where

Courtesy of Newark News.

UNLICENSED DAIRY, SHOWING UNSANITARY CONDITIONS

a man keeps from 10 to 30 cows it is inferred, however, that then the milk is produced for sale. Rather curiously, the investigator was in nearly all instances shown about the premises by the proprietor, who evidently took pride in his possessions. The unsanitary conditions apparently were purely the result of ignorance.

Food to Be Under Cover

Boston, Mass.—All dealers exposing meat, fish, vegetables and other articles of food will in the future be required to obey the law and keep their stock under cover, according to the information which comes from the Board of Health. This regulation was made more than a year ago, but has not up to the present time been thoroughly enforced. It will do away with the array of meat that may be seen hanging in the open air outside of hundreds of market stalls in the market district and elsewhere. In order for dealers to hang meat outside their stores in the future they will have to place the exhibit in glass cases. The Health Board maintains that the exposing of meat, berries, vegetables, etc., in the open air for hours at a time leaves the stock open to infection by all kinds of germs.

Chlorination System for Seaside Disposal Plant

Ocean City, N. J.—Along the line of improved sanitary conditions for Ocean City is the sewer-disposal plant to be installed by the Ocean City Sewer Company, the plans for which will be filed with the State Board of Health for approval. The plans are being supervised by Prof. Phelps, a consulting sanitary engineer of Boston and New York, whose system of chlorination, said to be the best known, is to be adopted here.

WATER SUPPLY

Eugene Water Filter Put Into Commission

Eugene, Ore.—The new water filter has been placed in operation and the machinery worked very satisfactorily to the city officials. W. H. Howell, superintendent of the plant at Oregon City, was here to start the machinery. It will not be necessary to boil the drinking water here, say the authorities.

City Cannot Regulate Water Company

Bluefield, W. Va.—The city is without authority to enforce rules or ordinances for the regulation affecting the property rights or the conduct of the business of the Bluefield Water Works & Improvement Company, according to a decision handed down by the Supreme Court in a case in which the water company is plaintiff and the city defendant. The opinion was written by Judge Poffenbarger and the action of the Circuit Court of Mercer County in dissolving the temporary injunction awarded against the city officials was reversed, and decrees entered for plaintiff. In short the higher tribunal holds that the city is without authority to regulate the water company because such powers are not delegated to it by the special act of the Legislature granting the city a charter.

Best Monthly Report of Cincinnati Water Works

Cincinnati, O.—Cincinnati's filtered water averaged 99.94 per cent pure for the month of February, according to the report of the filtration plant. This is the best showing the plant has made. The average number of bacteria in the raw river water was 15,500 to the cubic centimeter, which was reduced to the average of 10 in the filtered water. The highest number of bacteria in the raw water found was 34,000 to the cubic centimeter and on the lowest day the number was 3,800 to the cubic centimeter. The highest number of bacteria found in the filtered water was 36 and the lowest number one.

Water Softening Plant Near Completion

Daytona, Fla.—Work on the Daytona concrete water softening plant is progressing satisfactorily, and it is expected to be in operation within the next 30 days.

Gain in Earnings of Water Department

Lestershire, N. Y.—Reviewing and accepting reports of the Village Treasurer and the Water Department was the business at a recent meeting of the Board of Trustees. In point of money expended and balance on hand the Village Treasurer's report was one of the most satisfactory in many years. It showed that there had been a great saving of public funds during the past year, notwithstanding the many improvements that were made during the administration. The report of Superintendent W. D. Smith of the Water Department showed a marked gain in the earnings of this department, which reflects credit on the conservative manner in which affairs of the department have been handled during the past year.

Lockport Water Works Show Profit

Lockport, N. Y.—The annual report of Charles G. Peterson, Superintendent of the water works, has been given out and shows a net profit to the city on the year of \$10,660. The gross receipts were \$54,164. This is a gradual increase from an average total of about \$20,000 up to the time Mr. Peterson took office, seven years ago. The report contains an interesting discussion on the cost of pumping water and delivering it to the consumer, the estimate being \$.03457 per 1,000 gallons at the present rate of pumpage, namely, 5,000,000 gallons per day. The report shows that only 37 leaks occurred in the new pipeline last year. In 1909 there were over 700 leaks. Superintendent Peterson recommends the cleaning of all the old mains in the city and the construction of six-inch mains on important streets where four-inch mains are now in use.

City Refuses to Make Low Rate and Loses Customer

New Castle, Ind.—Because the City Council refused to grant it a lower rate for city water than it gave the other large consumers, the railroad company will sever its connection with the city as a water patron and install a private plant for supplying its engines with water.

Rights of Water Company Superior to Those of Oil Well Drillers

Butler, Pa.—That the rights of a water company to obtain its supply for centers of population by constructing storage dams along streams are paramount to the rights of owners of property on the watershed supplying the streams to drill and operate oil wells if the salt water discharged from the wells pollutes the water was the decision of Judge George S. Criswell, of Venango County, filed here last week, in the case of T. H. Henratty et al. vs. the Butler Water Company. Henratty and other oil producers in the Oakland and Center township oil fields, representing oil property worth \$100,000, sought an injunction against the Butler Water Company, restraining the corporation from building a large reservoir in the Connoquenessing Valley at Oneida, five miles north of here, on the ground that, according to the decisions of the courts, they would be compelled to abandon their properties, entailing a total loss, because salt water, which these hundred-foot wells discharge in large quantities in daily operation, has been declared a source of pollution. The oil men set forth that they could not operate the wells and prevent the salt water from flowing into the streams, and hence their rights to develop their properties and carrying the operations on such properties were interfered with. The oil producers give notice they will carry the case to the higher courts.

Increase of Typhoid Follows Disuse of Chemicals

Niagara Falls, N. Y.—Because of the increase in the number of typhoid cases in all cities along the great lakes, Health Officer Robert Talbot has issued a warning to citizens to boil all water used for drinking, washing vegetables, cooking and even cleaning teeth. "I deem it absolutely necessary to boil the water before using it, as neither the city nor the private water company is using chemicals of any kind to purify it," declared Dr. Talbot. J. H. Macbeth, superintendent of the Western New York Water Company, said no tests had recently been made of the water being supplied by the company. Hypochlorite of lime had not been used for some time, as the city had ordered the use of the chemical discontinued, he said.

Improvement in Ogden's Water Supply System Under Way

Ogden, Utah.—Work on the new city conduit to connect the reservoirs with the waters of Cold Water canyon has been commenced by the J. P. O'Neill Construction Company, a large force of men being in readiness to push the work to completion. The conduit will include about two miles of 24-inch steel pipe and about three-quarters of a mile of 36-inch wooden stave pipe. The rock work will consist of three tunnels, each of which will be about four feet wide and six feet in height, to permit the easy handling of the pipe and to furnish space necessary for the inspection of the conduit. The conduit will cost \$67,463.17, according to the contract signed by the city and the construction company which secured the job.

Municipal Water Plant Pays Well

San Antonio, Tex.—By figures in the annual report of the water company it is shown that the company made a total net profit during 1910 of \$119,763.82, of which \$67,761.60 was put back into the business in the shape of new extensions and materials, leaving a real net profit of \$52,002.22. The report shows that the average charge for water during the year has been 14 cents per 1,000 gallons.

Pure Water a Valuable Asset

Saginaw, Mich.—That a pure water supply for the city would be one of the greatest assets that Saginaw could secure for its health, welfare and upbuilding, is the declaration of Mrs. Caroline Bartlett Crane. Mrs. Crane, whose investigation of the water question has been extensive and covers many cities, is a great believer in pure water. She is also a thorough believer in filtration as a means for purifying the water supplies of cities. Mrs. Crane said she had made an investigation of this city recently and had pointed out perilous conditions caused by poor sanitation, but that they had not been remedied. Epidemics, she added, give cities a black eye and result in great damage aside from the loss of life.

Annual Report of Water Company Gives Satisfaction

Louisville, Ky.—Inasmuch as the annual report of the Louisville Water Company, just issued, for the year 1910, is the first annual report issued from the new home of the water company, especial attention is called by President Charles Grainger to the fact the splendidly arranged and superbly equipped office building enabled the company to serve the public with unusual speed and accuracy, and the many expressions of delight on the part of the public were a source of satisfaction to the company. Also, for the first time in its history, the announcement is made that the company owes no floating debt. On Feb. 6, 1911, the last obligation of that character was paid, and there remained on hand approximately the sum of \$86,000. No floating debt has since accrued. The report shows a reduction in operating expenses of \$280,24, and an increase in the net earnings of \$40,106.36 over the year 1909. The average amount of filtered water furnished the citizens of Louisville each day was 22,130,917 gallons. The operation of the filtration plant is announced as a perfect success and of incalculable benefit to the public.

Reduction in Water Rates

Naugatuck, Conn.—The Naugatuck Water Company has made a voluntary cut in its service rates. A score of years ago, when the company was organized, a rule was made that no service should be installed for a rental less than \$6. For several years the company has charged \$5 in many cases when a property owner had services in double or tenement houses. This was a sort of minimum rate, providing for a service of only one sink or its equivalent, as extra charges were made for bath rooms, bowls and toilets. Secretary E. C. Barnum for some time has been of the opinion that it was an injustice for one family to pay \$6 for a service for which another family paid but \$5, and he recently persuaded the directors to cut the rates to the uniform charge of \$5 for each sink, or its equivalent. The voluntary action of the company will mean a loss of between \$500 and \$600 a year to it, and a corresponding amount of money in the pockets of the property owners.

Separation of Water Works Accounts from Other Departments

Salt Lake City, Utah.—For the purpose of settling the conflict that has heretofore existed between the city water works and treasury departments over accounts, the City Council in special session last week unanimously passed an ordinance recommended by the water works committee, providing a new system in the keeping of accounts for the assessment and collection of water rates of the city. Under the provisions of the new ordinance a deputy assessor of water rates is to be appointed by the Mayor, subject to the approval of the Council, at an annual salary of \$1,500. He will be required to give a bond of \$5,000 in pledge of the faithful performance of his duties. The ordinance also provides for the appointment of an inspector of water and meter assessments, at a yearly salary of \$1,080. An appropriation not to exceed \$1,000 was authorized for the installation of the new system. The new system centers the responsibility in one department.

Schenectady Water Works Plans

Schenectady, N. Y.—In spite of frequent conferences the question of water works improvements is still undecided. Emil Knichling, Consulting Engineer, who made plans for a reservoir that would give increased pressure, recently explained at a public hearing further details of his plans. At another conference Charles A. Hague, Consulting Engineer, appeared for those who opposed the new reservoir. He termed the reservoir plan a luxury, and said that a standpipe of 2,600,000 gallons capacity would meet the needs of the city for the next forty years. Mr. Hague said the electrically operated centrifugal pumping system now installed is an engineering freak. In the meantime the Schenectady Illuminating Company have complained to the Mayor and Council because they have not been paid for installing the plant or even for the current used. They claim that the fault of the system is in the standpipe and certain pressure-reducing valves. The standpipe is not high enough to supply certain sections of the city. To correct this trouble check valves operating at 85 pounds have been placed at the standpipe and the pressure in the mains kept at 95 pounds.

STREET LIGHTING AND POWER

Underground Wire System Is Favored

Hoboken, N. J.—That the city seems in earnest in its desire to have the overhead wires removed seems evident from the text of a resolution passed at the Council meeting last week. This resolution calls upon the Corporation Attorney for an opinion as to what method of procedure will be necessary to compel the placing of all wires in the city underground. The resolution was introduced by Councilmen Belloff, Delaney and Volk, and was passed unanimously.

Municipal Control of Power Is Favored

Los Angeles, Cal.—Los Angeles will distribute its own electric power generated by the Owens River aqueduct. This was emphatically decided at the recent charter amendment election, when a straw vote on the question of whether the city should distribute the power or sell it to private parties or corporations, to be redistributed, was taken, resulted in an overwhelming declaration for the first proposal.

Olyphant Light Plant Again Shows Profit

Olyphant, Pa.—Continued good service for Olyphant from its electric light plant is shown by the annual report of the board of agents for the fiscal year which closed Nov. 30. This report has just been made public, and shows that with the exception of 16 hours and 10 minutes the commercial lines of the plant saw continuous service. Blowouts and short circuits caused the only delays. Arc lamps were out of service but one hour and 45 minutes. This was caused Feb. 5, 1910, by a broken circuit in the Third Ward school. The total free lighting list amounts to \$3,863.76. During the year \$5,275.33 was spent for new equipment, such as meters, lamps, extensions, etc. The net profit for the year was \$7,364.94, which is a slight increase over the profits realized the previous year.

Municipal Light Plant Earns Ten Per Cent

Pasadena, Cal.—Manager C. W. Komer, of the municipal electric light plant, in submitting a report covering period July 1, 1910, to Jan. 1, 1911, says in part: "Further analysis reveals the fact that the net receipts for the period amount to the rate of 10 per cent per annum on the total investment in the plant. The above period will give approximately average results for the entire year and proves beyond any doubt that with the continued and increased patronage of the owners of the plant, the citizens of Pasadena, there is no question or doubt concerning the perpetuation of the low base rate of 5 cents per kilowatt hour. The average number of consumers for the period was 3,273, as against 1,420 for last year. We have installed 4,142 services—that is to say, we would have had 4,142 customers if we had had no cut backs from original services. There are now 487 service connections not in use; however, we have used the meters at other places, allowing the services to remain. With the total number of consumers brought up to 4,000 or 4,200 it will be possible to improve the net results. The continued success of this department is assured with the continued patronage of its owners.

Municipal Electric Plant Completed

Eugene, Ore.—The formal beginning of operations at the Eugene municipal electric plant at Walterville, on the McKenzie River, took place last week, and the members of the City Council and a large number of citizens inspected the plant. The plant has been built at a cost of \$300,000 and has been in course of erection for two years or more. It will supply power for the operation of the pumps at the municipal water plant and will furnish light for the streets. Later the Council plans to do a commercial business.

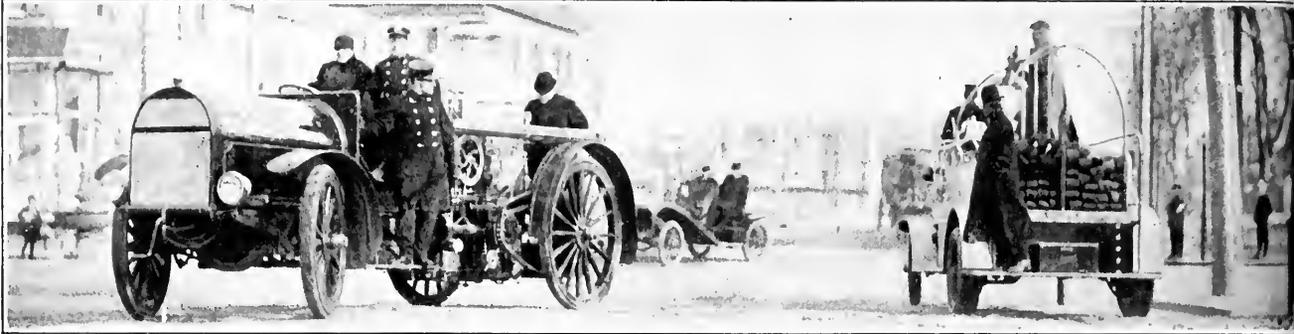

Report of Ilion Lighting Commission

Ilion, N. Y.—The report of the Ilion Municipal Lighting Commission for the year ending Feb. 25 has been issued. It shows that there are 613 meters in service, the number worn out and obsolete during the last five years being 69. The total cost of the meters was \$8,602.40. A credit of \$142 was obtained from the sale of junk meters. There were 102 meters installed during the year, the cost being \$1,081.20. The meter readings for the year were \$15,923.64, and there was paid in cash \$14,738.56, the discount amounting to \$986.42.

FIRE AND POLICE

Auto Steam Fire Engine Tested

New York, N. Y.—An official test of the new auto steam fire engine for speed and capacity took place in New York, March 16, in the presence of Commissioner Waldo, Chief Croker and other city officials and invited guests including the chiefs of fire departments of large cities who came from long distances and many chiefs of smaller cities nearby. Besides the engine there were assembled in front of the Fire Department repair shops, where the tests were

NEW MOTOR STEAM FIRE ENGINE AND MOTOR HOSE WAGON—NEW YORK FIRE DEPARTMENT

held, the Couple Gear auto water-tower and three Webb auto hose wagons designed for high pressure service. The Nott engine developed a capacity of 751 gallons a minute for ten minutes and was driven over twenty miles in one hour over city streets under ordinary service conditions. The accompanying illustration was taken at Jamaica, L. I., where the apparatus was driven during the test.

Police Purchase Automobile with Private Funds

Superior, Wis.—The Police Department has arranged for the purchase of a big touring car and the order for the machine has been sent into the factory at Luverne, Minn., by Lieut. Darwin D. Scoon, who is agent for the Luverne machine for Superior and Duluth. The new auto is a \$2,500 car, but it is understood that the police are purchasing it at a bargain price. The money has been raised in various ways, and does not come out of municipal appropriations. Most of the price was obtained last winter when the department was given a percentage of a stock company show at the Grand.

Police Begin Crusade Against Beggars

Lexington, Ky.—A crusade against beggars on the streets of the city is to be inaugurated by the Police Department, which will see that in the future all vagrants will be given a chance to support themselves by work or otherwise be sent to the county infirmary. This action was announced last week by the police and came as the result of a number of beggars being brought into Police Court recently on charges of vagrancy.

Auto Engine Proves Worth

Paterson, N. J.—Just what an automobile fire engine can do and how valuable one is to the city and its property owners was shown last week when No. 10, the city's new purchase, by making a run of over a mile and a quarter in five minutes, put out the fire in John Hartley's poultry houses and saved a row of dwelling houses from destruction. In addition to making a quick run the machine forced water through 700 feet of hose and delivered it in such a volume that the work of fire fighting was made easy.

New High-Pressure Area in New York

New York, N. Y.—An extension of the high-pressure fire service on the lower East Side is now in operation by an order issued by the Fire Commissioner. The area thus added to the high-pressure field is bounded by Chambers and Houston streets, the Bowery and the East River. It is the most dangerous fire zone in the world because it is filled with tall un-fireproofed tenements in which live many hundred thousands. High-pressure hose carts will be put in the district, and it is planned to supplement all horse apparatus there with automobile vehicles.

To Have Juvenile Police

Cincinnati, O.—At the instance of Councilman Mullen the Board will experiment with juvenile police at Lytle Park. Mr. Mullen said that boys damaged trees and shrubs in the park, and he thought boy police could do more to prevent this destruction than anyone else. He offered to pay the salary of a boy for the first year as an experiment. The Board decided to give the idea a trial, and instructed Secretary Longenecker to appoint a boy named Norris, whom Mr. Mullen recommended. The experiment will be watched with great interest and it is probable that the plan will be adopted in other cities.

Signal System Wanted

Salt Lake City, Utah.—Chief of Police S. M. Barlow has recommended to the City Council that a signal system be installed at police headquarters. There are fully a score of systems in use in various parts of the United States and thus far only two systems have been put into operation at a police headquarters. These include the signaphone, which includes a light and semaphore for the calling of a policeman, which is regarded as the most up-to-date, and the old system of the Dean Electric Company. The systems of the rival companies are now under demonstration at police headquarters and members of the City Council have made various inspections. Though the signaphone system seems favorable because of its up-to-date methods it is probable that the police and prison committee will desire to take a trip to Denver and inspect its system before making any recommendations. Chief of Police Barlow is in favor of installing the most up-to-date system or none at all.

Searchlights Added to Fire Equipment

Grand Rapids, Mich.—With the addition of powerful acetylene searchlights on the heavy fire trucks the Grand Rapids Fire Department is now equipped on a footing of equality with Chicago and the great centers of population throughout the country. Darkness will not baffle the firemen, who, with the aid of the powerful 10-inch reflectors will be able to flash lights down alleys, in dark corners and on danger points where firemen may be obliged to go, or to aid in locating any point within their radius. The big lamps are the workmanship of Master Mechanic Frank F. Hill, with the exception of the reflector portion. The acetylene manufacturing tank and all piping running to the lights are the work of Mr. Hill, and represent a great saving to the city. With the new equipment of lights, fire department officials expect to increase the efficiency of the department. In the past lights used on the trucks have been so dim that drivers have been unable to make speed, for fear of running down pedestrians or rigs in the darkness.

Automobile Fire Apparatus for Macon

Macon, Ga.—Work on the new fire house on the triangular lot in the rear of Wesleyan College has been resumed, and the construction of the edifice, which will quarter an all-auto apparatus company, is being rapidly pushed by the contractors. The automobile fire-fighting apparatus purchased from the Webb and the LaFrance companies at an expenditure of \$18,500 will arrive in the city in a few weeks. It may be necessary to store the engines and trucks somewhere, as the fire house will hardly be ready for occupancy at that time.

GOVERNMENT AND FINANCE

Plan Savings to Meet New Tax Law

Indianapolis, Ind.—On account of the depleted condition of the city treasury and a wish to save money in anticipation of a reduced tax levy next year under the new law providing a maximum tax levy for general purposes shall not exceed 5 cents on each \$100, the Board of Public Works is considering the question of meeting the cost of paving street and alley intersections this year by a special assessment on real estate. Beginning next year the cost of street sprinkling will likely be met by assessment on abutting property. The law provides this may be done. At present both the cost of street sprinkling and the cost of paving street intersections are met from the general fund.

City Refuses to Release Surety Company

Racine, Wis.—The concrete pier contractors will have to go ahead and complete their work of building the lake shore protection off of Seventh street. This was the decision of the committee on harbor and bridges who met last week to take up the proposition of releasing the surety company back of the contractors. Attorney Walter C. Palmer said the surety company was willing to pay the city \$2,000 to be released from further liability. The city has paid to the contractors an estimate of \$1,200. By the city accepting the proposition of the surety company it would be making \$800, but the officials do not like to do business that way. Merrill, Casson & McMynn, who took over the contract from the Interlocking Concrete Construction Company, furnished the city with a bond of \$26,500 as a guarantee of good work. The new firm started out to put in the work, but met with all kinds of reverses. High seas time and time again tore out all the work the company had put in. Finally the contractors gave up entirely and were forced into bankruptcy. The city was well protected, having a bond standing behind the contractors. The officials do not propose to settle for \$2,000, but prefer to have the bonding company go ahead with the work and put it in according to contract.

Commission Form of Government for Spokane by Court Decision

Spokane, Wash.—Spokane's long fight for the commission form of government is ended. The judges of the Washington State Supreme Court upheld the validity of the Spokane charter, adopted Dec. 27 by popular vote. The decision, rendered by Chief Justice Dunbar, is concurred in by every one of the other seven judges of the court, one seat now being vacant. It effectually knocks out every point raised by former Senator George Turner, late special counsel of the United States Government in the Canadian fisheries dispute, who was employed by opponents of the new form of government to defeat it in the courts.

The decision knocks out the last prop of the foes of the commission form of government in the State of Washington. It establishes the validity of the Tacoma charter as well as that of Spokane, and makes the commission form of government possible in every city in the State. There can be no appeal from the decision, the highest judicial body to which the matter can be submitted having passed final word.

Legislature Grants New Charter to San Antonio

Austin, Tex.—The bill granting a new charter to San Antonio last week enjoyed final passage in the House. The bill came up during the consideration of a host of local bills and was disposed of in one-half a minute's time.

Election Is Ordered on Bond Issues for Civic Improvements

Berkeley, Cal.—Public interest and the demands of the city for civic improvements were acted on by the City Council at its meeting last week, by the passage of eight resolutions, calling for bond election as to the acquisition and construction of city improvements, aggregating in the total an expenditure of \$940,000. A park in the west end to cost \$30,000 was added to the proposed list, and the matter of a bond election, calling for municipal kindergartens, was left to straw vote of the people in the coming city elections in April. The Council passed resolutions calling for an election early in May to learn the wishes of citizens on the proposed improvements.

To Recall Huron Mayor

Huron, S. D.—Petitions have been filed for the recall of Mayor Koepp and three commissioners of this city. They contain 15 per cent of the voters required by law, but the names of the heavier taxpayers and more prominent business men do not appear on the petitions. The complaint is that taxes have been largely increased, unnecessarily; the commissioners claiming in a published statement that the increase was necessary for the creation of a sinking fund to meet maturing obligations for which no provision had heretofore been made.

Dry City Has No Money for Lights

Everett, Wash.—This city cut its running expenses \$50,677 and as a result must go without street lights and other modern accessories of a prosperous municipality for a year. The reason is the loss of revenue from saloon licenses. The city went "dry" last fall.

Municipal Shows Continue to Interest the Public

Hoboken, N. J.—The Hoboken Budget Exhibit will be held during the last two weeks in April, and it has been definitely decided that the show will be on the third floor of the new Steneck Building on River street.

STREET CLEANING AND REFUSE DISPOSAL

Object to Reduction Plant

Cincinnati, O.—Mayor Schwab has received a letter from the Lower River Road Improvement Association asking him to do all that he legitimately could to prevent the rebuilding and operation of the reduction works at Anderson's Ferry, the property of the Cincinnati Reduction Company, which recently was destroyed by fire. The letter declares the operation of the plant is unfavorable to the development of the lower river villages as resident sections. The letter also says that with Delhi annexed and Saylor Park coming in it is only a question of time when Fernbank, Addyston, North Bend and Cleves will be added to the city. Mayor Schwab referred the letter to the City Solicitor for advice as to the legal status of the matter.

Spring Cleaning Decided on at Everett

Everett, Wash.—The Chamber of Commerce has taken up with the Health Department the question of a spring cleaning campaign in this city. The plague in China and the reported discovery of a case of bubonic plague in Spokane is regarded as sufficient reason for the people to get their premises, as well as the streets and alleys, in the best possible condition before summer opens.

Salt Water for Sprinkling Streets

Salem, Mass.—Salt water will probably be used for sprinkling streets in Salem and Beverly next summer. The water of Wenham Lake is so low that there will probably be none to spare for street sprinkling in the summer time. Mr. Kelley, Superintendent of Streets of Salem, is planning to set up pumps on the shores of the harbor for filling the street sprinkling car. In Beverly similar plans are being made. It is also probable that some of the streets of Salem and Beverly will be oiled next summer. Wenham Lake is about 10 feet lower than it was a year ago. There are scant prospects that the spring rains will fill it to its normal spring level. The water board is still urging people to be as economical as possible in the use of water.

Clean-up Week for Wilkes-Barre

Wilkes-Barre, Pa.—Plans for another clean-up week have been launched at a joint meeting of the Civic Club, Board of Trade and City Council members. This was in the form of a conference at the home of Mrs. C. P. Hunt, on North River street, and was well attended. It was decided that another clean-up week campaign be conducted. Encouraged by the success that attended efforts in that direction last year the movement this year is to be conducted on a much larger scale.

The work will be systematized, the city divided into districts and a definite time set aside for the clean-up of each district. The children will be interested in various ways, and prizes will be distributed to those doing the best work.

RAPID TRANSIT

Proposed Bill Gives Cities Power to Run Street Cars and Light Plants

Harrisburg, Pa.—Two bills were introduced in the Senate last week that give all municipalities the right to purchase or condemn or construct and operate water plants and street railways, electric light plants, gas works and all other public utilities. While the measures are drawn in the interest of Mayor Magee, who wants Pittsburg to gain control of a street railway and a suburban water plant, they give all municipalities a similar right. The bill providing for the acquiring or construction of a water plant contains no other sections, but as in the other bill, which refers to the other public utilities, the municipality is given the right to lease to a corporation or individuals such public utilities and upon such terms as may be agreed upon.

Prospect of Municipal Street Railroads in Dallas

Dallas, Tex.—The bill amending the Dallas charter which has passed the Senate contains the following provisions looking towards the municipal ownership of street railways.

The Board of Commissioners may do the following named things upon its own motion or upon petition or upon an advisory vote of the people:

1. To require any person, firm or corporation holding a franchise from the city to operate its cars over street railway lines which the city may build or acquire, the Board to fix the rental's, after hearing a statement from the franchise holders. It is made the duty of the Board upon petition of 250 voters to submit a proposition to issue certain bonds to construct a street railway extension but the Board is authorized to make such extension out of revenues.

2. To build, purchase, own and operate street railway lines, full power being given to do the various necessary things in this regard.

Improved Type of Fenders on Cars

South Bend, Ind.—The Chicago, South Bend & Northern Indiana Railway Company is equipping cars on the city lines with fenders in compliance with an ordinance of the Common Council. The ordinance provides that fenders adequate to the needs of traffic in South Bend be fitted to all cars before April 1. A number of cars have been provided with fenders and officials of the company say all cars will be equipped before April 1. The fenders are of a type identical with those used on the surface cars in Chicago. The new safety contrivance includes a standard wheel guard and fender, the operation of which the company believes will make it practically impossible for a body to be mangled under the car wheels. Under the platform of the car and hanging almost flush with the extreme front end is a standard, which when struck automatically and instantly releases a fender placed slightly in the rear. The fender is of a basket type, and when released touches the rails and acts as a scoop, preventing a body from rolling under the car. In addition wheel guards are being placed on all trucks, the protection of which is such, officials of the company declare, it will be scarcely possible for a man's hand to be cut off. The cars are being equipped at the car shops of the railway company as fast as possible. The fenders and other equipment are being manufactured in the local shops. The standard, consisting of an iron framework with wooden strips crossing it, releases the fender.

Boston Elevated Road Planning to Carry Freight

Boston, Mass.—The executive committee of the Boston City Council, Councilor John J. Attridge, presiding, gave a public hearing in the aldermanic chamber last week on the petition of the Boston elevated for the right to become a common carrier of freight on their surface lines.

Trolley Freight in England

Bradford, England.—The Bradford City Tramways have developed a large parcel business and are now collecting and delivering about 14,000 parcels weekly. The capital expenditure at present standing against the business is £2,500, and the annual profits are about £1,700. The parcel service is in charge of a parcel superintendent.

MISCELLANEOUS

Serious Fire Destroys Plant of Light, Heat & Traction Co.

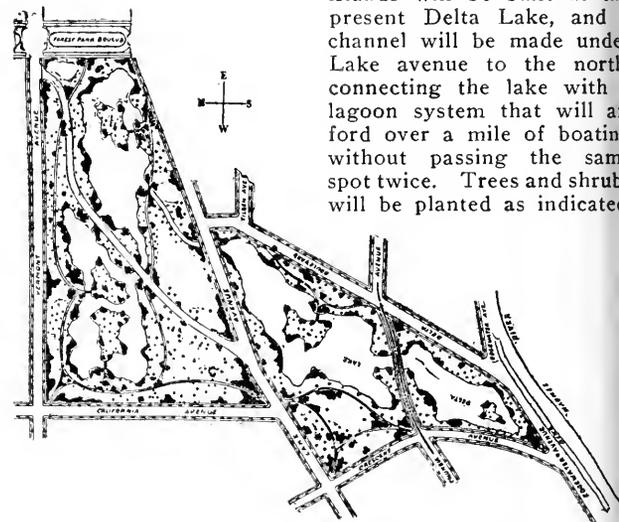

Racine, Wis.—Fire which completely destroyed the power house of the Milwaukee Light, Heat and Traction Company here last week, entailing a loss of over \$140,000, plunged the entire city into total darkness, brought street car and interurban traffic to a complete standstill and will result in the closing down of a number of factories in the city which depend on electricity for motive power. It may be weeks before the street car system will be running.

First Playground in Downtown District

Cincinnati, O.—The first playground to be established in the downtown district from the funds of the recent \$1,000,000 bond issue was arranged for last week by the Park Commission. The playground will be located at McMicken avenue and Walnut street and Link alley, and will comprise about 2,000 square yards. The property is a low-lying piece of land adjoining the small lake in Burnet woods.

Lakeside Park for Fort Wayne

Fort Wayne, Ind.—Superintendent Doswell, of Lindenwood Cemetery, has completed plans for the proposed Lakeside Park, which includes Delta Lake and a recently acquired tract of land north of it. As shown by the outline

islands will be built in the present Delta Lake, and a channel will be made under Lake Avenue to the north connecting the lake with a lagoon system that will afford over a mile of boating without passing the same spot twice. Trees and shrubs will be planted as indicated

A macadamized driveway through the park, with concrete arches over the lagoons, will be another feature of the new park. Graveled walks will thread the little resort with concrete arches connecting them with islands formed by the lagoons.

Artificial Bubbling Spring Constructed in Park

Los Angeles, Cal.—Work has been begun under the direction of the Park Commission on a unique scheme, which will form one of the attractions at Sycamore grove on Pasadena Avenue. It is an artificial boiling spring and will be located in the northwest corner of the park. A pumping plant is being installed to pump the water to the northwest corner of the park, where sand, kept in place by a circular stone wall, will be placed and the water forced through to imitate the natural bubbling or boiling springs found in different parts of the country. The water then will be allowed to escape in a stream, which will be left as nearly like a natural waterway as possible and diverted across the park to the lily pond. Watercress and other natural aquatic plants will be grown along the banks of the stream.

Wish to Preserve Old Bridge

Trenton, N. J.—Moses Taylor Pyne, of Princeton, another prominent man, are making a fight against the proposed improvement of the bridge over Stony Brook. The bridge was built before the Revolutionary War, and was used by the American army on the way to Princeton. It is as solid as it was 150 years ago, and Mr. Pyne declares it should be left in its original shape as a Colonial landmark.

First Municipal Dredge Starts Operations

Philadelphia, Pa.—The new municipal dredging plant, which was authorized by Councils nearly a year ago, has been completed and has been placed in operation. The powerful outfit of machinery is the only city-controlled plant of the kind in the country, and consists of one hydraulic dredge, representing a cost of \$99,989; a combination scoop and clam-shell dredge, costing \$64,160; tugboats 65 and 80 feet long, built respectively for \$11,425 and \$20,855; two 500-yard scows, three 250-yard scows and a deck scow, aggregating \$37,250. Fifteen pontoons, costing in all \$2,393, complete the equipment, making the total cost \$236,072. The new plant is entirely the idea of Mayor Reyburn, and is probably the most important asset of the Dock Department. Since the institution of the latter the city's dredging bills have gone on apace and the administration now hopes to take care of all the needs of the port, and to present navigation and docking facilities in keeping with the position the city has taken in the shipping world, particularly in the last year.

Plan Campaign to Acquire Property for Civic Center

Toledo, O.—A bond issue of a million dollars for the acquisition of a civic center site extending from Jackson to Cherry streets, and from Erie street to Spielbusch avenue, and for the improvement of the boulevard, is the object toward which a committee of 50, provided for at the meeting of the Business Men's Club, last week, is to direct its attention. The committee is to consist of 10 members from the club, 10 to be appointed by the City Board of Control, 10 from the Central Labor Union, 10 from the Chamber of Commerce, and 10 to be selected by these members. Chairman O. S. Brumback was authorized to appoint from the city at large such members as any of these bodies fail to name within two weeks. Advisability of a civic day for a referendum vote on the bond issue is to be investigated by this committee.

Locomotives Make Half of City's Smoke

Cincinnati, O.—Forty per cent of the total smoke and over one-half the dirt traceable to smoke in Cincinnati is made by the locomotives on the railroads entering the city, declares Smoke Inspector Nelson in a report issued last week. But 15 per cent of the coal shipped into Cincinnati is consumed by the locomotives, so that the percentage of smoke from locomotives is far greater than that from stationary plants burning soft coal. On the basis of 300 working days in the year the locomotives use 1,300 tons of coal daily, the report says, or about 400,000 tons in a year. Approximately 10 per cent of all the soft coal fired in the locomotive firebox is discharged from the stack in the form of cinders, so that within the city limits probably over 100 tons of cinders are dropped from the locomotive stacks every day. Inspector Nelson says that the study made indicates clearly that electrification offers the only final and satisfactory solution of the locomotive smoke problem in the city.

Will Beautify Attleboro

Attleboro, Mass.—The people of Attleboro are rejoicing because of an offer made to the town the past week by Thomas E. McCaffrey, a prominent business man. The gift is 1,000 trees which will be set out on or about Arbor Day by the school children. Mr. McCaffrey made the offer through the school committee and that board accepted with a vote of thanks. In announcing his gift Mr. McCaffrey says he believes it will be an effective way of interesting the coming generation in the care and growth of trees in Attleboro.

Extensive Park Planned for Covington

Covington, Ky.—The Covington Park Board has engaged the services of a local civil engineer and as soon as a plat can be made of the recently acquired immense area of land presented to the city by the Devou brothers the work of transforming the valleys and dales into a beautiful park will be prosecuted vigorously. The members of the Board, which consists of such representative men as Father Brosert, Frank Woodall, Ulie Howard and E. L. Pieck, are enthusiastic over the prospects for a magnificent park, and these citizens are devoting much of their time in devising ways and means of securing the best results with the somewhat limited funds at their disposal.

Dog Pound May Be Established by City

Cincinnati, O.—The establishment of a municipal dog pound is being planned by Mayor Schwab and Safety Director Scott Small. Following a conference with an official of the Ohio Humane Society it was decided to inquire of other cities where the plan already has been put in operation as to its success. The contract for catching the stray dogs of the city is about to be let and the municipal pound will not be put into operation for another year.

Extensive Plans for Beautifying Salt Lake City

Salt Lake City, Utah.—With the passage of house bill No. 231, providing a strongly financed and properly empowered park commission for Salt Lake, which went through without objection in the Lower House, the Utah Legislature will place in the hands of Salt Lake a tool by which a garb of unblemished civic beauty can be created and maintained. So holds the Salt Lake Commercial Club, through whose influence the measure, once killed, was revived and favorably considered, and which, now that it has become a certainty, is planning to back an undertaking to park and boulevard every principal street of the city before the Panama Exposition opens in 1915 at San Francisco. The bill makes this possible. It gives Salt Lake a board of five park commissioners, invested with unhindered power to improve where and when they see fit. They may create parking districts in any part of the city and a two-thirds vote of the property owners will be necessary to gainsay them. By means of a tax of not less than half a mill, or more than two mills, separate from the general city taxes, they will have an annual fund of approximately \$100,000 with which to work; this to be used outside of the special tax property owners will be required to pay to defray the cost of parking in front of their homes or holdings. With such a fund boulevards can be created in every part of the city, public parks can be made veritable paradises of landscape gardening, and the whole general appearance of the city can be changed to delight the eye.

Concrete Bridge Will Be Erected in Preference to Steel

Fort Scott, Kan.—The concrete bridge bill which was passed by the House several days ago has been passed by the Senate. This bill requires that all public officials having charge of letting contracts for culverts and bridges in counties, townships and cities shall prescribe concrete or corrugated iron in preference to steel in all cases where the cost of construction of such concrete or corrugated iron bridge or culvert is not more than 130 per cent of the cost of building such bridge or culvert of steel. The bill prescribes the maximum strength for such concrete bridges and culverts. Brady, of Douglas, secured the passage of another bridge bill. His bill makes counties and townships liable for defects in bridges and highways and enables injured parties to recover damages for neglect to keep roads and bridges in proper repair.

Contractor Claims Lack of Information About Soil Conditions

Detroit, Mich.—Contractor James Hanley, who wants to be relieved of his contract to build that part of the Fairview sewer between Jefferson avenue and the river, set up a contention at a meeting of the Council Committee on Sewers last week that he is not only entitled to be relieved, but that he is entitled to damages from the city, on the ground that he was not properly informed as to the nature of the soil. He said he had lost \$11,000 in building about 1,000 of the 1,700 feet, and that City Engineer McCormick, knowing the soil conditions from having made borings, is responsible for his entering into a losing contract. The committee will hear the case in detail, with attorneys present for both sides, and the testimony will be taken by stenographers.

Puts Ban on Fireworks

South Bend, Ind.—Wholesale dealers handling fireworks will be notified by the police that ordinance No. 1249 regulating the sale of explosives will be enforced in South Bend. The Board of Public Safety authorized the police to see that the ordinance is enforced. Wholesale dealers will be warned at once not to purchase dangerous explosives, and the retail dealers will be given police attention later.

LEGAL NEWS

A Summary and Notes of Recent Decisions—Rulings of Interest to Municipalities

Defects in Streets—Liability of Abutting Owner

City of Omaha v. Philadelphia Mortgage & Trust Co.—If the owner of city lots constructs a building thereon adjacent to a street of the city, and in such construction excavates a large space under the street to be used as a room in connection with said building, and so maintains the same for several years, it will be presumed that such excavation was made with the consent of the authorities of the city, and upon the implied condition that such excavation shall be maintained in proper and safe condition for travel along the street and the walks thereon; and the owner of the property will be liable for damages caused by his neglect to so maintain said excavation.—Supreme Court of Nebraska, 129 N. W. R., 996.

Defective Streets—Contributory Negligence

Reynolds v. City of Centerville.—In an action against a city for damages for injuries caused by a defective road in answer to an inquiry as to whether or not "you consider it dangerous if you were not careful" in crossing with his team the street at the place he did, plaintiff testified "that it was dangerous if a man did not use his best judgment over such a place." Held to show that he appreciated the danger.—Supreme Court of Iowa, 129 N. W. R., 949.

Regulation of Public Places

Sioux City v. Simons Hardware Co.—A city granted to an individual the right to use a part of a street in the construction and support of a proposed building, on condition that he should erect and maintain a conduit of a specified capacity for the waters of a stream. The conduit constructed was of insufficient capacity, and by reason of I-beams therein the flow of the water was obstructed. The conduit, at an expense of from \$4,000 to \$5,000, could be changed so as to take care of the waters of the stream and protect the public against floods. Held, that equity, at the suit of the city, would not order the destruction of the building and the conduit, but would require changes in the conduit, so as to protect the public from floods.—Supreme Court of Iowa, 129 N. W. R., 978.

Streets—Prescription—Payment of Taxes

Lockey v. City of Bozeman.—That a city received taxes levied on land did not estop it to claim the land as part of a street by prescriptive right where the city had nothing to do with assessing the land. A county assessor's act in listing land for taxation cannot operate as an admission against a city claiming the land as part of a street by prescriptive right.—Supreme Court of Montana, 113 P. R., 286.

Excavation in Street—Injury—Negligence

City of Minot et al. v. Walton.—In an action against a city to recover for an injury to plaintiff from falling into an excavation in a street at night, where the controlling issues were whether the excavation was properly guarded and that of contributory negligence, and there was substantial evidence on both in support of the verdict, the case was one for the jury.—S. S. Circuit Court of Appeals, 183 F. R., 768.

Telephone Franchise—Illegal Grant

Tri-State Telephone & Telegraph Co. v. City of Thief River Falls et al.—Where a city without authority granted a telephone franchise for the maintenance and operation of a telephone system along its streets, without advertising for proposals, or competition, as required by its charter, and the grantee of the franchise immediately carried the same into operation by expending money in equipping a plant, the city was not by that fact estopped from later questioning the validity of the franchise.—U. S. Circuit Court, 183 F. R., 854.

Street Railway Track—Nuisance

Zimmerman v. Metropolitan St. Ry. Co.—A city cannot authorize a street railroad to so use a street with its tracks and cars as to materially obstruct the right of ingress and

egress of an abutting owner, thus constituting a private nuisance.—Kansas City Court of Appeals, Missouri, 134 S. W. R., 40.

Right of Appeal from Assessments—Statutes

City of Portland v. Nottingham & Co. et al.—Portland city charter, approved January 23, 1903, provided for appeals to the Circuit Court from city assessments, and that the verdict of the jury there should be final. At that time there was no appeal from orders granting new trials, but Laws 1907 gave the right. Constitution adopted in 1906 provides that corporations may be formed only under general laws, that the Legislature may not amend or repeal any charter, and that the voters of every municipality shall have the power to enact or repeal their charters. Constitution gives the initiative and referendum to the voters of every municipality as to all local, special and municipal legislation. Held, that as the Legislature under the above constitutional provisions could neither amend nor repeal municipal charters, Laws 1907 giving an appeal from an order granting a new trial did not affect the Portland city charter, so that no appeal would lie from an order setting aside the verdict of the jury on an appeal from an assessment under section 401.—Supreme Court of Oregon, 113 P. R., 28.

Regulation of Streets—Irrigation Ditches

Baker City Mut. Irr. Co. v. Baker City et al.—Baker City Charter, as amended, defining the powers of the municipal authorities over streets of the city, does not, either expressly or by necessary implication, authorize the municipal authorities to permit the construction of drainage ditches in any of the streets, and an ordinance granting such a concession is a nullity, and no right is secured thereby.—Supreme Court of Oregon, 113 P. R., 10.

Sidewalks—Injuries—Evidence

City of Louisville v. Uebelhor.—In an action against a city for injuries from stepping into a hole in a sidewalk in August, 1907, evidence as to the measurement of the hole at the time of trial, in October, 1900, and that the hole had not been repaired up to that time, was admissible in evidence in connection with an offer to show that the hole was in the same condition as when the accident occurred.—Court of Appeals of Kentucky, 134 S. W. R., 152.

Park Department—Governmental Functions

Brightwell v. Kansas City.—Revised Statutes, 1899, provides that whenever any city desires to establish a park, etc., the common council, etc., is authorized to purchase or condemn land in such city for that purpose. A section gives the board of park commissioners power to establish, etc., within such park district all boulevards as they may deem proper, and for such purposes gives them jurisdiction over such of the streets as they deem necessary to give convenient access to the parks. The Kansas City Charter and Ordinances 1898 requires the board of park commissioners to adopt a system of public parks, and to designate lands to be appropriated for that purpose, and to select routes for boulevards, and further provides that special assessments for parks and boulevards shall be subject to the same rebate on payment, the same penalties for nonpayment, and shall be enforced in the same manner as general taxes levied by the city. Held, that while a municipal act will be classed as ministerial if it is substantially of a local or corporate nature, though it relates in a general way to a function of government, in levying an assessment for park purposes, the city acted in a governmental capacity, so that it was not liable in damages for the failure of its treasurer to issue a certificate to a purchaser at a sale of property under an assessment levied to maintain parks and boulevards.—Kansas City Court of Appeals, Missouri, 134 S. W. R.

Dangerous Conditions in Parks—Liability

Pennell v. Mayor and Council of Wilmington.—The plaintiff brought an action against the defendant to recover damages for injuries resulting from defective or dangerous conditions in one of the public parks of the City of Wilmington. To the plaintiff's declaration the defendant demurred on the ground that the city is not liable in damages for injuries resulting from defective or dangerous conditions in its public parks. Demurrer overruled.—Superior Court of Delaware, 78 A. R., 915.

MUNICIPAL APPLIANCES

Locator for Underground Pipes

THE Modern Iron Works, Quincy, Ill., manufacture a device used for the purpose of locating underground iron pipes in streets. It is no uncommon experience in water works management for a gang of men to spend a day in

to be adhered to, however, the Clough mixer would have to be classed as a batch mixer because it receives its whole charge at once from a side of the mixer and the concrete is disloader. The loader is attached to a shaft, by which it is raised on one side

power and the whole apparatus is mounted on a truck with large wheels, the front 20 and the rear 44 inches high. The large-size mixer, capacity 80 to 150 cubic yards per day, weighs 4,500 pounds, is operated by a six-horsepower engine, is 10 feet long and four feet six inches wide. One-quarter of a cubic yard is mixed at a batch.

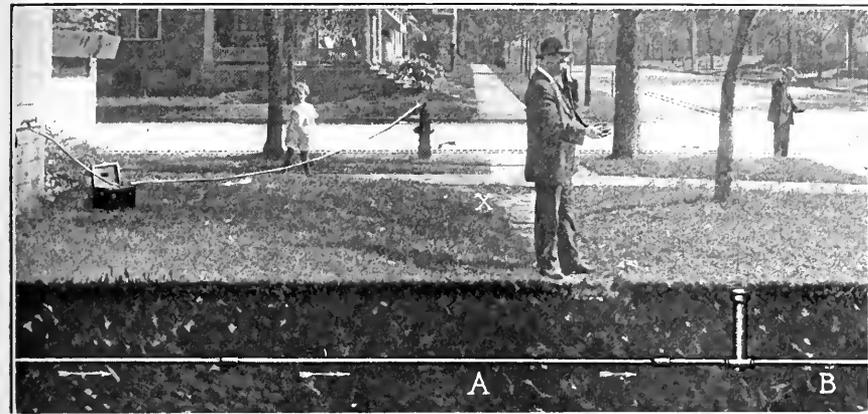

Drinking Fountains

The J. L. Mott Iron Works, Fifth avenue and Seventeenth street, New York City, manufacture drinking fountains in great variety, many of them of considerable artistic merit, considering the limitations of the material. Some of the designs are surmounted with single lamps, clusters or ornamental figures. The fountains are made to provide drinking water for men, horses and dogs. Every conceivable location in streets or parks seems to be provided for.

Combination Waste Receptacle for Garbage, Ashes and Combustible Rubbish

THE Universal Sanitary Appliance Company, 115 Dearborn street, Chicago, Ill., manufacture a combination waste receptacle, shown in the illustration attached to a fence, ready for use. The outfit consists of three compartments, made of cement and steel. The two lower compartments are for garbage and ashes. The upper one is for combustible rubbish and it can be burned in the receptacle. A grate at the bottom allows the charred material to drop down into the ash receptacle. Each compartment has a drain in the bottom so that it can be flushed out with water. As shown in the alley view, the construction is such that the iron doors are protected by setting back into the concrete, leaving no projections in the alley that might be damaged by wagons. All of the sections are universal and can be used separately.

The same company manufactures a portable concrete receptacle for burning rubbish. It is intended for domestic use, as well as for schools, clubs, hotels, golf courses, baseball parks, etc. The device is simply a concrete cylinder three feet high and two feet in diameter, provided with a grate about six inches from the ground, with an opening for withdrawing ashes from below.

LOCATING UNDERGROUND PIPE BY WIRELESS APPARATUS

tearing up pavements and digging for iron pipes which it is necessary to locate exactly. The labor spent in locating one pipe may easily amount to the price of the D. B. M. Pipe Locator, as it is called. The apparatus consists of a battery and a sender or vibrator for producing an electric current through the pipe which is to be located, and a special head telephone receiver and detector coil, constructed to pick up the electric wave produced by the instrument so that it can be distinctly heard in the receiver. In the case shown in the illustration the battery is connected by wires to a convenient hydrant and to a hose connection on the side of a house. The detector coil held in the right hand of the operator in the foreground, is also in the circuit by wires. The electric waves are transmitted without wires from the pipe to receiver.

When the operator is directly over the pipe no sound is heard, the windings of the detector coil having neutralized it. When this point is found, by passing the coil back and forth a few inches, the exact location of the pipe can be easily determined. The proper position for holding the coil to get the above results is flat, with the brass binding post on top. If turned up edgewise when over the pipe the sound is loudest.

The apparatus is mounted in a nicely finished case, equipped with a lock and handle for carrying; the entire equipment is first class in every respect.

Clough Concrete Mixer

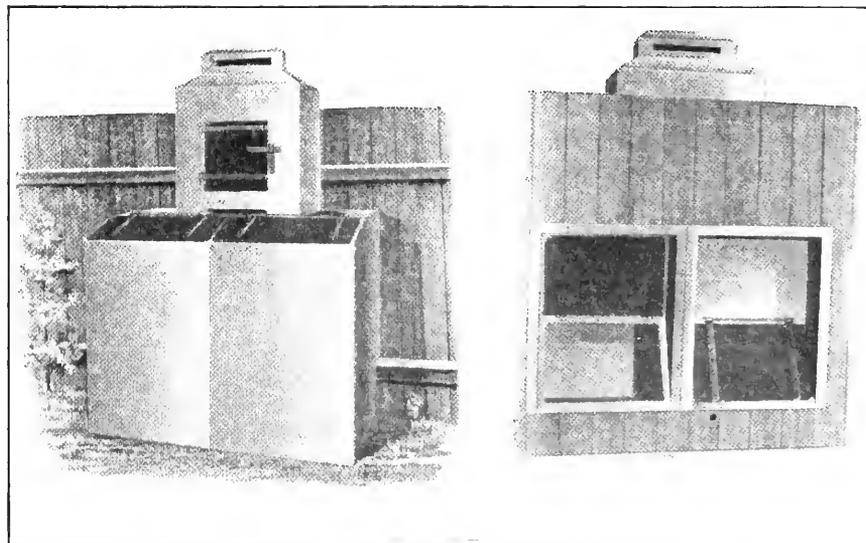

A concrete mixer having some unusual features is made by John G. Clough, Quincy, Ill., who calls it a continuous batch mixer. In general design the machine has the appearance of a continuous mixer and is claimed to have the advantage of portability and adaptability to work in difficult situations which such mixers have. With the improvements in feeding batch mixers and the hoods now generally placed over the end of the trough of a continuous mixer, the distinction between the two types is less distinct than it used to be. If the distinction is

of the mixer and the concrete is discharged from the trough or drum, it is hard to say which to call it, from the other. The mixing is done by revol-

PECULIAR TYPE OF CONCRETE MIXER

ving spring plows, which clean the trough at each discharge. The water is measured automatically for each batch. A gasoline engine supplies the

COMBINATION RECEPTACLE FOR ALL CLASSES OF WASTE

Tiffin Flushing Machine

The Tiffin flushing machines which have recently been placed on the market are claimed to have some merits not possessed by the original types of flushers. They have a water capacity of 600 gallons and an air capacity of one-third that amount. It is claimed that with an initial pressure of 60 pounds, a pressure of 25 pounds can be held until the tank is empty. The tanks, however, will stand a pressure of 125 pounds. It is stated that with one Tiffin flusher 40,000 square yards of pavement can be cleaned properly in ten hours. The use of two machines in co-operation increases this and 90,000 square yards can be cleaned by two. The discharge devices are claimed to be superior to those on any other flusher. A combination nozzle is made, by which the machine, when desired, may be operated as a street sprinkler.

The substantial character of the construction is shown by the following extracts from the specifications:

Tank—To be of the best grade of annealed steel, No. 10 gauge, uniform in thickness and free from flaws or defects. The internal diameter to be 46 inches, the internal length to be 114 inches. The heads to be of the best open-hearth flange steel $\frac{3}{8}$ of an inch thick and flanged to a true radius so as to make a perfect fit in the shell. All heads and plates shall be bevel sheared, as the tank must be caulked inside and out and all rivets must be $\frac{3}{8}$ of an inch in diameter, of proper length and driven hot. Tank to stand a test of 100 pounds to the square inch. Capacity of entire tank, 800 gallons, divided into two chambers, the small or air chamber to have 200-gallon capacity and to be a cylinder tank extending from end to end. The large water chamber to have capacity of 600 gallons. Tank to have manhole 10 x 15 inches with handhole plate in water chamber. Air and water chambers to be connected by the necessary arrangement of valves and fittings to enable the tank to be automatically charged with the initial air pressure direct from the fire hydrant. Tank must have 6-inch pipe flange on bottom, bulk heads and double row of rivets.

Nozzles—To be brass of the Zig Zag Jackson pattern or a nozzle equally as good, positioned to deliver a zig zag sheet of water under pressure at or near the center of the machine, angles

of delivery to be so adjusted as to clean the streets most effectively of all refuse. Outlet or supply pipes to be equipped with $2\frac{1}{2}$ -inch brass lever throttle valves or valves equally as good. Said valves connected by two levers leading to the driver's seat, one on each side. Levers to be so adjusted that the valve will remain wholly or partially open without the assistance of springs or ratchets. In the bottom of the rear end of the tank is to be located a $2\frac{1}{2}$ -inch automatic brass check valve with necessary connections for attaching the 10-foot length of $2\frac{1}{2}$ -inch 3-ply rubber hose. Tank to have one pressure gauge located on top of rear end of tank for information to operator when filling.

Framework—Side sills to be $2\frac{3}{4}$ x $3\frac{3}{4}$ -inch clear white oak with four oak cross sills properly mortised to side sills. Cross sills to be ironed with 3 x $\frac{3}{8}$ tee irons bolted to side sills. Cross sills to have rubber cushions for tank. Tank to be bolted to framework with three steel bands: Front band to be $1\frac{1}{2}$ x $\frac{3}{8}$, other two bands to be $1\frac{1}{2}$ x $\frac{1}{4}$. Ends of bands to be rounded to form a $\frac{5}{8}$ -inch bolt. The timber used in the framework to be of absolutely dry white oak of best grade, properly bolted to running gear.

Truck and Springs—To be truss-made, ironed top and bottom in the most improved way. To be a four-wheeled truck spring gear. Back spring to be 3 inches wide, 44 inches long and to contain 14 leaves. Front spring to be $2\frac{3}{4}$ inches wide, 40 inches long and to contain 11 leaves. Front and rear gear must track with a 4-ft. 6-inch tread. Axles to be steel, $2\frac{1}{4}$ front, $2\frac{1}{2}$ rear and to be of Timken roller bearing pattern, guaranteed for one year. Truck to be arranged to be drawn by two horses. Brakes to be of thorough strength iron faced with all necessary spring, dogs and levers.

Wheels—To be 34-inch front and 52-inch rear. Hubs to be of the best grade of Pennsylvania black birch (or oak if required) 14 inches long and 10 inches in diameter. Spokes to be 3 inches and A grade white oak. Felloes, white oak, 3 inches wide, $2\frac{1}{2}$ inches deep; tire 3 x $\frac{3}{4}$ -inch round edge.

Weight—About 4700 pounds.

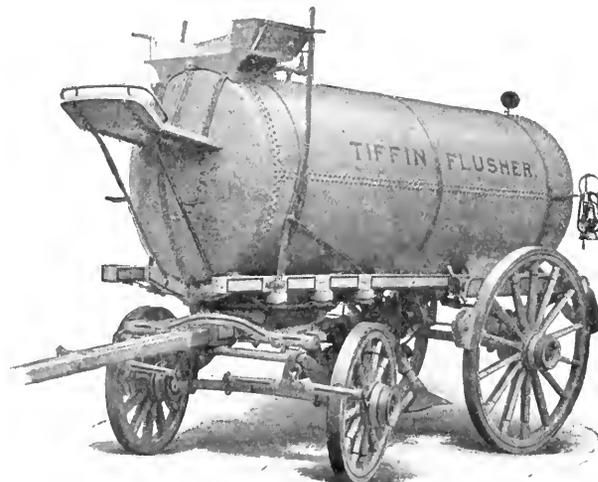

Sprinkler Attachment—To those wishing to use the same machine for flushing and sprinkling, a combination nozzle that can be attached for sprinkling purposes is furnished.

Cement Tile Machine with Mechanical Tamper

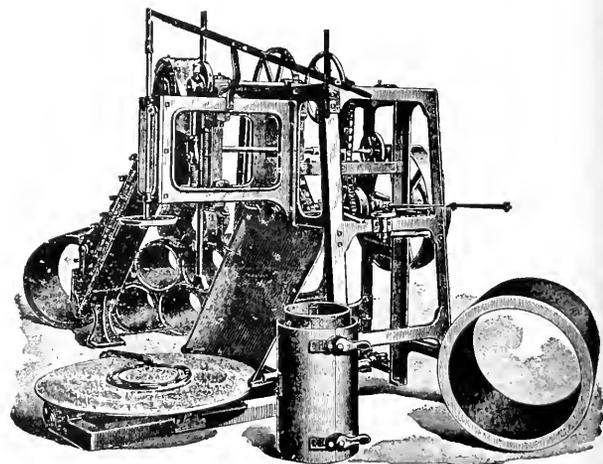

The National cement tile machine, for which the Marsh Company, 975 Old Colony Building, Chicago, Ill., are the general agents, is an improvement on the ordinary cement tile machine in that the concrete is tamped in place by an efficient mechanical tamper. The possibility of defects in hand tamped tile due to the negligence of workmen is too well known to need mention. The National machine is claimed to eliminate all such risk. The machine consists of a steel frame carrying the elevator and machinery, and at one side an iron pallet on which the mould rests.

The operation of the machine is as follows: The empty mould is placed on the table by a cart made for the purpose, the center is dropped down, the tamper is also lowered and the machine started in motion. The elevator starts and the man shoveling into same keeps the boot full all the time so that a continuous stream is pouring into the now revolving mould. The tamper playing up and down just like a trip hammer, rams the concrete in the mold until it is so hard that the tamper is forced up through the friction a little at a time, but the tamper does not raise until the concrete is packed so hard that it's forced up. It keeps going up until the tile is rammed full. The tamper is then stopped, trowel is brought into play, finishing up the top with a smooth surface. The tamper runs about 300 times per minute and strikes a 50 or 60-pound blow so that every particle in the mould is rammed dense and hard. After the tile is completed a cart comes up and takes the tile off the machine and same is wheeled back where the tile are to dry and the packets are removed immediately. The finished tile is just as hard at the top as at the bottom. Tiles made on this machine do not fall down as is common with hand-made tiles when packets are immediately removed. It is stated that five men can turn out 400 feet of 18-inch tile in 10 hours.

The general construction is strong and substantial. The chains are No. 6 and No. 67. The revolving table is made of heavy steel. Moulds are $\frac{1}{2}$ -inch steel outside and No. 10 inside. Each mould is in 10 pieces, held together by special locking devices that does not allow the least give. Top and bottoms of moulds are turned up in a lathe.

NEW STREET FLUSHING MACHINE

CEMENT TILE MACHINE—MECHANICAL TAMPER

NEWS OF THE SOCIETIES

City-Wide Congress, Baltimore, Md.

A three days' session was held at Albaugh's Theater, Baltimore, Md., March 8-10, for the purpose of organizing a movement to transform Baltimore and make a new and better city of it by 1920. More than 600 delegates, representing 130 civic, improvement and grades associations, were present. J. Iernsley Johnson, president, called the congress to order. Mayor Mahool, the second speaker, promised to follow closely the suggestions of the Congress and try to do all in his power to carry out the reforms proposed. Public hygiene was the first topic discussed in the formal program, and addresses were by Dr. Herman L. Biggs, New York, and Dr. William H. Welch, Johns Hopkins University. Dr. Biggs built up his address upon seven fundamental facts in the problem of public health. He set them forth as follows: There are certain fundamental facts in the problem of public health which must always be solved. Among these are: First, provision for a pure and abundant water supply; second, proper plumbing of the dwellings and an efficient drainage and sewerage system; third, proper disposal of the city waste; fourth, proper paving and care of the streets; fifth, adequate parks and playgrounds; sixth, proper housing of the people; seventh, proper planning of the city's growth. All of these mentioned have to do with the comprehensive and intelligent development of the great public works of the city. The great obstacles in the development of municipal public health work were stated to be: First, the lack of trained men, with permanent tenure of office, to administer sanitary affairs; second, the reluctance of the financial authorities to make adequate appropriations; and third, the lack of hearty co-operation of the people of the community in enforcing ordinances.

On the subject of Municipal Government addresses were delivered by Horace G. Deming, New York, and W. Cabell Bruce, former City Solicitor, Baltimore. On the subject of City Planning addresses were made by Frank Miles Day, Philadelphia, and V. W. Emmart, Baltimore. On Manufactures Taxation and Finance, Lawson Purdy and Prof. Jacob H. Hollander, Johns Hopkins. On social problems the speakers were Alexander Johnson, Chicago, and Mrs. Caroline B. Crane, Kalamazoo, Mich.

The objects of the convention were stated in the platform adopted, as follows:

Merit system in city administration.
The adoption of the city charter that was rejected by the last Legislature.

Marsh lands to be diked and channels deepened.

The drawing up of a plan by experts for straightening and widening streets and for the elimination of all unsightly nooks, corners, elbows, humps and other eyesores, and for a comprehensive system of parks and public squares.

The creation, through municipal co-operation or supervision, of private playgrounds for all city blocks where there is sufficient back yard area.

Increasing the boundary of the city, including the annexation of Brooklyn, in Anne Arundel County, and other adjacent settlements.

The adoption of a comprehensive system of paving.

The protection of the supply of the city's water from pollution in the country.

The employment by the city of men who have received expert training in sanitation, involving the possible idea of the establishment of a course in municipal sanitation at the Johns Hopkins University.

The condemnation of all property between Union Station and Mount Royal avenue, and the parking of the whole area.

A union freight station.
The laying out of the city in zones for trade, manufacture and residence.

The construction of beehive plants.
The purchase by the city of tracts of land to be developed to its best advantage for manufacturing purposes, to avoid mistakes in development that result in loss to investors and impede normal progress.

The extension of city street lines into outlying areas likely to become a part of the city in the future.

To prevent speculative builders from erecting inferior building that nullify the good of expensive municipal improvements.

The building of the Chesapeake and Delaware ship canal by the Federal Government.

The bridging of the Chesapeake.
The conservation of the beautiful section of the Patapsco River between Elliott City and Re'ay.

The paving of Light street in the best style from the wharf to the Long Bridge.

Firemen's Association of the State of New York.—At the last annual convention of the association, held at Watertown last August, Rochester was selected as the place of holding the next annual meeting, which will convene there on August 15, 16, 17 and 18. The following Central Committee has been appointed to make all arrangements: J. P. Kislisbury, president; Alfred Batho, vice-president; George King, treasurer; A. H. Otto, secretary; J. C. Kalbfleisch, Charles T. Chapin, William V. Clark, Charles E. Sunderlin. It is twenty-nine years since the Firemen's Association convened in Rochester. The parade was the finest firemen's parade ever seen in the city. At that time the association was in its infancy and has gradually grown to such dimensions that the committee expects at least 1,600 delegates present in this city. In order to raise sufficient funds to meet all expenses, the committee has associated with it Bert M. Tallinger, who is now soliciting advertisements for what will be the finest souvenir book ever issued in the city. Mr. Tallinger also has a letter of endorsement from the Chamber of Commerce. The committee is holding weekly meetings and will endeavor to make this the most successful convention in the history of the association. Applications have already been received for positions in the parade, which undoubtedly will be the largest Volunteer Firemen's parade ever witnessed in this State.

Engineers' Clubs of Philadelphia and Brooklyn.—The initial visit of a series which will be exchanged between the members of the Engineers' Club of Brooklyn and the Engineers' Club of Philadelphia was made March 11, when the Brooklyn men were entertained at dinner at the home of the Philadelphia club, No. 1317 Spruce street. All the officers and fifty additional members of the Brooklyn organization came to Philadelphia in a private car late in the afternoon. After the dinner the visitors enjoyed a vaudeville performance in the grill room of the club.

Toasts were responded to at the dinner by J. C. Meem, W. H. Roberts, president, and Joseph Strachan, secretary, all of the Brooklyn club; C. A. Angell, chairman of the Visiting Committee; James Christie, president, and W. P. Taylor, secretary, of the Philadelphia club. The local committee of arrangements was composed of Captain St. George H. Cooke, W. P. Taylor, Lewis R. Ferguson and F. K. Worley, chairman.

Idaho Society of Engineers.—The second annual convention was held at Iowa Falls, February 16-18, with about seventy members in attendance. Various questions pertaining to irrigation were the principal topics of discussion. The following papers were presented: "The Duty of Water as Applied to Different Soils and Crops," "Installation and Capacity of Reinforced Concrete Siphons," by Z. V. Vaughn, "Pumping Water for Irrigation," by E. V. Berg; "Conservation of the Waters of the State," by D. G. Martin; "Laying Out a Canal for a Given Acreage," by R. S. Cookinham; "Earth Dams," by A. M. McPherson; "Losses in Canals and Methods of Prevention," by F. W. Hanna. Excursions were made to a number of irrigation projects where construction was going on. At the invitation of City Engineer Mull and Superintendent Dan White, of the Warren Construction Company, a bitulithic pavement was inspected and a sample cut from it. The following officers were elected: Darwin A. Utter, Surveyor General, State of Idaho, president; State Engineer D. G. Martin, vice-president; Edmund M. Blake, Boise, secretary; Charles H. Mull, City Engineer, Twin Falls, treasurer.

League of Second and Third Class Cities of New York.—The following tentative program was formed at a conference between M. P. Capen, secretary to Mayor Duryee, Schenectady, and City Engineer Harding, of Poughkeepsie, where the meeting is to be held, May 25-26. It is proposed to hold the conference in Vassar Institute, where there will be two sessions each day. Among those invited to attend will be President Taft, Governor Dix, Mayor Gaynor, Tax Collector Lawson Purdy, of New York; Comptroller Prendergast, Herman A. Metz and Woodrow Wilson, Governor of New Jersey. Each evening the local committee will furnish entertainment. The topics to be discussed will be as follows:

Thursday morning—"Department of Public Works, in Relation to the Cleaning and Care of Streets."

Thursday afternoon—"Uniform Municipal Accounting."

Friday morning—"Taxation and Assessment."

Friday afternoon—"General Form of Work in Municipal Government," including a discussion on the proper form of government and the new form of commission government.

All these questions will be thoroughly discussed at the meetings. On Friday evening the local committee will tender a banquet to the visitors. This local committee will be appointed by Mayor Sague later on.

American Society of Civil Engineers.—Secretary J. P. Winn, of the Chamber of Commerce, Chattanooga, Tenn., has received a telegram from Charles Warren Hunt, secretary of the society, stating that the next annual convention of this body will be held at Chattanooga, June 13-16. This will be one of the largest and most important gatherings that has ever been held by the organization. Over 500 delegates from all parts of the United States and some foreign countries, including some of the most prominent civil engineers in the world, are expected to be in attendance. Hunter McDowell, of Nashville, chief engineer of the Nashville, Chattanooga & St. Louis Railway, is vice-president of the organization.

American Chemical Society.—At the regular meeting of the Cincinnati section, Clarence Bahlman read a paper on "The Determination of the Hardness of Water," and Dr. Folsom presented a paper on "The Filtration Plant of the City of Washington."

National Electric Light Association.—A branch section was organized at Pittsburg, Pa., February 28, at a banquet given by the officers of the Allegheny County Light Co. to the company's employees. About 150 were present, practically all of whom joined the new section.

Waterworks Manufacturers Association.—The American Waterworks Association will hold its thirty-first annual meeting in Rochester, N. Y., June 5 to 10. It is desired to make the exhibit of the various waterworks appliances one of the chief features of the convention. This will be under the auspices of the Waterworks Manufacturers' Association. All applications for space either in the exhibition hall or on the canal bank in the rear of the City Hall should be made to Mr. Fred S. Bates, chairman of the Exhibit Committee, 180 Broadway, New York City. Uniform signs only will be used and these will be small and provided by the association.

Chemists' Club of New York.—The Chemists' Building, 50-54 East Forty-first street, New York City, was opened March 17, with ceremonies and meetings which were continued for three days. The building is intended not only to supply the social needs of the Chemists' Club but also to serve as a meeting place for the New York section of the American Chemical Society, the Institute of Chemical Engineers, the Society of Chemical Industry and the American Electrochemical Society. The building occupies a lot 56 by 100 feet and cost upward of \$500,000. Addresses were made by the presidents of the societies interested and a number of technical papers were read. Among them was one by Prof. Wm. P. Mason, Rensselaer Polytechnic Institute, on the "Contribution of Chemistry to Sanitation."

National Good Roads Association.—The fourth National Good Roads Congress, which meets in Birmingham, Ala., May 23 to 26, promises to draw a very large crowd from all parts of the United States. The official call has been printed in many dailies and weeklies. Already inquiries in regard to special railroad rates have come in to the headquarters in Birmingham. J. A. Rountree, the secretary, has asked the Southeastern Passenger Association, the Western Passenger Association and similar organizations in the North for special rates for delegates and visitors to the congress. It is supposed that the Business Men's League and other local organizations will take advantage of this occasion and advertise to secure large crowds from the State and contiguous points. Several days ago an invitation to the fifty-two governors of all the States and territories in the Union were mailed by Secretary J. A. Rountree, joined by the Alabama Good Roads Association, Jefferson County Good Roads Association, Board of Revenue, Chamber of Commerce, Business Men's League and Board of Trade, requesting the presence of these governors and also asking that each of them appoint 100 delegates from their respective States to attend this congress. Already tentative acceptance has been received from several governors.

Calendar of Meetings

- March 21-22.
New York State Railroad Association.—Quarterly Meeting, Syracuse, N. Y.—C. Gordon Real, Secretary, Kingston, N. Y.
- April 6-8.
American Electrochemical Society.—Annual Meeting at New York City.—Secretary, Joseph W. Richards, Lehigh University, South Bethlehem, Pa.
- May.
City Commission Congress.—Meeting, Galveston, Tex.—Mayor Lewis Fisher, Chairman of Committee, Galveston, Tex.
- May 11.
Massachusetts Highway Association.—Quarterly Meeting in conjunction with the New Eng and Conference on Street Cleaning, Springfield, Mass.
- May 18-19.
Ohio Society of Mechanical Steam and Electrical Engineers.—Annual Convention, Youngstown.—F. E. Sanborn, Secretary, Ohio State University, Columbus.
- May 23-25.
National Fire Protection Association.—Annual Meeting, New York City.—F. H. Wentworth, Secretary, 87 Milk St., Boston.
- May 23-26.
National Good Roads Association.—Fourth National Good Roads Congress, Birmingham, Ala.—J. A. Rountree, Secretary, Birmingham, Ala.
- May 29-June 2.
National Electric Light Association.—New York City.—T. C. Martin, Secretary, 31 West 39th St.
- June 6-10.
American Water Works Association.—Thirty-first Annual Convention, Powers Hotel, Rochester, N. Y.—John M. Diven, Secretary, 14 George street, Charleston, S. C.
- June 11-16.
International Association of Chiefs of Police.—Eighteenth Annual Convention, Rochester, N. Y.—Major Richard Sylvester, Superintendent of Police, Washington, D. C., President.
- June 13-18.
New York State Association of Chiefs of Police.—Annual Convention, Rochester, N. Y.
- June 13-16.
American Society of Civil Engineers.—Annual Convention, Chattanooga, Tennessee.—Charles Warren Hunt, Secretary, 220 West 57th St., New York.

- October 4-6.
League of American Municipalities.—Annual Convention, Atlanta, Ga.—John MacVicar, Secretary, Des Moines, Ia.

PERSONALS

ANDERSON, CHARLES L. B., retires from the firm of Hazlehurst & Anderson to become associated as chief engineer with the Clarendon Construction Company, of Washington, D. C.

BENNETT, CHARLES J., Deputy Superintendent of Streets of Hartford, Conn., has been appointed Superintendent, to succeed Frederick L. Ford, resigned.

BOARDMAN, WM. H., of Philadelphia, has been retained by the city of Frederick, Md., to investigate the water supply situation and to make recommendations for an increase in the supply.

BOWMAN, JOHN G., secretary of the Carnegie Foundation, has been elected resident of Iowa State University. Mr. Bowman is but thirty-three years old and is said to be the youngest college president of the country. He graduated from Iowa State University in 1899 and received his M. A. degree there in 1904.

CAMPBELL, FRANK, has been appointed Town Engineer of Hackensack, N. J.

CASEY, WM. C., has been elected mayor of Batavia, N. Y.

CLARKE, W. G., has been re-employed by the city of Toledo as consulting engineer at the filtration plant during the construction of the 14 supplementary filter units.

CROWIN, THOMAS, Mayor of Belle Center, Wis., has resigned because of the press of business. Dr. J. C. Banning has succeeded to the office.

DONAHOE, S. E., a former patrolman on the Alexandria police force and recently foreman of a railway construction crew at Hammond, will be the new Chief of Police of Alexandria, Ind., succeeding the late John L. Ellis.

DOWNES, HARRY C., will be chief smoke inspector of Cleveland, Ohio, on and after March 31. The resignation of William P. Walsh, present smoke inspector, will be in force on that date. It was announced by Director Hogan that Walsh had tendered his resignation in order to become city sales manager for the Great Western Oil Company.

GRAY, WM. B., has resigned as general superintendent for H. S. Kerbaugh, Inc., and has been appointed general manager and chief engineer for Geo. W. Jackson, Inc., of New York and Chicago, who are executing Catskill Aqueduct contract 54 for the New York Board of Water Supply. Mr. Gray while general superintendent for H. S. Kerbaugh, Inc., organized Contract 11 of the Catskill work and designed the steel crushing and mixing plant and the steel centering used on that contract. He was associated with H. S. Kerbaugh, Inc., for the past ten years, during which time he had charge of construction of the Marysville, Enola and Pitcairn yards and the low-grade freight lines of the Pennsylvania Railroad, all very heavy work, employing large forces of men and large plants. Mr. Gray is an associate member of the American Society of Civil Engineers.

HALDEMAN, B. A., presented a paper on "A Review of the Progress of City Planning" before the Engineers' Club of Philadelphia on March 18. At a business meeting of the club on March 4 Mr. N. W. Aki-moff read a paper on "The Design of Impellers of Modern Centrifugal Pumps," and Mr. Carl Hering one on "Engineering Features of Electric Furnaces."

HARRISON, CHRISTOPHER, has been appointed City Engineer of Everett, Mass., for the fourteenth consecutive term.

HAZLEHURST, JAMES N., consulting engineer, retiring from the firm of Hazlehurst & Anderson, will continue the practice of his profession at Atlanta, Ga.

MULLEN, C. W., has been elected mayor of Bangor, Me.

PEARSE, LANGDON, assistant engineer for the Sanitary District of Chicago, gave an illustrated lecture on March 11 at the Detroit Museum of Art on "Modern Ideas as to the Desirability of Pure Water, in Connection with Water Supply and Sewage Disposal." Mr. Pearse made particular reference to conditions in various typical lake cities.

STEPHENS, WM. D., of Los Angeles, Cal., whose term as member of Congress has begun, resigned his position of President of the Municipal Board of Water Commissioners, and Major Henry T. Lee was elected by the board as his successor. Mr. Stephens will continue for the time being to serve as a member of the Water Commission. Only the position of president of the board has a salary attached, \$3,000 a year. The other service is honorary and will not conflict temporarily with Congressman Stephens' other duties.

TIGHE, JAMES L., who has served the city of Holyoke, Mass., as engineer of the municipal water works and City Engineer for nineteen years, has opened an office as consulting engineer in the Caledonia Building, Holyoke.

VAN TASSEL, ROBERT, has been re-elected president of the Water Board of Lowell, Mass., and Robert J. Thomas has been re-elected superintendent.

WARD, MICHAEL P., has been chosen chairman of the new Board of Health named by Mayor Conroy of Lynn, Mass.

TRADE NOTES

Cast Iron Pipe.—Chicago—Business is active and numerous small sales have been made. Prices continue firm. Quotations: 4-inch, \$25.50; 6 to 12-inch, \$24.50; 16-inch and up, \$24. Birmingham—The tonnage placed recently consists principally of comparatively small lots, but the prices received indicate the maintenance of the recent advance. The market is considered as stronger than for some weeks. Quotations: 4 to 6-inch, \$22; 8 to 12-inch, \$20; over 12 inch, average, \$19. San Francisco—Prices show increasing firmness, and in expectation of a further advance a large volume of business has been booked. Most of the buying has been for small municipal projects. Quotations: 6-inch, \$33; 4-inch, \$35. New York—The general market shows a renewal of activity, with quite a number of inquiries from private consumers, and some sales. Competition for business is still keen. Quotations: 6-inch, carloads, \$21 to \$22.

Lead.—Some fairly good sales of lead have been made by outside sellers at lower prices than prevailed a week ago. The leading interest continues to keep its quotation at 4.50c., New York, which is now fully 12½ points above the price set by independent sellers. As a matter of fact, the American Smelting & Refining Company is practically out of the market, except that it is making a few sales of selected brands. The St. Louis market is ragged, and there are reports that the price of 4.22½c. has been slightly shaded there. Plenty of lead can be had in New York at 4.37½c.

Valves.—The stockholders of the Chapman Valve Manufacturing Company, Indian Orchard, Mass., have voted to accept the recommendation of the Board of Directors for a financial reorganization, by which the corporation will be capitalized for \$1,000,000; equally divided between common and preferred stock, an increase of preferred stock of \$200,000, but a decrease in common stock from \$1,000,000 to \$500,000. The stockholders were practically unanimous in their action, which will put the finances of the business on a most substantial basis.

100,000-Barrel Cement Order.—The Tennessee Coal, Iron & Railroad Company, of Birmingham, has closed a contract with the Standard Portland Cement Company, of Birmingham, for 100,000 barrels of Portland cement, to be used principally in the construction of the Edgewater dam. The Standard plant is located at Leeds, Ala., and the quality of cement manufactured is offered as fulfilling the most rigid tests and specifications.

Quarry Plant for Sale.—A stone-quarrying and crushing plant in Wake county, North Carolina, is offered for sale. Its daily capacity of crushed stone is 300 tons. For details address the American Stone Company, Box 538, Richmond, Va.

Hydraulic Pipe Flanging.—A new pipe flanger employing the cold hydraulic process is being developed by the Patterson-Allen Engineering Company, 2 Rector street, New York City. The machine is automatic in its operation and will flange bent and straight pipe equally well. It does its work rapidly, having a capacity of between 250 and 300 8-inch flanges per day.

Gravel Plant.—The Tioga Gravel Company, which was recently organized with a capital stock of \$200,000, will

install a plant for washing and screening gravel at Tioga, Ia. Among those interested in the enterprise are C. L. Dwyer, George K. Force, K. C. Barkley and A. D. Anderson, of Houston, Tex., and E. S. Brasher, of Tioga, Ia.

Municipal Auditing.—A settlement has been reached between the Audit Company of New York and the City of Louisville by which the Audit Company accepts \$39,500 in full settlement of its bill of \$46,000. The settlement was made by the advice of City Attorney Clayton B. Blakeley, who advised that if the bill were disputed there would be interest to pay, and a master's salary of \$2,000; besides the bill as presented might be allowed in full. The Audit Company was hired by Mayor Robert W. Bingham to audit the books of the Louisville Water Company. The books were found to be correct.

Cement Prices Advance.—The leading manufacturers of Portland cement advanced their quotations 5c. per bbl. on March 1. The new quotation for cement, delivered in New York City, is \$1.48, with an allowance of 40c. for the bags returned. Compared with the basis of last year, the quotation would be \$1.38. It represents a price of 80c. per bbl. in bulk at the mill. Manufacturers are making this quotation on contracts to be shipped within the next thirty days, and state that a further advance will probably be made April 1. There is little or no cutting of prices, except by some concerns which are habitually under the market.

Water Purification Apparatus.—The Walworth Manufacturing Company, of Boston, Mass., has taken over the sale of the apparatus for water purification made by the American Water Purification Company, of the same city.

Steam Rollers.—The Iroquois Iron Works, of Buffalo, has received an order for six 10-ton macadam steam rollers for the Philippine government work, and for a similar roller for government use in the District of Columbia.

Lap Welded Pipe.—American Spiral Works, Chicago, Ill., have issued a circular which calls attention to the line of lap-welded steel pipe made in sizes ranging from 12 to 72 in. in diameter, which are illustrated. This pipe is made from low carbon open hearth steel and is especially suited for gas, compressed air, vacuum and high-pressure hydraulic lines. The illustrations show some 30-in. lap-welded pipe and fittings and an 11-ft. lap-welded steel drum.

Crushing Plant.—The St. Paul Stone Quarries Company, St. Paul, Ind., is endeavoring to interest additional stockholders for the purpose of enlarging the present stone crushing plant.

Castings for Municipal Work.—The Murray Iron Works Company, Burlington, Ia., has issued a pamphlet devoted to a line of castings for sewer, water and street lighting work. All of these castings are illustrated and two of them, a catch basin and a sewer outlet, both of which are patented, are described at length.

Crushing Plant.—R. B. Tyler & Co., Louisville, who have bought the Tucker quarries at Tucker, Ky., will purchase a complete crushing outfit, including boilers, compressors and drills, and will extend the operations at Tucker.

Care of Solid Rubber Tires.—The Firestone Tire and Rubber Company has issued a colored poster containing a proposed Chauffeur's Moral Code, which refers to the elastic and other properties of rubber. The rules refer to the use of vehicles having solid, not pneumatic tires. The poster reads:

This Certifies, That the Commercial Motor Vehicle chauffeur to whom this document has been awarded has the interests of his vehicle ever in mind and, regardless of the yearnings of the repairman and the junk dealer, has adopted the following Chauffeur's Moral Code:

1. I will avoid overloading my vehicle, because of the heavy stress it places on the mechanism and tires.

2. I will not overspeed my vehicle, as I realize that its tires and mechanism have their limitations and if persistently overtaxed they cannot give their full length of service.

3. I will keep my brakes working with equal pressure on each wheel, and the axles and wheels trued up. I can thereby save rack and wear on the running gear and prevent unusual stress on any one of the tires.

4. I will not allow oil or grease to accumulate on my rubber tires, because this will cause them to decay.

5. I will always start my vehicle before turning the steering wheels, remembering that the act of turning the front wheels when vehicle is standing still, places a heavy and unnecessary stress upon the tires.

6. I will start and stop my vehicle gradually, and avoid jerky motions under all circumstances.

7. I will not persist in running my vehicle along street car rails, as that grinds off the edges of the tires.

8. I will always, when possible, choose the smoother pathway, avoiding obstacles and road irregularities, and will cross car tracks preferably at an angle.

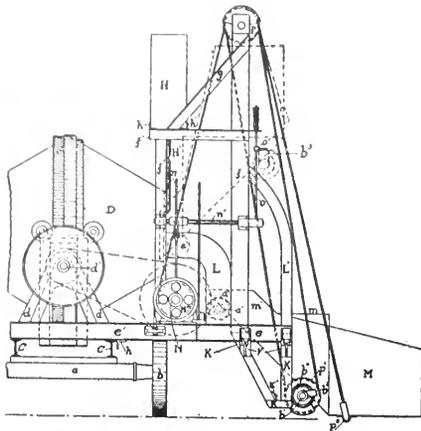

9. As merely resetting or repairing a side-wire tire will in many cases double its life, I will have my tires attended to promptly in order to secure this extra service.

Electrical Conduits.—The Steel Conduit Company has been incorporated with a capital stock of \$150,000 at Penn Yan, N. Y., to manufacture electrical conduits and insulating devices. The incorporators are W. T. Morris, H. M. Short and E. R. Ramsay, Penn Yan.

Lock Joint Pipe.—City Engineer Hoover, Everett, Wash., has expressed satisfaction over the contract of the Pacific Lock Joint Pipe Company that has completed the manufacture of cement pipe for the Capitol Hill sewer and laterals. The 4-foot sections, 3½ inches in thickness, 30 inches in diameter and each weighing 1,500 pounds, lie along Broadway, waiting for the sewer contractors, Snyder & Stalwell, to put them in place. The lock joint pipe is something new in Everett. From Seventeenth street to Twenty-first street, on Broadway, the pipe lying along the distance is of the 30 and 24-inch variety. The laterals will use a 24-inch pipe, the smallest made by the company. This was made on the ground, molded in collapsible steel forms 4 feet long, prepared of sand, gravel and cement in a one, two and four mixture. Superintendent W. S. Shaw, of the Pacific Lock Joint Pipe Company, has taken his men and equipment to Salem, Ore., where the company has a contract.

PATENT CLAIMS

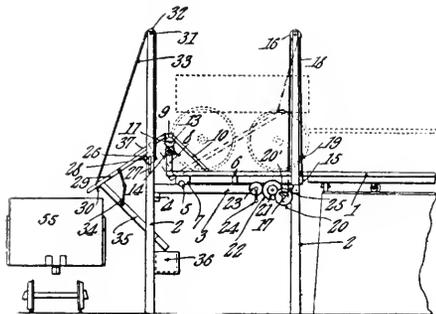

985,751. CHARGING DEVICE FOR CONCRETE MIXERS. Thomas L. Smith and Edward W. Meyer, Milwaukee, Wis., assignors to The T. L. Smith Co., Milwaukee, Wis., a corporation of Wisconsin. Filed Feb. 1, 1909. Serial No. 475,499.
A charging device for a concrete mixer consisting of a loading car having an open discharge spout adapted to enter the feed

opening of the mixer drum, guide tracks engaging said car and hoisting means for operating said car, said guide tracks so constructed as to introduce the discharge spout of the car to the feed opening of the mixer and to tilt the car for discharge by the upward movement given by the hoist.

985,923. LOADING APPARATUS. Frank J. Neefe, Cottage Grove, Wis. Serial No. 541,328.

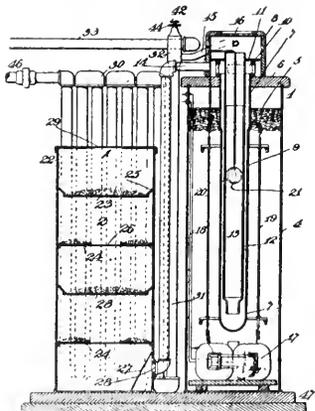

A loading apparatus comprising a frame,

a tiltable bed mounted upon the frame, a traction means mounted upon the bed, and a chute mounted upon the frame.

986,194. WATER-STERILIZING APPARATUS. Clifford D. Meeker, East Orange, N. J., and Charles Fred Wallace, New York, N. Y., assignors to Gerard Ozone Process Company, New York, N. Y., a corporation of New Jersey. Serial No. 575,492.

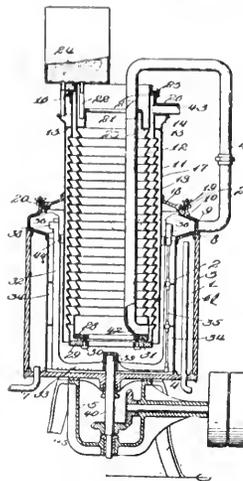

A water sterilizer having a tank containing oil, an ozonizer element submerged

In said oil, a transformer also submerged in said oil, and electrical connections from said transformer to the ozonizer element having joints therein located within the body of oil.

986,257. REGENERATIVE PASTEURIZER. Joseph Willmann, Derby, Conn. Serial No. 483,925.

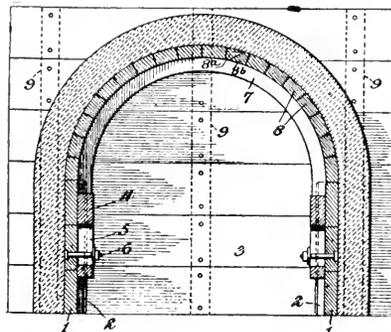

A regenerative pasteurizer comprising a heating section and a regenerative section,

the regenerative section being removably mounted within the heating section.

985,916. MOLD FOR CULVERTS. Nicholas Marx and John Ketzner, Mount Hope, Kan. Serial No. 514,561.

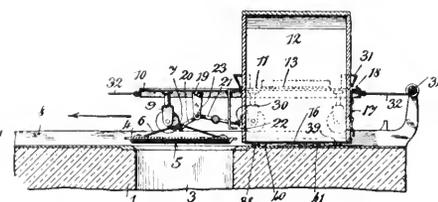

A culvert mold comprising a plurality of boards arranged on edge and rigidly connected by vertical cleats forming vertical side frames, vertically disposed blocks arranged at intervals on the inner faces of the side frames and provided with vertical slots, means for operating in the slots for adjustably securing the blocks to the side frames, said blocks terminating short of the

upper edges of the side frames, rigid arched supporting members spaced apart and removably seated at their lower ends upon the upper ends of the blocks and extending below the upper edges of the side frames and held against lateral movement by the same, and a collapsible arched cover resting upon the upper outer faces of the arched members and also upon the upper edges of the side frames, said cover being composed of longitudinal bars placed edge to edge, two of the said bars being beveled and overlapped to form an automatically collapsible joint, whereby the cover is collapsed by lowering the blocks at each side.

985,830. APPARATUS FOR DISCHARGING DUST-CARTS INTO THE FURNACES OF REFUSE-DESTRUCTORS. Jacob Ochsner, Zurich, Switzerland. Serial No. 487,990.

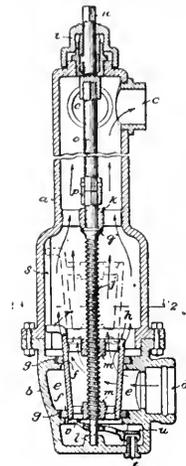

Apparatus for discharging dust into covered receptacles, comprising a movable frame, a lifting member thereon, means

operated by the movement of the frame to move the lifting member into position to engage the cover of the receptacle, and a dust box adapted to be placed in the frame and to actuate the lifting member to raise the cover.

985,469. HYDRANT. Ole O. Storle, Tacoma, Wash., assignor to O. O. Storle Valve Company, Green Bay, Wis., a corporation of Wisconsin. Filed July 11, 1910. Serial No. 571,443.

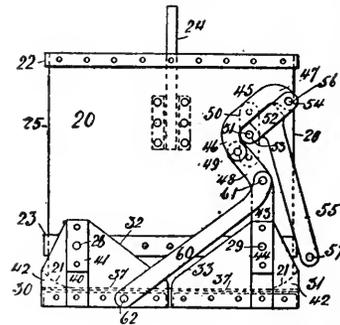

In a hydrant the combination with a tubular body having a discharge connection at the upper end, an inlet chamber and a lateral inlet connection opening into said chamber at the lower end and aligned open-

ings and valve seats on opposite sides of said inlet connection, a tapering tubular valve fitted to said seats, and an operating stem extending upwardly through said tubular body and adapted to move said valve axially.

986,100. BOTTOM-DUMPING BUCKET. Gustavus L. Stuebner, Flushing, N. Y. Serial No. 448,322.

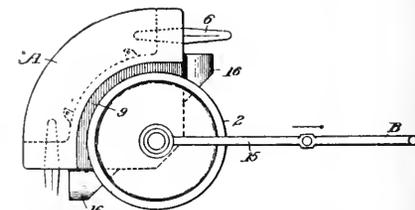

In a bucket the combination of a body having curved lower edges, a pair of doors pivoted thereto, side plates for the doors, bottom plates for the doors, filling blocks on the bottom plates curved to gauge with curved lower edges of the body of the

bucket, locking links pivoted to opposite sides of the bucket, arms extending from the side plates of one of the doors, links connecting the arms and the locking links, the latter link locking itself with the locking link when the doors close the bucket, connecting links connecting the said arms and the side plates of the other door, arms extending from the locking links, and a handle bar connecting the arms.

986,113. ROAD SCARIFIER. Edward Wright, Brooklyn, N. Y. Serial No. 565,941.

A road scarifier, comprising a metal body, wheel-supported means for pivotally supporting the body upon a horizontal axis at one side of a vertical line passing through its center of mass, so that said body is

normally unbalanced upon the shaft, a set of picks carried by said body and adapted to engage the ground when its center of mass is at one side of said horizontal axis, and another set of picks carried by said body and adapted to engage the ground when its center of mass is at the opposite side of said horizontal axis.

CONTRACTS AWARDED

Selma, Ala.—To R. B. Cook & Co., by Dallas County Board of Revenue, to build 6 1/2 miles of good road on south side, \$12,000.

Jacksonville, Fla.—Grading and laying pavement and curbing at Dignan Park, to F. J. Trout; tile walk \$1.27 per sq. yd.; A. J. Cesery Co. bid \$1.30 per sq. yd., and Logan Concrete and Engineering Co., \$1.32 per sq. yd.; bids for laying curbing were 9c. per running ft., same for each bidder.

Manatee, Fla.—Building hard roads throughout county, to J. S. Tarror, Manatee Livery Co.—J. O. Gates, Supervisor.

Highland, Ill.—To Highland Marble Works for construction of 7,600 ft. of macadam road on upper Sebastopol road, \$10,644.

Jeffersonville, Ind.—Construction of gravel road in Owen, Bethlehem and Washington Townships, to W. Walter Taggart, \$5,568.

La Fayette, Ind.—Constructing the Higley gravel road, to Snyder & Barner, Frankfort, at \$6,995.

Rockville, Ind.—Constructing road in Liberty Township, to J. B. Thomas & Co., Kingman, \$4,375; other bidders: W. G. Carty, Montezuma, \$4,400; J. P. Vaufoosse, Rockville, \$5,100; Chas. Ireland, Montezuma, \$4,875; Ewbank & Ewbank Kingman, \$4,725.

Wabash, Ind.—Construction of gravel roads, to Conover & Toper, \$19,480; to Kilty & Hick, \$10,675; to C. J. McGreevey & Son, \$5,950; Frank Murphy, \$8,180.

Williamsport, Ind.—Constructing gravel road in Warren Township, to Haynes & Waymire, \$11,439; other bidders: D. H. Fatont, \$12,495; Frank Simms, \$12,557; W. W. Cram, \$12,980; Fred Cunningham, \$11,909; E. H. O'Leary, \$13,229.

Topeka, Kan.—Paving 20 blocks with brick to the Kaw Paving Co., \$55,000.

Detroit, Mich.—Grading and paving various streets: Berlin st., 26 ft. wide, with cedar blocks, to T. E. Currie, 20 McGraw Bldg., \$15,644; Dearborn ave., with cedar blocks, 30 ft. wide, less single track, and 40 ft. wide, less double track, to F. Porath & Son, Penobscot Bldg., \$10,859; Dix ave., 46 ft. wide, less double track, with cedar blocks, to F. Porath & Son, \$11,804; Missouri ave., 26 ft. wide, with cedar blocks, to Julius Porath, at \$8,102; Willis ave., 26 ft. wide, with cedar blocks, to F. Porath & Son, at \$20,821; Third ave., with cedar blocks, 28 ft. wide, to Julius Porath, \$52,869; Canton ave., 26 ft. wide, with sheet asphalt, to Otis Cement Construction Co., 1010 Hammond Bldg., at \$29,141; paving to be on concrete foundation with Amherst curbing.

Bernardsville, N. J.—Stone roads, asphaltic binder, total length of both roads 1,790 ft., to A. C. Denaban, Yardley, Pa., \$5,070.

Jersey City, N. J.—Repaving Jackson ave. on 6-in. concrete base, to Van Keuren & Sons at 79 per cent of the estimated cost.—George Bouton, City Clerk.

Brooklyn, N. Y.—Paving 85th st. with asphalt pavement on a concrete foundation and paving and repaving with granite blocks on a concrete foundation, from a point east of 11th ave. to 12th ave., to Brooklyn Alcatraz Asphalt Co., 407 Hamilton ave., at following bid: \$8,299 sq. yds. asphalt pavement, 5 years' maintenance, 90c.; 1,294 sq. yds. granite pavement, 1 year maintenance, \$2.75, and 1,470 cu. yds.

concrete for pavement foundation, \$5; total, \$19,130, totals of other bidders: Barber Asphalt Paving Co., 30 Church st., New York City, \$21,674; Cranford Co., 22 9th st., Brooklyn, \$19,529; Uvalde Asphalt Co., 1 Broadway, New York City, \$19,269.

New York, N. Y.—Repairing street pavements under jurisdiction of Park Department, to Barber Asphalt Co.; about \$12,000.

Elizabeth, N. C.—Paving streets to E. J. McGuire, Norfolk, Va., with Baltimore brick, \$1.42 sq. yd.; Water st. is to be paved with granite block.

Akron, O.—Paving 3½ miles of Akron-Hudson road, to Pickett & Faust, Martin's Ferry, \$75,000.

Lorain, O.—Constructing sidewalks and crosswalks throughout city, to H. A. Schallon, \$11,598; other bidders: A. Graupner, \$11,635; H. N. Oberlander, \$11,912; M. L. Jackson, \$11,943; Aaron Besh, \$12,032; McHugh Bros., \$12,524.

Wooster, O.—Paving 3,700 ft. of road, to Herring & Son, Mansfield, \$8,150; other bidders: D. R. Houser, Wooster, \$8,198; D. A. Phillips, Ashland, \$8,800; and L. Winder-son, Orrville, \$8,900.

Wilson, Pa.—Paving and sewerage Mendelssohn ave., to Maynard & Flynn, Pittsburg, \$12,173.

Beaumont, Tex.—To Elliott Andrews, to grade road leading from El Vista to West Port Arthur, distance 3¼ miles, average bid, 18c. per cu. yd.

Dallas, Tex.—Furnishing 10-ton road roller, to J. I. Case Threshing Machine Co., \$1,650.

Dallas, Tex.—Paving Jefferson st., Oak Cliff, 10th to Tyler st., to the Standard Engineering and Construction Co., \$74,824.90.

Seattle, Wash.—Planking alley in block 56, to Hansen & Co., 4102 Twenty-fifth ave., S. W., \$463; wood and concrete walks on Seneca st., to same, \$764.34, and curbing and wood walks on Waters ave., \$26,976.

Superior, Wis.—Macadamizing county road, city limits to Cutler, to Russell Construction Co., city, grading \$1,400, stone \$2.60 per yd.; all culvert work during year to Richard Russell, city; macadamizing South Range road, distance 3 miles, to Ed. Johnson, grading \$990; stone \$2.67 per yd.; road north of Solon Springs to Jos. Andre, Bennett.

BIDS RECEIVED

Bridgeport, Conn.—Supplying crushed stone, (a) ½-in., (b) 1-in., (c) ¾-in., (d) screenings; Biltz Co., (a) \$2c., (b) 87c., (c) 90c., (d) 68c.; Rockland Trap Rock Co., (a) 85c., (b) 92c., (c) 90c., (d) 80c.; G. E. Sykes Co., (a) 90c., (b) 90c., (c) 90c., (d) 90c.; Connecticut Trap Rock Co., (a) \$1, (b) \$1, (c) \$1.20, (d) \$1; bids were based upon 3,000 tons of ½-in. stone, 2,000 tons of 1-in., 1,000 tons of ¾-in. and 3,000 tons of screenings; all bidders offered to deliver by boat excepting Connecticut Trap Rock Co., which uses cars.

Jersey City, N. J.—Reconstructing three sections of Boulevard: Bergen section, Van Keuren & Son, 71 per cent.; Thomas Harrington Sons Co., 92 per cent.; Joseph Murphy & Son, 69 1-3 per cent.; Edward P. O'Neill, J. F. Shanley Co., 99 per cent., and William Baker, 59 per cent.; Greenville and Bayonne section: M. J. Curley, 85 per cent.; William Baker, 59 per cent. and Jos. Murphy & Son, 69 1-3 per cent. in Greenville, and 73 1-4 per cent. in Bayonne. William Baker's bid on entire job, \$80,-180.89, while estimate furnished by Engineer Dunham gives total of \$135,901.50, two estimates on the three sections work out as follows: Bergen section, Baker, 47,-421.25; Dunham, \$30,375; Greenville, Baker, \$18,400.62; Dunham, \$31,187.50; Bayonne, Baker, \$14,259.01; Dunham, \$24,339.

Newark, N. J.—Lowest bidders for paving various streets: Astor st. with brick, McMahon Construction Co., \$14,282; West End ave. with asphalt block, Hastings Pavement Co., \$13,420; for paving Seymour ave. with brick, Newark Paving Co., \$4,257.

Amsterdam, N. Y.—Paving Clearfield block, Baird Bros., lowest bidder: 8,400 sq. yds. brick pavement, \$2.35; 200 lin. ft. header, 25c.; total, \$19,790; for 1,000 lin. ft. curb additional, 73c.; making total with curb of \$20,520.

Brooklyn, N. Y.—Furnishing and delivering 1,500 tons of 2,000 lbs. each of refined asphalt at municipal asphalt plant, 7th st. basin: Union Oil Co., of California, \$35,440; Barber Asphalt Paving Co., New York City, \$43,200.

New York, N. Y.—Furnishing all the labor and materials required for regulating, grading and paving the South st. ferry approach, and for constructing subway ducts at the St. George Ferry, Uvalde Asphalt Paving Co., 1 Broadway, city, lowest bidder, \$9,054; other bidders: Atlanta Contracting Co., \$11,690; Joseph Johnson Sons, \$9,470; M. Di Menna, \$9,287; Frank J. Gallagher, \$11,500; J. A. Donovan, \$9,995; Thomas Tarpey, \$11,375.

Portland, Ore.—Paving entire Beaumont district, which will cost approximately \$150,-000 with bitulithic pavement, Elwood Willes was only bidder. Warren Construction Co. submitted proposal to pave Stanton st. district improvement with bitulithic, \$157,750; Barber Asphalt Paving Co., lowest bidder for paving E. Everett st. district of Laurelhurst, \$149,195; completion of Vista ave. improvement, \$23,685; Oregon Hassam Paving Co., only bidder; Oregon Independent Paving Co., underbid Barber Asphalt Paving Co. for paving E. Washington St. with asphalt pavement, \$7,569.

Spokane, Wash.—Grading in West Grove addition: James C. Kennedy, \$124,980; Mas- sie Bros. & Long, \$125,000; Naylor & Norlin Co., \$126,489; Mitchell Bros., \$129,000.

Fond du Lac, Wis.—Paving South Main st., 10th st. to the Ditch: John Rasmussen & Sons Co., Bar block \$1.94½ per sq. yd., Purington block \$2.02 per sq. yd., Metropolitan block \$2.10 per sq. yd.; curb and gutter 47c.; totals, Bar block \$20,260.35, Purington block \$20,951.10, Metropolitan block \$21,687.90; G. H. Stanchfield, Bar block \$2.07 per sq. yd., Purington block \$2.15 per sq. yd., Metropolitan block \$2.23 per sq. yd.; curb and gutter 46c.; totals, Bar block \$21,339.90, Purington block \$22,-076.70, Metropolitan block \$22,813.50; Christ Johnson: Metropolitan block \$2.16 per sq. yd., Purington block \$2.10 per sq. yd., curb and gutter 44c.; totals, Metropolitan block \$22,191.40, Purington block \$21,638.80; John Brogan: Danville block \$2.02 per sq. yd., Indiana paving block \$2.02 per sq. yd., curb and gutter 50c.; totals, Danville block \$21,069.20, Indiana paving block \$21,069.20; on cement street, Rasmussen and Sons Co., paving \$1.45 per sq. yd., curb and gutter 47c., track work \$1,650; total \$15,701.40; G. H. Stanchfield, paving \$1.43, curb and gutter 47c., track work \$1,800; total \$15,-487.20; Christ Johnson, paving \$1.64, curb and gutter 44c., track work \$2,000; total \$17,372.20; John Brogan, paving \$1.39, curb and gutter 50c., track work \$1,216; total \$15,266.90; on creosoted block, Rasmussen & Sons Co., paving \$2.49 per sq. yd., curb and gutter 47c., track work \$1,650; total \$25,279.80; G. H. Stanchfield, paving \$2.53, curb and gutter 47c., track work \$1,800; total \$25,612.20; Christ Johnson, paving \$2.54, curb and gutter 44c., track work \$2,-000; total \$25,661.20; John Brogan, paving \$2.44, curb and gutter 50c., track work \$1,-216; total \$24,937.40.

SEWERAGE

Texarkana, Ark.—Engineer A. B. Matson has begun preliminary survey of territory to be affected by Improvement District No. 10: cost \$40,000 to \$50,000.

Corning, Cal.—Plans are being prepared for construction of complete sewer and water system; estimated cost, \$70,000.

Los Angeles, Cal.—Board of Public Works is considering need of storm drains.

San Francisco, Cal.—Board of Public Works has recommended construction of sewers on Lincoln ave. at cost of \$125,000.

Denver, Col.—Installation of sewer district to be known as Part A of Sub. Dist. 1 of West and South Side Sanitary Sewer District is being considered; cost \$20,283.

Winsted, Conn.—Borough is considering installation of \$150,000 sewer system.—Chas. A. Patterson, Engineer.

Pensacola, Fla.—Board of Bond Trustees, together with Engineer George Rommell, Jr., have completed plans for sewer work which is to be done at total cost of about \$80,000.

Camilla, Ga.—Plans have been prepared for construction of sewers at estimated cost of \$150,000.—T. B. Perry, Mayor.

Macon, Ga.—Consulting Engineer Wilcox has been instructed by Council to prepare surveys and profiles for an auxiliary sewer system in South Macon.

Savannah, Ga.—Council is considering construction of system of house and storm drainage: City Engineer Howard has made preliminary plans; estimated cost of gravity system to drain southeast section, \$265,970, including the covering Bilbo Canal, \$150,000; same system for western section, \$67,770.

Kokomo, Ind.—Professor Sackett, of Purdue University, Lafayette, Ind., is preparing plans for proposed sewer system: cost about \$50,000.—Ben Havens, City Clerk; Jackson Morrow, City Engineer.

South Bend, Ind.—City Engineer Wm. S. Moore is preparing plans for proposed Bowman Creek sewer: pipes to be 10 ft. in diameter at intake and 12 ft. at outlet.

South Bend, Ind.—Preliminary resolution for a pipe sewer on Angelina, Blaine, McCarty and Portage aves. has been adopted by Board of Public Works.

Clinton, Ia.—City Engineer R. C. Hart has been ordered to make plans, specifications and an estimate for paving Fifth ave. from Second st. to Fifth st. with creosoted wood block paving; 12,000 sq. yds. required.

Shenandoah, Ia.—Council has decided extend sewer on West Groat ave.

Tipton, Ia.—Iowa Engineering Co., Clinton, has been selected to prepare plans sewer system.

Louisville, Ky.—Residents of Eastgate are considering improvements to sewer system. J. Russell Gaines, County Engineer, is interested.

Easton, Md.—Sewerage Commission organized, with Mayor Higgins, President will at once commence laying plans building proposed sewers.

Birmingham, Mich.—Village has voted \$25,000 bonds for sewer construction.—E. Dames, President.

Detroit, Mich.—Council has ordered advertisement for bids for constructing number of vit. brick lateral sewers.—L. Haarer, Commissioner Public Works.

Ely, Minn.—Council is considering \$30,000 bond issue for constructing sanitary storm sewers.

Glasgow, Mont.—Plans have been prepared for extension of sewers in District 4; cost \$25,000.

Carthage, Mo.—Plans have been prepared by City Engineer Frank B. New for proposed sewer district; estimate shows cost will not exceed \$6.20 per sq. ft. of property.

Havelock, Neb.—Grant & Letton, Lincoln, are preparing plans for 10,000 ft. lateral sewers.

Bogota, N. J.—Plans by Engineer F. Campbell for sewage disposal plant, this borough have been approved by Board of Health; plans submitted for tank at either northern or southern end of sewer system, and the cost will exceed \$7,000.

Binghamton, N. Y.—Plans for intercepting sewers for conducting sewage of entire city to a sewage disposal plant located below the city limits have been approved by State Commissioner of Health if city authorities conform to demand State Department construction must be in spring of 1913; estimated cost of interceptor and sewage disposal plant, \$320,000.—Geo. L. Robinson, 37-39 E. 28th st., New York City, Consulting Engineer designs disposal works; City Engineer J. A. designed intercepting sewers, made surveys and collected necessary data.

Frankfort, N. Y.—Plans are being prepared by Vrooman-Perry, Gloversville, construction of sewer system and disposal plant.

Scarsdale, N. Y.—Assistant Engineer John Lowery, White Plains, is making preliminary survey for outlet sewer which is to cost \$11,000 and is to make connections with Bronx Valley sewer.

Bellefontaine, O.—Plans have been prepared by the Riggs & Sherman Co., Nasby, Toledo, for construction of sewer disposal plant; bids will be received a June 1.

Bucyrus, O.—Ohio State Board of Health has just approved plans prepared by Riggs & Sherman, The Nasby, Toledo, for age disposal plant.

Bryan, O.—Riggs & Sherman, Nasby, Toledo, have prepared plans construction of a sewer system and sewer disposal plant.

Delaware, O.—Riggs & Sherman, Consulting Engineers, The Nasby, Toledo, prepared plans for the installation of age disposal plant.

Marysville, O.—E. A. Kimmler, Columbus will furnish plans for sanitary sewer system, \$2,160.

New Bremen, O.—A. Elliott Kimbrough, 827 Columbus Savings and Trust Bldg. Columbus, has been retained by Village to prepare plans for sewerage disposal.

Pleasant Ridge, O.—Plans have been prepared by Riggs & Sherman, The Nasby, Toledo, for construction of sewer system and sewerage disposal plant.

Reading, O.—Plans and specifications have been completed for sanitary sewer system to cost about \$52,750.

Eugene, Ore.—Citizens will vote April 28, 1909 bonds to build trunk sewers.

South Bethlehem, Pa.—Borough Engineer R. E. Neumeyer has submitted to City Commissioner of Health Dixon plans sewerage disposal plant and system.

Clinton, S. C.—City is considering action on construction of sewerage system.

Yoakum, Tex.—Council has ordered plans for installation of \$30,000 sewer system; plans by D. W. McVea, Secretary Commercial Club.

Blacksburg, Va.—City is considering construction of sewer system.—F. W. Ehrman, Mayor.

Colonial Beach, Va.—City has selected Harry Stevens, Union Trust Bldg., Washington, D. C., to prepare plans and specifications for sewer system and disposal works.—H. W. R. Williams, Mayor.

Puyallup, Wash.—Sewer Committee soon ask for bids for sewerage Har- St.; City Engineer W. T. Bowman

Estimated cost of 12-in. wood pipe extension at \$2,020 and 14-in. extension at \$2,280. Seattle, Wash.—Board of Public Works has received plans and specifications for orth trunk sewer in Interbay district.

Spokane, Wash.—Board of Public Works will prepare plans for sewer on upper roadway of Rockwood Blvd., Arthur st. to connection in Garfield; also on Garfield and upper roadway of Highland Blvd.

Scottstown, Que., Can.—City is considering installation of sewerage and water system; cost, about \$40,000; plans by Engineer Dufresne, Sherbrooke.

CONTRACTS AWARDED

Long Beach, Cal.—To S. Zarubica, Los Angeles, for construction of sewer in District No. 7, \$7,889.

Los Angeles, Cal.—To George A. Rogers for construction of a sewer complete in avannah and other streets, \$26,873.

Pocatello, Ida.—Construction of trunk sewers to R. M. Hardson & Co., Butte, Ont., as follows: 1,800 ft. 12-in. vit. pipe, 1-ft. to 14-ft. cut, \$1,667 per lin. ft.; 334 15-in., same cut, \$1,973; 220 ft. 20-in., 1-ft. to 16-ft. cut, \$2,968; 600 ft. same, 1-ft. to 18-ft., \$3,468; 90 ft. 24-in., 5-ft. to 1-ft. fill, \$7,385; 180 ft. same, 0-ft. to 5-ft. fill, \$4,695; 990 ft. 24-in., 0-ft. to 5-ft. cut, \$1,611; 60 ft. same, 5-ft. to 8-ft. cut, \$3,021; 0 ft., 8-ft. to 10-ft., \$3,35; 420 ft. 10-ft. to 0-ft., \$3,495; 2,250 ft. 12-ft. to 15-ft., \$4,99; 0 ft., 15-ft. to 18-ft., \$5,68; 270 ft., 18-ft. to 20-ft., \$10,73; 360 ft., 20-ft. to 22-ft., \$1,61; 450 ft., 22 to 25 in., \$12,29; 720 ft. 1-in. pipe, 0 to 5 fill, \$5,85; 40 24-in. x 6-in. specials, \$3,25; 40 6-in. 1/2-bends, 75¢ each; 9 6-in. vit. pipe risers, 25¢ per vert. ft.; 9 6-in. vit. pipe house connections, 0-ft. to 10-ft. cut, \$1 per lin. ft.; 1 flushing manhole and connection, \$275; 370 manholes and purt., \$6 per ft. of depth; 60.5 tons c-i-e, exclusive discharge pipe, \$90; 1 grit chamber and appurtenances, \$225; 3,200 cu. yds. rock excavation, \$2.75 per cu. yd.; 474 yds. excav. in soil, clay and loose gravel, \$1.63 cu. yds. extra earth filling, \$1; 200 cu. yds. gravel filling, \$2; 200 cu. yds. of concrete with forms furnished by contractors, \$12; 26,000 ft. of lumber for setting, \$27 per M.; 9,000 ft. of lumber, \$1 in place, \$35 per M.; resurfacing 1,725 yds. gravel streets, 35¢; c-i. pipe discharge apparatus and appurtenances at Artnear River, \$3,500; furn. 4-in. tile drain, 2¢ total, \$69,833.05; engineer's estimate, 2,493.53; other bidders, Moran Contracting Co., Ogden Utah, \$75,089.18; Gillis Construction Co., Salt Lake City, Utah, \$77,399; F. W. Whittier, Twin Falls, \$80,599.18; Bannock Engineering Co., City, \$81,442; Lindstrom & Orem, Billings and Little, Mont., \$87,999.65; Montague & Reilly, Portland, Ore., \$90,397.10; W. W. Cook & Son, Junction City, Kan., \$94,204.65; Orange & Maguire, Salt Lake City, Utah, \$4,275.25; Geo. Irving, Salt Lake City, Kan., \$4,345.05; E. M. Eby, Wichita, Kan., \$4,444.40 and Jas. Kennedy Const. Co., Salt Lake City, Utah., \$97,433.75.—W. A. Samms, City Engineer.

Rock Island, Ill.—Construction of west section of Seventh Ward sewer system, to E. Keeler & Co., Davenport, \$55,697.

Abilene, Kan.—To Snyder & Peterson, City Hall, for construction of storm sewer.

Billings, Mont.—Constructing a sanitary sewer in Special Improvement District No. 1, requiring about 1,010 ft. 10-in. and 3,400 8-in. sewer, with necessary "Y" branches, 7 manholes and 2 flush tanks, to Lindstrom for \$6,966.

Jamaica, L. I., N. Y.—To Litchfield Construction Co. for building sewer in Liberty and Stoothoff aves., \$51,395.

Erle, Pa.—To Clarence Wolfran for constructing 9-in. sewer in 24th st., \$1.15 for in. pipe and laying, 40¢ for 6-in. pipe, 40¢ for Y and T branches, and \$39 for manholes.

Toronto, Ont., Can.—To O. W. Rice, city engineer for construction of storm overflows for sewerage tanks. 30¢ per lin. ft.

BIDS RECEIVED

Jacksonville, Fla.—Laying of sewer and main pipes in certain streets of city: 250 ft. of 12-in. c-i. pipe on Missouri, 5th to Cleveland sts.; Bryan & Co., \$4 per ft.; Logan Engineering & Concrete Co., \$3.50; W. Long & Co., \$2.88. 940 ft. 10-in. c-i. pipe, Cleveland, Missouri to 3rd sts.; Bryan & Co., \$3.50; Logan Co., \$3.25; Long Co., \$2.54. 500 ft. 30-in. circular brick main, in alley west of Palm st.; Bryan & Co., \$4.50 per ft.; Logan Co., \$4.75; Long Co., \$4.54. 300 ft. circular brick drain, south of Highway ave.; Bryan & Co., \$4.65; Logan Co., \$4.75; Long Co., \$3.95. 600 ft. 15-in. rein. concrete pipe, Holloman, north of Highway; Bryan & Co., \$1.75; Logan Co., \$1.98; Long Co., \$1.88. 1,100 ft. 15-in. rein. concrete pipe, Highway ave., Holloman to Steele st.; Bryan Co., \$2.30; Logan

Co., \$1.98; Long Co., \$1.88. 960 ft. rein. concrete pipe, Highway, Lime to Devine st.; Bryan & Co., \$2.75; Logan Co., \$1.98; Long Co., \$1.88. 465 ft. 12-in. rein. concrete pipe, Highway, Lime to Devine st.; Bryan & Co., \$2.10; Logan Co., \$1.73; Long Co., \$1.48. 300 ft. 12-in. double-strength terra cotta pipe, Highway, Holloman to Smith st.; Bryan & Co., \$1.65; Logan Co., \$1.73; Long Co., \$1.48. 600 ft. 10-in. terra cotta pipe, Osceola, Irene to Highway; Bryan & Co., \$2.25; Logan Co., \$1.50; Long Co., \$1.57. Building manholes on sewers; Bryan & Co., \$40 each Logan Co., \$45 each; Long & Co., \$46 each. Building manholes on drains; Bryan & Co., \$40 each; Logan Co., \$50 each Long Co., \$46 each. 15,700 ft. 8-in. terra cotta pipe on 17 streets; Bryan & Co., \$1.19; Logan Co., \$1.40; Long Co., \$1.22.

Evansville, Wis.—Construction of sewer system; work comprises approximately 7,936 lin. ft. of 8-in. sewer, 5,491 lin. ft. of 10-in., 450 lin. ft. of 12-in., 223 lin. ft. of 15-in., 3,303 lin. ft. of 18-in., 42 manholes, 2 septic tanks, inverted siphon; A. C. Schreitter, Manitowoc, \$24,904.88; H. J. Hickey, Milwaukee, \$24,768.08; H. Hohensee, Milwaukee, \$23,810; W. O. Bahr, Manitowoc, \$22,571.38; F. C. Robinson, Manitowoc, \$22,247.30; Sweeney Bros., Reedsburg, \$21,518.61; F. E. Kaminski, Watertown, \$19,967.79; E. R. Harding, Racine, \$19,838.29; N. F. Reichert, Racine, \$19,530.26; J. T. Blake, Madison, \$19,277.25; Robert Nelson, Racine, \$16,453.51.

WATER SUPPLY

Gadsden, Ala.—Citizens will vote on \$50,000 bonds to rebuild, improve and extend water system.

Huntsville, Ala.—Council has authorized purchase of water purification plant to be installed at pumping station.

Mena, Ark.—City has passed ordinance for construction of water works.

Tracy, Cal.—City has decided to give franchise to private corporation to install water works.—H. R. Youngblood, City Clerk.

Winters, Cal.—Contract will soon be let for water works from plans of the O'Neill Engineering Co.; cost about \$20,000.—W. J. M. Farland, City Secretary.

Washington, D. C.—Consul Alfred A. Winslow, of Valparaiso, has reported that the Chilean Government has decided to put in water works at Valienar, at estimated cost of \$53,690 United States gold, and complete water systems at Guindos, Buin, San Bernardo, and San Joaquin, at estimated cost of \$128,042. Address No. 6376, Bureau of Manufactures.

McDonough, Ga.—Council has ordered plans for water works; J. B. McCrary & Co., Atlanta, Ga., will make survey of city and submit plans.

Oglethorpe, Ga.—Citizens will vote April 12 on \$18,000 bonds to install water and lights.

New Athens, Ill.—Plans are being prepared by C. A. Dedinger, Chemical Bldg., St. Louis, Mo., for construction of water works to cost about \$28,000.

Odell, Ill.—City will issue \$7,000 bonds for water works improvements.

Rockford, Ill.—Citizens will soon vote on \$200,000 bonds for installation of water works system.

Broad Ripple, Ind.—Installation of water works system is being considered.

Monticello, Ind.—Board of Public Works will soon let contract for water works improvements.

Mulberry, Kan.—Citizens will at once vote on \$17,000 bonds to build water works plant.

Baltimore, Md.—About April 1, Chief Engineer Alfred M. Quick, of Water Department, will call for bids for constructing the new million dollar filter plant near Lake Montebello; several weeks later he will call for bids for building new 21,000,000-gal. impounding reservoir on the Gunpowder River above Loch Raven.

Avon, Mass.—Town will extend water mains at cost of \$15,000.

Holyoke, Mass.—Water Board is considering advisability of building small reservoir near high-service reservoir with capacity of 1,000,000 gals.—T. J. MacCarthy, City Engineer.

East Grand Rapids, Mich.—Town is considering \$40,000 bond issue for construction of water works and sewer system.

Milan, Mo.—Hiram Phillips, Consulting Engineer, Third National Bank Bldg., St. Louis, Mo., has been selected to prepare plans for construction of water works system; cost \$25,000.—J. W. Bingham, Mayor.

Bridgeport, Neb.—Town Board is considering election April 4 on \$18,000 bonds for water works.—R. H. Willis, Engineer.

Riverhead, L. I., N. Y.—Town is considering the construction of water plant. John Hogen is interested.

Tarboro, N. C.—Citizens will vote May 1 on \$25,000 bonds for proposed water works;

plans by Gilbert C. White, Durham.—Paul Jones, Mayor.

Cincinnati, O.—Council has passed ordinances authorizing Water Works Department to contract for sterilization plant at the California filtration plant at cost not to exceed \$6,000; two water turbines with electric generators, at \$5,500; two wash water pumps for filtration plant, at \$6,000.

Lowellville, O.—Citizens have voted to install water works system; cost between \$50,000 and \$75,000.

South Charleston, O.—Citizens will vote May 2 on \$22,000 bonds for water works.

Bridgeport, Okla.—Plans and specifications have been prepared by Oklahoma Engineering Co., 120 Broadway, Anadarko, for extension of old water works at cost of \$8,000.

Carnegie, Okla.—Oklahoma Engineering Co., 120 Broadway, Anadarko, has prepared plans and specifications for construction of a water works.

Welch, Okla.—Cooke-Gregory Engineering Co., Keystone Bldg., Joplin, Mo., is preparing preliminary plans for construction of water works.—J. H. Van Arsdale, City Clerk.

Hermiston, Ore.—Council is planning to construct distributing system, including reservoir and pumping plant south of town.

Toledo, Ore.—Council is considering construction of water works system.

Clarion, Pa.—Clarion Water Co. has employed Engineers Chester & Fleming, Pittsburgh, to design and install water filtration plant.

Coatesville, Pa.—Council has appropriated \$1,000 to Board of Health to be used in sinking artesian well.

Vineland, Pa.—Borough Council has instructed the Superintendent of Public Works to purchase another engine to keep pace with growing demand for water and electric light.

Bridgewater, S. D.—All bids opened on March 6 for water tank and tower have been rejected.—David B. Huston, City Engineer.

Clarksville, Tenn.—City is considering opening bids about May 1 for erection of buildings for water works; steel, brick and concrete structures; cost about \$15,000; water works will require two turbine centrifugal pumps and steel standpipe of 290,000 gals. capacity; \$50,000 to \$60,000 to be expended.—Hazlehurst & Anderson, Atlanta, Ga., Engineers; S. J. Love, Superintendent City Water Works.

Sherman, Tex.—Citizens have voted \$20,000 bonds for improvement of water works.

St. Albans, Vt.—Mayor S. C. Greene has recommended increasing of water supply.

Blacksburg, Va.—City is considering construction of water works.—F. W. Eheart, Mayor.

Colonial Beach, Va.—City has selected Harry Stevens, Union Trust Bldg., Washington, D. C., to prepare plans and specifications for water works and sewerage system.—H. W. B. Williams, Mayor.

Lexington, Va.—City has selected N. Wilson Davis, Harrisonburg, as engineer in charge of construction of water works; 800,000 gals. capacity; will lay pipe from 30,000,000-gal. impounding reservoir, distance of 11 1/2 miles.—Samuel B. Walker, Jr., Mayor.

Seattle, Wash.—Cost of laying water mains in North 50th st. has been estimated at \$22,700; Board of Public Works has received plans and specifications for laying mains in Alike ave.

Charleston, W. Va.—Fire Chief Rand has recommended improvements and extensions of water system for better protection against fire.

Battleford, Sask., Can.—Water works system will be installed in spring; estimated cost, \$100,000.—H. C. Adams, Secretary-Treasurer.

Scottstown, Que., Can.—Citizens are considering the installation of water and sewerage system; cost, about \$40,000. Engineer A. Dufresne, Sherbrooke, has prepared plans.

CONTRACTS AWARDED

Colton, Cal.—To the Fairbanks-Morse Co., 425 E. 3rd st., Los Angeles, for air compressor for municipal water works, \$2,392; to Frank J. Kimball, 1 W. Hellman Bldg., Los Angeles, for air lifts, \$3,150.

Oceanside, Cal.—To United States Pipe Co., San Francisco, for c-i. pipe, \$34.15 per ton, and fittings, \$62 per ton; total cost about \$13,000.

Turlock, Cal.—To Wm. Heafey, Chestnut and Pierce sts., San Francisco, for extensions to water system; cost \$16,431.

Chicago, Ill.—To the Platt Iron Works Co., Dayton, O., for installation of two 25,000,000-gal. motor-driven centrifugal pumps for the 22d st. pumping station at \$53,949; other bids were: Worthing, Basler & Co., six bids, \$39,468 to \$40,593; Alberger Pump Co., \$41,517; Lathbury D'Oliver Co., \$41,562; Camden Iron Works, \$46,434; L. H. Prentice & Co., two bids, \$52,023 and

\$52,719; Platt Iron Works Co., four bids, \$53,249 to \$53,610; Gudele Bros. & Co., two bids, \$48,200 and \$55,300; each unit is a horizontal-shaft single-stage pump direct connected to an alternating-current motor capable of delivering 25,000,000 gals. daily under total head of 115 ft., contract includes bed plates, starting apparatus, switchboards and equipment, exciters and transformers to step down the current from 12,000 to 440 volts, wire connections, suction pipe from the pumps to the well, discharge piping to 4 ft. outside of the building, two check valves and four hydraulically operated gate valves.

Lake Mills, Ia.—To Des Moines Bridge and Iron Co., for erection of standpipe, \$2,286.

New Orleans, La.—Furnishing c.-i. pipe and castings for water works, to U. S. Cast Iron Pipe and Foundry Co., Chattanooga, Tenn., as follows: 4-in., \$26 per ton; 6-in., \$25; 8, 10 and 12-in., \$24.50; 14 to 48-in., \$24, and specials, \$50 per ton.

Detroit, Mich.—Building Fairview pumping station, to Langley & Jaynes, 68 Toledo ave., \$19,200.

Mt. Clemens, Mich.—To Fairbanks-Morse & Co., Beloit, Wis., for pumping engine for water works, \$5,660, and to Wm. Baragwanath & Son, Chicago, Ill., for condenser, \$560.

Madison, Minn.—Drilling well to F. F. Gray & Co., Milwaukee, Wis., \$3.25 and \$4.16 per ft.

Hornell, N. Y.—Construction of storage reservoir and pipe line to Gray & Miller, city, \$40,440.22; contract for pipe to United States Cast Iron Pipe Co., \$26,286.39.

Cincinnati, O.—Laying 12-in. water main in North Bend road, from Cheviot to College Hill, to J. J. Brown, lowest bidder, \$14,274; Evan Evans was highest bidder, \$21,141.

Cherokee, Okla.—Water and light extension: To Ludlow Co., for furnishing hydrants and valves; to the Oklahoma Engineering Co., Anadarko, for general construction; to E. J. Merkle, representing Skinner Engine Co., for high speed engine, \$1,360.

Seattle, Wash.—Laying water mains on West Andover st., to Jahn Construction Co., \$26,976.

Neenah, Wis.—To C. W. Nelson, city, for construction of intake and reservoir for water supply and power.

Sheridan, Wyo.—To Jas. Kennedy, of Fargo, N. D., for laying about \$8,694 ft. 14 and 10-in. mains, \$24,833.

Hamilton, Ont., Can.—To Chadwick Bros., city, for furnishing compression stop and corporation cocks and 50 hydrant drop valves.

BIDS RECEIVED

Harlowtown, Mont.—Construction of water works, Lindstrom & Oren, \$9,390; Gans & Anderson, \$9,885; J. S. Penson, \$7,749; R. M. Bardsen & Thorpe, \$7,800; William Garrard, \$8,310.—C. M. Thorpe, Bozeman, Engineer.

New Brighton, S. I., N. Y.—Furnishing, constructing and erecting pumping station near the existing Grant City driven well plant, Borough of Richmond, (a) building, (b) 100 cu. yds. excavation, per sq. yd., (c) 50 cu. yds. concrete per cu. yd., (d) totals: W. H. C. Russell, (a) \$40,000, (b) \$1.25, (c) \$12, (d) \$40,725; Jas. I. Valentine, (a) \$38,724, (b) \$1, (c) \$11, (d) \$39,374; Concord Construction Co., (a) \$28,770, (b) \$5c., (d) \$6.25, (d) \$29,167; Wechsler & Nichols, (a) \$30,400, (b) 40c., (c) \$9, (d) \$30,890; Chas. H. Peckworth, (a) \$34,741, (b) \$1.50, (c) \$12, (d) \$35,491; Thos. J. Buckley & Co., (a) \$30,679, (b) \$1.50, (c) \$7.50, (d) \$31,204; Mitchell Construction Co., (a) \$29,735, (b) 50c., (c) \$7, (d) \$33,735; Masonry Construction Co., (a) \$32,890, (b) 65c., (c) \$7.75, (d) \$33,342; Thos. McKeon, Inc., (a) \$32,973, (b) \$1, (c) \$10.80, (d) \$33,613; I. T. Walsh Construction Co., (a) \$31,400, (b) 60c., (c) \$8, (d) \$31,860; P. Wolff & Sons, (a) \$43,861, (b) \$2, (c) \$16, (d) \$44,861; Kelly & Kelley, Inc., (a) \$30,965, (b) \$2, (c) \$7, (d) \$31,515.

New York, N. Y.—Water improvements, (a) hauling and laying water mains and appurtenances in various streets east of Park ave., Bronx, and (b) furnishing, delivering and laying water mains in Moshulu Parkway, at intersection with Jerome ave. and in Jerome ave. and removing existing water mains: James Burns, 147 East 125th st., (a) \$27,378, (b) \$24,099; Wilton Construction Co., Elliott ave., Williamsbridge, (a) \$24,774; Hanover Construction Co., 215 West 125th st., (a) \$42,841, (b) \$29,554; J. M. Rodgers, 121 West 125th st., (a) \$27,277, (b) \$23,888; Soraci Construction Co., 170 Broadway, (a) \$40,955, (b) \$34,548; L. D. Gregory, 25th st. and 1st ave., (a) \$20,610, (b) \$25,779; Hagerty & Drummond Co., 41 Park Row, (a) \$29,725; P. N. Lewis, 4th ave. and 21st st., (b) \$29,859; Londino & Gallo, Brooklyn, (b) \$36,168; furnishing, constructing and erecting a pumping sta-

tion near existing Grant City driven well plant, Richmond Borough, W. H. C. Russell, \$40,725; Wechsler & Nichols, \$30,890; T. J. Buckley Construction Co., \$31,204; the Masury Construction Co., \$33,441; Thomas McKeon, Inc., \$33,613; P. Wolf & Son, \$41,861; Concord Construction Co., Brooklyn, \$29,167; Chas. H. Peckworth, \$35,491; Mitchell Construction Co., \$30,135; James I. Valentine, \$39,374; J. F. Walsh Construction Co., \$31,860; Kelly & Kelley, \$31,515.

Dallas, Tex.—Furnishing 4,800 ft. of 36-in. water pipe: United States Cast Iron Pipe and Foundry Co., \$25.70 a ton, delivered at Dallas; Hardy Greenwood, \$22.50 at Galveston, or \$25.80 at Dallas.

Seattle, Wash.—First ave. W. et al. water mains: Dicken & Rightmire, \$8.-\$31.70; Allain & Hull, \$8,766.50; Will Kopta, \$9,252.95; J. T. Donaldson & Co., \$9,642.64; Best Construction Co., \$9,568.98; Ferguson Construction Co., 423 Arcade Bldg., \$8.-749.83.

LIGHTING AND POWER

Montgomery, Ala.—Richard Tillis has secured engineers to prepare plans for erection of an electric lighting plant which will furnish light and power.

Helena, Ark.—Plans are being prepared for power house and gas plant to be erected by Helena Gas Co. Address General Manager O'Brien.

Elsinore, Cal.—Council has passed ordinance granting M. A. Gardner and M. L. Cambern franchise to construct, lay, maintain and operate gas pipes and mains for purpose of carrying gas for heat and light.—C. P. Carter, City Clerk.

Longmont, Cal.—City is considering municipal operation of electric light and power plant.

Tustin, Cal.—County Board of Supervisors will receive bids shortly for installation of electric lighting system in Tustin and vicinity.

Washington, D. C.—District Commissioners have ordered erection of several more miles of 100-cp. glowing lamps.

Fort Meade, Fla.—D. O. Rodgers, of Wauchula, and Engineer J. G. Fancy, of the American Diesel Engine Works, are at the head of a movement to organize stock company of Fort Meade, Bowling Green and Wauchula people with capital stock of \$50,000 to erect modern power house to generate electricity for heating, lighting and power purposes in these towns.

McDonough, Ga.—Council has ordered plans for electric light system; J. B. McGrady & Co., Atlanta, will make survey of city and submit plans.

Oglethorpe, Ga.—Citizens will vote April 12 on \$18,000 bonds to install lights and water.

Columbus, Ind.—Indianapolis, Columbus and Southern Traction Co. is planning to let contract for construction of dam in Driftwood River, construct canal six miles in length and erect and equip power house for generation of electricity.—Will G. Irwin, President.

Pendleton, Ind.—Town has sold \$5,000 bonds for installation of electric light plant.

Sioux City, Ia.—Plans for electric power plant which Council has considered erecting in vicinity of Main st. pumping station have been submitted to Councilman G. B. Healy; cost \$27,000.

Mulberry, Kan.—Citizens will at once vote on \$8,000 bonds to install electric light plant.

Bowling Green, Ky.—City will install engine and centrifugal pump in electric light plant; bids will be asked.

Paducah, Ky.—McCracken County Commissioners are considering graveling of 20½ miles of road this year.

Everett, Mass.—Everett Gas Co. is considering extension of its mains about eight miles; cost about \$32,065.—W. W. White, General Manager.

Springfield, Mass.—Gas and Electric Light Commissioners have granted United Electric Light Co. of this city permission to issue shares of new capital stock for improvements.

Taunton, Mass.—Council is considering giving Committee on Public Works authority to make contract for care of street lights other than electric lights, and authority to contract for naphtha, glass, etc., for the same class of lights.

Elsie, Mich.—Citizens have voted \$5,000 bonds for lighting purposes.

Hastings, Mich.—Citizens will vote in April on \$120,000 bonds to establish water power plant which will operate municipal electric pump and pumping station.

St. Louis Park, Minn.—Village Council has granted Minneapolis General Electric Co., Minneapolis, 25-year franchise to light the village; company is to install system within six months.

St. Paul, Minn.—The Senate has passed bill giving city authority to enter into con-

tract with street lighting companies for periods of two years.

Handsboro, Miss.—City has granted franchise to Gulfport and Mississippi Traction Co. to construct electric light and power system in and through city; Supervisors of Harrison County, Gulfport, has granted company franchise to construct system along road between Gulfport and Biola; company will construct three-phase, 18,000-volt transmission system over country road, through Handsboro and in Biola, distance about 15 miles.

Kingston, N. Y.—Electric substation Newburgh Light, Heat and Power Co. near Highland Station has been burned.

Chimney Rock, N. C.—North Carolina Interurban, George L. McKay, General Manager, Rutherfordton, will construct power houses.

Ashtabula, O.—Council has appropriated \$10,000 for use of the city lighting plant which will double its capacity; two boilers will be installed to cost about \$6,300; bids will be asked for in the near future.

Heavener, Okla.—Heavener Light and Power Co. will construct electric light plant; cost of plant \$5,000.—E. M. Cooper, Manager.

Baker City, Ore.—Estimates will be prepared for municipal lighting plant; plan to construct pipe line from Elk Creek Salmon Creek, including construction new reservoir of 3,000,000 gals.

Forest Grove, Ore.—Council has granted 25-year franchise to Independent Electric Co. for the transmission of current and erection of poles over certain streets.

Medford, Ore.—Colonel Frank R. Prest, and Managing Director of Rogue River Electric Co., will let contracts within few weeks for construction of new plant on the Upper Rogue River, near Prospect; cost in neighborhood of \$1,000,000.

Harrisburg, Pa.—Legal notices are being published in Lehigh, Schuylkill, Columbia, Northampton, Bucks and Montgomery counties stating that application will be made April 3 by W. A. Lathrop, Rollin Wilbur and H. F. Baker, of Philadelphia, for charters for about 60 electric companies in these five counties.

Two Lick, Pa.—Indiana County St. R. ways Co. has decided to erect power plant which, according to plans, will be duplicate of present plant.—John G. St. Clair, Secretary.

Edgefield, S. C.—Town is considering establishment of electric light plant.

Walterboro, S. C.—John D. Glover, G. Brown, T. J. Blanchard and others are interested in establishment of electric light plant.

Miller, S. D.—The Miller Electric Co. is considering installing 100-h.p. boiler and tungsten street lighting system and additional lines in several parts of city.—Kellough, Manager.

Nashville, Tenn.—Extension of mains into suburbs is being urged Mayor Howse.

Stowe, Vt.—Village Trustees will contract with Morrisville Electric Light & Power Co. for power to light streets village and vicinity and also for commercial and house lighting purposes; a vote to empower Trustees to erect plant with necessary equipment.

Hampton, Va.—Newport News and Point Railway and Electric Co. is considering improving power plant.

Mishicot, Wis.—Ira Beyer is interested in proposed establishment of electric light plant.

Albarni, B. C., Can.—Albarni District Electric Light and Power Co. has been incorporated to supply light and power.—W. G. McAllister, Secretary.

Magog, Que., Can.—Electric lighting power plant will be installed this summer; specifications prepared by Messrs. Ross & Holgate, Montreal.

CONTRACTS AWARDED

Louisville, Ky.—By Kentucky Electric Co. for furnishing 2,000 and a 4,000 l. turbo generator, one 1-100 kw. turbo chiller, one 1-100 kw. motor generator, etc., to General Electric Co., Schenectady, N. Y.; to Babcock-Wilcox Co., Bayon N. J., four boilers, each with 5,000 sq. ft. heating surface, four superheaters and four stokers; Louis S. Strong, Chief Engineer of company, with Sargent & Lundy of Chicago, are Engineers who will be in charge of erection of plant, which will cost \$600,000.

Annapolis, Md.—By Anne Arundel County Commissioners to Consolidated Gas & Electric Light Co., Baltimore, 5-year contract for furnishing electric current lighting Brooklyn, Curtis Bay and other sections of the Fifth district contiguous Baltimore city; contract is renewal; 2 lamps, \$77; 40-cp. incandescents, \$26.

-cp. incandescents, \$30.75; 80-cp. incandescents, \$34.50, and 200-cp. incandescents, 7.25.

West Caldwell, N. J.—Borough Council has executed a three-year contract with the Public Service Electric Co. providing lighting of that municipality with lights.

Schenectady, N. Y.—By East Creek Light and Power Co. to General Electric Co., to supply electrical equipment for new station at Ingham Mills on East Canada Creek.

Coraopolis, Pa.—Furnishing machinery for electric light and water plant, to Buckeye Engine Co., for engine of 225-h.p.; to Truethers-Wells Co. for two engines, one of 150 and the other 175-h.p.; to Crocker-Wehler Co. for three generators, and the Vestinghouse Electric and Mfg. Co. for switchboard, and Reineke-Wagner Co. for pump with a capacity of 1,500,000 gals. of water daily.

Marcus Hook, Pa.—By Council for electric street lighting, to Beacon Light Co., Chester.

Fort Worth, Tex.—To Nutt Light & Power Co. to furnish electrical power to pump artesian water supply at rate of 2-10 cts. per kilowatt hour; contract is for five years.

FIRE EQUIPMENT

Phoenix, Ariz.—National Board of Fire Underwriters has recommended establishment of two new auto hose companies. Purchase of 2,000 ft. of 2½-in. fire hose, new ladders for ladder truck, installation of boxes, appliances, etc., and general improvement to fire alarm system.

Bridgeport, Conn.—Architect will soon be expected to draw plans for \$15,000 engine house to be built on Putnam st.

Bloomington, Ill.—Fire Chief Henry Mayer recommends purchase of aerial hook and ladder truck and additional hose.

Coeur d'Alene, Ida.—Fire Chief O'Rourke will investigate cost of motor combination hook and ladder truck and chemical engine with 3,000 ft. of hose.

Athol, Mass.—Board of Fire Engineers has recommended purchase of combination re truck.

Attleboro, Mass.—Town has voted to purchase \$5,500 auto truck.

Greenfield, Mass.—Town is considering purchase of auto truck.

Hull, Mass.—Town has voted to erect \$10,000 fire station.

Methuen, Mass.—Town has voted to appropriate \$6,000 for purchase of combination chemical and hose automobile.

Saugus, Mass.—Citizens have voted to purchase auto combination chemical and hose with two ladders at cost of \$5,500.

Duluth, Minn.—Work will soon begin on erection of \$4,000 fire hall at Lakeside.

Springfield, Mo.—Fire Chief H. McLaughlin has recommended purchase of additional fire apparatus.

Newmanstown, N. J.—Newmanstown Fire Co. will build its own home, engine house and hall.—Dr. J. H. Horne, President.

Paterson, N. J.—Police and Fire Commissioners will expend over \$250,000 in next few months to equip fire department with auto fire engines.

Perth Amboy, N. J.—Fire Chief Theodore Anderson has recommended equipment for the various houses, including combination hose and chemical wagon for McClellan Engine Co.

Thorofare, N. J.—Fire company is considering erection of fire house.

Tarrytown, N. Y.—Columbia Hose Co. has presented petition to North Tarrytown Board of Trustees asking that \$2,500 be raised for purchase of automobile hose wagon.

Barberton, O.—Council is considering erection of hose house in western part of city.

Tiffin, O.—Central fire station has been condemned; city is preparing to erect new station.

Erie, Pa.—Fire Chief McMahon has recommended erection of two fire stations.

Mauch Chunk, Pa.—Fire companies of city are considering installation of alarm system.

Thornton, R. I.—Johnstown Town will vote April 8 on \$300 appropriation for hook and ladder truck for fire company at Graniteville.

Chamberlain, S. D.—Council has decided to erect fire hall.

Moundsville, W. Va.—City is considering purchase of auto fire truck.

CONTRACTS AWARDED

Shelbyville, Ky.—Installing electric fire alarm system to Star Electric Co., Binghamton, N. Y., \$1,805.

Paterson, N. J.—Furnishing 2-passenger Bulck car for Fire Chief John Staggs to Hughes Garage, Prospect St., \$1,128.

BIDS RECEIVED

Dallas, Tex.—Furnishing 2,000 ft. of 2½-in. fire hose, 400 lbs. pressure, Enreka Fire Hose Manufacturing Co., 90c. to \$1.20; Voorhees Rubber Manufacturing Co., 90c. to \$1.10; Fabric Fire Hose Co., 90c. to \$1.10; Briggs-Weaver Machinery Co., \$1.10; Boston Woven Hose and Rubber Co., 90c. to \$1.10; Chicago Fire Hose Co., 85c. to 95c.; Ben F. Wolfe & Co., 85c. to 95c.; Diamond Rubber Co., 65c.

BRIDGES

Grass Valley, Cal.—Bennett st. bridge has been condemned by City Trustees and new concrete bridge has been ordered erected.

Grand Junction, Col.—Construction of a bridge over Grand River at Main st. is being considered.

Stites, Ida.—Bids will soon be received by Idaho County Commissioners for construction of the bridge over Salmon River; \$15,000 has been appropriated.

Batavia, Ill.—Bids will be received about April 1 for construction of concrete bridge over east branch of Fox River; cost about \$29,000.

Greensburg, Ind.—Decatur County Commissioners have ordered plans and specifications for construction of two and repair of 12 bridges.

Huntington, Ind.—Commissioners of Huntington County have prepared plans and specifications for construction of 20 bridges and culverts; bids will soon be asked.—J. B. Vernon, County Engineer.

Vincennes, Ind.—County Commissioners will ask new bids for building three bridges.

Cedar Rapids, Ia.—Council has sold \$150,000 worth of bridge bonds to the Continental Commerce Savings Bank, Chicago; proceeds will be used to erect concrete bridge across Cedar River at 3d ave.

Leavenworth, Kan.—Joseph O'Neil, City Engineer, is preparing estimates for proposed bridge across Three-Mile Creek on 3rd st.

Salina, Kan.—Contract for 50-ft. steel girder bridge across Dry Creek on high-road of Smolan will be let by County Commissioners next month.

Winslow, Me.—Concrete bridge will be erected over Mile Brook Stream; \$4,000 available.

Duluth, Minn.—Park Board is receiving bids for erecting eight bridges on Lester River.—Address S. F. Swirley, 118 Manhattan Bldg.

Pitman, N. J.—If borough and Washington Township will build approaches Gloucester County Board of Freeholders stands ready to erect bridge over creek for new highway from Pitman to stone road.

Hugo, Okla.—Choctaw County will vote April 18 on \$120,000 bonds for construction of 21 bridges.

Medford, Ore.—Plans have been prepared by City Engineer W. W. Hannon for erection of proposed \$12,000 Gold Hill bridge.

Doylestown, Pa.—Bucks County Commissioners have granted three new bridges, one over Newtown Creek, in Newtown Township; at Schwenk's Mill, in Hilltown Township, and the third on the line between the borough of Ivyland and Warminster Township.

Providence, R. I.—Plans are about completed for construction of bridge at Hunts River on Post road between Providence and the Pier by towns of North Kingstown, Warwick and East Greenwich.

Smithville, Tenn.—De Kalb County is considering construction of bridge across Caney Fork; cost about \$12,000.—T. J. Potter, President County Commissioners.

Galveston, Tex.—County Board will ask for bids for erecting of bridge over Todd's Bayou.

Vanderbilt, Tex.—Jackson County Commissioners, Edna, are considering construction of bridge across Lavaca River.

Fredericksburg, Va.—Road Commissioners of Spotsylvania County are asking new bids for erecting bridge over Hazel Run.

Rocky Mount, Va.—Board of Supervision is considering erection of bridge across Pico River.

Marinette, Wis.—City Engineer A. L. Hillis has completed plans for proposed Middle bridge, to be constructed jointly by cities of Marinette and Menominee, Mich.; Engineer's estimate of cost \$145,000, not including approaches and street work.

CONTRACTS AWARDED

La Salle, Ill.—By Board of Supervisors for construction of bridge over Indian Creek, near Leland, to Decatur Bridge Co., Decatur, Ill., approximately \$2,000.

Paris, Ill.—Paris Bridge Co., city, for construction of bridge over Sugar Creek in Elbridge Township.

Nebraska City, Neb.—To H. T. Ward & Co., Lincoln, for bridge building and cement work for Otoe County for coming year.

White Plains, N. Y.—Constructing two reinforced concrete bridges over Bronx River and contracts, Bronxville bridge, to O'tourke Construction Co., Yonkers, \$8,887, and Tuckahoe bridge, to E. J. Doyle & Co., Albany, \$6,742.

York, Pa.—To General Supply and Construction Co., to erect concrete bridge across Furnace Creek, \$1,237.50.

Fredericksburg, Va.—By Road Commissioners, Spotsylvania County, for building concrete bridges: Gayle's Run, to Roanoke Bridge Co., \$1,432; Massaponax Run bridge, on the C. H. road, to same company, \$1,183; Massaponax Run bridge, on Telegraph road, to E. W. Woodward, Richmond, \$1,466.25.

Milwaukee, Wis.—Constructing reinforced concrete highway bridge over Kinnickinnic River at Chicago ave., to Czaropata Construction Co., city, \$5,750.

Superior, Wis.—Building bridge over Nemadji River to Hennepin Co., Minneapolis, \$4,940; 60-ft I-beam at Wentworth to Russell Construction Co., city, \$2,400; concrete arch on Hawthorne road to same, \$720.

BIDS RECEIVED

Los Angeles, Cal.—Construction of reinforced concrete bridge across Arroyo Seco, near the Ostrich farm at South Pasadena. (a) for work complete, (b) hand railings and pylons, (c) 80 concrete piles, per ft., (d) Class A concrete per cu. yd., (e) Class B, (f) Class C, (g) reinforcing steel, per lb.; J. D. Kneen Construction Co., Santa Monica, bid (a) \$149,000, (b) \$6,750, (c) \$12,500 per pile, (d) \$10, (e) \$9, (f) \$8, (g) 5c.; Chas. Stansbury, H. W. Hillman Bldg., bid (a) \$153,964, (c) \$10, (d) \$9, (e) \$8.00, (f) \$8, (g) 4c.; J. F. Hall-Martin Co., Stimson Bldg., bid (a) \$157,500, (b) \$7,100, (c) \$12, (d) \$9, (e) \$7.50, (f) \$6, (g) 3½c.; Mercereau Bridge and Construction Co., Pacific Electric Bldg., bid, (a) \$169,600, (c) \$25, (d) \$8, (e) \$8, (f) \$8, (g) 5c.; the F. O. Engstrom Co., 5th and Seaton sts., bid, (a) \$248,239, (c) \$24, (d) \$10, (e) \$8, (f) \$7, (g) 4c.; the Cement Products and Construction Co., bid, (b) \$5,171; T. J. Shea, 1616 Ingraham st., (a) \$140,700, (b) \$6,500, (c) \$1 per ft., (d) \$10 per cu. yd., (e) \$8.50, (f) \$6.50, (g) 5c. per lb.

Cedar Rapids, Ia.—Building bridge over Cedar River at 3rd st., B. J. Sweatt, Boone, lowest bidder, \$155,988.50.

White Plains, N. Y.—Construction of two bridges over the Bronx River (a) from Yonkers to Tuckahoe, at Underhill st., and (b) from Yonkers to Bronxville, at Swain st.; McDonald & Murray, Yonkers, (a) \$8,889; E. J. Doyle & Co., Yonkers, \$7,788; O'Rourke Construction Co., (a) \$8,887, (b) \$9,227; Wilson & English Co., New Rochelle, (a) \$9,600, (b) \$11,500; James Garofano, Mt. Vernon, (a) \$8,965, (b) \$9,875; Atkinson Co., New York, (a) \$9,300, (b) \$9,450; Frank Nordoe, Mt. Vernon, (a) \$8,190.50, (b) \$9,900.50; Ensigner Co., New York, (a) \$8,918, (b) \$9,418; S. W. Speirs, Jr., Co., New York, (a) \$11,156, (b) \$13,970; Westchester Engineering Co., city, (a) \$11,989, (b) \$15,993; Coughlin & Louman, (a) \$10,289, (b) \$12,269; Howard & Worm, (a) \$10,005, (b) \$12,968; Kennedy Co., Albany, (a) \$9,373, (b) \$9,373; N. Fagnani & Bro., Tuckahoe, (a) \$12,370, (b) \$14,670.

Philadelphia, Pa.—Widening the Chestnut st. bridge from 60 to 70 ft.; American Paving and Construction Co., \$101,900; M. & J. B. McHugh, \$108,600; Owego Bridge Co., \$119,930; Stoeckel Steel Co., \$136,000; John McMenemy, \$135,000.

Janesville, Wis.—Erecting bridges: Racine st., Central States Bridge Co., \$14,490; Worden-Allen Co., \$16,480; Milwaukee Bridge Co., \$16,750; the Hiel Co., \$16,900; T. McGrath Cons. Co., \$16,931.29; Hayes Bros., \$18,860; Fourth ave., Central States Co., \$21,850; Hiel Co., \$24,500; Worden-Allen Co., \$24,560; T. McGrath, \$25,590; Hayes Bros., \$25,810; Milwaukee Bridge Co., \$26,950.

MISCELLANEOUS

Los Angeles, Cal.—Finance Committee will recommend that the identification bureau of the police department be allowed \$1,509 asked for filing cabinets, measuring instruments for the Bertillon system and other needed equipment.

Niles, Cal.—Board of Supervisors will consider erection of \$2,500 jail.

Oakland, Cal.—Playground Commission has decided to request Board of Education for permission to equip three school yards as playgrounds for use during coming summer vacation.

Susanville, Cal.—Supervisors have decided to ask new bids for erection of proposed county jail.

Vallejo, Cal.—Board of Works has decided to ask for bids for constructing proposed municipal wharf. —Wm. J. Torrey, City Clerk.

Waterbury, Conn.—Preliminary plans have been prepared by Architect E. E. Benedict for the proposed alterations to city hall, which call for new public comfort station in basement, addition to Town Clerk's office, addition to vault, new fire-proof vault for the City Engineer and other alterations.

Dover, Del. Council has decided to improve Hurd Park.

Gainesville, Fla.—Machua County is considering erection of modern jail.

Pensacola, Fla.—Bids will soon be asked for furnishing spring uniforms for police and fire departments.

Tampa, Fla.—Board of Public Works will secure plans of local architect for erection of \$50,000 library.

Huntington, Ind.—Erection of city crematory is being considered.

Michigan City, Ind.—Establishment of public playground is being considered.

Thayer, Kan.—Citizens have voted to erect \$5,000 city hall.

Louisville, Ky.—City has sold \$500,000 city hospital bonds to John W. & D. S. Green.

Louisville, Ky.—Board of Public Works, D. R. Lyman, Chief Engineer, desires correspondence with persons or firms relative to installation of garbage disposal plant.

Hammond, La.—City has decided to erect jail building.

Lake Charles, La.—Livaudais & Favrot, New Orleans, will prepare plans for erection of proposed city hall.

Baltimore, Md.—Plans for new city stables to be erected on Greenmount ave. have been finished by Building Inspector Preston; building will start soon; cost about \$2,500.

Boston, Mass.—Commissioner Rourke, of Department of Public Works, has rejected bid submitted by Bath Iron Works to build double screw ferry boat for \$149,500.

Brookline, Mass.—Health Department has been allowed \$4,000 to provide for better system of collecting ashes.

Detroit, Mich.—Marcus Polasky has applied for 50-year franchise for building of subway system at estimated cost of \$400,000 per lin. mile.

Saginaw, Mich.—Board of Park and Cemetery Commissioners will ask Council for necessary authority to construct lodge house at Forest Lawn, to cost \$11,000.

Duluth, Minn.—Mayor M. B. Cullum has recommended light grade crossings; extension of municipal garbage collection; extension of park system; installation of workhouse and progress in municipal dock proposition.

St. Louis, Mo.—City is considering construction of steel scavenger dump barge, 36 ft. beam, 100 ft. long, 2-ft. draft; estimated cost \$9,500.—W. B. Dryden, Secretary Board Public Improvements.

Central City, Neb.—Merrick County is considering election on erection of court house.

Ocean City, N. J.—Council has ordered specifications for extension of the boardwalk from 17th ave. to 23d ave.

Bronxville, N. Y.—Citizens will soon vote on \$100,000 expenditure for park lands.

Cincinnati, O.—Police Chief Jackson is visiting Detroit, Cleveland and other cities to inspect new methods of using police patrols.

Columbus, O.—Council will consider \$100,000 bond issue for erection of city prison.

Toledo, O.—Council has authorized issuance of \$75,000 bonds for park and boulevard improvements.

Hugo, Okla.—Citizens will vote Apr. 18 on \$125,000 bonds to build jail and court house.

Allentown, Pa.—Water Board has decided to establish playground for children along Little Lehigh.

Erie, Pa.—Council has finally passed \$38,000 bonding ordinance for installation of garbage plant.

Philadelphia, Pa.—Working plans will be prepared by Architect John Windrim, Commonwealth Bldg., for proposed city convention hall.

Pittsburg, Pa.—Council is considering \$15,000 appropriation for merry-go-rounds in three parks and \$10,000 for comfort station and shelter house in Olympia Park, and \$14,000 for same in McKinley Park, south side.

Charleston, S. C.—Police Chief Boyle is considering purchase of auto patrol; \$1,500 available.

Parker, S. D.—City hall, cost \$15,000, will be erected this summer.

Humboldt, Tenn.—City is considering bond issue for erection of city hall.

Temple, Tex.—City is preparing to erect crematory; committee from Council, composed of Mayor Hamill, Aldermen J. J. Booker and W. W. Swain, will visit various cities to secure data.

Paris, Tex.—Citizens have voted \$10,000 bonds for public comfort station.

Weatherford, Tex.—Commissioners' Court has decided upon plan for improvement and beautifying of court house yard, and as soon as the specifications are completed County Judge is authorized to advertise for bids for work; the plans have been drawn up by Superintendent of Public Works C. W. Camp.

Opportunity, Wash.—Town has voted \$2,000 bonds for town hall.

Benwood, W. Va.—Plans by Dixon Engineering Co. have been accepted for erection of proposed \$7,200 crematory.

Grand Rapids, Wis.—Warren H. Manning, landscape gardener, Boston, Mass., will draft city plan of improvements, which include park system along both sides of Wisconsin river.

CONTRACTS AWARDED

Birmingham, Ala.—To Varley & Bauman for furnishing summer uniforms for police department, \$18,250 each.

Chico, Cal.—Erecting municipal building to E. D. Sharp, city, \$30,726.

Los Angeles, Cal.—Board of Public Works has consented to transfer of the contract for collection of garbage from Charles A. Alexander to the V. D. Reduction Co., a corporation.

Jacksonville, Fla.—Furnishing Police Department with summer uniforms to Cheatham-Alderman Co.

Amite City, La.—Erecting city hall to John D. Ward, city.

Holyoke, Mass.—Removing garbage, to Ernest E. Proulx, \$2,400 per year.

New Bedford, Mass.—Furnishing auto truck for street department, to Harry E. Borden, agent for Johnson Service Co., \$2,000 on board cars at Milwaukee.

Minneapolis, Minn.—Furnishing auto ambulance to Thos. B. Jeffery Co., Kenosh, Wis., \$3,800.

New Brighton, S. I., N. Y.—Regulating grading and paving South st. ferry a proach and for constructing subway duct at the St. George ferry terminal, State Island, to the Uvalde Contracting Co., Broadway, New York City, \$9,055.

Rochester, N. Y.—By Board of Contract and Supply, Building No. 2, Exposition Park, to A. Frederick & Sons Co., \$15,490; Building No. 4, Exposition Park, to H. Sickles Co., \$29,826.75; macadam roadways and cement walks for Exposition Park, William Aikenhead, Jr., \$14,618.

Hamilton, O.—By Board of Control for police patrol system to be established in this city, to Home Telephone Co. at annual rental for 20 boxes, system complete, for \$720 per annum for period of five years \$3,600.

Philadelphia, Pa.—By Acting Director Hasskarl for deck and coal scow, to be utilized in connection with municipal dredging plant, to C. Hillebrandt, of Esopus, N. Y., lowest bidder, \$2,745; next lowest bid was the Kensington Shipbuilding Co.'s, \$2,960; John H. Mathis Co., of Camden, N. J., submitted bid of \$2,982.

Seattle, Wash.—Furnishing apparatus for inspection of weights and measures to V. & L. E. Gurley, \$1,491.75.

Ripon, Wis.—Street sprinkling for the ensuing season, to Charles Kuehn, \$770 city to furnish water.

BIDS RECEIVED

Boston, Mass.—Boston Disposal Co. has made proposition to dispose of all the city garbage, except that in East Boston and West Roxbury districts, for 54½¢ per ton or approximately \$235,000 a year.

Holyoke, Mass.—Removing garbage for two years, E. E. Proulx, \$4,800; James T. Reidy, \$3,100; Michael Fitzgerald, \$6,600; S. Beaulieu, Jr., \$3,120; all of Holyoke; John S. Miller, South Hadley Falls, \$3,300.

Eveleth, Minn.—Furnishing 500 numbered garbage cans: Helps-Shea Hardware Co. city, 15x25 in., 16 gals., \$2.12 per can; 18x26 in., 24 gals., \$2.55 per can; Polski Bros. city, 18x26 in., 24 gals., \$2.50; 15x26 in., \$2.1 per can; 21x26 in., 32 gals., \$2.95 per can; Gleason Hardware Co., city, 15x26 in., 16 gals., \$1.76 per can; 17x26 in. \$2 each; 18x25 in., \$2.37 each.

Brooklyn, N. Y.—Construction of Re Hook playground, at Richards, King Dwight and Pioneer sts., J. W. Fiske Iron Works, 56 Park pl., New York, \$16,225; Frank J. Gallagher, 490 Park pl., New York \$21,474; Kelly & Kelley, Inc., 45 E. 42d st., New York, \$19,984; John MacArthur, 22 Armond pl., Brooklyn, \$20,076; Wm. Werner 657 Vanderbilt st., Brooklyn, \$17,295; Norton & Gorman Contracting Co., 339 Douglass st., Brooklyn, \$19,969.

Pittsburg, Pa.—Collection and disposal of the city's garbage, American Reduction Co. bid for collecting rubbish of old Pittsburg at \$185,700, and Allegheny Garbage Co. \$66,500 for taking care of garbage on the north side.

Dallas, Tex.—Furnishing to city two street sweeping brooms: Studebaker Bros. Co., of Texas, \$285 each, delivered; Austin Western Company, Limited, \$260 each, delivered; W. T. Fulton Company, \$265 each.

TOO LATE FOR CLASSIFICATION

STREET IMPROVEMENTS

Leavenworth, Kan.—Board of City Commissioners has decided to pave Shawnee st. with brick.

Baltimore, Md.—State Roads Commission has authorized County Commissioners of Worcester County to proceed as soon as possible with construction of Pocomoke City end of the Pocomoke City and Snow Hill road; also authorized Chairman of the Commission to advertise for bids for construction of New Market and Monrovia road in Frederick County.

Adams, Mass.—Town has voted to pave and relay Commercial St. at cost of \$45,000.

Westport, Mass.—Town has voted \$2,000 appropriation for macadamizing Blossom road.

Laconia, N. H.—Board of Public Works has asked for appropriation of \$11,500 for bituminous macadam work coming season.—Chas. A. French, City Engineer.

Brownsville, Tex.—Citizens have voted \$80,000 bonds for paving.

Dallas, Tex.—Bids will be asked for paving Germania St., Swiss to Ross Ave.

Taylor, Tex.—Cameron Precinct is considering \$200,000 bond issue for good roads.—Richard Cretz, County Judge.

Franklin, Va.—Town Council is planning to place concrete curbing along Main st. Wood is now in use. Street Commissioner Jackson has been authorized to make experiments with concrete.

Seattle, Wash.—Board of Public Works has approved plans and specifications for grading and filling Alki ave.; grading and curbing 63rd ave., S. W., and Alki ave., and improving four other streets.

Superior, Wis.—Purchase of a motor road roller by Roads and Bridges Committee of County Board for use in the construction of macadam and clay roads throughout Douglas County has been authorized by Board; cost from \$2,400 to \$2,800, and will weigh not less than eight nor more than ten tons.

Brantford, Ont., Can.—Bids will be called shortly for paving Market St., between Colborne and Erie ave.

CONTRACTS AWARDED

Hutchinson, Kan.—Laying 7,800 ft. of curbing to J. H. Shears & Son, 33c. per lin. ft.

Watertown, N. Y.—To W. C. Jones for curb and gutter in two streets, \$1,879.13; to M. R. Klock for Arsenal St. curb, \$1,244.54.

Cincinnati, O.—To B. Niehaus for grading corner of Burnet Woods at Clifton ave. and Calhoun st, \$10,175.

Oklahoma City, Okla.—Paving streets to Cleveland Trinidad Asphalt Co., \$147,185.90; to Western Paving Co., \$351,815.57.

Dallas, Tex.—Paving Live Oak st. with bitulithic to Texas Bitulithic Co., \$2.30 per sq. yd.; total, \$69,026.88; resurfacing Lamar st. to Municipal Paving Co., \$1.50 per sq. yd. for new and 75c. for repair work on old concrete base.

Fort Worth, Tex.—To Texas Bitulithic Co. for paving portions of 5 streets, \$2,083, with 40c. for extra excavation.

Seattle, Wash.—Grading and curbing Fillmore st. to Rowan & Anderson, 1105 Klumbourne st., \$2,845.

SEWERAGE

Clinton, Ia.—Council has ordered asking of bids for completing sewer system in District No. 4.

Duluth, Minn.—Mayor M. B. Cullum has recommended provision for solution of sewage problem.

Seattle, Wash.—Bids will be readvertised for building Virginia st. brick sewer; plans have been approved by Board of Public Works for sewers on two streets.

FIG. 1. PRIMARY AND SECONDARY CONTACT BEDS UNDER CONSTRUCTION

SEWAGE DISPOSAL WORKS AT BORDENTOWN

Include Screen Chambers, Sedimentation Tanks, Contact Beds, Settling Basins, Sand Filters and Sludge Pit — Tanks of the Emscher Type, with Gallery Beneath Them — Air Operated Dosing Device

By E. G. KASTENHUBER, JR.

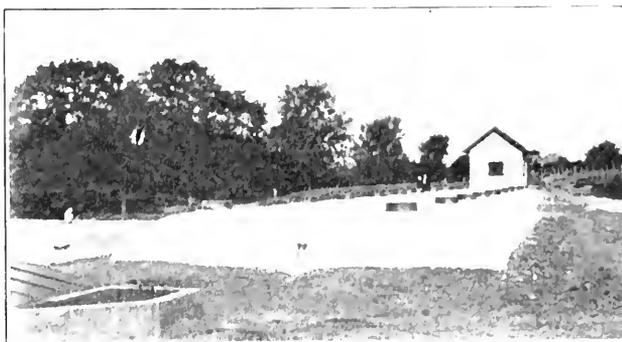

The sewage disposal works recently completed at Bordentown, N. J., embracing screen chambers, sedimentation tanks, contact beds, settling basins, sand filters and sludge pit, each, excepting the last mentioned, being in duplicate, comprise a plant designed to produce an effluent of exceptional purity.

The sewage is delivered by gravity to the screen chamber through a 15-inch terra cotta sewer, which is split into two channels just in front of the walls of the chambers, one of these channels entering each of the chambers. Each of these channels is fitted with gates and each has a gate-fitted spur leading from it to a by-pass, by means of which the sewage

can be delivered directly to the sedimentation tanks. The screen chambers are of monolithic concrete construction, and comprise duplicate hopper-bottomed tanks, each fitted with two sets of screens hung vertically in guide slots and extending from above the surface of the sewage down to weirs, the tops of which are level with the tops of the hopper bottoms, and across the full width of the chambers. The screens are constructed of flat wrought-iron bars $\frac{1}{8}$ x 2 inches, pierced at the top and bottom by $\frac{13}{16}$ -inch round rods and spaced $1\frac{1}{4}$ inches apart in the first, and $\frac{5}{8}$ inch apart in the second screen. The bottom of each rod is bent forward hook-wise

ix inches so that bulky solids which have been stopped in front of the screens will not slide off when the screens are raised for cleaning. Each screen is hung from a shaft, set in the walls of the superstructures, by chains passing over 14-inch chain sheaves and weighted at the other end by counterbalances. These latter are connected by a piece of railroad iron. This arrangement permits of the screens being raised for cleaning. This chamber is intended to separate from the sewage only the coarse matter such as paper, rags and other refuse which should not enter the sewers, but, through neglect or ignorance on the part of servants and householders, is usually present in more or less large quantities. Such refuse can be taken from the screens, dried and disposed of by burning. Any finer particles which may be settled out of the sewage in its passage through the screen chambers, will be drained out from the bottom of each of the hoppers through gates which lead to a 12-inch drain leading from the outlets under each structure to the outlet of the plant. This drain has its upper end in a manhole just in front of the screen chamber proper. A gated branch leading from this drain ends in the sludge pit. The space beneath, formed by the sloping sides of the hoppers of the screen chambers, opens into the manhole mentioned and at one end gives access to a like gallery under the sedimentation tanks. A substantial building, 12 x 18 feet, of vitrified brick paving brick with wrought-iron door and window shutters and slate roof, houses the screen chambers, the manhole at the upper end of the sludge drain and the "Dibble" recording gauge with which the mouth of the sewer is equipped.

The sedimentation tanks are 150 feet long by 17 feet high and 12 feet wide and are constructed as one structure. The bottom six feet of each side of each tank is built on a one to one slope, thus forming a long, narrow trough. This slop-

SEDIMENTATION TANKS AND SCREEN CHAMBER

The screen chamber (see Fig. 2) is in the building in the background. From this the sewage flows into the sedimentation tanks, whose two long arched roofs are the prominent feature of this photograph. The effluent from these passes through the control chamber (Fig. 6), one end of the roof of which is seen in the foreground of the above.

ing bottom is composed of heavily reinforced concrete, 12 inches thick on the sides which form the gallery between the tanks and 9 inches thick on the sides which were built against the excavation. From the tops of these troughs the side walls, the outside ones 9 inches thick and the middle partition wall 12 inches thick, rise vertical for 6 feet, or to the normal flow-line of the tanks. From these walls is sprung an arched roof 12 inches in thickness, over each tank. The end walls of the tank are 15 inches thick. The side walls are reinforced by buttresses extending from the springing line of the arches to the line of the bottom of the whole structure.

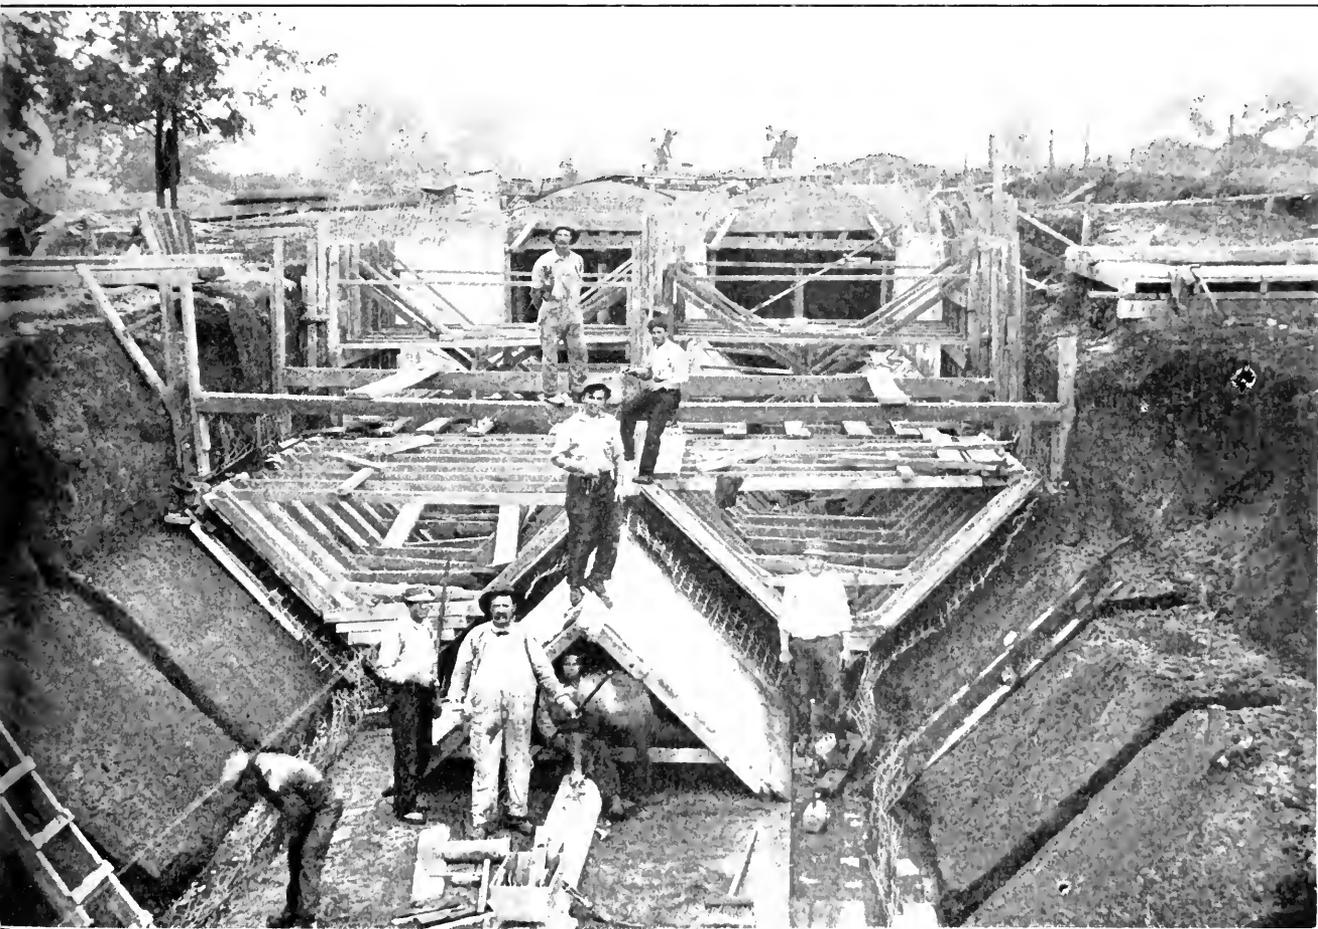

FIG 4. SEDIMENTATION TANKS. PLACING FORMS

The reinforcement is seen in place. The trenches for the side buttresses have been dug. The gallery for the sludge pipe is seen in the center of the excavation, the pipe being shown already in place. The forms for the roof arches are seen in the background.

The intakes from the screen chambers are placed six feet below the flow line, and those from the by-pass are at the flow line. All these are baffled to secure an even distribution of the flow across the full width of the tanks. At the outlet ends a concrete weir, resting on a shelf extending two feet into the tanks from the end walls, extends across the tanks. The inverted V-shaped space formed by the sloping sides of the bottoms of the adjacent tanks forms a gallery which contains the valves by means of which the sludge is drawn off from the bottoms of the tanks. Along the center of this gallery, with its bottom slightly below the floor level, is the 12-inch drain; and from it at right angles, and at 25-foot intervals, 6-inch pipes extend into the bottoms of the tanks, gate valves on which, placed just inside the gallery, control the drainage of the sludge.

Access to the tanks themselves is possible through ten standard manhole frames and lids placed at intervals of fifteen feet, center to center, along the crown of each arched tank cover, these having perforated lids to permit of ventilation.

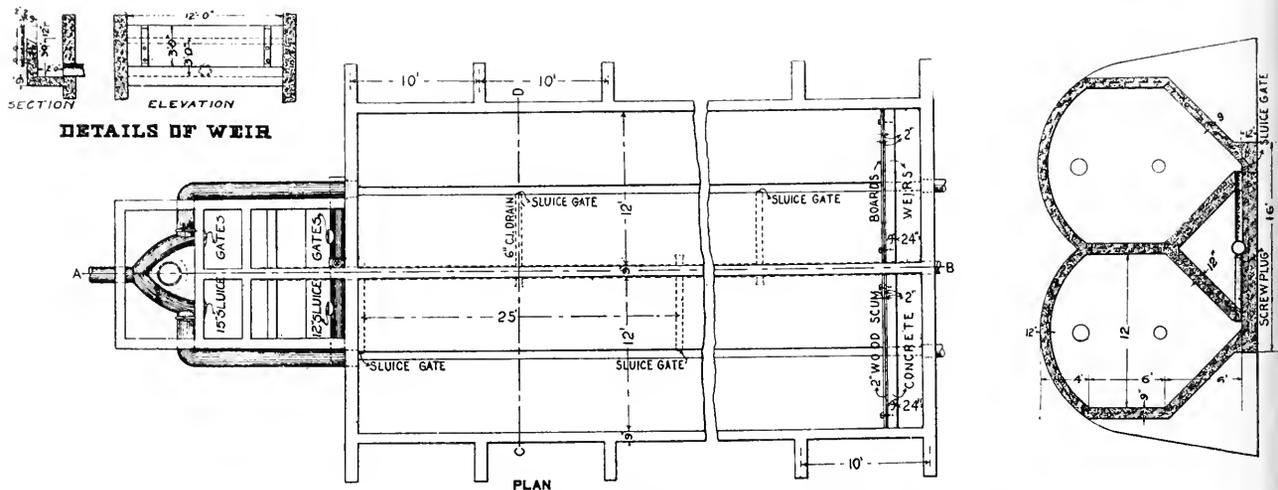

FIG. 5. PLAN OF SCREEN CHAMBER AND SEDIMENTATION TANKS

These tanks were designed for eight hours detention period for a 250,000-gallons flow per day for each tank. The tanks, when completed, furnished a fine specimen of water-tight concrete of extremely thin section. When filled with water only two small leaks, discharging streams about one-eighth of an inch in diameter, developed, both of these being stopped with ease. The seepage is barely noticeable.

From the sedimentation tanks the sewage flows through gated outlets to a dosing device designed by the Pacific Flush Tank Company. By this ingenious apparatus the sewage is fed automatically in rotation to the contact beds. By the manipulation of valves the order of feeding can be changed as desired and any two beds can be cut out of service in-

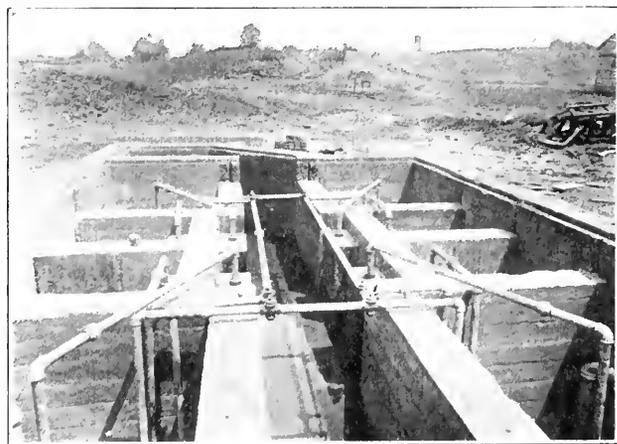

FIG. 6. CONTROL CHAMBER, DOSING DEVICE

definitely. The device is operated entirely by air pressure developed by the sewage itself through four "Adam's feed" with their accompanying syphons and domes.

The contact beds are in two series, each of four beds, higher or "primary" series and a lower or "secondary" series. They are so designed, however, that either series may be passed whenever desired. The beds are of the underfed type and both are of identical construction, except that the secondary beds are filled with a liner material. The floors of each series of the beds cover a rectangular area of 80 x 200 feet and are 4½ inches thick and are of reinforced concrete. Each series is divided into four beds by walls 4½ feet high, 9 inches thick at the top and 3 feet thick at the bottom. The floor of all drain to the middle of each bed, where a gutter runs from end to end longitudinally. Specially designed U-shaped tiles 5½ inches wide by 6½ inches high, cover the floors in close laid, transverse rows, cemented together. The ends of the tile along each side of the gutters support and are lapped about 4 inches by coping stones 2 inches thick, which span the gutter. Over this drainage system the filter material, compos-

of crushed trap rock in two of the beds of each series, and selected washed gravel in the other two, is placed to within 6 inches of the tops of the walls.

To insure ample ventilation of the beds, six 10-inch ventilating pipes, placed in rows of three on each side of each bed, were brought from the ends of the U tile drains to one foot above the surface of the stone, where each was fitted with a swiveled hood.

The sewage delivered by the dosing device from the sedimentation tanks enters the primary contact beds at the upper end on the floor line, fills the bed to within six inches of the top of the stone, is held for any desired period of contact by air-locked syphons, installed by the Pacific Flush Tank Company, and then automatically discharged either to the secondary contact beds or, if so desired, into the main drain. The installation of valves is such that a primary bed can be discharged into either of the two secondary beds below it, and the beds can, any of them, be cut out of service or drained by hand should necessity arise.

From the secondary contact beds the sewage is fed to a settling basin 350 feet long, 3 feet deep and 15 feet wide at the bottom. On account of the possibility of the sewage freezing in this basin during the night and other periods of light flow, the ends and sides next to the contact beds of this basin were built on a slope of approximately two to one. This slope is expected to take care of any damaging thrust which even a thick layer of ice would otherwise exert against the walls of the basin, which are 4½ inches thick.

A cross-wall divides this settling basin into halves, each having inlets from the two adjacent contact beds and an outlet leading to the sand filters. Gates are so arranged that either half of the basin can be cut out, and the contact beds can

FIG. 7. LAYING U-TILE, PRIMARY CONTACT BEDS

FIG. 8. PRIMARY CONTACT BEDS COMPLETED

The effluent from the sedimentation tanks is discharged, through the dosing device, into the primary contact beds, from which it passes to the secondary contact beds (see Fig. 1). In Fig. 8 are seen the swiveled hoods or cowls for ventilating the beds. In laying the U-tile, the ends were kept in line and slightly apart to permit the effluent to drain into them, by placing boards on edge between the rows.

emptied into either half. Access is had to the main drain gates in a manhole, which is built into the partition wall of the basin. The outlets from the basin to the sand filters are wired and baffled by concrete walls.

Sand filters, in two sets of two each, form the final stage of treatment. The effluent from the settling basin is delivered to these through 12-inch terra cotta drains. The sand filters are of the usual earth bank construction with 2½ feet depth of sand and tile under-drainage system. The feeds are of the inverted type, with circular concrete distributing tables, 3 feet in diameter, at the surface of the sand. The filters discharge, through their under-drains, into manholes on the main drain line thence into a small creek which is tributary to the Delaware River.

Owing to the fact that it was impossible to keep the outlets of the sand filters above what was known to be the maximum flood level of the creek, a dyke was constructed around a low area, thus forming a basin or storage reservoir, into which the effluent from the plant can be turned during flood periods. This reservoir has a capacity for several days' flow.

The sludge pit is of the usual type, and it is proposed to connect others of the same sort when this is filled to the level of the incoming pipe.

W. W. Young, of New York, designed the plant and had charge of the construction, the writer representing him as resident manager. The Pitt Construction Company, of Pittsburgh, were the contractors.

SEWAGE DISPOSAL IN CALIFORNIA

The January *Bulletin* of the California State Board of Health contains a brief review of the work done in that state in the way of constructing sewage disposal plants. The report states: According to records on file at this office (known to be incomplete) the following sewer systems and disposal plants have been completed and put into operation during the year:

Shop	\$3,975.	Sewage disposal tank.
Ontario	4,750.	Septic tank.
Pasadena	16,000.	Septic tank.
Santa Clara	24,623.	Disposal plant and sewer ext'n's.
Whittier (bonds)	110,000.	Sewer system and septic tank.
East San Jose	29,900.	Sewer system and disposal plant.
Wintersfield	14,500.	Septic tank.
Imperial	33,346.	Sewer system and disposal plant.
Dayfield	21,785.	Sewer system and disposal plant.
Redi	49,041.	Sewer system and disposal plant.
Los Banos	28,639.	Sewer system and septic tanks.
Lawman	23,079.	Sewer system and septic tank.
San Anselmo (bonds)	15,000.	Sewer system.
Pluma	27,808.	Sewer system and septic tanks.
Corona (figures not available).		Sewer system and septic tanks.
Total	\$403,346.	

In addition to these money has been provided and construction begun, or is soon to be begun, in thirteen cities for new sewer systems, in eleven for sewer extensions and in ten for sewage

disposal plants, the estimated costs of these totaling \$1,389,634. In addition, the names are given of twenty-seven communities where improvements of this kind are under advisement.

The report states that many of these are being built not only because of an awakening to the appreciation of these as a matter of public duty and sanitation, but also because it is "good business," in that it will attract to these communities a larger percentage of the new settlers which are so much desired by all sections of the state.

NEW YORK'S HEALTH RECORD

Figures concerning the death rates in New York City during the past forty-three years indicate a very gratifying decrease in such rates. In 1868 the death rate was 27.90 per thousand population, and during the nine years from 1868 to 1876 inclusive the death rate varied from a minimum of 26.36 to a maximum of 30.96. From that time on there has been a gradual and remarkably consistent decrease in the death rates, the fluctuations being much less than are found on inspecting the figures for a great many cities. Between 1877 and 1893 inclusive the death rate had fallen to an average of 25.07, the maximum having been 29.03 and the minimum 22.76. Between 1894 and 1904 inclusive the average had fallen to 20.42, the maximum having been 23.00 and the minimum 18.10. During the period of 1905 and 1910 inclusive the average death rate was 17.30, the maximum having been 18.42 in 1905 and the minimum 16.06 in 1909. The rate for 1910 was practically the same as 1909—16.10.

An inspection of figures classified according to causes of death show that there has been an enormous reduction in mortality in ages below 45, but an increase in mortality in ages over 45. A great deal of the reduction in death rate has been among the children. There has been a decided reduction in mortality from smallpox, typhoid fever, diphtheria and pulmonary tuberculosis, but an increase in the death rate from pneumonia, cancer, Bright's disease and heart disease. This would apparently indicate, as is known to be the case, that the work of the health authorities has been directed very largely against the infectious diseases.

An inspection of the figures indicates some things which would not perhaps be generally expected. For instance, density of population seems to be of minor effect, local and personal hygiene having much more influence. For instance, some blocks with a population of 2,700 persons per acre have a mortality less than other blocks with only one-half that density. A much more important influence, apparently, is the nationality. For instance, taking typical blocks inhabited almost entirely by persons of given nationalities, it is found that the death rate among the Irish is about 50 per cent higher than the general rate of the entire city, while that among the Chinese, Syrians and negroes is double the average city rate. Italians show a very high death rate from broncho-pneumonia, although

their general death rate is but slightly above the general city average. Among the foreign population the only ones listed whose death rate is below the general city average are the Russians, Poles, Austro-Hungarians and Germans.

The department believes that it must endeavor to make some efforts toward reducing the death rates from non-infectious diseases; to effect which it is necessary to educate the people to moderation in the use of alcohol and tobacco and greater care in looking after their general physical well being.

DISPOSAL OF GARBAGE AT NEWPORT

For some time the city of Newport has experienced serious difficulty in satisfactorily solving the problem of the disposal of the city's garbage. Dumping grounds were provided at the outskirts of the city and contracts were awarded for the collection of garbage. In this way a large area at the south end of the harbor has been filled in during several years past and improved in such a manner by the planting of trees, placing of soil and sod and construction of paths and roads that it was finally transformed into a very attractive harbor park on what is now a part of the boulevard.

From time to time dumping grounds in various parts of the city have been entirely filled in until now the Representative Council is confronted with the problem of what to do with the garbage. House refuse of animal and vegetable matter has in the past been carried out to sea and there dumped, but even this method is made undesirable by long-shore tide and winds which have cast it along the beaches and rocks in the vicinity.

Several weeks ago Col. William H. Morse, of New York gave before the Board of Health and its guests a lecture, illustrated with lantern pictures, on garbage and cremation plants, and largely as a result of this lecture the Representative Council, at a meeting held on March 13, decided upon a crematory as the solution of the present situation in Newport, and voted to appoint a committee to act in co-operation with the Board of Health and inspect or investigate crematories now on the market and in operation in other cities. Five hundred dollars has been appropriated to defray the expenses of this committee.

MILWAUKEE REFUSE INCINERATOR

In our issue of December 23 we gave figures of the quantities of refuse burned during the first six months of operation of the new Milwaukee incinerator, and the costs per ton. Further details for the same period are given below, sent us as a copy from the books of the city department in charge of the plant. These figures give the amounts of each class of material burned and the costs for the six months from June to November, 1910, both inclusive. It is stated, in commenting upon this record, that during this time the crew were all new to the operation of the plant, and that since June the cost per ton has steadily decreased and probably will be brought still lower.

Figures are also presented, for comparison, for the old plant during the same months of the previous year. This plant dis-

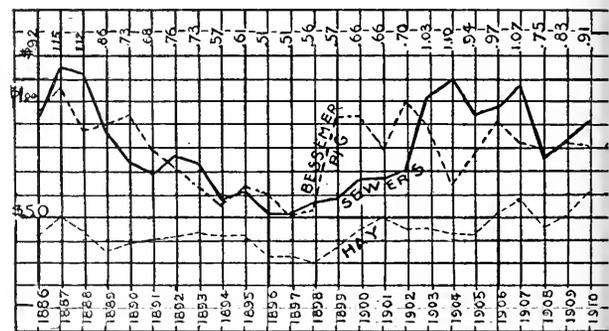

posed of garbage only, while the new plant disposes of garbage, which was a little greater in 1910 than 1909, and a of the ashes, rubbish and manure of the city.

An inspection of the figures in detail offers a possible explanation of the gradual reduction in cost, in addition to greater expertness of the crew, in the gradual increase in the percentage of ashes, which suggestion is given somewhat more fully by the fact that in June, when the percentage of ashes was greater than in the two or three following months, the cost was less than during those months. This, however, should not be taken for granted without a much more thorough study of the figures and conditions.

YEARLY VARIATION IN COST OF PIPE SEWERS

By E. S. RANKIN, Engineer of Sewers, Newark, N. J.

HAVING occasion recently to look into the average cost of pipe sewers for the purpose of ascertaining how this cost varies from year to year, a tabulation was made of all contracts let by the city of Newark for the past 25 years for 12 inch pipe sewers with an average depth of from 8 to 10 feet. These figures were selected as furnishing the greatest number of contracts for any one size and depth. Contracts requiring especially difficult work, such as rock or quicksand excavation were eliminated, the object being to secure as nearly possible the real variation of cost.

COST OF SEWER PIPE COMPARED WITH IRON AND HAY

The results obtained are plotted on the annexed diagram, figures representing cost per foot of sewer complete.

For comparison there is also plotted on the same diagram the average price of Bessemer Pig Iron at Pittsburg, from a table published by "The American Metal Market and Daily Iron and Steel Report," and also the average price of hay, from figures furnished by the United States Department of Agriculture. This was selected as being less subject to speculative influences than wheat or other grains.

The result is interesting as showing that contract costs follow the same general trend as the cost of these two standard products and that there is a difference of over 100 per cent between the low point of 1896 and 1897 and the high point of 1887 and 1904.

MILWAUKEE REFUSE INCINERATOR

Data for first six months' operation, June to November, 1910

	Total Quantity Tons	Average per Day Tons	ALL BY WEIGHT.				Total cost Disposal of Refuse 1910*	Cost per Ton of Refuse 1910†	Total Cost Disposal of Garbage 1909	Balance in Paved of 1910
			Per cent. Garbage	Per cent. Ashes	Per cent. Rubbish	Per cent. Manure				
June§	5,170	198	58	25	9	3	\$4,956.04	\$0.96	\$5,691.60	\$735.
July	4,760	183	67	17	11	5	5,146.48	1.07	6,451.84	1,305.
Aug.	4,861	180	71	14	12	3	5,074.96	1.04	6,662.64	1,587.
Sept.	5,341	205	67	20	11	2	4,698.74	.88	6,914.24	2,215.
Oct.	5,370	206	64	22	12	2	4,405.21	.82	5,453.60	1,048.
Nov.	5,373	217	55	32	12	1	4,208.83	.78	5,473.52	1,264.
Av. and totals.	30,875	198	64	22	11	3	28,490.26	.92	36,647.44	\$8,157.

* Costs for 1910 do not include oil, waste, repairs, etc., amounting to \$1,281.66 for six months, about half of which represents permanent improvements.
 † Quantities of garbage greater in 1910 than in 1909 by about 8 per cent.
 § Four per cent of street sweepings not included in table.

Diminishing Death Rates

NEVER before in the history of the world, probably, has life been held so valuable as now, and never before has the death rate been as low. On another page are given the rates in New York City for the last thirty-three years, which show a reduction from 28 per thousand to about 16 per thousand—over 40 per cent. While New York is to be congratulated on these figures, it is by no means exceptional in this improved condition. For instance, the figures for London, England, show a decrease of nearly 40 per cent during the same period, from 24.4 to 15.0. The figures of the actual lives saved are even more startling in their magnitude than the percentages. Assuming a population of four and a half million for New York, a saving of 12 per thousand means that under present conditions there are 54,000 less deaths per year than would have been the case thirty-three years ago. If the conditions have equally improved over the entire country with its ninety million population, we have an annual saving of 1,080,000 lives per year by

improved sanitation, medical and surgical practice and other features of modern civilization which make to preserving health and life.

If we consider the matter a little further, the figures are still more encouraging. It is, of course, out of the question to expect that any acts or precautions of man can render the human race immortal. A certain number of deaths—probably nine or ten per thousand—are inevitable unless the average length of life be increased beyond the maximum attained by any except the very unusual cases. If we take these figures to be ten per thousand, the preventable deaths thirty years ago in New York were about eighteen per thousand and at present are about six per thousand; in other words, the preventable deaths have been reduced by two-thirds.

This is certainly a remarkable showing and cause for great honor to physicians and sanitarians.

New York Pavements

AN item has recently appeared in a number of daily papers throughout the country discussing the unsatisfactory condition of the pavements in New York City, stating that the only solution appears to be the spending of \$10,000,000 to \$15,000,000 in replacing many of them with entirely new pavements and giving the startling information that it is the intention of the authorities to use a *metal* pavement for this purpose. Just where the reporter obtained this item of alleged information it is difficult to say, but it is possible that he may have heard some one use the term "road metal" and evolved the rest. We can state positively that there is no idea in the Highway Department of New York of using any metal in the construction of pavements in the future, but that the only innovation at present considered is that described by us a week or so ago—the smooth, close-joint stone block pavement.

That portion of this item, however, which states that New York streets and New York traffic have reached a condition which makes it advisable to modify previous methods of construction and maintenance has some foundation of fact. On another page of this issue is a statement concerning the asphalt pavements which, although the author is interested in laying asphalt pavements, is in general a fair and accurate statement of conditions and reasons therefor. Traffic in New York avenues is increasing and the diversion of this from one or more avenues while these have been torn up for subway construction (which has been almost continuous for several years past) has tended to increase this concentration of traffic and hasten the wearing out of the pavements. As the author of the article referred to states, neither asphalt pavement nor any other kind should be expected to wear indefinitely, even though frequently repaired; and the point has been reached in New York where many miles of asphalt pavement have outlived their economic usefulness and should be replaced entirely with new pavement. In his book on street paving George W. Tillson, Engineer of the Bureau of Highways of Manhattan, stated that the life of granite could hardly be expected to exceed 25 years nor that of asphalt 18 years, and under the intense traffic conditions in New York these figures are perhaps too high.

Unfortunately a great many miles of pavement have reached the end of their economic life at the same time and the city is called upon to make an immediate outlay of \$10,000,000 or more for new pavements, the alternative being a continuation of the present unsatisfactory condition of most of its avenues together with a rapidly increasing annual cost of pavement maintenance.

This condition of affairs is made additionally burdensome to the city because of the fact that these pavements were paid for by bonds which still have many years to run, and for decades yet to come it will be necessary for the taxpayers to meet the interest not only on the bonds required to relay the worn-out pavements, but also on those issued to construct them originally.

We desire to especially emphasize this phase of New York's predicament as a lesson to other municipalities. It is just and

proper that the taxpayers of a city should continue to pay for a pavement which they are using so long as they continue to use it, rather than that pavements should be paid for out of the tax levy of two or three years only. But there can be no defense of the practice of distributing the cost of a pavement over twenty-five or even fifty years when it is certain that the usefulness of the pavement will have departed in ten or fifteen years. In other words, bonds issued for constructing city pavements should be ten or at most fifteen-year bonds, and should never have a life longer than this. There is an alternative method of solving this problem in case there seem to be good reasons for issuing long-term bonds, such as ability to sell them to better advantage. This plan is to create a paving sinking fund into which should be paid each year such amount as will be sufficient to relay the pavement at the termination of its probable life. There is the additional argument in favor of this method that the amount made available by the sinking fund at the time when the pavement requires renewing need be only that necessary to replace the surface and not the foundation, since it may be assumed that the latter will outlive several surfaces. It is questionable, however, whether a careful calculation of the annual payments for interest and sinking fund on the long-term bonds, the interest received on the sinking fund deposits, and the interest on a series of short-term bonds would not show a balance in favor of the latter.

NEW YORK'S ASPHALT PAVEMENTS

DANIEL T. PIERCE

In the current discussion of the condition of New York's streets, and of the cure for this condition, there are certain facts that should be considered in arriving at the merits of the subject.

The paving most complained of falls into two classifications: Asphalt that has given good service, but is now worn out and must be replaced; and asphalt that was not properly constructed, and therefore requires more constant repair than it is possible to give it in order to keep it in proper condition.

In the first class is the Fifth avenue pavement (from Ninth to Fifty-ninth street) which was laid in 1897-98. It has carried the heaviest traffic found anywhere in the United States for thirteen years—a record few other pavements can match.

In the second class are pavements laid according to faulty specifications, by unskilled contractors, and with inferior material; and pavements laid on unsuitable foundations, such as Belgian block.

The community is now paying for past errors of judgment and for its unwillingness to face the fact that no pavement will last forever. There appears to be nothing in the city's experience with good asphalt that reflects discredit upon this form of pavement when properly constructed and maintained.

The construction of smooth surface pavements in the Borough of Manhattan began in 1888 when 34,000 yards of sheet asphalt were laid in various localities, followed by 27,000 in 1889 and increasing to 130,000 in 1890. By 1895 748,160 square yards of sheet asphalt had been laid in Manhattan by the Barber Asphalt Paving Co. alone, and by 1900 1,169,939 sq. yds.

Any form of pavement subjected to considerable traffic should hardly be expected to have a life of more than ten years. The granite blocks which were laid on Fifth avenue in 1886 were removed in 1897 because they were worn out. It would be but reasonable to suppose that the 750,000 yards of asphalt surface laid before 1896 would have already been entirely replaced. As a matter of fact a large proportion of these pavements on residence streets and those of moderate travel are in a satisfactory condition to-day, and are maintained at a reasonable cost. Park avenue between Thirty-fourth and Fortieth streets was paved in 1889 and after 22 years is in a condition not open to criticism and which will permit it to be maintained economically for some years to come. The same can be said of many other residence streets.

Many of these streets were not constructed upon a proper foundation, or they would be in a much more satisfactory

condition at the present time, notwithstanding their age. In these streets the asphalt surface was placed directly upon the old stone block pavements, the blocks of which are not rigid and will not support without yielding the constant passage of heavy trucks. It is not surprising that many streets of this character of construction are worn out, in every case having survived beyond the period to which their usefulness could be expected to extend, in view of their foundations. As a matter of fact, with the exception of Fifth avenue and a few other streets, none of the pavements in New York are supplied with a concrete foundation adequate to support the traffic to which the pavement is subjected. The city having constructed pavements of such a type, it should expect to replace them with a more modern type when repairs reach such a cost as to make it economical to do so. This, however, has not been done, and as a result there is a large area of worn-out pavement which cannot be economically or satisfactorily maintained. Had the old asphalt pavements been replaced with new ones built on modern lines criticisms would not now be made.

The entire area of asphalt pavements in the Borough of Manhattan is 5,230,484 sq. yds. and of this 2,460,089 yards, or 47.2 per cent, is not under guarantee, and its maintenance is in the hands of the borough officials. At least half of this area is worn out and should be replaced, but a realization of this fact has not been reached, either by the public, the borough engineers or the Board of Estimate and Apportionment, although the engineers are now beginning to realize this fact and agree that an expenditure of ten million dollars would be necessary to put the streets of New York in a proper condition, a figure which would, of course, be appalling to the Board of Estimate. The situation, unless something is done, will grow worse from year to year.

It seems plain that the pavement problem in Manhattan to-day is due to lack of good judgment ten years or so ago in the construction of many of the streets (although an adequate return for the money has been received), to failure to appreciate the fact that a pavement should not be expected to wear indefinitely, and to lack of information on the part of the public. No permanent improvement in the condition of our streets can be accomplished until there is an awakening to the facts of the situation and a demand from the public that new pavements shall replace those that are worn out.

MANHOLES IN WINNIPEG

In Winnipeg, Man., the standard manholes and catch basins are built of concrete, but to avoid the expense of either taking out forms from the interior of the structures or the use of collapsible forms, or in fact of using portable forms at all, the standard structures are composed of a series of rings placed one upon the other, the rings being made in forms at the city yard and delivered where and as required. Manholes are built of concrete rings, the upper ones 2 feet 6 inches in internal diameter, 4 in. thick and 12 in. high. The four bottom rings have the same diameter and height but are 6 inches thick, and the three bottom ones are split in halves at the sides and between the two halves are placed concrete blocks, an 18-inch block being used at each side in the bottom ring, a 12-inch block in the second ring, and a 6-inch block in the third ring. This makes the bottom of the manhole approximately oval, 2 feet 6 inches by 4 feet, and draws it in to a circular section 4 feet from the bottom.

The catch basins are constructed of rings in a manner similar to the manholes and are generally 8 ft. deep and 3 ft. in diameter at the bottom; drawn in to 2 ft. 3 in. at the top, by using for the three top rings a series decreasing in diameter 1/2 inches at a step. This causes each of the top rings to overhang the next below 1/2 inches all around. As the thickness is 4 inches this gives a 2 1/2 inch bearing on the ring beneath.

In laying up these manholes and catch basins the joints between successive rings are cemented with Portland cement mortar. This construction is not used for the flush tanks, and it probably would not be sufficiently water tight.

NEWS OF THE MUNICIPALITIES

Current Subjects of General Interest, Under Consideration by City Councils and Department Heads—Streets Water Works, Lighting and Sanitary Matters—Fire and Police Items—Government and Finance

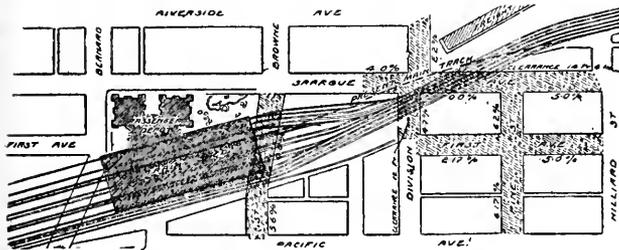

ROADS AND PAVEMENTS

Pavements Destroyed by Heavy Hauling

Portland, Ore.—The moving of an immense traction sewer-digging machine weighing about 25 tons, by Paquet, Gebisch & Joplin, from East Stark street to Holgate street, in the Sellwood district, where it is to be used in digging the Holgate street sewer, caused considerable damage to hard surface pavements en route. The tremendous weight of the digging machine caused the pavement to crumble beneath the wheels, the greatest damage being done in the Ladd tract and on Division street. The route chosen was largely over hard surface pavements and where the pavements were laid on filled ground. City Engineer Morris took up the matter with City Attorney Grant, and it was decided to ask the City Council to pass an ordinance prohibiting the running of such heavy machinery over the streets of the city without first obtaining a permit from the City Engineer. The former declared that no pavement would withstand the weight of so heavy an object, and if such machines are to be moved, some means must be provided, so that the pavements will not be damaged. The owners of the digger will have to pay for the repair of the streets they damaged, it is said.

Will Eliminate Grade Crossings Near Terminal

Spokane, Wash.—The accompanying plan shows the complicated changes in streets necessary to accomplish grade separation with the Northern Pacific at Division street and Sprague avenue, and gives a view of the Northern Pacific's proposed new passenger terminal, including the new depot which is to occupy the present park triangle at Bernard and Sprague. The change in street grades at Sprague and

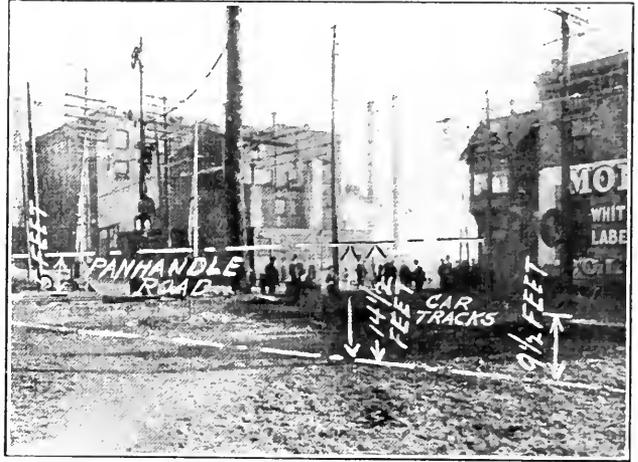

Division alone will cost the road \$200,000. Streets shaded have to be regraded. Their new grades between each block are shown by the figures "0.0 per cent.," "5.0 per cent.," etc. The present double track of the road where it crosses the intersection of Sprague and Division is widened to six tracks and has to be moved south several feet in order to be carried over the two streets by separate viaducts. The clearances of both these viaducts are shown. Bernard street will eventually be opened by a subway as shown in the cut.

Oiled Pavements Prove a Success

St. Augustine, Fla.—The oiling of San Marco avenue from the end of the brick pavement to the waterworks station is proving a most valuable experiment. A trip over the road with Mayor Masters and Street Commissioner Cray revealed a splendid highway. The shell paving was swept clean, the dust being worked off from the base with the street sweeper. The oil was then applied highly heated and on top of this was thrown fine shell and gravel. As the oil works up through this covering more is scattered on and in this way the material is firmly bound together with the asphaltic base which forms 50 per cent. of the road oil applied. A tank car of the road oil was purchased from the Standard Oil Company and it has covered approximately a mile. Besides Fort Marion Circle, San Marco was oiled to the city limits and on to the waterworks. The change wrought is already wonderful and it is stated that within a few weeks the road will be in still better condition.

Grade Crossing Elimination in Pittsburg

Pittsburg, Pa.—The Try street crossing, for many years a serious hindrance to traffic and a menace to life, is to be done away with. According to Public Works Director Joseph G. Armstrong work will soon be started. An agreement has been reached by the administration officials, the Pittsburg Railways Company and the Pennsylvania Railroad which insures the passing of the crossing. The cost will be about \$318,000, it is estimated, of which the railroad will pay \$131,200, the city \$116,800 and the railways com-

Courtesy Pittsburg Dispatch.
GRADE CROSSING, SHOWING PROPOSED CHANGES.

pany \$70,000. The plan is to elevate the railroad tracks 5 feet and lower the street car tracks 9.5 feet, making a total clearance under the railroad tracks of 14.5 feet. A 5 per cent. grade in Second avenue to Ross street and a 3 per cent. grade eastwardly for a distance of about 700 feet will be the result. The assurance that the dangerous crossing is to be abolished comes after years of seemingly fruitless negotiation between the city and the railways company.

Several States May Be Connected by Boulevard

Wilmington, Del.—The proposition made by General T. Coleman duPont to build a boulevard the entire length of Delaware at a cost of \$2,000,000 and present it to the State will result in other commonwealths continuing this big improvement, in a measure at least, from the Delaware line. The General Assembly at Dover will, it is expected, formally accept the offer this week by passing an amendment to the General Incorporation law permitting the incorporation of boulevard companies. It is stated that the residents of Worcester County, Maryland, are arranging to build an improved road to connect with the duPont boulevard at the latter's southern terminus, Selbyville, Del. It is intended to have the modern road run through Maryland to the Virginia line, where it will doubtless be taken up by the authorities of Northampton and Accomac counties. Other counties on the eastern shore of Maryland may emulate this example with parallel highways of up-to-date construction.

Tracks Declared a Nuisance

Brownsville, Tex.—The City Council passed a motion declaring the railroad tracks of the Brownsville & Gulf Railroad, which extend for about a mile through the heart of the city, to be a public nuisance and the city marshal was instructed to see that the same was abated at once. The road extends from near the tracks of the St. Louis, Brownsville & Mexico to the tracks of the Rio Grande Railway, and the only traffic that has passed over the road-bed for years has been flat cars loaded with wood for use on the Rio Grande engines. The cars are hauled back and forth by mules.

SEWERAGE AND SANITATION

Begin Work on Storm Sewer

Chico, Cal.—Work on Chico's new storm sewer system started last week. The first soil was turned on First street, near the Southern Pacific Railroad tracks. If the weather conditions continue favorable the contract will be pushed through to completion as rapidly as possible.

Bryan Sewer System

Bryan, Texas.—Ground was broken here last week for the \$12,000 sewer system for this city.

Sanitary Department Inspectors Bear Expense of Uniforms

Tampa, Fla.—There are no marks of provincialism about the present sanitary department. They are going to be uniformed. There being no money in the appropriation for these uniforms, the inspectors are paying for them out of their own pockets. Incidentally the sanitary inspectors have to own their own horses and pay for and keep up their own buggies. In a short while every one of the eight or nine inspectors who serve the city in the department in question, under Chief W. J. Bailey, is going to be out in neat khaki clothes, coats cut sack, with the words "Sanitary" neatly lettered on the jacket lapels. Campaign hats will complete the outfit, while instead of the heavy badges which they are now wearing—which resemble a breast-plate of yе olden times man-at-arms—they will wear neat little badges, a circlet of nickle properly lettered about a red cross. The net result is going to be a neatness which is always commendable; a distinct advance over the civilian attire which now, and has always heretofore marked the dress of the sanitary officers.

Plan to Take Waterway Around City

Portland, Ind.—Plans are being prepared by City Engineer O. O. Clayton for the taking around the city of the waters now carried by Miller's branch, running through the business part of the town. For years this waterway has been credited as a breeder of disease during the summer months, as well as a source of overflow to business houses in the lower portion of the city at every freshet. About eighty-five properties, specially benefited, will probably be assessed, with a general assessment over the city of approximately \$3 per lot.

Sewage Pours Into Water Mains

Lockport, N. Y.—An alarming discovery was made a short time ago when it was found that for some time past a large trunk line sewer carrying refuse from the City of North Tonawanda has been pouring its filth into the river at a point where, it was incidentally discovered, there was a leak in Lockport's intake pipe big enough for a man to walk through. The first attention to the condition was the suspicion at the pumping station that there was something wrong with the water being pumped. A thorough investigation was made at the station for the cause of the water being in such condition. It was found that near the main shore where the intake pipe, which is about eight feet under the bottom of the river, takes an upward turn, the current in the river had washed away the ground from under the pipe and uncovered the bottom of the bell which is located at the joint, leaving an opening large enough for a man to walk through. One of the principal trunk sewers in North Tonawanda, draining a large portion of the city north and south of Wheatfield street, empties into the Niagara river at the foot of Wheatfield street a few feet above this leak in the Lockport pipe. Necessarily, refuse carrying any amount of contamination was drawn into the well and pumped into the Lockport water mains and into homes in this city. Temporary repairs were made at once. The well in the pumping station was cleaned out and an enormous amount of refuse taken from it.

New Sewer System for Binghamton

Binghamton, N. Y.—Plans for intercepting sewers for the city, conducting the sewage of the entire city to a sewage disposal plant located below the city limits, have been approved by the State Commissioner of Health. The work is to be completed by September 1, 1914. The estimated cost of interceptor and disposal plant is \$320,000.

Anti-Spitting Ordinance Will Be Enforced

Louisville, Ky.—To enforce the anti-spitting ordinance, plain-clothes policemen will be placed on Louisville street cars within the next few days. It has been determined to break up the practice and the officials say that they feel that they must impose the law's penalty on all offenders, not so much as a punishment to them as an example to others, and as an earnest of the department's determination to enforce the ordinance. The City Health Department issued 100,000 little red slips yesterday upon which were printed warnings not to spit in public places. The little red slips will be given to street car conductors who have been instructed by the Louisville Railway Company to hand them to anyone caught spitting in the cars. The janitors of theatres, churches, public buildings, railway stations, office buildings, restaurants, saloons and other places, where men are accustomed to congregate, will also be supplied with the little slips.

Pure Food Ordinances for Dallas

Dallas, Texas.—City Attorney J. C. Collins, in consultation with City Chemist Dr. Landon C. Moore, drafted an ordinance regulating the handling of milk and the sanitary condition of dairies. Another ordinance will prohibit the exposure to dust of foodstuffs when on sale.

Paper Towels for Schools

Hackensack, N. J.—Ten thousand paper towels have been authorized by the Board of Education for the use of the pupils in the schools. It is claimed that paper towels used once and thrown away are more sanitary than a cloth towel used continuously by different pupils, and it is aimed to eliminate as much as possible the danger of contagion.

Drinking Cup Must Go.

Burlington, Vt.—The quarterly bulletin of the Vermont State Board of Health, bearing date of March 1, contains the copy of a regulation adopted by the State Board February 9, prohibiting the use of the "common drinking cup" in all public places, parks, fountains, school houses, factories, mills, work shops, libraries, railroad stations and railroad trains from and after May 1 next.

Topeka, Kan.—The State Board of Health last week sent a communication to all the hotels of the state informing the proprietors that the Board has adopted a resolution prohibiting the use of the common drinking cup in their hotels.

Trenton, N. J.—A bill has been passed by the Legislature forbidding the use of the common drinking cup for public places.

Office of City Bacteriologist Created

Portsmouth, Va.—The ordinance providing for a City Bacteriologist to be selected by the Board of Health and elected by the Council, has been passed by the Council. The ordinance provided that the officer should receive a salary of \$75 per month, but this was changed by amendment. There were two amendments offered, one by Dr. Bilisoly that the bacteriologist be required to also serve the water commission, and one by Mr. Hawks, that the salary be \$800 per annum, and these were carried.

Hypochlorite of Lime Substituted in Water Purification

Erie, Pa.—Hypochlorite of lime solution has been substituted for copper sulphate solution in the purification and sterilization of the city water supply. The change was made by the water commissioners last week and has been reported to be in perfect working order. For the present the new plant is under the direction of Engineer Jennings, who came from Chicago to put the system into operation. The change has been recommended by the three experts brought here by the Water Board to conduct an investigation. It has been concurred in by the State Health Department. Two reasons are given for the adoption of the lime solution in preference to the copper solution. The first reason is that it is used generally where purification and sterilization of water supply has to be carried on. The second reason is that the expense of the lime solution is considerably less than the copper sulphate. The State Health Department adopted the copper solution largely because it could be started easily and quickly.

Trunk Sewer Can Be Built Under Estimated Cost

Newark, N. J.—Estimating the cost of the construction of the proposed Passaic Valley trunk sewer at \$15,000 less than the estimate of the engineers of the Sewerage Commission the contracting firm of McArthur Brothers, of New York, has submitted a report to the commissioners showing that the entire construction work on the sewer could be done for \$12,235,000. The commission's engineers estimated that the work would cost about \$12,250,000. The McArthur firm is one of the best known constructing firms in the United States. The firm at present is engaged in building an Ashokan reservoir for New York City, which is a contract for \$12,000,000. The estimate was submitted by the New York firm at the request of the Passaic Valley sewer commissioners, who wished to have a reputable contracting firm present an estimate of the cost with a view to showing that the work could be done as the commissioners claimed for \$12,250,000. It had been contended by those fighting the sewer that it could not be built for anything near that figure.

Double System of Sewers for Bridgeport

Bridgeport, Conn.—That section of the North End on both sides of Main street, from Wheeler avenue northerly, will be the first to be benefited by the Hering sewer system which has received the endorsement of the Board of Apportionment and the Common Council. The Aldermanic committee on sewers has inspected the territory preparatory to a recommendation to the Council of the construction of a storm water sewer, the first to be built in accordance with the plans of Mr. Hering, the sewer expert of international reputation, for a double sewer system. The territory that is to be drained has a sanitary sewer that is of sufficient capacity to meet the demands of the present. The storm water sewer to be constructed at once will be paid out of the regular appropriation of the Board of Apportionment of \$22,500 for sewer construction and the Dindley street trunk sewer extension will be paid from the proceeds of the \$100,000 bond issue for further sewer work in accordance with the Hering plan. This city now has one storm sewer in Iranistan avenue, constructed some time ago to meet peculiar conditions which existed in that territory. In the future the city will build storm sewers where they are needed and from year to year the Hering plan will be followed until such time as the double system is in good working order. In future years all of the sewage will be carried away by sanitary sewers and rain fall will be disposed of in a special sewer.

Sewerage Improvements Will Not Make River Water Safe

Yonkers, N. Y.—At a recent joint meeting of the Common Council and the Water Supply Committees, testimony of experts was heard regarding the possibility of using the Bronx River as a source of water supply. Both Expert Allen Hazen and City Engineer Samuel L. Cooper expressed the opinion that the city should entertain little hope of solving the water problem by going to the Bronx River, even after the Bronx sewer has been constructed. Sewer construction has never yet been known to purify streams, Mr. Hazen said, and Mr. Cooper reiterated it. Of course, said Mr. Cooper, if you employ powerful enough methods and a sufficient amount of money you can make drinking water out of sewage itself. But, he added, the Bronx River is so far polluted that it would be inadvisable to use it and Mr. Cooper held that it would hardly serve the ends of economy to transfer the water from that stream to the city mains.

Buy Drinking Water for City Schools

Buffalo, N. Y.—The lowest of several bids to supply the public schools with pure drinking water, as recommended by the Health Department and the Committee on Schools, has been reported by Commissioner Ward as 20 cents a gallon, which would cost the city \$281 a day to supply all the public schools. For the 65 days remaining of the present school term this would amount to \$18,800. This would allow each child a pint a day. It was decided to supply this water as the ice will soon break up and then will come the danger of contamination of the water from ice drifting down from Erie, where a typhoid epidemic has been raging this winter. By the time the children return to school in the fall the schools will have been equipped with filters.

WATER SUPPLY

Profit in Municipal Water Works Will Reduce Rate

Youngstown, O.—Youngstown users of city water have reason to expect a reduction in water rates by next year at least. The report of the State Examiner made public several days ago establishes this fact since the water department has been conducted at a substantial profit for several years past and patrons are entitled to this gain. For various reasons no general reduction in rates will likely be made this year. The chaotic state in which the municipalities of Ohio now find themselves because of the many different taxation measures proposed for passage by the legislature makes any reduction in the revenue of the city's water department inadvisable at present. In addition to this the city is now undertaking an immense departure in the water supply line in the proposed construction of the Milton reservoir, to which the excess revenue from this department can be profitably applied.

Municipal Water Plant Highly Profitable

Los Angeles, Cal.—If the municipal water system of Los Angeles were sold for what it proved itself to be worth last year there would be a little more than \$46 coming to every man, woman and child in Los Angeles, providing the money were equally distributed. Moreover, if the money it has earned above expenses since 1902 were now lumped and equally divided, every man, woman and child would get about \$19.68. These figures show graphically what it means to the city to conduct the most successful example of a municipally-owned public utility in the United States. The city water department is that. There is no other city in America, it is said, where municipal ownership has proved such a brilliant and practical experiment. Last year—that is, for the year ended June 30, 1910—according to the city's books, the water department earned \$1,107,199. Its operating expenses were \$239,792, and its profit therefore was \$867,407. This profit makes it possible to put a capitalized value on the plant. The amount represents 5 per cent. interest on a capitalization of over \$17,000,000. The actual physical value of the plant is about \$6,000,000.

Municipal Water Plant Asked for in Citizens' Petition

Superior, Wis.—A petition is being circulated in the interest of the purchase by the city of the water plant of the Superior Water, Light & Power Company. This petition will be presented to the Common Council in the near future. The petition mentions two alternatives by which the city can secure a water plant. One is to buy the water company's plant at a fair valuation and the other is to build and maintain a separate system. It is asserted that Duluth with a municipal water plant is giving consumers water at half the rate charged here and asks to have the question of issuing bonds submitted to the electors.

New High Service Pump Installed

Milwaukee, Wis.—The official test has been made of the 12,000,000 gallon high service pump No. 8 in the North Point pumping station. The pump was installed by the Allis-Chalmers Company at a cost of \$63,000. It is now felt that the city is well fortified against the summer season so far as water supply is concerned.

Report of Water Commissioners Shows Increase

Merrimac, Mass.—The Board of Water Commissioners report that during the past year they have added 34 services, making a total of 476; laid 25 service pipes, making a total of 416. There are 20 services shut off at this number; six are double services where only one is being used. During the year 30,028,996 gallons of water have been pumped. Water takers have consumed a much larger proportion of the water pumped than ever before, the receipts being \$4,575.41, exceeding last year's receipts by \$1,491.08. For several years the commissioners have been trying various compounds for removing scale from the boilers without success. Some two months ago the inspector advised the commissioners to take water from the swamp for the boilers. They acted on his advice and it has proved a success, as it has already removed large quantities of the scale, leaving the parts perfectly clean.

STREET LIGHTING AND POWER

Lighting System Has Been Completed

Lodi, Cal.—City Superintendent John Henning, who recently prepared a wiring and lighting system for this city, has announced to the Trustees that his task has been completed and the work nearly finished. Most of the new lights have been installed in East Lodi, which has been poorly lighted heretofore. They are of the Tungsten type and are 80 candle power.

Effort to Reduce Lighting Rate May Cause Litigation

Toledo, Ohio.—An electrical lighting war, involving 6,500 Toledo residence consumers, extensive litigation and an alternative intimation by the company that it would cut off domestic service made unprofitable by a reduced rate, is the threatened result of the adoption by council committee on lighting of a schedule providing a five cent net rate for residence lighting. President A. E. Lang, of the Rail-Light, promptly told the committee that the company absolutely will not accept the proposed rate, and Attorney Rathburn Fuller announced that if it is ratified by Council the company will bring suit to enjoin the city from putting it into operation.

Hopes to Make Municipal Light Plant Pay

Cleveland, Ohio.—S. G. Beckwith, superintendent of the municipal lighting plant is preparing a report which he will submit to the Director of Public Service in the near future showing just why, in his opinion, the plant has not paid in former years. He states that there is no reason why a power plant run by the municipality should not pay as well as one run by private corporations; that it should do more than merely pay the actual cost of running; it ought to pay an interest on the investment sufficient at least to cover the depreciation from wear and tear. If it is not doing that it is a failure. The growth of patronage of the plant is steady and, Mr. Beckwith believes that with proper economy in management it will be able to care for itself without the appropriation of funds raised by taxation.

Remove Poles and Wires

Wishawaka, Ind.—Ideas expressed at the March meeting of the Business Men's Association that wires and poles be removed from the principal streets of the city and placed in alleys, wherever such a change is practicable, are having some fruit, as the city electrical department recently started work transferring some of the city's wires to poles in the alleys in the fire limits. Within the next few months through the movement started by the merchants and aided by the city, the main streets of the city and the business district may be entirely freed from the poles and wires.

Light Plant Acquired by City.

Alliance, Neb.—The controversy between the City of Alliance and the Electric Light and Power Company has now been finally settled by the city taking over the plant for \$55,000. Warrants have been issued for \$40,000 and the balance of \$15,000 will be paid in three annual installments of \$5,000 each.

Municipal Plants Pay

Sharpsburg, Pa.—Albert H. Young, borough clerk of Sharpsburg, has filed with the Bureau of Statistics at Washington a report of the financial condition of the municipal lighting plant and water works of Sharpsburg. The report shows that the cost of each arc lamp is \$32.60 per annum, and that during the last ten months the plant earned a profit of \$5,000. This profit accrues from the sale of current for commercial lighting. It is also shown that the water works has a profit of \$7,000 for a corresponding period. The light plant and water works represent an investment by the borough of \$100,000.

Says City's Contract Will Damage Plant

Trenton, N. J.—The Atlantic City Gas Company has filed a petition with the Board of Public Utility Commissioners protesting against the city's installing a drainage canal and general underground drainage system, claiming that it will compel the company to take out two 20-in. trunk mains and a 20-in. pumping main which supply gas to the city, result in great inconvenience to the public and damage the company to the extent of \$20,000.

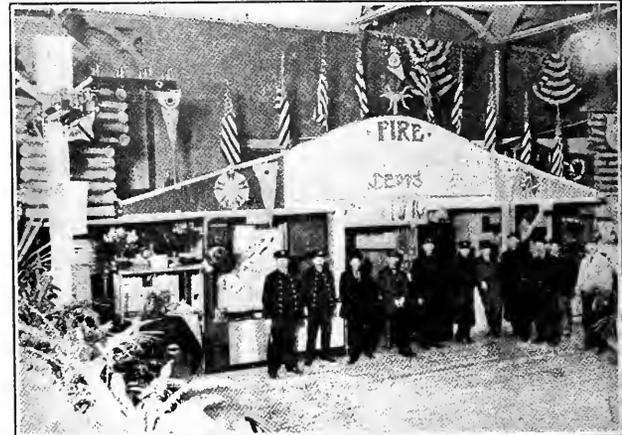

FIRE AND POLICE

Fire Ordinance Regulating Theaters

Janesville, Wis.—City Attorney H. L. Maxfield has completed the drafting of an ordinance regulating the operation of moving picture machines, theaters and amusement halls in this city, safeguarding the public in the case of fire in these amusement places and requiring the owners to take precautions to prevent any conflagrations. The measure is most complete and covers all possible contingencies regarding fire prevention in moving picture halls and theaters. Among the matters which are treated in the ordinance as drafted is a section governing the moving picture machine which provides that various equipments be provided to minimize the possibility of fire and that it shall be located in an enclosed galvanized room lined with asbestos sheeting. The chief of the fire department is empowered to inspect all apparatus after it has been installed, which shall be within two months after the passing of the ordinance. It is also his duty to enforce the provisions in the measure regarding the equipment necessary.

Police and Firemen's Booth at Municipal Show

Toledo, O.—The police and firemen's booth is one of the popular places in the Municipal Exhibit at Memorial Hall. Citizens, young and old, were attracted to the engrossing process of "looking in" upon the mysteries which the Police Department has for them through the medium of the telephones having direct connection with the central station. There are a dozen waiting for each receiver and

Courtesy Toledo Blade

BOOTH AT THE MUNICIPAL SHOW

the clerks and officers in the booth have a busy time answering all the curious questions asked them. By this practical method people are getting a better insight into the complicated, yet really simple, methods taken by the police and fire departments to safeguard property and prevent crime or to capture the criminal after its commission. The booth has all the charms of the mysterious and is splendidly conceived and handled for the purpose for which it was conceived—the enlightenment of the people of Toledo.

Want Women on Police Force

Jersey City, N. J.—It is possible that women may be regular members of the police force in New Jersey if a bill now pending in the Legislature at Trenton is passed. The measure provides for appointment of women to the police force in every town and city in the State. It is not framed with the intention of having the women police perform all the functions of the departments, but has as its object their assignment to duty in dance halls, moving picture theatres, public parks and other recreation centres. In twelve cities in the United States the plan of having women policemen do the light work has been tried with good results, it is said.

New Night Police Signal Installed

Warsaw, Ind.—In order to give better protection to the citizens of Warsaw, the City Council has decided to place in service a night police signal, in the form of a red electric light, placed in a conspicuous place in the heart of the city and operated by a switch at the telephone station.

GOVERNMENT AND FINANCE

Plans Parole System for Municipal Court

South Bend, Ind.—The South Bend City Court will take on a more metropolitan air with the establishment of parole system, similar to that in vogue in many of the larger cities. Prisoners given suspended sentences will appear before the Magistrate once a week to report his or her behavior, in accordance with a plan outlined by Judge Farabaugh recently. The measure will become effective at once.

City to Buy all Utilities

Winnipeg, Man.—Winnipeg is about to become the greatest exemplar of municipal ownership on the continent. The City Council last week decided to buy out the Winnipeg Electric Company, controlling the street railway, electric light, power and gas franchises. With this effected the city will own all the public utilities here.

Commission Government Elections

Wilmington, N. C.—By popular vote Wilmington adopted the commission plan of government, the vote being practically unanimous, there being only 22 votes cast against the measure out of a total of 1,200.

Wyandotte, Mich.—Wyandotte is the fourth Michigan city to adopt the commission form of government. Contrary to the prophesies of the city officials, the proposition was carried at a special election by a tremendous majority. The vote was 777 for and 298 against.

Aberdeen, S. D.—At a special election Aberdeen voted to adopt the commission form of government, conducting its municipal affairs by the aid of a mayor and four commissioners instead of by the mayor and council system. The vote stood: For the commission form, 1,003; against, 535.

Oklahoma City, Okla.—Oklahoma City adopted the commission form of government by about 1,200 majority.

Peoria, Ill.—Government by commission was defeated by a majority of 735.

Spokane, Wash.—What is declared by experts to be the most advanced practical plan of municipal government by commission in America is now in operation in Spokane. Five commissioners, chosen from among 92 candidates at a special election on March 7, when women exercised the right of the ballot for the first time in the history of the city, have been formally inducted into office, retiring Mayor Nelson S. Pratt and 10 Councilmen.

City's Share of Street Railway Profits

Chicago, Ill.—The city's share of the net receipts of the Chicago City Railway Company, which controls the surface lines in the southern part of the city, will be \$829,914, or 5 per cent of the net receipts. This is an increase of \$355,000 over last year, which is accounted for in the reduction of operating expenses. The money, which will be turned into the city treasury by April 10, is the fourth payment by the company since the passage of the franchise ordinance in 1907 and makes a total in four years of \$2,593,026.

Propose Annual Assessment for Sidewalk Space

Erie, Pa.—The matter of forcing merchants to pay a revenue to the city for signs extended over the sidewalks and for show cases, display cases, fruit and grocery stands, bulletin boards and other outdoor advertising devices placed on city property was discussed at the meeting of the joint street committee of Councils last week. Councilman Bideker called the attention of the members of the committee to the proposition, which, he said, was one way in which the municipal finances might be increased. Five dollars a square yard was the value set on street sidewalk space.

Auto Pay Car Is Planned

St. Louis, Mo.—An ordinance to equip the city with an automobile pay car, in which representatives of the City Treasurer will travel to the city institutions and other outlying districts to pay off city employees, was introduced into the Council at a recent session. The automobile is to be assigned to the City Treasurer's office, and is to be equipped with a stationary strong box for safeguarding the funds transported and stations for armed guards. An appropriation of \$4,000 is carried by the bill.

Argue Greater City Bill

Harrisburg, Pa.—Over 400 residents of Allegheny County, representing Pittsburg and various boroughs and townships and a number of residents of Wilkes-Barre, Scranton and other cities, attended the public hearing held in the hall of the House of Representatives last week on the Allen bill to permit annexation of territory contiguous to municipalities. The bill allows annexation by the combined vote of the district to be annexed and the community to which it is to be annexed. The bill was presented with the support of Mayor William A. Magee and prominent residents of Pittsburg, and is designed to extend the limits of that city by taking in surrounding towns. It was stated to-night that the bill would affect 35 boroughs in the vicinity of Pittsburg and would also enable numerous other cities to expand, Wilkes-Barre, for instance, being able, if the bill passes, to enlarge its area from 4½ square miles to 23, and to obtain a population of 135,000, which would put it in the second class with Scranton. The bill would also enable Harrisburg to annex Steelton, and York to take in the boroughs about its boundaries. It was stated to-night that the bill is favored by residents of Erie, Meadville, Lancaster and other cities, as well as Pittsburg.

Will Vote on Annexation

Freeport, Ill.—The voters of Freeport will have a chance to increase the city's population by about 300 at the city election April 4. It was decided by the City Council at a special meeting to place the annexation of a part of Silver Creek township on the ballot and an ordinance to that effect was passed. The petitions for annexation were signed by 71 property owners and by 32 voters of Silver Creek, making a majority of 32 property owners and six voters for annexation.

Citizens Protest Against Officials' Extravagance

Milwaukee, Wis.—Resolutions protesting against "extravagance on the part of the present city administration" were adopted at a mass meeting of 150 taxpayers last week in the Twentieth Ward, one of the strongest Socialist wards in the city.

The resolutions adopted follow:

Whereas, the present administration has shown by its acts that it does not propose to live up to its proclaimed promises; and

Whereas, it is squandering the taxpayer's money without giving him an opportunity to express his wishes in regard to the expenditure of that money; and

Whereas, it is now prevailing upon the State Legislature to pass bills which would enable the city to engage in the ice business, slaughter house business, plumbing business and undertake to make public improvements by engaging with whom, when and at the price it sees fit, thereby laying a foundation for corruption of the worst type; and the Council

Whereas, it openly and flagrantly goes contrary to the Councilman of the people of the city, as was plainly demonstrated by the association's refusal to submit the river park proposition to the people, because, in its words, "they would vote down the project at this time";

Whereas, the practices inaugurated by them are prepared to government by the present administration census figures for this dangerous precedents and are not found only 34,670 people pledges; and it serves daily 47,789

Whereas, the present administration seven days by the twenty-two to introduce into our city a system that each served an average of "Somers system," which coverage of 409 places. Figured station has shown some very val to a family this makes a ble to the conditions in our city 6,000.

Resolved, that we, the citizens of Milwaukee, in mass meeting, have been started on the new do most earnestly and land, on the site of the structure demanner in which the market ago, by Henry L. Brown, of Philadelphia by the present Mayor. It is rumored that some citizens

Resolved, that we, the citizens of Milwaukee, at this time will of the \$1,000,000 river by injunction.

test against the introduction of City Limits Acquired for Park

valuation, urging the City Council to continue the acquisition of land outside the city limits for a park. Sufficient and desirable land outside the city limits for a park. Superintendent of Parks John W. Duncan states that he has vote of the people for the improvement of the new park, which

The rescuers have no name.

STREET CLEANING AND REFUSE DISPOSAL

Destructor Plant the Best Solution

Paterson, N. J.—The report of William F. Morse, the Sanitary Engineer who was employed by the Board of Works for the purpose of making an investigation of Paterson's waste disposal problem with the idea of making a recommendation as to what had best be done in this city has been presented to the board. The report is a lengthy one, but his recommendations may be summarized in the statement that he recommends the construction of a main destructor plant of 100 tons daily capacity at a cost of about \$100,000 and a yearly maintenance cost of \$21,800; together with the erection of another smaller plant in the over-the-river section, with a capacity of about 40 tons, at a cost of approximately \$60,000, with a maintenance cost of about \$10,000 a year. In addition to this, there would be the cost of collecting the garbage and bringing it to the plants for destruction, which would be in the neighborhood of \$16,000. This would mean an annual total maintenance cost of about \$47,800. To offset this there is an estimated revenue from the plants for horsepower and clinker product of about \$20,000.

Leavenworth Will Have Clean-up Day

Leavenworth, Kan.—Mayor Abernathy will be petitioned by a committee from the Civic League to issue a proclamation for a clean-up on May 13. If granted the women of the league will start immediately to interest the members of the Junior League, a children's auxiliary. They have been instrumental in making the clean-up days of the last two years successful. Clean-up day is original with Leavenworth. It was inaugurated by the Civic League. Many cities of the United States have taken this means of making their streets and vacant lots presentable to visitors and a pleasing sight to their citizens. Trash of all kinds is gathered by the workers and removed by wagons. It is the intention of the workers to finish the clean-up in one day.

City to Co-operate with Board of Trade in Clean-up

Paterson, N. J.—Extensive plans have been made by a committee of the Board of Trade for a "clean-up" day for Paterson. One of the matters which has been worrying the members of the committee is as to how they should get rid of the great quantities of dirt and refuse which would be gathered by the citizens during the progress of the campaign, for if the committee was forced to hire the necessary wagons and teams it would mean the expenditure through a great deal of money. The matter was called to the attention of the members of the Board of Public Works, and a resolution was decided that the city would dispose of all the refuse in barrels, boxes or piles.

Alliance to Buy Street Flusher to Take Place of Sweeper

Alliance and Wash.—Within the coming week the new Alliance has finally decided which the Purchasing Committee of the for \$55,000. Warrington will be in operation on the paved streets of the balance of \$15,000. After having the machine explained to the members of the committee it would mean the expenditure of \$5,000 each. They have viewed similar machines in operation in other cities.

Municipal Committee Decided in its Favor

Sharpsburg, Pa.—At the last meeting decided that they should buy this machine by money by buying this machine. The committee found it satisfactory. The city of Sharpsburg, has filed with the Board of Public Works a report of the findings of the committee. It is necessary to buy a street lighting plant and water works. It would be necessary to buy a street sweeper and that during the last ten years. This would involve an expenditure of \$5,000. This profit accrued from the sale of the commercial lighting. It is also necessary to buy a street sweeper and requires a profit of \$7,000 for a corresponding water can be drawn with a plant and water works represent an expenditure of \$100,000. The newly acquired machine will sweep both sides of a block.

Says City's Contract Will Be

Trenton, N. J.—The Atlantic City Gas Company has filed a petition with the Board of Public Utilities protesting against the city's installing a gas system in Chicago's downtown district. The city claims that the gas system is a ball and chain and will compel the company to take out two 20-in. trunk lines, which will be used for the protection of the public and damage to the property to the extent of \$20,000.

RAPID TRANSIT

Municipal Street Car Line

Seattle, Wash.—One of the first acts of the new city administration will be to advertise for sale \$800,000 in bonds for the construction of a municipal street car line. Then will begin the most extensive experiment in public owned surface lines since Tom Johnson's attempt at Cleveland. With the \$800,000 the city proposes to construct and operate a 13-mile trunk line from Ballard, one of its northernmost wards, to the Rainier Valley in the south end, crossing the central business district and intersecting all the existing lines of the Seattle Electric Company, a Boston-owned corporation. Instead of building a track through the three miles in the center of the city the Government line will use a section of the Seattle Electric Company's tracks by virtue of a "common user" clause in its franchise. From the northern end of this section to Rainier Valley the city will parallel the tracks of the Seattle, Benton & Southern, an independent interurban line that has given patrons and city officials much trouble for several years. Through much of the distance the city will lay its tracks on the same streets used by the interurban, placing them outside the existing tracks if that company refuses to sell or make agreement for joint use. From the southern end of the joint track to Ballard the city will build an entirely new line through territory not now enjoying good street car service. It will follow around a hillside for three miles and will draw all the patronage of those living above the line, for now those people have to climb several blocks of a typical Seattle hillside to reach an existing line. It is expected that this three miles of line will open up to settlement a large area, comparatively close in, that is now sparsely settled.

Electric Freight Line Proposed

New Bedford, Mass.—Prominent citizens of the north end of the city, who have threshed the matter over thoroughly, have come to the conclusion that they would like to have the Union Street Railway Company lay tracks extensively through the north end which would supply the mills in that territory with freight which would be delivered at late hours of the night or very early in the morning. One of the features of the proposed railroad is that in day time the lines could be used by passenger cars to transport mill operatives of these north end mills which are situated on the water front and now a long way from the car lines. Should the idea be properly handled and passed the freight would not go through the city until after 11 or 12 o'clock at night and would stop at daylight. All possible danger would be eliminated in this way, and those who are behind the movement are enthusiastic over what they think can be developed into a very useful builder of the north end.

Postal Boxes in Cars

Washington, D. C.—Washington soon may have street car letter boxes. The scheme already has been tried successfully in several other cities. Announcement was made at the Postoffice Department recently that the local street railway companies are being communicated with regarding the installation of letter boxes on each car passing the city postoffice or any of its substations. At first but a few mail boxes will be installed, but if the idea is found feasible the boxes will be placed on a majority of the street cars of Washington, according to present plans. Passengers can post their letters on the street cars without the necessity of alighting and looking for a mail box. The boxes can be emptied every time the cars pass the postoffice, and the delivery of the mail thus expedited.

Vestibules for Street Car Crews

Dover, Del.—The Senate last week passed the House bill providing that electric cars shall be equipped with enclosed vestibules from November to March for the protection of conductors and motormen. When the bill passed the House it also provided for rubber curtains on summer cars for the protection of the crews on rainy days. The Senate amended the curtain requirement out of the bill.

Want Lights on Cars

Michigan City, Ind.—The Common Council is again after the Northern Indiana Railway Company to display colored lights on its cars designating their destination. An ordinance has been passed, but the Council has been informed that it is not being enforced.

Pay-As-You-Enter Cars in Texarkana

Texarkana, Ark.—Texarkana is rapidly becoming one of the most metropolitan small cities in the country. Pay-as-you-enter street cars will be introduced in Texarkana during the coming summer. It is expected that the cars will be in use by July 1.

MISCELLANEOUS

Illegal Appointment of Commissioner of Public Works Brings Trouble

Milwaukee, Wis.—The illegal appointment of Harry E. Briggs as Commissioner of Public Works has had a far-reaching effect. Special taxes for 1910, aggregating \$848,872.74, have been invalidated; buyers of nearly all of the delinquent taxes refused to accept the city certificates amounting to almost \$160,000; every assessment of benefits and damages made by Mr. Briggs is invalid, and half a hundred suits probably will be brought against the city as a result of the failure of the Council legally to adopt chapter 297 of the laws of 1907 providing a one-man board of Public Works. Steps have been taken by the Council to remedy the blunder committed by the Socialist Council on April 19, 1910, in attempting to change the law without referring it to a committee as required by law.

Smoke Ordinance Passed

Knoxville, Tenn.—Not a single vote was recorded against the smoke ordinance that was passed at the meeting of the City Council last week. The ordinance passed provides for the prevention of smoke pouring from the stacks and chimneys of all hotels, apartment houses, factories and plants in the city where a boiler is used. It further provides that the building inspector shall assume the duties of smoke inspector. The ordinance does not become effective until June 1, 1911. To prevent working a hardship the owner of a factory or building where the smoke consumer must be put on can by applying to the building inspector secure a permit to extend the time six months, but no permit will be granted after January 1, 1912. The ordinance makes it the duty of the building inspector to inspect the various places where he finds the smoke ordinance violated and to notify the owners of the property to install a smoke consumer within sixty days. The ordinance further makes it the duty of the building inspector when a party does not comply with this notice to have him cited before the recorder and makes the non-compliance with the ordinance a fine of not less than \$3 nor more than \$50. The building and smoke inspector will at once take notice of the new ordinance and begin to send out notices to present offenders. An unusual amount of interest in the smoke nuisance ordinance has been manifested and the announcement of its passage was received with enthusiasm by members of the City Beautiful League who have been behind the movement.

City to Buy Site for Playground

Providence, R. I.—The Board of Contract and Supply of the city of Providence have voted to purchase the Garribaldi playground on Brayton avenue and West Exchange street. The decision was reached after the board had made a tour of inspection of several possible sites for playgrounds in the neighborhood. The land, which is owned by the Providence Land and Wharf Company, includes 49,519 square feet and the price to be paid will be approximately 40 cents a square foot. It has been for two years very successfully utilized by the Providence Playground Association as a playground. According to Mayor Henry Fletcher, the chairman of the Board of Contract and Supply, the need of a playground in that vicinity has been plainly demonstrated by the great number of children in the immediate vicinity, who have had the advantage offered for play the past two years through the efforts of the Providence Playground Association.

Will Start a Municipal Restaurant

Kansas City, Mo.—Kansas City is going into the restaurant business and no longer will those who visit Swope Park, in this city, forgetting to take their lunch, be compelled to go hungry while they roam over the 1,324 acres within its confines. The City Park Board has decided that hereafter a real old-fashioned country dinner will be served on the grounds during the summer. The lunch stand, which has heretofore been leased, will be operated by the city and, besides the dinner, meals can be obtained at any time. Charges for the food sold at the park will be regulated so as to only pay the actual expense of the business. As all city employees must take the civil service examination, the cooks, waitresses and waiters will have to pass this before they can be employed. All of the equipment used in a first-class restaurant will be purchased by the city for use in its café.

Plan Municipal Athletic Field and Running Track

Spokane, Wash.—Establish four large playgrounds containing between eight and twelve acres each. Provide small playgrounds in the vicinities of many of the large ward schools. Install an athletic field and quarter-mile running track for the use of all athletes in the city. Provide at least 15 small neighborhood parks at various points about the city. These are the salient features of a comprehensive plan being worked out by W. J. C. Wakefield, one of the members of the Spokane Park Commission. "These are some of the important features which I intend to recommend and strive to see inaugurated in Spokane's park plan as soon as the \$1,000,000 authorized at the election is available from the sale of the bonds," states Mr. Wakefield.

Foreign Tress for Topeka

Topeka, Kan.—The United States Bureau of Plant Industry, Peter Bissett, expert plant introducer, will send to Superintendent of Parks E. F. A. Reinisch a number of each of 11 species of foreign trees to be planted in the park nurseries. Eight species from China and one each from Russia, Madeira and Arizona. Two species of five plants each are Conifers: a pine from China, attaining a height of from 80 to 100 feet, bearing edible nuts, and a cypress from Arizona 40 to 70 feet high when full grown. The plants are sent here for trial to test their hardiness in this climate and other characteristics. They will be closely observed and reports made to the Department of Agriculture, Bureau of Plant Industry. The plants remain the property of the city and will be used in permanent park planting.

Public Playground Needed

Michigan City, Ind.—Steps were taken last week at the Common Council meeting to provide Michigan City with a public playground. A communication was submitted by a committee of the Charities Association asking the Council to look into the matter and upon motion of Councilman Hanley a committee was appointed to meet with the association's committee to talk the matter over.

Census Dispute at Joliet

Joliet, Ill.—Joliet officials declare they are prepared to claim a mistake in the count in the census figures for this city. While the census department found only 34,670 people the post office department reported it serves daily 47,789 patrons. A record was kept for seven days by the twenty-seven carriers and it was learned that each served an average of 1,733 people and an average of 409 places. Figured on a basis of four and one-half to a family this makes a population of approximately 46,000.

Rebuilding City Hall

Cumberland, Md.—Work has been started on the new City Hall for Cumberland, on the site of the structure destroyed by fire a year ago, by Henry L. Brown, of Philadelphia, the contractor. It is rumored that some citizens opposed to the erection of the City Hall at this time will try to stop the work by injunction.

Land Outside City Limits Acquired for Park

Spokane, Wtsh.—The Spokane Park Board has acquired 124½ acres of land outside the city limits for a park. Superintendent of Parks John W. Duncan states that he has made no plans for the improvement of the new park, which as yet has no name.

Artistic Cement Work May Be Done by City

Los Angeles, Cal.—Artificial stone seats and other cement work in the parks may be made soon by a separate department of the city under the direction of the Park Board, if present plans do not miscarry. The equipment necessary to work of that kind is said to cost comparatively little, consisting mostly of a designing room, pattern shop and small work room. In addition, a man who is an artist, designer and workman all in one is said to be necessary, and the members of the Park Board declare there is just such a man employed in the department now. If the cement plant is established he probably will be placed in charge.

Free Meals at Schools

Boston, Mass.—A bill has been introduced in the Legislature providing for free meals for children at public schools. It is said that if a child does not get sufficient food to develop the brain he is wasting time in school. The plan of feeding school children is very generally followed in Europe and has been adopted in some cities of the United States.

Attempt to Force Wires of Telephone Under Ground

El Paso, Tex.—The first move for burying the telephone and telegraph wires underground in the residence district is being made. The property owners along Upson avenue from Santa Fé to Fisher streets are making an effort to have the telephone and lighting wires placed in conduits under the surface of the street before the paving is laid. The conduit for the telephone wires into the Anson Mills Building has been laid across Pioneer plaza and the paving replaced. The conduit leads from the cable in "Sheldon avenue" to the basement entrance to the Mills building.

Offer Prizes for Beautification

Norfolk, Va.—Public-spirited citizens have offered cash prizes amounting to about \$200 in an effort to interest people in beautifying the city. The points of excellence upon which the judges to be appointed by the Woman's Club, Board of Control and Business Men's Association will render their awards are: 1. The best kept grass lawn in the city. 2. The best kept parkway-areas and street trees in the city. 3. The most artistic arrangement of shrubbery, flowers and trees upon the lawn. 4. The most beautiful vine or rose-covered house or porch in the city. 5. The most beautiful vines and plants inside or outside window boxes in the city. 6. The neatest, cleanest and best kept school ground and the street block of which the school grounds form a part, in the city. 7. The cleanest and best kept back premises, yards and gardens in the city.

Council Rewards a Horse

Minneapolis, Minn.—Twenty years of faithful service given the city by a horse so moved the hearts of the city fathers that they voted a reward of merit to the deserving animal. The horse is Billy, which has been running with the ambulance. Chief Corrison pleaded with the police committee to retire the horse to a life of ease for the rest of its days, and the committee recommended to the Council that this be done. Billy was turned over to the Humane Society and will be left to roam at will about the workhouse farm.

St. Louis Plans for a City Beautiful

St. Louis, Mo.—The bill establishing a City Plan Commission to plan for a City Beautiful was passed by the House of Delegates last week and now goes to the Mayor. The bill carries no appropriation and provides for a commission of 15 members.

File Petition for Park Plan Election

Columbus, O.—The petitions which the Chamber of Commerce have had in circulation for several months asking for a special election on the question of creating a park commission for Columbus have been filed with the Board of Elections. They have practically double the number of names required for the calling of the special election, and, according to the law, the Election Board has no alternative but to fix the date and make other arrangements for the election. It is expected the date will be announced within the next few days. The law provides for the calling of the election within 30 days after the filing of the petitions.

City to Acquire State Fair Grounds

Memphis, Tenn.—Memphis is considering the matter of purchasing the grounds of the Tri-State Fair, formerly Montgomery Park, one of the best race courses in the country, and making of it a public park and a place for the annual fair. It is proposed to issue \$400,000 or \$500,000 in bonds for the purchase and improvement of the property. The proposition is to operate it on the plan adopted in Dallas to meet similar conditions. The Dallas plan of maintaining an agricultural and live stock exhibition, which is recognized as one of the leading public attractions of its nature in the United States, was adopted after the fair was operated for a number of years at a financial loss. It was seen that they could not go further without public aid and the city of Dallas then came to the rescue with a scheme similar to the one proposed for Memphis. During the days of the Fair in Dallas the Fair Grounds are in charge of the Fair Association. During the rest of the year it is in the hands of the city and is used for public park purposes. The contract entered into between the city and the Dallas Fair Association was signed in 1904. Since that time it is said the association has earned net something over \$450,000, besides paying out nearly as much in premiums and prizes, \$350,000 in permanent improvements and having left a cash balance of about \$65,000. The city of Dallas has derived the benefit also in the visitations of over two and a half million people since 1904 and has sent its name far and wide on the merits of the annual exposition. The contract between the Dallas association and the city of Dallas further provides that the city shall assume no liabilities incurred by the agricultural show, that the city shall have the use of the grounds eleven months and a half each year for park purposes, that the earnings of the association shall be used in maintaining the park and that the balance, if there is any, shall go to the fund for retiring the bonds.

Municipal Dental Clinic Started

Tacoma, Wash.—An entirely new form of philanthropy is to make its appearance in Tacoma this Spring. Children of the poor are to have their teeth examined free of charge by the best dentists in the city, who will fill cavities, stop decay and relieve sufferings of the little ones who are at present obliged to exist in agony because their parents or guardians lack the means to pay for dental care. The dentists, through the Tacoma Dental Society, will take turns giving their services free of charge, receiving the little sufferers every Saturday afternoon in a municipal dental clinic to be established in the City Hall.

Expert Plans Park for City

Tacoma, Wash.—S. J. Hare, the noted Kansas City landscape architect, has arrived in Tacoma to study the great reserve of 637 acres preparatory to providing the Park Board with general and detail plans for its development. Mr. Hare's work will consist of preparing a scheme to be followed by all who may hereafter undertake to beautify the park. It will consist of opening new roadways, providing proper drainage systems, locating propagating houses, outlining what is needed for adequate fire protection, planning walks, drives, picnic grounds, re-arranging the zoo and adding new features to it, setting aside room for a palm house and a water garden for tropical plants and birds in connection with it, besides making innumerable recommendations relative to improvements which may suggest themselves from time to time. A boulevard system leading to the park is one of the important additions that will be provided when possible to make the approach so much like the park itself that one would scarcely know when he entered it.

Child Labor Law Affects Many

Evansville, Ind.—Between 400 and 500 children between the ages of fourteen and sixteen years will be affected in Evansville and thrown out of employment when the new child labor law becomes effective the latter part of April or early in May. Heeding the bulletin issued last week from the legal department of the Indiana Manufacturers' Bureau advising all manufacturers to discharge all children between the ages of fourteen and sixteen by April 1 many Evansville men who employ children have begun to lay off those who will be prohibited from working under the new law.

LEGAL NEWS

A Summary and Notes of Recent Decisions—Rulings of Interest to Municipalities

Defective Crossing—Negligence

Gallagher vs. City of Tipton.—There can be no recovery for injuries to a pedestrian from stepping off from a gutter crossing constructed on a general plan of street improvement adopted by a city, but if the crossing is not an ordinary one over a gutter, but the city has negligently constructed the crossing over a deep hole without placing guard rails at the crossing or maintaining a street light there, the city will be liable for injuries received from stepping off from such a crossing.—Kansas City Court of Appeals, Missouri, 133 S. W. R., 135.

Construction of Charter—Initiative and Referendum

Southwestern Telegraph & Telephone Co. vs. City of Dallas.—Dallas City charter, granted by Special Acts Thirtieth Legislature, provides by Chapter 71, Article 3, Paragraph 1, that all powers conferred on the city, unless otherwise provided, shall be exercised by the mayor and four commissioners designated as the board of commissioners. Article 2, Section 8, Paragraph 27, gives the city power, by ordinance, to regulate and fix the charges of local telephones. Paragraph 7 provides that "the right is hereby delegated to the city of Dallas, acting through its board of commissioners," to regulate the charges made by corporations, etc., exercising a public privilege and to change such regulations, but forbids such change except after notice and a fair hearing. Article 8, Paragraph 1, provides that "any proposed ordinance" may be submitted to the board by petition signed by 5 per cent. of the electors voting at the last mayoralty election, when the board shall submit such ordinance without alteration to a vote of the people, and upon its adoption by a majority of the electors it shall go into force. Article 2, Section 1, Paragraph 2, provides that the specification of particular powers shall not be a limitation upon the general powers granted, the intention being that the city shall exercise all powers of municipal government not otherwise prohibited. Held, that Article 8, Paragraph 1, did not authorize a submission to the electors of ordinances upon any subject of legislation named in the charter, but only upon subjects to which the initiatory method was applicable, and an ordinance regulating telephone rates could not be presented to the electors for adoption, since a fair hearing on the reasonableness of the rate fixed, as required by Article 2, Section 8, Paragraph 7, could not be had by that method, and hence such an ordinance adopted by the electors was invalid.—Supreme Court of Texas.

Defective Sidewalk—Proximate Cause of Injury

City of Franklin vs. Smith.—In an action against a city for personal injuries sustained by a defective sidewalk the complaint alleged that, while plaintiff was walking along the sidewalk exercising due care, suddenly and without fault of plaintiff "he was precipitated violently to the sidewalk, his feet striking the said raised flagstone at said point on said sidewalk with such force that the first metatarsal bone of the right foot was fractured and broken." Held, that the complaint did not allege that the negligent condition of the sidewalk was the proximate cause of plaintiff's injuries and was demurrable on that ground.—Supreme Court of Indiana, 93 N. E. R., 993.

Selection of Paving Material—Bonds

Bell et al. vs. City of Shreveport et al.—Under the provisions of Act No. 10 of 1896, empowering cities to improve streets and alleys and to levy special taxes on abutting real estate and railroads, the paving material must be selected by the council before bids are invited and the bids must be for cash. Where by a vote of the taxpayers a city council was authorized to levy special taxes and to issue negotiable bonds for paving purposes the insertion in the submission ordinance of a provision that the bonds may be negotiated for work does not affect the validity of the bond issue.—Supreme Court of Louisiana, 53 S. R., 928.

Municipal Electric Plant—Prior Franchise

Houma Lighting & Ice Manufacturing Co., Limited, et al., vs. Town of Houma et al.—A contract made by a municipality for some public improvement, payable out of the revenues of future years, will not be interfered with by this court when the evidence shows that it is reasonable and that the financial condition of the municipality is such as to warrant the belief that the future revenues will be sufficient to pay for it without exceeding the limit of taxation. The granting by a municipality of a franchise to operate a lighting system does not confer an exclusive privilege on the grantee and does not prevent the municipality from subsequently erecting a system of its own.—Supreme Court of Louisiana, 53 S. R., 970.

Violation of Ordinance—Findings—Conclusiveness

Stutsman vs. City of Cheyenne.—A judgment rendered on conflicting evidence on a trial for a violation of a municipal ordinance will not be disturbed by the Supreme Court on writ of error.—Supreme Court of Wyoming, 113 P. R., 322.

City Employees—Hours of Labor

State ex rel. Pleasant, Co. Atty., vs. City of Ottawa et al.—Section 1, Laws 1891, providing that eight hours shall constitute a day's work for all laborers, workmen, mechanics or other persons employed on behalf of any city of the State, applies to the engineers and firemen who operate the water and electric light plant of the city of Ottawa.—Supreme Court of Kansas, 113 P. R., 391.

Use of Street by Railroad—Injunction

New York Central & Hudson R. R. Co. vs. City of New York.—Where the State Legislature, pursuant to an exclusive right, granted a franchise to a railroad company to occupy certain streets in a city for railroad purposes, and the railroad company, in the exercise of such franchise, maintained tracks in the streets for many years, the right to enforce a removal of the tracks, if any, either as a nuisance or because the franchise had expired by limitations, vested in the State and not in the municipality.—New York Supreme Court, 127 N. Y. S., 513.

Care of Streets—Negligence

Josupeet vs. City of Niagara Falls.—The liability of a city for negligence of its agents in keeping the streets in condition is not limited to the traveling public, but extends to the safety of its employees, and the provisions of the employer's liability act apply to cities as well as to individuals or private corporations, and hence a city is liable for the negligence of a foreman of a street gang in directing an employee to work under an overhanging bank which had been cracked by dynamite, of which he was ignorant, so that he was injured by the fall of the bank, the act of the foreman being that of a vice principal.—New York Supreme Court, 127 N. Y. S., 527.

Change of Grade of Street—Benefits

Powell et al. v. City of Columbia.—The benefits that may be considered, in reduction of damages to abutting property by a change of grade of a street, are only the special benefits conferred on the property by the grading of the street, as distinguished from the benefits to all the property in the locality, and not the benefits conferred by the paving and curbing of the street.—Kansas City Court of Appeals, Missouri, 134 S. W. R., 76.

Contractors' Bonds—Liability of Sureties

Board of Education of City of St. Louis v. United States Fidelity & Guaranty Co.—Under Rev. St. 1899, requiring contractors for public work to give bond to secure payment for materials and labor, whether by subcontract or otherwise, and giving materialmen and laborers the right to sue on the bond, a bond which stipulates for the payment to the persons furnishing materials used in the work, and which authorizes an assignment of the bond to subcontractors, materialmen, and laborers, who at the instance of the contractor have furnished work or material for the work, binds the surety to answer for the default of the contractor, or the school authorities on the default of the contractor, but does not bind the surety to answer for the default of a third person unless he derives his right to do the work by contract with the contractor.—St. Louis Court of Appeals, Missouri, 134 S. W. R., 18.

MUNICIPAL APPLIANCES

Division Plate for Constructing Cement Curb and Gutters

ROCCO DE GREGORY, Easton, Md., has invented a form holder and division plate for use in the construction of combined curb and gutter. The plate is made of metal 3-16 or 1/4 inch thick and of a size conforming to the width of gutter and depth of curb. Practically no braces, cleats, clamps, stakes or support of any kind are needed with the use of the above plate. It is pro-

vided with slots or recesses open at their upper end and of a depth to receive the wooden forms or strips. The pivoted latches B are turned on against forms which are thus forced tightly against that part of plate forming curb and gutter. The forms are made thinner than the width of slats, so that they can be removed easily. In fact, the pivoted latches B being rounded, receding backward at their lower end, get loose automatically when the finisher takes the forms apart; a gentle lift is enough to take each form up.

The plate is also provided at its lower ends with vertically adjustable legs C formed of steel slotted strips, through which extends a thumb screw. By properly adjusting these legs the plates may be supported, even though the surface may be uneven.

The plate is made higher at the curb and the gutter forming portions D than the extensions forming slats E so that when forms are in place nothing is in the way; and even edging tools can be run over edges to give same a slightly appearance.

The slot in front of curb F is beveled at lower end and so is the form that goes in it that the finisher may finish gutter surface up to curb before taking any of the forms off.

The slot at end of the gutter forming portion of plate G is made of the exact width of strip at bottom, usually 2 inches for 2 x 4 strips, and 1/4 inch wider at top where latch C forces it against plate. Form holders for sidewalks are made like slot, leg and latch at gutter forming end of plate G, C, B and E and rounded on edges D.

Form holders for single curb or coping are made with deep slots like the part forming back of curb; the front slot widening or battering downwardly to give that cross section of curb the proper shape.

In order to supply the wants of those not believing in clean-cut joints, a portion of lower edge of plate can be cut away, A, see dots, that the combined

curb and gutter may have a continuous bond at that place.

The wooden forms after planing and shaping them to fit loosely in slots are provided with angle irons on edges to make them rigid and to protect edges from wear. They are rabbeted on the ends so as to fit the next one and can be joined any where either right on slots or plates or between plates, then joints at suitable intervals can be provided in walks or in curb and gutter by the use of a number of plates.

Leading from the lights and bells are wires running to a switchboard in the station by which means the system is worked. In place of a patrol box there have been erected small enclosure throughout the precinct in which there is a telephone connected with the station house and also a button similar to the hook used in the present patrol boxes, by which means a wagon call may be sent to the station house by touching the button.

If at any time a patrolman is wanted his post number is touched on the switchboard in the station house, and it happens to be at night the little red light on his post will brighten up and he will answer the telephone in the box. If it happens to be during the day the bell attached to the red light wiring, at the same time informing him that he is wanted at the station house.

In lifting the receiver of the telephone in the boxes the patrolman registers his time the same as pulling a lever in the present system. A large card is arranged in the station house and as the receiver opens a hole opposite the post number and time is registered.

The system will make it a trifle easier for the patrol sergeant in locating his men, but he will be required to visit them on their posts just the same.

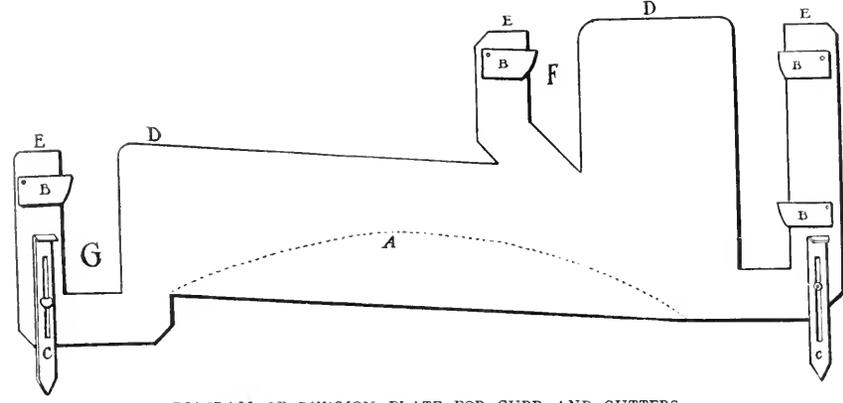

DIAGRAM OF DIVISION PLATE FOR CURB AND GUTTERS

Police Signal System

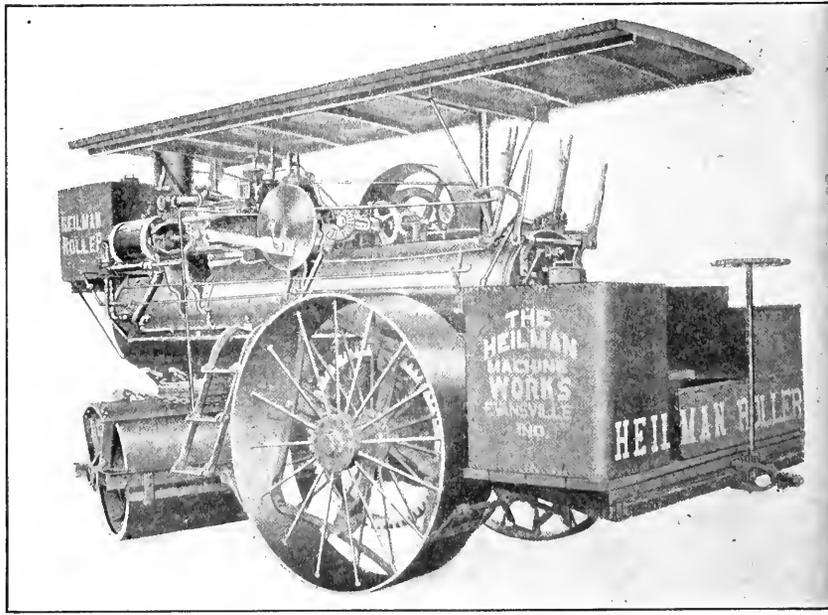

WHAT is known as the Miller plan for calling patrolmen while on duty, the system owned by the National Police Signal Company, 200 Ellicott Square, Buffalo, N. Y., may be adopted by the Niagara Falls, N. Y., Police Department in the near future. Lewis Miller, formerly connected with the Rochester Police Department, is the inventor of the new plan, and he expects to demonstrate its working to the Police Commissioners in a short time. The plan has been tried in Rochester and other cities and has been found to work successfully.

At equal distances apart on an officer's post a galaxy composed of more than 60 red lights to which is attached

Traction Road Roller

THE Heilman Machine Works, Evansville, Ind., manufacture a traction road roller, shown in the illustration, suited specially for road construction. To facilitate the use of road scrapers and plows drawn by the engine an adjustable hitch bar has been devised for adjusting the hitch to either side of the platform. The following are some of the details of the specifications:

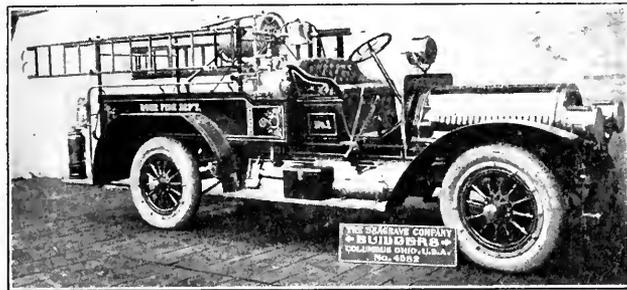

The boiler shell is 5-16 inch thick double riveted. The crown sheet and

TRACTION ENGINE AND STEAM ROLLER

sides of fire box are 5-16 inch thick, and both flue heads and throat sheet are 7-16 inch, wagon top sheet is 5-16 inch thick. All rivets are $\frac{5}{8}$ inch diameter spaced according to Hartford Steam Boiler Insurance & Inspection Company's rules. The stay bolts are 13-16 inch thick, spaced $4\frac{3}{4}$ inches between centers. The boiler is guaranteed for a safe working pressure of 150 pounds per square inch.

The engine has the Heilman spring semi-balanced valve, girder type frame, improved reverse motion, friction clutch and power steering gear. Rear drive wheels are 67 inches diameter, 18 inches face, 2 inches thick rim fitted with removable taper shank spurs or spikes (for plowing and breaking up roads) and taper steel plugs for clos-

SEAGRAVE MOTOR COMBINATION HOSE AND CHEMICAL WAGON.

ing the holes when used as a roller. The hubs of the wheels are fitted with removable thimbles or boxes. The engine is double geared, and the master gears are $4\frac{1}{2}$ inches face, 2 inches pitch. All of the gearing is made of an alloy of best cast iron and steel; the compensating gears are of the best cast steel.

The forward roller is composed of four (4) heavy cast wheels turned smooth, with a total width of 58 inches. These wheels turn loosely on a 4-inch shaft which is supported in suitable cast boxes riveted to a steel saddle frame, which in turn is fastened by an arched cast steel double trunnion to the saddle under the shell of the boiler, having ball bearings, making a durable, revolving table for easy steering, which adapts itself to the unevenness of the ground. The forward roller will tilt 13 inches either end without striking the boiler and either hind roller may rise 16 inches above the other, while the front roller remains level. Spring tension scrapers are provided for cleaning the wheels.

Combination Motor Wagons

THE Seagrave Company, Columbus, O., have furnished to the city of Rome, Ga., one of their motor combination hose wagons and chemical engines, shown in the illustration. The chemical tank has a capacity of 50 gallons. Two hundred feet of chemical hose are carried on a reel. The wagon body has a capacity of 1,000 to 1,500 feet of $2\frac{1}{2}$ -inch fire hose. The ladder equipment consists of a 16-foot roof ladder and a 24-foot extension ladder. The apparatus is driven by a Seagrave blower cooler motor. The four cylinders are $5\frac{3}{4}$ -inch bore, 6-inch stroke. The horsepower is 50. The transmission is three speed. The drive is by double chains to rear wheels. Speed, 40 miles an hour. The frame is channel steel braced with cross members. Tires in the Rome engine are pneumatic, but on account of the strong frame solid tires may be

used. There are two large gas headlights in front and a revolving searchlight on the dash. All lights are filled with electrical lighters.

Contractor's Motor Dump Wagon with Steel Tires

THE Briggs Labor Saving Specialty Company, Waterloo, Ia., have placed on the market a motor-driven dump wagon which on account of the use of iron wheels they expect will prove to be a practicable wagon for the use of contractors. The cost of the wagon is, of course, far below that of the dumping trucks so far manufactured by automobile manufacturers and the cost of rubber tires is eliminated. To accomplish this result something has to be sacrificed in the way of speed. The wagon is built at present in two sizes, two yards and two and a half.

A lever at the side of driver's seat provides means for tilting the box or body. As the box or body is dumped the end gate swings up automatically. The box is so balanced and supported that it does not touch the ground when dumped. Box is returned from dumping position to loading position by crank used in starting engine which fits shaft of drum on which cable connection with top of box is wound. The wheels are of solid metal with flat treads and lugs. The drive is from sprocket on transmission to center sprocket on differential or jack shaft. From the jack shaft the drive is taken to rear wheels by means of chains. The sprockets are provided with cut teeth. "Diamond" roller chains are used throughout. The construction of the differential shaft or jack shaft is very substantial. The main shaft extends the entire length across frame and drives the small sprocket on one end. The sprocket on opposite end is driven by a sleeve from differential. The hangers for mounting differential shaft to frame are provided with roller bearings also with an adjustment for taking up any slack in the chains.

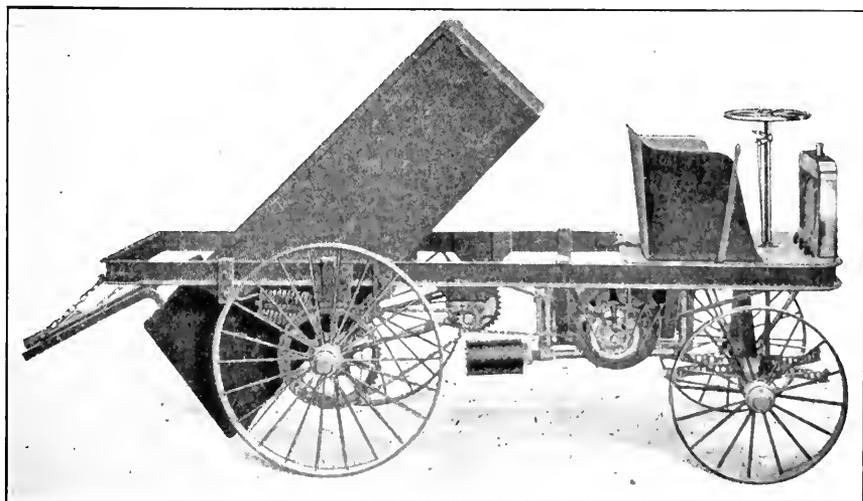

The transmission is of the planetary type which gives two speeds forward

and one reverse. There is no shifting of gears, as all gears are always in mesh. On high speed, 8 miles per hour, no gears are in action. A brake is provided on transmission. This brake is operated by a foot pedal. The low speed and the reverse speed are also operated by foot pedals. A lever at right of driver's seat operates the high-speed clutch. When this clutch is thrown in all gears are locked and the entire transmission revolves as a unit. The governor throttle control, also the spark advance control, is mounted just below the steering wheel, as shown in illustrations.

The motor used on this wagon is the Model E motor manufactured by the Anderson Motor Company, Anderson, Ind. This motor is of the horizontal opposed type, $5\frac{1}{2}$ -inch bore by 5-inch stroke. The engine is equipped with a six feed mechanical oiler, magneto, water pump, timer, Schebbler carburetor and all accessories. The motor with transmission attached next to fly wheel is mounted under the frame by means of heavy iron straps. The crank case is of gray iron of a design rendering it very strong for its weight. It is composed of two pieces, divided longitudinally through the crank case bearing center, thus permitting the top half to be removed without tearing down the whole engine. The lower half can also be removed without taking the engine apart. The cylinder and valve boxes are cast in one piece and are completely surrounded by water jackets. Lubrication is accomplished by means of a mechanical oiler driven by a spiral gear on time shaft inside of crank case.

New Sprinkling and Flushing Hydrant

The Mueller Manufacturing Company, Decatur, Ill., and New York City, has placed a new sprinkling and flushing hydrant on the market. It is designed for either public or private use. It is especially urged for public use to obviate the use of fire hydrants for any other purpose than that of the suppression of fires. In private installations it is of service in garages, markets and manufactories or, in fact, wherever large quantities of water are needed for flushing or sprinkling. The connection at the main is made with a Mueller corporation cock. The top of the box is flush with the curb. All iron parts are galvanized and the other parts are of brass. The box delivers a 2-inch stream and is made in lengths of $2\frac{1}{2}$ to 8 feet.

CONTRACTORS' MOTOR DUMP WAGON.

NEWS OF THE SOCIETIES

Memphis-to-Bristol Highway Association.—The association was organized for the purpose of building a highway across the State of Tennessee, a distance of about 540 miles. Branches have been organized in 38 counties and 15,000 men have signed an agreement to work for two days on the construction of the road. The sum of \$50,000 has been subscribed for bridge and culvert material, signboards, road material, lumber, road machines and various supplies needed. An overseer has been selected for sections of a mile or less. Assistant overseers have been appointed for sections of 900 feet. August 14 and 15 have been selected for constructing the road. By that time the materials will be delivered along the road where needed. Arrangements have been made for feeding the men, and it is expected that 25,000 men will report for work at the time selected and that the work will be finished.

National Electric Light Association.—A public meeting will be held April 8 at the Engineering Societies' Building, New York City, to discuss the relation of the National and State Governments to the conservation and utilization of water power.

Fire Chiefs of West Virginia.—Chief Altmeyer, Wheeling, has taken the initiative in the formation of a State Fire Chiefs' Association.

Engineers' Society of Northwestern Pennsylvania.—Members of the society are considering the investigation of problems of public interest. If the plan is followed out special committees will be appointed to make reports to the society and these reports may be given to the public, thereby providing valuable information for the people from the standpoint of engineers who look at the practical side of the questions. The trolley questions and water department problems have been suggested as proper fields of inquiry. City Engineer B. E. Briggs, who is at the head of the society, is favorable to the proposed idea of making special investigations. He has already appointed one of the members to get information on the garbage disposal plant idea as worked out in other cities and reported in scientific journals. The engineers met last week to hear a talk on a new style of heating and ventilating from an expert.

Municipal Engineers of the City of New York.—At the regular meeting, March 22, a paper on "A Proposed Method of Interpreting the Elevations of All Portions of a Street Surface from the Established Grades" was read by Vernon S. Moon. On Saturday afternoon, March 25, an excursion was made to the new plant of the Consolidated Gas Company, Astoria, Long Island.

Road Supervisors of Washington County, Pa.—The annual convention was held at the Court House, Washington, Pa., March 21. The topic, "Road Legislation and Laws," was discussed by State Senator Carter Judson and Representatives Feeney, Holland and Bentley. R. W. Irwin spoke on "Roads of To-day, and How They Can Be Improved." William Wylie, Washington, D. C., spoke on "The Best Way to Grade and Drain Clay Roads." Boyd E. Warner spoke of "The Care of Improved Roads in the Country." There was a general discussion on the methods of constructing bridges and culverts.

Indiana Municipal League.—The program for the annual meeting of the league, which meets at Marion, Ind., in June, was completed at a meeting of the program committee and the local committee. Lemuell Darrow, Mayor of Lafayette, president of the league and chairman of its program committee, and Joseph T. McNary, excouncilman of Logansport and a member of the committee, were present, together with Fred B. Robinson, Marion, third member of the program committee. The local committee was composed of Finley P. Mount, city attorney, chairman; Bernard Price and M. L. Claypool, councilmen; S. M. Coffman, of the Commercial Club, and A. A. McClain, editor of the Crawfordsville "Journal."

The two committees met in the Elks' home and spent most of the morning and afternoon in formulating the program. The committees first decided that the meeting should be held in the Masonic Temple Tuesday, Wednesday and Thursday, June 20, 21 and 22. The program, subject to slight changes, was arranged as follows:

Tuesday, June 20, 10 a. m.—Reception of visitors. 1.30 p. m.—Welcome address, Mayor Wert, Crawfordsville; response, Mayor Lew Shank, Indianapolis; How Can Cities Develop Parks and Playgrounds? Prof. Woods, superintendent of South Bend School; discussion, Prof. M. B. Thomas, Wabash College; Should Cities Be Authorized to Appropriate Money for Public Band Concerts? John O. Willson, Mayor of Marion; discussion, Paul Jameson, of Newcastle. 7.30 p. m.—Should Women Be Permitted to Vote in City Affairs? (by prominent women to be selected;) Can the Smoke Nuisance Be Eliminated? W. K. Martin, of Crawfordsville; discussion, Samuel E. Spohn, Mayor of Goshen; Building a City; Mayor Thomas C. Knotts, of Gary; discussion, F. B. MacGregor, of Madison; Home Rule for Cities, A. E. Veneman, Speaker of the House; discussion, Judge Timothy E. Howard, President of City Council of South Bend; ten-minute talks by citizens of Crawfordsville; opening of query box.

Wednesday, June 21, 9.30 a. m.—Report of the meeting of the League of American Municipalities at St. Paul. Does the Proposed Constitution of Indiana Benefit Cities and Towns, and Does the 2 Per Cent Limit on Indebtedness Prevent Ownership of Public Utilities? E. B. Stotsenburg, of Evansville; discussion, F. P. Mount, of Crawfordsville; Should the Public Accounting Law Be Amended or Repealed? Jonas G. Howard, Councilman of Jeffersonville; discussion, Senator Hauck, city attorney of Lawrenceburg; How Shall the Price of Water, Gas, Electricity and Heat Be Regulated When Furnished by Private Corporations? Judge Lawrence Becker, of Logansport; Should the Street Improvement Law Be Amended, and Should Cities Pay Any Part of the Assessments Against Street and Alley Crossings? City Attorney of Terre Haute; discussion, Mayor Foster, of Anderson; exhibition run by city fire department. 1.30 p. m.—Reports of section leaders of the league; opening of query box. Track Elevation and Grade Crossings, Henry C. Hogan, city attorney of Fort Wayne; discussion, Senator Robert E. Proctor, city attorney of Elkhart; District Workhouses, the Rev. Mr. Kiplinger, chaplain of prison at Michigan City; discussion, Mayor W. W. Zimmerman of Richmond. Should Mayors of the Fifth-

Class Cities Appoint Police and Fire Departments and City Attorney? John Harris, Mayor of Bloomington; discussion, Frank A. McCauley, Councilman of Huntington; Municipal Initiative, Referendum and Recall, Roy Shattuck, of Brazil; discussion, A. D. Cuningham, City Attorney of Lafayette; Municipal Sanitation, Ezra Shoccraft, of Purdue University; discussion, Dr. E. C. Laehr, Mayor of Noblesville; Wednesday evening to be filled by local committee.

Thursday, June 22, 9 a. m.—Query box; Pedestal Cluster Lights; How to Get Them, Elza Rogers, Mayor of Lebanon; discussion, John Herzog, Mayor of Mishawaka; Collection and Disposal of Garbage, Dr. D. A. Davidson, Mayor of Princeton; discussion, James D. McDowell, Mayor of Vincennes; Shall School Trustees Be Elected by the People? Albert J. Field, Mayor of Bedford; discussion, J. B. Cooper, City Attorney of Columbus. Various social events will be arranged for the visitors by the citizens of the city.

Municipal Art Society of Hartford, Conn.—A municipal exhibit under the auspices of the society is being held in the Donchian Building. On the landing at the head of the stairs is a collection of fine pictures under the society's special direction which City Engineer Frederick L. Ford obtained while in Europe in 1909. One of these shows what is what in Berlin in the way of street signs. Another picture preaches that Munich is clean because women do the street cleaning. Yet another is a view of the statue of Lafayette in the Louvre.

Just inside the main hall is a set of placards showing statistics about the work of various city departments. For instance the collector in 1889 dealt with a far different situation than he does now. The total amount of the tax assessed in that year was \$1,399,201.99 and in 1908 it was \$1,653,685.83. The amount of money collected has increased and the cost of collecting has decreased. Next to the placards is the Police Department booth. This has a picture of Chief Gunn, who is in charge part of the time. Detective Sergeant Henry L. Hart is in charge the rest of the period. The new red light system is shown by a practical model. The Bertillon system is also demonstrated. The police roster for 1866 is shown, and is to be contrasted with that for the present year. Then there are riot guns and surgeons' instruments and handcuffs and other things interesting to ordinary observers of the "finest" in the world.

Association for Standardizing Paving Specifications.—This is now the name of the society formerly known as the Organization of City Officials for Standardizing Paving Specifications. Copyrighted proceedings of the meeting held in New York in January of this year are now ready for distribution. Information relative to membership, use of copyrighted matter and cost of proceedings will be furnished upon application to the secretary, John B. Hittell, Chief Engineer of Streets, City Hall, Chicago.

Wisconsin Association of Police Chiefs.—The legislative committee of the association, which includes 70 cities in its membership, recently appeared before the Legislature to urge the passage of the Albers bill, which authorizes Fire and Police Commissioners of all cities, excepting Milwaukee, to fix the salaries of the members of the Fire and Police Departments under them. At present this authority is vested in Common Council.

Congress of Technology.—Among the papers to be presented at the Congress of Technology, Massachusetts Institute of Technology, Boston, Mass., April 10-11, 1911, are the following:

The Life-Saving Corps of the Technical School, Severance Burrage, '92, Professor of Sanitary Science, Purdue University, Lafayette, Ind.; The Technical School Man in Public Health Work, Harry W. Clark, '85-'87, Chief Chemist, State Board of Health, Boston, Mass.; Sewage Disposal with Respect to Offensive Odors, George W. Fuller, '90, consulting hydraulic engineer and sanitary expert, New York City; The Pollution of Streams by Manufacturing Wastes, William S. Johnson, '89, sanitary and hydraulic engineer, Boston, Mass.; Profitable and Fruitless Lines of Endeavor in Public Health Work, Edwin O. Jordan, '88, professor of bacteriology, University of Chicago, Chicago, Ill.; Present Status of Water Purification in the United States and the Part That the Massachusetts Institute of Technology Has Played, George C. Whipple, '89, consulting engineer, New York City; Factory Sanitation and Efficiency. C.-E. A. Winslow, '99, associate professor of biology, the College of the City of New York, New York City.

American Society of Civil Engineers.—A committee consisting of seven members of Chattanooga and ten members of surrounding cities has been appointed to attend to local arrangements in connection with the annual convention to be held at Chattanooga, Tenn., June 13-16. The names of this committee are as follows: William Dunbar Jenkins, chairman; E. E. Betts, H. S. Bosler, W. H. Converse, J. A. Fairleigh, C. H. Fisk, D. H. Wood, all of Chattanooga; W. W. Harts, Major U. S. E., Nashville; G. F. Rowell, Guild, Tenn.; W. M. Gardner, Memphis; W. H. Courtenay, Louisville, Ky.; J. W. Kendrick, Birmingham, Ala.; J. N. Hazlehurst, Atlanta, Ga.; T. G. Dabney, Clarksdale, Miss.; W. S. Lee, Charlotte, N. C.; J. E. Sirmine, Greenville, S. C.; W. F. Reichardt, Little Rock, Ark.

Calendar of Meetings

- April 6-8.**
American Electrochemical Society.—Annual Meeting at New York City.—Secretary, Joseph W. Richards, Lehigh University, South Bethlehem, Pa.
- May.**
City Commission Congress.—Meeting, Galveston, Tex.—Mayor Lewis Fisher, Chairman of Committee, Galveston, Tex.
- May 11.**
Massachusetts Highway Association.—Quarterly Meeting in conjunction with the New England Conference on Street Cleaning, Springfield, Mass.
- May 15-17.**
National Conference on City Planning.—Philadelphia, Pa.—Flavel Shurtliff, Secretary, 19 Congress street, Boston, Mass.
- May 18-19.**
Ohio Society of Mechanical Steam and Electrical Engineers.—Annual Convention, Youngstown.—F. E. Sanborn, Secretary, Ohio State University, Columbus.
- May 23-25.**
National Fire Protection Association.—Annual Meeting, New York City.—F. H. Wentworth, Secretary, 87 Milk St., Boston.
- May 23-26.**
National Good Roads Association.—Fourth National Good Roads Congress, Birmingham, Ala.—J. A. Rountree, Secretary, Birmingham, Ala.
- May 29-June 2.**
National Electric Light Association.—New York City.—T. C. Martin, Secretary, 31 West 39th St.
- June 5-14.**
National Probation Officers' Association.—Boston, Mass.—Roger N. Baldwin,

Secretary, 903 Security Building, St. Louis, Mo.

June 6-10.
American Water Works Association.—Thirty-first Annual Convention, Powers Hotel, Rochester, N. Y.—John M. Diven, Secretary, 14 George street, Charleston, S. C.

June 7-14.
National Conference of Charities and Correction.—Boston, Mass.—Alexander Johnson, Secretary, Ft. Wayne, Ind.

June 7.
National Association for the Study and Prevention of Tuberculosis.—Denver, Col.—Dr. Livingston Farrand, Executive Secretary, 105 East Twenty-second street, New York City.

June.
New England Conference on Street Cleaning.—Springfield, Mass.—Corresponding Officer, Carol Aronovici, 55 Eddy street, Providence, R. I.

June 11-16.
International Association of Chiefs of Police.—Eighteenth Annual Convention, Rochester, N. Y.—Major Richard Sylvester, Superintendent of Police, Washington, D. C., President.

June 13-18.
New York State Association of Chiefs of Police.—Annual Convention, Rochester, N. Y.

June 13-16.
American Society of Civil Engineers.—Annual Convention, Chattanooga, Tennessee.—Charles Warren Hunt, Secretary, 220 West 57th St., New York.

June 21-22.
National Conference of Poor Law Officials.—Boston, Mass.—Dr. Robert W. Hill, President State Board of Charities, 105 East Twenty-second street, New York City.

September 19-22.
American Hospital Association.—New York City. J. N. E. Brown, M.D., Secretary, Toronto General Hospital, Can.

September 24-30.
International Congress on Tuberculosis.—Rome, Italy.—Professor Ascoli, Secretary-General, Via Lucina, Rome, Italy.

September 26-29.
American Society of Municipal Improvements.—Grand Rapids, Mich.—A. Prescott Folwell, Secretary, 239 West Thirtieth street, New York City.

October 4-6.
League of American Municipalities.—Annual Convention, Atlanta, Ga.—John MacVicar, Secretary, Des Moines, Ia.

PERSONALS

BARRY, J. EDWARD, Democratic candidate for Mayor of Cambridge, Mass., was elected by a big majority.

CLAUSSEN, OSCAR, has been appointed City Engineer of St. Paul, Minn., succeeding L. W. Rundlett, who will remain in the municipal service as Superintendent of Construction of the water Board.

COWPER, Dr. C. W., who has been appointed a Medical Inspector in the Health Department, resigned his post in the Board of Aldermen, as he could not legally hold the two positions.

CURRY, CHARLES, has been elected Superintendent of Highways, Danville, N. Y.

EYRES, W. L., of Austin, Tex., has been appointed Superintendent of the Water Works at Lafayette, La.

FARLEY, JOHN M., who has been Consulting Engineer for the past twenty-five years on various State and municipal works, has organized the firm of Farley & Braunworth, Consulting Engineers, with offices at 527 Fifth avenue, New York City, and in Trenton, N. J. They will specialize in sewerage and sewage disposal, and water supply and water purification. Mr. Braunworth was formerly principal assistant engineer to Mr. Farley, and is a specialist in sanitary engineering.

FARRETT, J. W., has been elected Mayor of Lawrenceburg, Tenn.

FEREBEE, JAMES L., has been appointed Resident Engineer, Atlantic City Drainage, Atlantic City, N. J. Mr. Ferebee

was formerly connected with the Water Department at Wilmington, Del.

GIBBS, E. C., has tendered his resignation as Mayor of Ida Grove, Iowa, on account of ill health.

HALLIDAY, ALEX., the Socialist candidate for Mayor of the city of Two Harbors, Minn., was elected by a large plurality.

HAMILTON, ALEX., has been elected Mayor of Tallapoosa, Fla.

HANSON, EDGAR F., has been re-elected Mayor of Belfast, Me., for the seventh term.

HARE, SIDNEY, Landscape Architect of Kansas City, Mo., has been visiting Tacoma in consultation with the authorities as to improving Point Defiance Park.

HINDLEY, WM. J., a Congregational clergyman, has been elected Mayor of Spokane, Wash.; Chas. W. Fassett, President of the Chamber of Commerce, was elected Director of Public Utilities, and David Coates, formerly Governor of Colorado, now a Socialist writer, will have charge of public works.

HOWALD, HAROLD, for nine years City Engineer of Massillon, Ohio, has resigned.

HUGHES, EDWARD F., who for many years has been identified with the water works business, and who is at present a Water Commissioner of Watertown, Mass., has opened an office as Consulting Engineer at 8 Oliver street, Boston.

LEMON, WALTER T., whose term as a member of the Board of Public Works of St. Paul, Minn., expired last week, has been reappointed by the Mayor for the full term of three years. Mr. Lemon was made a member of the board about three months ago to complete the unexpired term of Peter Van Hoven, who resigned to become a State Senator.

MARABLE, JOHN, formerly City Engineer of Clarksburg, Tenn., for nine years, died in that city February 22 at the age of 60.

MARCILLE, ALBERT O., has been re-elected Mayor of Biddeford, Me.

MYERS, L. J., City Engineer of Ardmore, Okla., has been appointed a member of the committee on vitrified brick paving of the Association for Standardizing Paving Specifications, of which Geo. W. Tilson, City Engineer of New York, is President.

NOYES, REUEL J., Democratic, has been elected Mayor of Augusta, Me.

PARKS, JAMES W., has been elected Mayor of Aberdeen, Wash.

PARKS, OREN E., has been reappointed Town Engineer of Westfield, Mass.

PAYNE, JOHN BARTON, has been elected President of the Board of South Park Commissioners of Chicago.

SLIPPY, RALPH P., has opened an office for the general practice of civil engineering in the Marsh-Place Building, Waterloo, Iowa.

SHURTLIFF, FLAVEL, Boston, Mass., an attorney representing the Russell Sage Foundation, is making a tour of various cities for the purpose of studying the commission form of government.

WARD, M. P., has been elected Chairman of the Board of Health of Lynn, Mass.

WATTS, THOMAS, JR., has been re-elected Mayor of Coal Creek, Tenn.

WAY, J. ROMAN, has been chosen president of the Board of Trade of Williamsport, Pa.

WELCH, W. E., has been elected Mayor of Rainier, Ore.

WORKS, SENATOR S. B., of Mankato, Minn., at the invitation of the South St. Paul Commercial Club, gave an address before that body, explaining the commission form of city government.

YOST, HOWARD MC., has been appointed City Engineer of Massillon, Ohio.

TRADE NOTES

Cast Iron Pipe.—Chicago—Market is active and many small municipalities are in the market. Gas companies have been liberal buyers. Orders of from 50 to 200 tons constitute the bulk of the business. Quotations: 4-inch, \$25.50; 6 to 12-inch, \$24.50; 16-inch and up, \$24. Birmingham—New business appears to have been light, but better prices are being maintained. Quotations: 4 to 6-inch, \$22; 8 to 12-inch, \$20; over 12-inch, average, \$19. New York—Several large lettings are in sight, including about 10,000 tons for New York City. The demand from private water and gas companies is keeping up well. Quotations: 6-inch, carloads, \$21 to \$22.

Lead.—Market is stronger. The leading interest is keeping price up at 4.50c., New York; outside sellers have advanced their price to 4.40c.; St. Louis price, 4.25c., with probability of higher quotations.

Cement Freight Rates.—The Alpha Cement Co., Manheim, W. Va., have brought suit against one hundred railroads before the Interstate Commerce Commission, alleging discrimination against it by the carriers in favor of the Universal Portland Cement Co.

Carbon Tetrachloride.—Carbon tetrachloride is an unflammable liquid which may be used in many arts as a substitute for benzene. It may also be used as a fire extinguisher, as its vapor smothers fires. High cost and lack of information as to its adaptability to the arts have hitherto limited its use. Owing to improvements in manufactured carbon tetrachloride may now be purchased at a much lower price than formerly.

Electric Companies Merged.—The Public Service Commission has approved the consolidation of the Geneva-Seneca Electric Company and the Wayne County Gas and Electric Company into the Central New York Gas and Electrical Company.

Blaw Collapsible Steel Centering.—The Blaw Collapsible Steel Centering Company, Westinghouse Building, Pittsburgh, Pa., announce the removal of their Eastern sales office from the present location in the Park Row Building, New York, to more commodious quarters in the City Investing Building, 165 Broadway, New York. This change in effect May 1. They announce further the location of their permanent Western sales office at 1008 Ashland Block, Chicago, Ill.

Bonding New and Old Concrete.—H. J. Livingston, 11 Pleasant street, Baltimore, Md., is sending out a description of "Livingstone," a bonding material for uniting new and old concrete. The material, the pamphlet states, contains neither hydrochloric nor sulphuric acid and will not weaken the cement used in the bond. It is recommended for a number of purposes besides bonding layers of concrete, including the attachment of hard wall plaster to concrete walls, for which purpose it has been used satisfactorily. One gallon of the material will, on the average, cover 250 to 300 square feet.

Power House Accessories.—The Liberty Manufacturing Company and Elliott Company of Pittsburgh, Pa., manufacturers of power house accessories, will move their New England office from 102 High street, Boston, Mass., to the Oliver Building, 141 Milk street, Room 954, where their representative, Mr. Herbert E. Stone, will be glad to see their customers and friends.

Concrete Mixer and Hoist.—The Waterloo Cement Machinery Corporation, Waterloo, Ia., has designed a combined concrete mixer and hoisting plant. Made specially for use in the building of cement houses at Gary, Ind., it is suitable for any purpose where concrete is to be elevated vertically a moderate height. The fact that it also has a traction plant makes its field of usefulness a wide one. From the hopper the mixed concrete is drawn into buckets, which are then hooked by hand to a vertical conveyor. The elevator runs continuously. Should a workman, however, fail to remove a bucket no harm can ensue, as they will simply continue on their course without spilling. The different features of the plant are all controlled by independent friction clutches.

Contractors' Equipment.—The Wm. J. Oliver Manufacturing Company, of Knoxville, Tenn., which makes a large variety of dump, ballast, mine and flat cars for standard and narrow gauges, mining plant, derrick fittings and hoisting engines, has opened an office at 50 Church street, New York, in charge of R. L. Sites, assistant to the president.

Damp Proofing.—The Antihydrine Company, Washington Building, New Haven, Conn., has prepared a leaflet which gives briefly the objects to be attained in the application of "antihydrine" as a damp-proofing and stain-proofing compound on brick, stone, concrete surfaces and fireproofing material. The compound is made of a high grade of asphalt, prepared in combination with several chemicals which give it the property of forming a continuous glossy and impervious coating upon porous surfaces. It is applied cold with a brush. Directions for its use are included in the leaflet.

Reorganize Water Company.—The Taylor Water Company has been reorganized on its new management with the election of the following officers: A. J. Zilker, president; George Shelley, of Austin, vice-president; Noyes D. Smith, of Austin, secretary-treasurer; H. A. Bittick, superintendent; Walter Schultz, bookkeeper; Spencer Carradine, collector.

Manager of Electrical Plant.—The City Controller of Winnipeg, Man., will soon advertise for a manager for the \$3,500,000 municipal power plant now nearing completion.

Chemical Engineer.—William Miller Booth, Syracuse, N. Y., announces that he has opened a branch office at 299 Broadway, New York City. In the New York office Mr. Booth will take care of chemical and engineering work as in the Syracuse office.

Triangle Mesh Reinforcement.—The American Steel and Wire Company, 30 Church street, New York City, has prepared a 110-page book giving full details of tests made by and under the supervision of the building bureaus of the various boroughs of New York City upon slabs reinforced with triangle mesh reinforcement manufactured by the company. Practically all of the tests were made in 1910. In each case full details are given regarding the span, thickness of slab, size of reinforcement and loading, and these data are followed by the report of the responsible municipal officer on the results of the tests. Drawings illustrate in every case the type of construction. The last half of the book shows views of buildings and other structures in New York City in which this reinforcement has been used.

Stokers.—Birch, Riley & Co., of New York City, sales agents for the Universal stoker, have opened a Boston office in the Oliver Building, 141 Milk street, Room 954, where Mr. Charles F. Sammons, M. E., will have his New England headquarters.

Double Geared Traction Engine.—The Woods Brothers Thresher Company, Des Moines, Ia., has developed double geared type of traction engine. This engine is built with a center crank and two gear trains, one on each side. The special advantages claimed for this construction are the elimination of a side strain and the development of the maximum tractive effort.

Steel Furniture and Metal Lath.—The General Fireproofing Company, Youngstown, Ohio, announces that owing to the remarkable growth in its steel furniture and Herringbone metal lath business it has sold its entire business to the General Reinforcement Company, Youngstown, O. This move has been made to gain necessary additional manufacturing facilities which will permit specializing along the metal lath and furniture lines in which the General Fireproofing Company is pioneer.

New Chemical Engine Company.—The Hansen Continuous Chemical Fire Apparatus Company, St. Louis, has been incorporated with a capital stock of \$50,000. Dr. F. William Runde is president; Edward M. E. Hansen, vice president, and L. A. Ragan, secretary. The company will manufacture a chemical fire engine invented by E. M. E. Hansen.

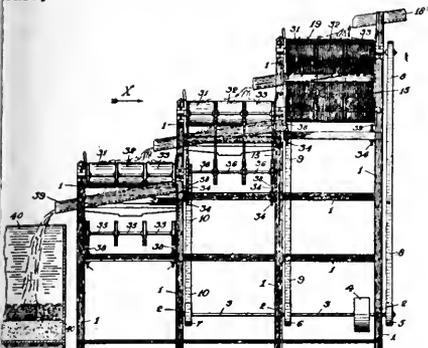

Power Transmission Machinery.—The Link-Belt Company states that its sales office, formerly located at 8 State street, Boston, Mass., has been moved to more commodious quarters at 131 State street, Boston, to take care properly of the increasing demand for Link-Belt elevating, conveying and power transmission machinery and chains. Lawrence Spillan is in charge.

Sewer Pipe.—The American Sewer Pipe Company, Akron, Ohio, has commenced work on its new plant at Braintree, Ill., which it hopes to have ready for occupancy by July 1.

Steel Reinforcement for Concrete.—A leather bound handbook has been issued by the Pittsburgh Steel Products Company, an identified interest of the Pittsburgh Steel Company, Wallace H. Rowe, president. It gives tables and other data relative to Pittsburgh standardized reinforcement for concrete. The company has prepared this blue book to enable engineers, architects and builders to design concrete structures without laborious mathematical computations. The girder, beam and slab tables have been computed so that under a dead and live load and figured on the basis of the "straight line formula" the tensile stress in the steel will not exceed 16,000 pounds per square inch and the compressive stress in the concrete will not exceed 650 pounds per square inch. Illustrations are given of the Pittsburgh standard bars and of typical frames and standard reinforcement for beams, girders and slabs. The tables have been prepared after formulas recommended by a joint committee on concrete of the American Society for Civil Engineers, American Society for Testing Materials, American Railway Engineering and Maintenance of Way Association and the Association of American Portland Cement Manufacturers.

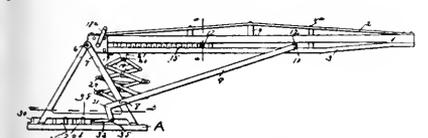

PATENT CLAIMS

985,809. GRAVEL OR ORE SCREEN. Frederick J. Hoyt, Redlands, Cal. Serial No. 442,615.
 A gravel or ore screen, comprising a frame having therein a horizontally-disposed, transversely movable endless screen, cylinders or rollers at each end to carry said screen, said rollers having

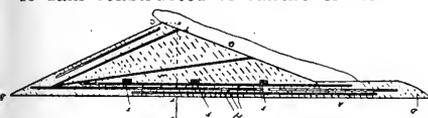

grooves at intervals and sprocket chains in said grooves extending from roller to roller, the screens being secured to said chains at intervals, and means for producing tension on said chains and keeping said screen taut.

986,352. FIRE APPARATUS. Burdett B. Briggs, Creston, Iowa. Serial No. 466,377.
 The combination with a support, a ladder pivoted thereon, links pivoted at one end to said support at points remote from the pivot of the ladder, and the free ends of

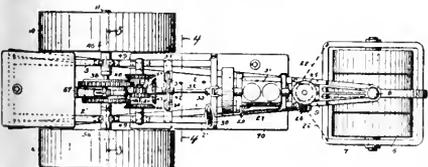

the links attached to a cross-rod, movable on said cross-rod, a credit sleeve connected to said cross-rod, a screw mounted on the base end of the ladder and engaging said sleeve, for the purpose set forth.

985,841. DAM. Frank E. Roff, Richfield Springs, N. Y. Serial No. 513,561.
 A dam constructed of cantilever form in

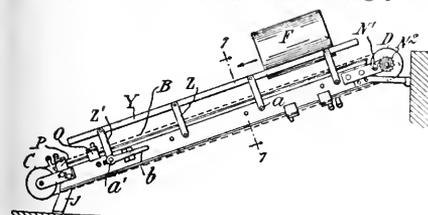

vertical cross-section, having the deck extending obliquely to receive the water load.

986,290. ROAD ROLLER. Pliny E. Holt, Stockton, Cal. Serial No. 525,978.
 In a road roller, a main frame comprising a triangular frame and a rectangular frame resting upon and rigidly secured to said triangular frame; separate main axes mounted on horizontal pivots fixed on the

main frame; traction rollers journaled on said axes; means for adjusting the angle of said axes and locking the same; a steering truck mounted under the main frame; and a motive and power transmitting mechanism mounted on the main frame and engaging said traction rollers.

986,483. ELEVATOR FOR ASH - CANS AND THE LIKE. Rudolph Messlin, New York, N. Y. Serial No. 509,127.
 An apparatus of the character described, including in combination an inclined elevator and skids permanently attached thereto, said elevator and skids being pro-

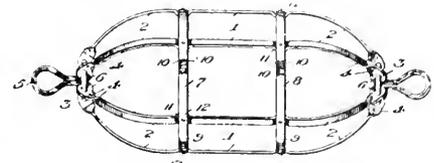

portioned for use with the same articles and adapted to be brought alternately into

operative position, so that such articles may be elevated and lowered by the same apparatus.

986,462. SEWER - CLEANER. John M. Holdaway, Provo, Utah. Serial No. 569,988.

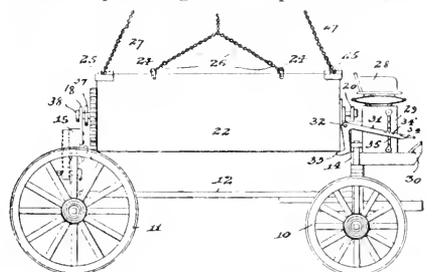

In a sewer cleaner, the combination with longitudinally extending ribs, of a con-

tractible split circular knife secured thereto having a cutting edge disposed in the direction of the length of said cleaner.

986,582. DUMPING - WAGON. Charles Lynch, Chicago, Ill. Serial No. 557,806.

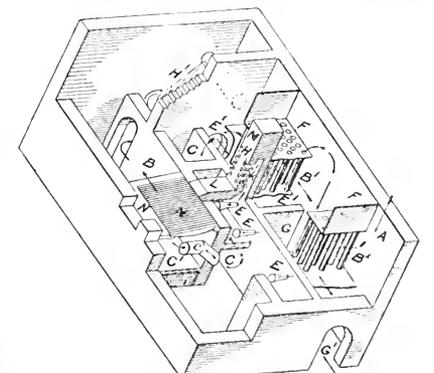

In a dumping-wagon, the combination of a wagon frame having a pair of bearings, a load-conveying box comprising two parts hinged together at the top, means to tie said two parts together to prevent the box

from opening and discharging its contents, trunnions secured to the opposite ends of said box and fitting in said bearings, and means to turn said box on its trunnions to discharge its contents, substantially as described.

986,594. REFUSE-DESTRUCTOR. Frank Percy Rudder, Derby, England. Serial No. 390,126.

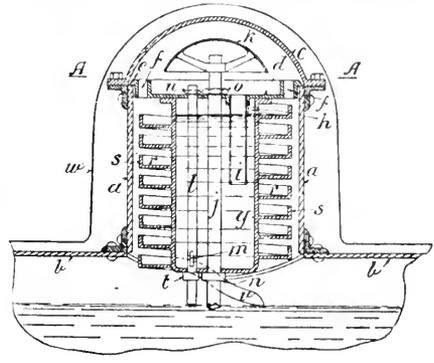

In a refuse-destructor the combination of a grate; a refuse drying plate; an air heater adapted to be heated by the products of combustion; means for providing communication between the grate and the

air heater; means for conducting the heated air to the grate, and means for directing products of combustion into contact with the refuse upon said drying plate, and then returning said products to the grate.

986,886. WATER HEATER AND PURIFIER. John Edward Wood, Nottingham, England. Serial No. 529,427.

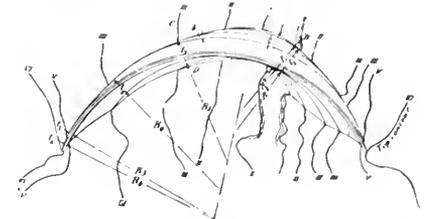

In a water heater and purifier the combination of a water inlet pipe, a cowl for breaking up the feed water, a tray on to which the water falls, a settling tank, an inlet from the tray directly into the

tank, and a helical evaporating tray surrounding such tank and an outlet from the tank to the tray.

986,718. DAM CONSTRUCTION. Lars Jorgensen, Berkeley, Cal., assignor of one-half to Frank G. Baum, San Francisco, Cal. Serial No. 586,969.

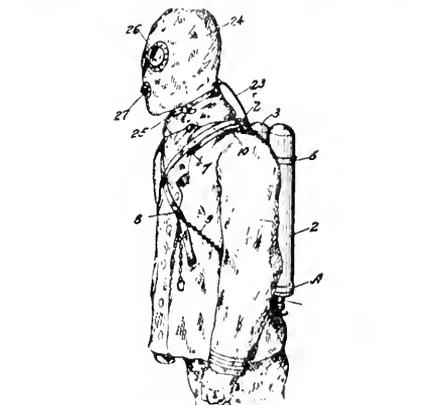

An arch dam for a cañon or the like comprising a plurality of superposed arch-shaped elements of varying radii the radii

of such elements varying with the widths of the cañon at the corresponding levels of such elements and bearing a definite relation to such widths.

986,907. RESPIRATORY APPARATUS FOR FIREMEN OR OTHERS. Charles E. Chapin, Elmhurst, Cal. Serial No. 546,877.

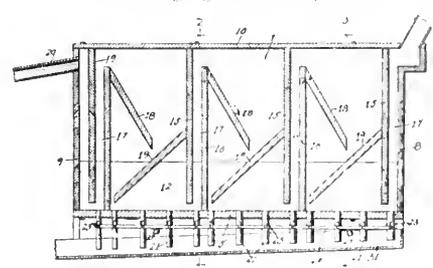

In a respiratory apparatus, the combination of a harness consisting of upper and lower loop members suitably connected together and fitting the back of the wearer,

means for securing the harness on the wearer, and a battery of cylinders detachably fitting said harness, each of said cylinders having a separately controlled valved outlet, and certain of the valves having means appreciable to the touch for distinguishing them.

986,897. WATER - PURIFIER. Edward Bowman and Joseph A. Wallace, McGill, Nev. Serial No. 521,119.

The herein described water-purifier comprising a casing, a chamber therein, spaced partitions at opposite sides of the chamber forming inlet and outlet channels, the former discharging into the bottom and the latter leading from the top of said chamber, oppositely inclined baffles in said chamber, disposed at different elevations and one overhanging the other, and means

for discharging sediment from the bottom of said chamber and said channel, said means comprising a plurality of discharge tubes, a valve in each discharge tube, a crank handle operatively connected to each valve, a link connecting all of said crank handles, ratchet teeth formed on the lower edge of said link, a bracket supported by said casing, a shaft journaled in said bracket, a toothed member mounted eccentrically on said shaft and operatively engaging the teeth on the link and means for rotating said shaft.

987,060. PAVING-BLOCK. Frank Galgano, New Rochelle, N. Y. Serial No. 569,573.

A block, embodying a recess in its under side, said recess extending to near the upper surface of said block, leaving a frangible portion forming a normally unbroken upper surface, said recess when said frangible portion is broken being adapted to receive a lifting tool.

THE WEEK'S CONTRACT NEWS

Relating to Municipal and Public Work—Street Improvements—Paving, Road Making, Cleaning and Sprinkling—Sewerage Water Supply and Public Lighting—Fire Equipment and Supplies—Bridges and Concrete Work—Sanitation, Garbage and Waste Disposal—Police, Parks and Miscellaneous—Proposals and Awards

To be of value this matter must be printed in the number immediately following its receipt, which makes it impossible for us to verify it all. Our sources of information are believed to be reliable, but we cannot guarantee the correctness of all items. Parties in charge of proposed work are requested to send us information concerning it as early as possible; also corrections of any errors discovered.

Table with columns: STATE, CITY, RECEIVED UNTIL, NATURE OF WORK, ADDRESS INQUIRIES TO. Includes sub-section 'STREET IMPROVEMENTS' and 'SEWERAGE' with various project details and contact information.

BIDS ASKED FOR

STATE	CITY	RECEIVED UNTIL	NATURE OF WORK	ADDRESS INQUIRIES TO
SEWERAGE (Continued)				
New York	New York	Apr. 3, 2 p.m.	Reconstructing outlet sewer and appurtenances at the foot of 79th St., East River	Geo. McNaney, Pres. Boro. Manh.
Arkansas	Arkadelphia	Apr. 4	Constructing about 48,000 ft. sanitary sewers	E. M. Hall, Chm. Comrs. Sewers.
Iowa	Clinton	Apr. 4	Constructing main and lateral sewers in various streets	W. E. Hayes, City Clerk.
New Jersey	Trenton	Apr. 4, 8 p.m.	Constructing sewers in Spruce Street and Wilson Street and Drain in Federal Street.	Harry B. Salter, City Clerk James M. Mallock, Town Clerk. W. E. Leinertz, Secy. B. Loc. Imp.
California	Boulder Creek	Apr. 5	Constructing sewer in Railroad avenue	John H. O'Connell, City Clerk. W. Barneck, City Engr.
Illinois	Chicago Heights	Apr. 5, 7:30 p.m.	Constructing Storm Sewer No. 3	
Wisconsin	South Milwaukee	Apr. 6, 5 p.m.	Constructing about 7,299 ft. of sanitary sewer and constructing sewage purification plant.	W. F. Heal, City Clerk. S. K. Shryock, Chm. Sewer Com. Edward Arcularious, Twp. Clk. L. L. McKay, Boro. Secy.
Minnesota	Albert Lea	Apr. 7, 5 p.m.	Constructing 3,475 lin. ft. 8-in. pipe sewer	
Sask., Can.	Moose Jaw	Apr. 10, 8:30 p.m.	Furnishing and laying about 30,700 lin. ft. tile pipe sewer, building manholes, etc., separate bids. Con. sewage disposal plant, etc.	M. M. Higgins, Pres. Sewer Com W. J. Scholey, Chmn.
Pennsylvania	Chambersburg	Apr. 10, 8 p.m.	Bldg. system of san. sewers, outfall sewer & sewer disp. plant.	
New Jersey	South Orange	Apr. 11, 8 p.m.	Bldg. sanitary sewers in the Hilton district	
Pennsylvania	Grove City	Apr. 11	Constructing sewers, 8 to 24-in. terra cotta pipe	
Maryland	Easton	Apr. 15, noon	Constructing, complete, about 6 mi. pipe sewers, 8 to 15-in., Y branches, manholes, grading etc., Clyde Potts, 30 Church St., New York City, Engineers.	
Wisconsin	Kenosha	Apr. 15, 2 p.m.	Constructing Main Trunk sewer	
Minnesota	Winona	Apr. 17	Constructing 8, 12, 15, 18 and 20-in. pipe sewers, manholes and catch basins.	O. B. Leland, Asst. City Engr. City Clerk.
Ohio	Amherst	Apr. 20	Constructing sewer system and sewage disposal plant	
California	San Jose	July 3	Construct septic tank for County hospital	
WATER SUPPLY				
Sask., Can.	Saskatoon	Mar. 31, noon	Installing mechanical filtration plant.	W. B. Neil, City Comr. City Clerk.
Oregon	Astoria	Mar. 31	Con. gate, well and high serv. dis. system for hill section of city.	
New York	Troy	Mar. 31, 11 a.m.	Furn. valves, sluice gates and appurtenances required in construction of reservoir; and for cast iron pipe and specials.	Edwin L. Grimes, City Engr
Minnesota	Minneapolis	Mar. 31, 7:30 p.m.	Furnishing sleeves and valves and gasoline trench pump; also hauling water works mater. & supplies & bldg. water tower.	Henry N. Knott, City Clerk.
Wisconsin	Wauwatosa	Apr. 1, 2 p.m.	Furn. one duplex compound steam driven, air compressor, 90 lbs. steam pressure; cap. 500,000 gals. per min.; also one air receiver or tank suitable size for use with compressor.	Edward Coulthard, City Clk. H. Z. Walpole, Secy. Water Co
Pennsylvania	West Telford	April 1	Constr. water works; approx. cost \$30,000	
Washington	Tacoma	Apr. 1, noon	Constructing concrete lined reservoir; pipe line from Green River Crossing to reservoir, retaining wall, stand pipes and a telephone line from Headworks to reservoir	Nicholas Lawson, Comr. Lt. & Wt.
Illinois	Lyons	Apr. 2	Constructing brick and concrete building for pumping station; installing deep well pump, power head and motive power and appurtenances.	President Bd. Village Trustees. Board of Public Works. A. T. Dickey, City Engineer.
California	Vallejo	Apr. 3	Laying 14-in. pipe and 8-in. pipe in various streets.	
Texas	Galveston	Apr. 3, noon	Installing 10,760 lin. ft. of water main.	
Ontario, Can.	Welland	Apr. 3, noon	Constr. of one unit water-power driven water-works pump, 3,000,000 Imp. gals. daily cap., incl. turb., pipes, valves, etc.	R. Cooper, Chm. Water Comms. City Clerk. John J. Wenner, Clk. B.I. Pub. Serv.
Nebraska	Lodgepole	Apr. 3	Constructing water works	Henry S. Thompson, Comr. W. Sup
Ohio	Cincinnati	Apr. 3, noon	Constructing 2 turbine water wheels	B. F. Hudspeth, City Clerk.
New York	New York	Apr. 3, 2 p.m.	Furnishing, placing, repairing, replacing and emptying vault pans in vicinity of Mt. Kisco.	G. McK. Williamson, Q. M., U. S. A. Clerk Bd. of Public Affairs. C. I. Shaver, Boro. Secy. J. B. Mace, Pres. Bd. Water Comrs.
California	Chico	Apr. 4, 7:30 p.m.	Furnishing about 600 ft. of No. 14 steel or iron pipe 8 and 10-in. diameter, double riveted and dipped in asphaltum	C. O. Wood, Chmn. Water Comms. G. B. Healy, Supt. Pks. & Pub. Prop W. F. Heal, City Clerk.
California	Ft. Baker	Apr. 4	Reconstructing pump house, installing machinery, laying 6-in. water main and erecting steel water tank.	
Ohio	Lakewood	Apr. 4, noon	Constructing an elevated water tower	
Pennsylvania	Somerset	Apr. 5	Constructing concrete storage reservoir	
New York	Keesville	Apr. 5	Constructing reservoir, laying water pipe, etc.	
Pennsylvania	Chambersburg	Apr. 7, 8 p.m.	Constructing a diversion dam and intake chamber, a reservoir of 200,000 gals. capacity and a standpipe.	
Iowa	Sioux City	Apr. 8	Installing 3 centrifugal pumps with d. c. motors.	
Sask., Can.	Moose Jaw	Apr. 10, 8:30 p.m.	Furn. and lay about 20,700 lin. ft. c. i. water main; sep. bids.	
Oklahoma	Ada	Apr. 10, 8 p.m.	Furn. pipe and machinery for extension and improvement of water system; about 66,000 lin. ft. of 12 in. pipe line, either of steel or cast iron, required. Goodwin & Harper, 920 Scarritt Bldg., Kansas City, Mo., Engineers.	W. B. Jones, City Clerk. Capt. Jos. F. Gohn, Con. Q.M.U.S.A. J. A. Mattson, City Clk. G. D. Canfield, Chm. W. W. Com.
Maine	Ft. McKinley	Apr. 15	Constructing chemical water softening plant.	
Montana	Helena	Apr. 20, 8 p.m.	Con. water works system, reservoir, pipe line & distri. system.	
North Carolina	Morehead	Apr. 20	Installing water works.	
BRIDGES				
New York	Fredonia	Apr. 1, 2 p.m.	Constructing concrete arch over Candaway Creek	Frank H. Moir, Town Clerk.
Kansas	St. John	Apr. 3, noon	Con. 2 cement and steel bridges & repairing 1 cement bridge.	R. C. Ardrey, Co. Clk.
Pennsylvania	Allentown	Apr. 3, 10 a.m.	Repairing 5 wooden bridges.	J. S. Troxell, Clk. Bd. of Comms.
Kansas	Hill City	Apr. 4, noon	Constructing bridge.	Ben. S. Smith, Co. Clerk.
North Dakota	Cando	Apr. 4, 1 p.m.	Constructing 150 ft. more or less of concrete and steel bridges.	Frank Shanley, County Auditor.
Pennsylvania	Reading	Apr. 4, 10 a.m.	Erecting 3 reinforced concrete bridges in Berks County.	A. L. Rhoades, County Compt.
Indiana	Brazil	Apr. 4, 11:30 a.m.	Constructing a bridge at Clay City.	E. A. Stagg, County Auditor.
Indiana	LeGrange	Apr. 4, 2 p.m.	Constructing 1 wooden, 1 iron and 5 concrete bridges.	C. S. Willard, County Auditor.
Ohio	Columbus	Apr. 5, noon	Grad. roadway, con. abutments & approaches of various bridges	F. M. Sayre, Co. Audr.
Indiana	Shelbyville	Apr. 5, 10 a.m.	Constructing 4 reinforced concrete bridges.	G. R. Huntington, County Auditor.
Indiana	Rockport	Apr. 5, 10 a.m.	Constructing 25 bridges.	John T. White, County Auditor.
New Jersey	Jersey City	Apr. 5, 3:30 p.m.	Repairing and placing in good condition Hudson Boulevard Bridge over Pennsylvania Railroad.	J. C. Sweeney, Clk. Blvd. Comrs. J. O. Donovan, Clk. Bd. Co. Comrs.
Ohio	Germantown	Apr. 6, 10 a.m.	Constructing concrete steel arch bridge over Little Twin Creek.	
Indiana	Fort Wayne	Apr. 8, 10 a.m.	Constructing a steel bridge of 2 spans 171 ft. each; also remodeling two old steel bridges, building concrete abutments and one culvert; also furnishing I-beams and bridge plank.	Calvin H. Brown, County Auditor. John T. Scott, Aud. Knox Co.
Indiana	Vincennes	Apr. 8, 10 a.m.	Constructing 3 bridges in Knox County.	
New Jersey	Camden	Apr. 10, 11 a.m.	Constr. conc. culvert over Bates' Mill Stream; alternate bid for wooden bridge at same place.	Fred'k W. Gercke, Chm. Bridge Com.
Kansas	Kansas City	Apr. 10	Repairing 5th St. Bridge over Kansas river.	Frank M. Holcomb, County Clerk
Ohio	Xenia	Apr. 12, 11:30 a.m.	Con. superstructure & approaches of the Louis Hill Bridge.	Board of Co. Comms.
Indiana	Decatur	Apr. 14	Constructing the Abe Egley bridge.	Board of Co. Comms.
Wisconsin	Kenosha	Apr. 15, 4 p.m.	Rebuilding and altering Middle St. Bridge.	R. H. Moth, City Engr.
Kansas	Lawrence	Apr. 15, noon	Constructing 2 stone abutments and 37-ft. girder span.	W. R. Green, County Clerk.
Ohio	Warren	Apr. 17, 1 p.m.	Construct concrete bridge over Little Squaw Creek, Liberty twp	Fred T. Stone, County Auditor.
LIGHTING AND POWER				
Minnesota	Minneapolis	Mar. 31, 7:30 p.m.	Furnishing alternating current generator	Henry N. Knott, City Clerk.
Missouri	Kansas City	Mar. 31, noon	Furnishing 1 automatic cut-off steam engine for direct connection to 200 kw. direct current 220 volt generator; 1 generator of 200 kw., 220 volts direct current connected engine.	Leo. M. Gilday, Clk. Co. Court.
Kentucky	LaGrange	Apr. 1	Installing second-hand 65 H. P. gas engine and producer for soft coal; 45 kilowatt D. C. multipolar comp. 250 volt generator; also poles, overhead and underground wire, cross-arms etc.	J. C. Emmick, Manager. John J. Wenner, Clk. B.I. Pub. Serv
Ohio	Cincinnati	Apr. 3, noon	Light. by electricity streets, etc., for ten years beginning June 1	
Sask., Can.	Rouleau	Apr. 4	Pumping machinery, electrical machinery, pole line, etc., producer gas plant, c. i. or steel water mains, valves etc.	W. H. Stewart, City Secy.-Teras. D. P. McIntyre, City Clk G. M. Beaver Mayor.
Minnesota	Eveleth	Apr. 4	Furn. 6 blocks of ornamental street light. sys., about 46 posts.	
Mississippi	Newton	Apr. 4, 4 p.m.	Constructing electric light plant	

BIDS ASKED FOR

STATE	CITY	RECEIVED UNTIL	NATURE OF WORK	ADDRESS INQUIRIES TO
LIGHTING AND POWER (Continued)				
New York	Auburn	Apr. 4, 8 p.m.	Constructing subways and laying 19,700 lin. ft. straight iron pipe laterals, 190 iron pipe bends and 23 double manholes, including sewer connections.	J. S. Hanlon, City Clerk.
Omaha	Fort Nebraska	Apr. 10, 11 a.m.	Constructing an extension of the electric lighting system, at Fort Omaha	Capt. W. L. Clarke, Con. Q.M., U.S.A. W. F. Heal City Clerk
Sask., Can.	Moose Jaw	Apr. 10, 8:30 p.m.	Furn. 2 electrically driven centrif. pumps and auto starters.	
Nebraska	Omaha	Apr. 11, 8 p.m.	Lighting streets with incandescent street lamps, three years including extinguishing, cleaning, repairing and maintaining and painting posts once a year.	Dan B. Butler, City Clerk.
Alabama	Troy	Apr. 17	Furn. 1 stationary steam engine, 400 H.P., 150 lbs. initial pressure; 1 electric generator, 250 kva., 60 cycles 3-phase, 2,300 volts; 1 pump, electrically driven capacity not less than 500 gals. per minute against 200 lbs. working pressure; 1 motor to drive pump; transmission line material for 3-phase line 3 1/2 miles long, size of wire No. 4 B&S.	A. B. Campbell, Supt. E. & W. Dept. Magnus Peterson Secy. Civic B. Con.
Manitoba, Can.	Winnipeg	May 1, 11 a.m.	Furnishing ornamental lighting standards.	
FIRE EQUIPMENT				
Pennsylvania	So. Bethlehem	Apr. 3, 8 p.m.	Furnishing 1,000 ft. of fire hose.	Denis McFadden, Chm. Fire Com.
Ohio	Lakewood	Apr. 3, noon	Furnish 1 steam fire engine or 1 auto. fire engine.	B. M. Cook, City Clerk.
New York	New York	Apr. 3, 10:30 a.m.	Furnishing two 75-ft. aerial hook and ladder trucks of self-propelling design.	R. Waldo, Fire Commissioner.
Washington	Tacoma	Apr. 6, 3 p.m.	One-third size steam Fire Engine.	L. W. Roys, Comr. Public Safety.
New Jersey	Jersey City	Apr. 7	Furn. 1 first-size steam fire engine & 85-ft. aerial hk. & lad. truck	Michael J. Pagors, City Clk.
New Jersey	Paterson	Apr. 21	Furn. automobile hook and ladder outfit and converting 2 first-class fire engines into gasoline-propelled vehicles.	T. S. Standeven, City Clk.
New Jersey	Princeton	July 5	Furn. auto pumping engine.	E. M. Updike, Chm. F. & W. Com
MISCELLANEOUS				
Minnesota	Minneapolis	Mar. 31, 7:30 p.m.	Furnishing 1 automobile for use of fire department; one automobile runabout for sewer department and 2 commercial auto trucks of about 2,000 lbs. capacity.	Henry N. Knott, City Clerk.
Minnesota	Duluth	Mar. 31, 10 a.m.	Sprinkling streets for season of 1911; and furnishing 400, 600 or 800 tons of calcium chloride.	Olof G. Olson, Pres. Bd. P. ub. Wks.
New Jersey	Elizabeth	Apr. 3	Oiling pavements for season of 1911.	P. J. McGurn, Chm. Com. Hwys.
Florida	Tampa	Apr. 3, noon	Building county jail.	County Commissioners.
South Carolina	Charleston	Apr. 4, 7 p.m.	Furnishing for one year iron castings; brick, lime and portland cement; lumber; curbing; terra cotta pipe; concrete sidewalks; laying terra cotta pipe; hauling stone curbing; furnishing crushed stone; purchase and removal of manure.	J. H. Dingle, City Engineer. Wm. H. Sanderland, City Clerk.
Connecticut	Waterbury	Apr. 5, 4 p.m.	Altering building to conform to requirements of mod. fire sta.	R. O. Owen, City Secy.
Texas	Rotan	Apr. 6	Constructing two story brick city hall building.	City Clerk.
Missouri	Kansas City	Apr. 6	Erecting engine house at 60th St. and Troost Ave.	Ed. Metz, City Clerk.
Missouri	Hutchinson	Apr. 7, 3 p.m.	Sprinkling various streets.	J. S. McCullough, Chm. Bd. Pub. Wks.
Wisconsin	Fond du Lac	Apr. 7, 3 p.m.	Sprinkling various streets.	
Minnesota	Duluth	Apr. 8, 8 p.m.	Constructing piers of concrete, and moving buildings when piers are finished.	
Ohio	Ashland	Apr. 12	Erecting city hospital building.	F. L. Packard, Architect.
New York	Binghamton	Apr. 12	Furnishing 12,000 ft. oak lumber.	City Clerk.
Kansas	Hutchinson	Apr. 14, 3 p.m.	Sprinkling various streets.	Ed Metz, City Clerk.
Ontario, Can.	Goderich	Apr. 15	Erect. municipal building Combined Town Hall and Fire Hall.	L. L. Knox, Town Clerk.

STREET IMPROVEMENTS

Troy, Ala.—Council has adopted plans and specifications for paving on North Three Notch and College sts.

Texarkana, Ark.—Council is considering establishment of Improvement District No. 13; work includes draining, grading, guttering and macadamizing.—John P. Kline, Mayor.

Van Buren, Ark.—Construction of macadamized road from this city to Mulberry is being considered; distance about 20 miles; cost about \$50,000. F. D. Scott is interested.

Coronado Beach, Cal.—Contracts will soon be let for paving 7th, 10th and "E" sts.

Los Angeles, Cal.—City Engineer Homer Hamlin has recommended paving of Ave. 64 with asphalt and vit. block gutters.

Hartford, Conn.—Plans are being prepared by Division Engineer E. C. Welden for following State road work: Town of Somers, 10,000 lin. ft. survey on the main highway to Ellington, and 12,700 lin. ft. survey on Somers st.; town of Ellington, 20,000 lin. ft. survey on Ellington turnpike; town of Coventry, 21,000 lin. ft. survey from South Coventry to Coventry.

Thompsonville, Conn.—Selectmen have decided to macadamize Pearl and South Pearl sts.

Washington, D. C.—American Consul has reported that an official in Oceania is about to purchase steam roller for use on roads, and at later date will purchase others, as there is none in the region at present; weight of roller desired should be 4 or 6 tons, and in writing its exact weight, all dimensions, capacity, cost f. o. b. San Francisco, and illustrations should be given; matter is to be taken up at once. Address in French, if possible, No. 6410 Bureau of Manufactures.

New Castle, Del.—Council will open bids Apr. 3 for \$30,000 street paving bonds.

Wilmington, Del.—Having been authorized by Legislature to issue bonds for purpose, New Castle County Levy Court is planning construction of about 30 miles of good roads this summer.

Rome, Ga.—Hazelhurst & Anderson, Candler Bldg., Atlanta, have been selected as engineers for proposed pavement, sewer and construction work.

Boise, Ida.—Bids will be received Mar. 31 by Emily L. Savidge, City Clerk, for \$220,000 Paving Dist. No. 15 bonds.

Greencastle, Ind.—Council has passed ordinance for improving four streets around the public square; work will cost about \$15,000.

Hartford City, Ind.—County Commissioners have decided to devote \$4,000 more to improvement of roads throughout county.

Council Bluffs, Ia.—Councils considering resolution providing for repaving of Main st. and Broadway.

Dayton, Ky.—Street Committee has been instructed to receive bids for reconstruction of 6th ave.

Tonganoxie, Kan.—City has decided to pave Main st. with macadam.

Alexandria, La.—Rapides Parish Police Jury will consider election on \$200,000 bonds for road improvements.

Augusta, Me.—Mayor Reul J. Noyes has recommended macadamizing of portion of Water st.

Chestertown, Md.—Council has decided to macadamize streets.

Port Deposit, Md.—Ceil County Commissioners have decided to macadamize road between the town and Battle Swamp.

Holyoke, Mass.—Board of Aldermen is considering macadamizing of Brown ave. and macadamizing or paving of Jackson st.

Charlotte, Mich.—Council has voted to submit proposition to bond city for \$19,000 at the spring election; money will be used for street improvements.

Detroit, Mich.—Bids will soon be asked for paving with cedar block on concrete base. Fort st.; cost \$17,500; Ellery st., \$24,960; Beaufait ave., \$17,077.

Duluth, Minn.—Board of Works will ask bids for improving Juniata and Wyoming sts. with tarcon.

Columbus, Miss.—City desires delivered prices on 6,000 lin. ft. of granite curbing; stones to be about 5 x 18 in. by 6 ft.; street and alley corners to be radius of 6 ft. and 3 ft. respectively.—E. S. Donnell, Mayor.

St. Joseph, Mo.—More than twenty-one miles of macadam road leading out of St. Joseph will be oiled at cost of the county this year.

Hackensack, N. J.—Street Committee will soon ask bids for street work, including sidewalks and curbing.

Jersey City, N. J.—Finance Commission-

ers have authorized repaving of Ocean ave. Myrtle to Gates ave.

Perth Amboy, N. J.—Paving of portion of Division st. with vit. brick is being considered.

Trenton, N. J.—Board of Freeholders will consider resurfacing of Trenton-Princeton road at total cost of \$60,000; length 9 miles.

Trenton, N. J.—Council is considering paving of seven streets with fibertine; 20 st., Broad to Lator st., with asphalt, and Quarry alley with Belgian blocks.

Westfield, N. J.—Town Engineer Varr will purchase tarvia and crushed stone for road repairs.

Albany, N. Y.—Council has accepted bill of Assemblyman Hinman providing for improvement of State st., Broadway to the river front, at a cost of not to exceed \$500,000.

Bronxville, N. Y.—Public Service Commission, Second District, has approved plans for elimination of grade crossings on the Harlem Division of the New York Central Railroad; cost will approximate \$150,000.

Canastota, N. Y.—Village has voted to pave Peterboro st. for distance of nearly two miles.

Cornwall, N. Y.—Citizens have voted to construct sidewalks.—Address Village President Clarkson.

Dewitt, N. Y.—Town Board has appropriated \$1,600.60 for highway improvements to be made during summer by Town Superintendent of Highways Thomas Baker.

Hudson, N. Y.—City has decided to repave Warren st. with vit. brick on 6-in. concrete base.

Hudson, N. Y.—Bids will be received in April for paving, probably with vitr. brick, cost about \$25,000.—Wm. Wortman, Secretary Board of Public Works.

Irvington, N. Y.—Public Service Commission, Second District, has approved plans for elimination of the Main st. grade crossing on Harlem Division of the New York Central Railroad; cost will approximate \$80,000.

Lyons, N. Y.—Twelve and one-eighth miles of county highway to be built in 1912 with State aid have been designated by Wayne County Board of Supervisors.

Montour Falls, N. Y.—Citizens have voted \$6,000 for brick pavement.—Geo. M. Post Village President.

Belham Manor, N. Y.—Citizens have voted \$6,000 expenditure for repairing 1,200 lin. ft. of sidewalks and \$7,000 for laying 10,000 ft. of new sidewalks.

Potsdam, N. Y.—Citizens have defeated proposition to raise \$13,000 to pave Market st.

Poughkeepsie, N. Y.—Board of Aldermen has ordered macadamizing of three streets and paving of three others; Board of Works has recommended paving of six streets.

Pulaski, N. Y.—Citizens have voted to raise \$2,000 to construct and repairing stone crushed roads.

Utica, N. Y.—Board of Contract and Supply has rejected bids for paving Canal and Ray sts.

Whitesboro, N. Y.—Citizens will vote April 4 on paving four streets.

White Plains, N. Y.—Board of Supervisors has approved plans for new roads in Westchester County to be built with State aid, as follows: 4.6 miles running through towns of Lewisboro and Bedford, cost \$62,500; 1.8 miles in town of Rye, cost \$24,700; 5.68 miles, the Cross River road, running through town of Lewisboro to Connecticut State lines, cost \$81,000.

Yorkville, N. Y.—Citizens have decided to improve Whitesboro st. at cost of \$19,500.—Edw. M. Coughlin, Village President.

Carthage, N. C.—Moore County will vote Apr. 4 on \$100,000 of bonds for road construction.

Cincinnati, O.—City Engineer Shipley has submitted approximate estimates for improvement of Fairmount ave., Harrison ave. to Iroquois st., at \$18,990, and Neff ave. from Wilder ave. to Maxwell Place with macadam at \$14,241.

Los Angeles, Cal.—Street improvements: Daly st. to Barber Asphalt Paving Co., Central Bldg., \$7,185; Vine st. to A. W. Leeseemyer, \$1,886; Normandie ave., to Geo. H. Oswald, \$1,102; Hasse st. to T. E. Shafer, \$11,923; Boyd st. to Fairchild, Gilmore Wilton Co., Pacific Electric Bldg., \$8,212; Mesa st. to H. H. Curtis, \$7,177.

Belleville, Ill.—To Hoeffken Bros. for improvement of Jarrott and C sts., \$37,697.55; other bidders, Reeb Bros., \$38,434.95; A. F. Franks, Jacksonville, \$39,438.25; Meyer & Thomas, East St. Louis, \$40,143.10; Albion Block will be used. Improvement of Douglas ave. and Sycamore st. to Reeb Bros., \$28,110.05; other bidders, Hoeffken Bros., \$28,682.70; A. F. Franks, Jacksonville, \$29,331.75; Meyer & Thomas, East St. Louis, \$30,053.50; Egyptian block, manufactured at Murphysboro, Ill., will be used.

Chicago, Ill.—Furnishing 10,000 sq. yds. of sectioned wood pavement to be delivered and used as directed for repaving bridges to Geo. P. Cullen & Co., 78 LaSalle st., Chicago; 2 1/2-in. pavement \$2.35 per sq. yd., 3 1/2-in. pavement \$2.70 per sq. yd.; sidewalk construction to H. P. Larsen, 1542 N. Rockwell st.; Thos. D. Joy, 3911 W. Van Buren st.; Banstrow Supply Co., 6084 Ridge ave.; Siewart Colom, 3865 Milwaukee ave.; Skafgard Concrete Construction Co., 4024 W. North st.; Jas. J. Ferry, 92 Sigel st.; Deming & Wendt, 84 LaSalle st., and General Cement Construction Co., Milton Place.

Brazil, Ind.—Building 7,655 ft. of gravel road in Clay County, to Edgar J. Schaeffer, \$9,349.

Portland, Ind.—Building gravel road in Jay and Randolph counties, to Daniel Wallace, Ridgeville, \$17,749.

Seymour, Ind.—Constructing gravel road in Vernon Township, to Sam Small, city, \$7,995.

Red Oak, Ia.—Paving with brick, to Hamilton & Schwartz, Shenandoah, \$1.83 per yd.

Louisville, Ky.—Paving with asphalt at cost of \$70,000 to American Standard Asphalt Co., for bulk of work; to Barber Asphalt Co., work on 6th st., and to S. S. Saxton Co., on Avery st.

Hagerstown, Md.—To Victor Cushwa & Sons, to furnish sand, cement and sand pipe for year.

Boston, Mass.—Furnishing crushed stone and screening in various city districts during year ending Feb. 1, 1912: In the South Boston district, to Lane Quarry Co., \$1.47 per ton of 2,000 lbs.; East Boston, Rowe Contracting Co., \$1.48; Charlestown, Coleman Bros., \$1.47; West Roxbury, Thomas F. Minton, \$1.10; Dorchester, T. F. Bradley, \$1.19 1/2; other bidders: South Boston, J. C. Coleman & Sons, \$1.65; Bleiler Contracting Co., \$1.50; John F. Beatty, \$1.55; Hugh Nawn Contracting Co., \$1.60; W. J. Emerson, \$1.48; East Boston, Coleman Bros., \$1.53; Hugh Nawn Contracting Co., \$1.70; Essex Trap Rock and Construction Co., \$1.55; Charlestown, Rowe Contracting Co., \$1.50; Hugh Nawn Contracting Co., \$1.70; Essex Trap Rock and Construction Co., \$1.55; West Roxbury, West Roxbury Trap Rock Co., \$1.13; Hugh Nawn Contracting Co., \$1.10; Dorchester and Ashmont, West Roxbury Trap Rock Co., \$1.47; P. F. Donovan, \$1.32; Hugh Nawn Contracting Co., \$1.50; W. J. Emerson, \$1.34; Lane Quarry Co., \$1.47.

Boston, Mass.—To Standard Oil Co. of New York for furnishing 400,000 gals. of emulsion oil and 400,000 gals. of emulsified road oil.

Detroit, Mich.—Paving with cedar blocks on concrete foundation, with Amherst curbing: Chalmers ave. from Freund to Jefferson ave., to T. E. Currie, 20 McGraw Bldg., \$7,680; Hazel st., National to Wabash ave., to J. A. Mercer, 211 Hammond Bldg., \$8,939; Montclair ave., Charlevoix ave. to city limits, to T. E. Currie, \$7,142; Spruce st., 12th st. to Wabash ave., to J. Orath, 31 McGraw Bldg., \$4,818; Willis ave., McDougal to Mt. Elliott ave., to T. E. Currie, \$15,855.

Muskegon, Mich.—Furnishing and delivering 14,200 cu. yds. of road building materials, to Lake Shore Stone Co., Milwaukee, Wis., \$18,319.

Columbia, Mo.—Building 11,750 sq. yds. of pavement, to J. A. Stewart, \$24,899.

Kansas City, Mo.—Building 1 1/2 miles of concrete paving through Westmoreland district, to Weaver Bros., about \$25,000.

Webb City, Mo.—Paving 6,960 sq. yds. asphalt and macadam to Webb City Paving and Improvement Co., 58 1/2 c., 8,266 sq. yds. to W. F. Plumber & Co., Springfield, 79 1/2 c.; macadam foundation; setting 4,718 lin. ft. concrete curb and gutter to W. F. Plumber & Co., 61 c.; other bidders, Webb City Co., \$2,019, and M. Gilloiz, \$2,830; laying 3,921

sq. yds. concrete sidewalks, gravel foundation, to M. Gilloiz, 85 c.; excavation 50c. per cu. yd.; filling 50c. per cu. yd.

Elizabeth, N. J.—Supplying stone for use on roads in Springfield Township, to Steward Hartshorne, chips 65c., 1-in. 90c., 3/4-in. 90c., dust 90c.; prices per ton at quarry; to James Morrison, Springfield, 29 1/2 c. per ton, also to grade and repair Short Hills ave., \$85.

Haddon Heights, N. J.—Laying over 25,000 lin. ft. of cement curb, to Albert D. Pine, of Camden.

Perth Amboy, N. J.—Paving, to Hastings Pavement Co.; Lewis st., \$10,855; Hobart st., \$7,564; King st., \$6,657; Fayette st., \$5,549; Barber Asphalt Paving Co. only other bidder.

Trenton, N. J.—Repairing asphalt pavement, to Filbertine Co.

Westfield, N. J.—Building crosswalks, to J. W. Manhattan.

Albany, N. Y.—Building State roads: Road No. 886, Greene County, to De Graff & Hogeboom, Kingston, \$55,871; Road No. 887, Greene County, to De Graff & Hogeboom, \$36,118; Road No. 5096, Genesee County, to Hucknall Construction Co., Albion, \$50,000; Road No. 874, Hamilton County, to Creedon & Pitou, New York, \$49,670; Road No. 5077, Lewis County, to Thomas Shaughnessy Co., Albany, \$35,600; Road No. 5078, Madison County, to Newport Construction Co., Newport, N. Y., \$31,800; Road No. 409, Montgomery County, to Joseph Walker, New Paltz, \$82,863; Road No. 837, Oneida County, to Joseph Walker, \$49,950; Road No. 838, Oneida County, to Fred W. Begent, Newport, N. Y., \$7,787.67; Road No. 839, Oneida County, to A. C. Brewer, Oriskany Falls, \$12,946.90; Road No. 840, Oneida County, to Kennedy Roofing and Paving Co., Utica, \$57,965; Road No. 877, Oneida County, to John Hyde, Rome, \$12,419.50; Road No. 5079, Oneida County, to Kennedy Construction Co., Albany, \$18,973; Road No. 556, Onondaga County, to Central City Paving Co., Syracuse, \$32,479; Road No. 557, Onondaga County, to Thomas Meehan & Sons, Philadelphia, \$65,458.80; Road No. 655, Onondaga County, to Central City Paving Co., Syracuse, \$12,657; Road No. 669, Onondaga County, to Meehan & Son, Philadelphia, \$72,517.01; Road No. 5080, Onondaga County, to Paddock & Williams, Memphis, N. Y., \$33,975; Road No. 772, Oswego County, to Joseph H. Connors, Fulton, \$43,990; Road No. 825, Oswego County, to Monroe Roads Co., Pittsford, \$36,212; Road No. 826, Oswego County, to Folk & Menzies, Buffalo, \$56,999.99; Road No. 5082, Oswego County, to Charles O. McComb, Syracuse, \$37,990; Road No. 5083, Oswego County, to Chas. O. McComb, \$30,420.

Albany, N. Y.—State road work: Road 879, Shakers-Watervliet, Albany County, 6.40 miles, to John E. Consalus, city, \$76,600 for Trinidad; Road No. 858, Whitney Point-Upper Lisle, Browne County, 4.27 miles, to T. H. Gil & Co., Boston, \$46,316; Road No. 687, Fair Haven-Sterling-Martinville, Cayuga County, 5.30 miles, to Mosier & Summers, Buffalo, \$62,000 for residuum; Road No. 666, Plymouth-Kirk, Chenango County, 4.90 miles, to E. D. Baker, Binghamton, \$53,548 for residuum; Road No. 777, Plattsburg-Codyville, Clinton County, 4.33 miles, to Spellman-Oliver Co., Chateaugay, \$39,970 for residuum; Road No. 5,074, Schodock Center-Volatie, Part 4, Columbia County, 4.30 miles, to Thos. Shaughnessy & Co., city, \$48,900 for residuum; Road No. 712, Amenia-Sharon Station, Dutchess County, 2.25 miles, to Lane Construction Co., Meriden, Conn., \$20,619; Road No. 834, Malone-Port Covington, Part 1, Franklin County, 3.58 miles, to St. Regis Construction Co., city, \$42,222.22 for residuum; Road No. 885, Moera-South Bombay, Franklin County, 8.58 miles, to Jas. Anderson, city, \$84,429.93 for residuum; Road No. 5,076, Malone-Nevira, Franklin County, 5.22 miles, to Jas. Anderson, city, \$59,579.38 for residuum; Road No. 625, Theresa-Antwerp, Part 2, Jefferson County, 5.37 miles, to Dale Engineering Co., Utica, \$54,120 for residuum; Road No. 626, Burr's Mills-South-Champion, Jefferson County, 4.56 miles, to Semper Bros., Watertown, \$49,917.70 for residuum; Road No. 659, Brunswick Center-Lansing Rensselaer County, 5.07 miles, to J. W. Flinn, Waterford, \$55,488 for residuum; Roads No. 5,072 Ext., Livingston-Hudson, Parts 1 and 2, Columbia County, to General Construction Co., Bridgeport, Conn., \$101,859 for residuum.

New York, N. Y.—Regulating and repaving with sheet asphalt pavement: To Sicilian Asphalt Paving Co., 41 Park Row, for improving 29th st. from Lexington ave. to 4th ave., \$10,899; to W. J. Fitzgerald, 457 West 45th st., for improving 11th ave., 42d to 62d st., at \$92,264; East 20th st., East River to 1st ave., \$18,823; portion of 34th st., \$24,519. Curbing and laying sidewalks on Hunters' Point ave., Jackson ave. to Van Dam st. Borough of Queens, to the

M. Di Menna Construction Co., 212 Hughes ave., \$11,550; other bidders: Leace Bros., \$12,500; Green Contracting Co., \$12,500; W. H. Robertson, \$12,500; Astoria Contracting Co., \$12,900; Frazer Co., \$12,310; Deegan Realty and Terminal Improvement Co., \$11,115; Henry J. Mullen, \$11,918.

Yonkers, N. Y.—Furnishing 8,000 cu. yds. of trap rock, to Manhattan Trap Rock Co., \$1.05 per cu. yd.

East Youngstown, O.—To E. A. Grubb for putting in all new sidewalks for village within next year, 95¢ c. per sq. ft.

Stamford, Tex.—Paving four blocks of streets with Bassam, to Oakland Bros., Waco.

Spokane, Wash.—Grading streets in West Grove addition, to J. C. Kennedy, \$121,980.

Sheridan, Wyo.—Bismarck General Engineering Co., Bismarck, N. D., has been awarded contract to supervise the placing of 69,000 yds. of creosote block paving.

BIDS RECEIVED

Trenton, N. J.—Thos. J. McGovern, lowest bidder for paving West End ave. with 8-in. macadam and laying concrete gutters; bid for pavement, 80c. per sq. yd.

Albany, N. Y.—State road improvement; contracts held over: Road No. 679, W. Stephentown-Stephentown Center, Rensselaer County, 4.14 miles; J. W. Whalen, Whitehall, \$36,574; Fred E. Ellis, Melrose, Mass., \$51,306; Olin T. Benedict, Pittsfield, Mass., \$59,379; Cunningham-Woodard Co., Hudson Falls, \$45,400; Richard Hopkins, Troy, \$44,832; S. B. Van Wageningen, Rondout, \$46,000; Charles E. Horne, Millburg, Mass., \$59,800; Amos D. Bridges' Sons, Inc., Hazardville, Conn., \$53,933; Edward J. Rourke, Arlington, Mass., \$54,043; Joseph McCormick, East Providence, R. I., \$49,830.

Road No. 680, Stephenson Center, Massachusetts, Rensselaer County, 3.92 miles; John W. Whalen, Whitehall, \$35,588; Cunningham-Woodard Co., Hudson Falls, \$39,445; The Lane Construction Co., Meriden, Conn., \$26,640; Ryder & Sanders Construction Co., Troy, N. Y., \$33,491; S. B. Van Wageningen, Rondout, N. Y., \$36,000; Amos D. Bridges' Sons, Inc., Hazardville, Conn., \$41,998; Joseph McCormick, East Providence, R. I., \$39,970; Fred E. Ellis, Melrose, Mass., \$33,790; Olin T. Benedict, Pittsfield, Mass., \$46,072.

Road No. 5072, Extension Livingston-Hudson Parts 1 and 2, Columbia County, 8.70 miles; Frank J. Gallagher, Brooklyn, N. Y., \$112,000 for Residium, \$117,000 for Bermudez and \$115,852 for Trinidad; Joseph Walker, New Paltz, \$105,532; \$117,728 and \$109,544; Brown & Lowe Co., Schenectady, \$112,668, \$117,804 and \$116,322; Catskill Supply Co., Catskill, \$106,480, \$111,740 and \$111,740; Herlihy Contracting Co., Glens Falls, \$105,312, \$121,000 and \$119,500; James E. Martin, Poughkeepsie, \$113,000, \$118,000 and \$110,800; General Construction Co., Bridgeport, Conn., \$104,859, \$109,495 and \$108,995. Road No. 4074, Extension Schodack Center-Valatie, Parts 3 and 4, Columbia, Rensselaer, 7.20 miles; Frank J. Gallagher, Brooklyn, N. Y., \$94,550 for Residium, \$99,070 for Bermudez, and \$97,940 for Trinidad; Brown & Lowe Co., Schenectady, \$94,999, \$99,519 and \$98,389; Herlihy Contracting Co., Glens Falls, \$105,000, \$110,000 and \$109,000; Di Martino & Musso, Scranton, Pa., \$83,251, \$88,274 and \$88,000; Lane Construction Co., Meriden, Conn., \$91,000, \$95,500 and \$94,400. Road No. 763, Hollowville-Crarryville, Columbia County, 7.14 miles; Herlihy Construction Co., Glens Falls, \$108,900 for Residium, \$116,000 for Bermudez and \$115,000 for Trinidad; D. Martino & Musso, Scranton, Pa., \$68,980, \$72,180 and \$72,065; Joseph Walker, New Paltz, N. Y., \$120,167, \$123,687 and \$122,807; Thomas Meehan & Sons, Philadelphia, Pa., \$124,301, \$127,821 and \$126,941; James Sewart & Co., New York City, \$117,000, \$120,520 and \$120,520; James E. Martin, Poughkeepsie, \$111,994, \$106,800 and \$115,800; General Construction Co., Bridgeport, Conn., \$103,490, \$106,490 and \$106,000; DeGraff & Hogeboom, Kingston, \$104,436, \$108,500 and \$108,500. Road No. 5084, Schodack Center-Valatie, Part 3, Rensselaer County, 2.90 miles; Lane Construction Co., Meriden, Conn., \$40,950 for Residium, \$42,750 for Bermudez, and \$42,300 for Trinidad; Thomas Meehan & Son, Philadelphia, \$39,581, \$41,606 and \$41,156; Olin T. Benedict, Pittsfield, Mass., \$46,000, \$47,174 and \$46,800; Dorpian City Construction Co., Schenectady, \$39,892, \$41,656 and \$41,215; Di Martino & Musso, Scranton, Pa., \$32,898, \$34,620 and \$34,500; Thomas F. Shaughnessy Co., Albany, \$37,800, \$42,000 and \$42,000; Wiltzie & Rigley, Rensselaer, \$39,961, \$41,851 and \$41,379. Road No. 790, Cohoes City Line-Boghts Corner, Albany County, 2.17 miles; Thos. H. Carr, Troy, \$25,200, Residium; Grattan Construction Co., Cohoes, \$22,990; Fred E. Ellis, Melrose, Mass., \$25,078; Thomas Meehan & Sons, Philadelphia, Pa., \$23,911.20; Kennedy Construction Co., Albany, \$27,873; Ryder & Sanders Construction Co., Troy, \$21,918; John B. Dower,

Ballston, \$26,670. Road No. 695, Otto-Cattaraugus, Cattaraugus County, 1.21 miles, no award, amounts exceeding the appropriation; Miller & Nickenburgh, Buffalo, \$13,751.75; James Stewart & Co., New York, \$14,690.50; George S. Van Winkle, New York, \$15,149.95. Road No. 697, Otto-E. Otto, Sec. 2, Cattaraugus County, 2.27 miles, no award, amounts exceeding the appropriation; Miller & Knickenberg, Buffalo, \$29,441.40; James Stewart & Co., New York, \$26,154; George S. Van Winkle, New York, \$25,265.60.

Brooklyn, N. Y.—Furnishing and delivering to Bureau of Highways broken stone and screenings of trap rock: (a) in the Fourth Ward, (b) in the Second, Third and Fifth Wards; Clinton Point Stone Co., (a) \$38,697, (b) \$21,735; Manhattan Trap Rock Co., (a) \$39,574, (b) \$21,424.

New York, N. Y.—Regulating and repaving with granite block on a concrete foundation 10th ave. from 23d st. to 30th st., Rafferty Bros., W. 52d st., lowest bidder: 5,590 sq. yds. granite block with cement joints, except the railroad area, \$2.53, and 3,150 sq. yds. granite block with cement joints, within railroad area, no guarantee, \$2.53; 3,340 sq. yds. old stone block to be purchased and removed by contractor, 1c.; 1,660 cu. yds. Portland cement concrete, 1c.; 1,850 lin. ft. new bluestone curb, 7c.; 1,490 lin. ft. old bluestone curb reset, 20c.; 1,920 sq. ft. new granite bridgestone, 75c.; 210 lin. ft. header stone, 30c.; total, \$31,814.

York, Pa.—Paving, Standard Bitulithic Co., \$2.20 per sq. yd. for bitulithic paving on South Richland ave. aggregating 5,000 yds.; East Gas alley, aggregating 550 yds.; South Hartley st., aggregating 2,120 sq. yds.; West Philadelphia st., aggregating 7,000 sq. yds.; The Barber Asphalt Co., \$1.74 per sq. yd. for asphalt on West Philadelphia st.

Virginia, Minn.—Building sanitary sewer in southern part of city, to H. L. Bartlett Co., city, \$3,555.70.

Syracuse, N. Y.—Constructing north section of Harbor Brook intercepting sewer and for improving corresponding section of brook, to John Young and George C. Dounce, under name of Young Contracting Co., \$88,121.

Russell, O.—To Scherer & Mountain, Ironton, for constructing sewers, \$10,891.

Glassport, Pa.—Constructing sewer on Ohio ave. and Plum Alley, about 3,915 ft. 6, 12 and 18-in. terra cotta pipe sewers to McLaughlin Contr. Co., Pittsburg.

Cameron, Tex.—To Hamilton Bros., of Chicago, for installing sewerage system; approximate cost \$15,000.

Moundsville, W. Va.—To B. F. Sweeten & Son, Camden, N. J., for constructing sewerage system, \$121,180.80.

BIDS RECEIVED

Moundsville, W. Va.—Constructing sewer system: Henning Vineyard Co., Evansville, Ind., \$222,912.50; Thorney Pietro, Morgantown, \$145,943.80; Whiting Middleton Construction Co., Baltimore, Md., \$268,217.21; P. J. Kerns, Knoxville, Tenn., \$162,965.30; J. B. McCleans, Newport, Ky., \$174,087.30; Van Meter Construction Co., Steubenville, O., \$132,215.65; Althous Construction Co., St. Louis, Mo., \$201,609.42½; Trainer & Scanlan, Huntington, \$169,562.50; James Ferry & Sons, Pittsburg, \$157,500; Boser & Maloney, Bellaire, O., \$147,511.20; Central Construction Co., Pittsburg, \$165,000; M. O'Heron Co., Pittsburg, \$196,608.75; John W. Stringer, Rayland, O., \$148,726.75; Thomas S. Savage, Parkersburg, \$149,932.30; W. H. & C. F. Thompson, Baltimore, Md., \$174,692.90; B. F. Sweeten & Son, Camden, N. J., \$121,180.80.

WATER SUPPLY

Gadsden, Ala.—Citizens will vote April 24 on \$50,000 bonds for completion and improvement of water works system.

Alameda, Cal.—Union Water Company has made plans to incorporate factory and warehouse district with its Alameda water system and will lay large mains throughout section.

Alameda, Cal.—Alameda Police and Fire Commissioners have recommended installation of auxiliary salt water cistern system throughout district, each cistern to be of sufficient capacity to allow six engines to draw water from it; cisterns will be supplied with water from estuary by large underground pipes.—I. N. Chapman, City Engineer, has begun surveying ground for the auxiliary system.

Norwich, Conn.—National Board of Fire Underwriters has recommended immediate construction of additional supply a Stony Brook and installation of number of mains, hydrants and gate valves.

Gunnison, Col.—Plans and specifications have been completed for water works and lighting improvements to cost \$90,000.—Burns & McDonnell, 823 Scarritt Bldg., Kansas City, Mo., Engineers.

Washington, D. C.—Appropriation of \$45,100 will be available July 1 for laying water main to Benning and Kenilworth.

Wilmington, Del.—Water Commissioners have announced that water mains, which have been in service for many years, will have to be renewed.

Colquitt, Ga.—Citizens have voted \$7,500 bonds for extension of water system.

Eastman, Ga.—City had plans prepared for construction of water works extension;

about three miles 6-in. and 8-in. mains, and about two miles 2-in. galvanized service pipe; material will be purchased and contract for construction let at once.—Arthur Few, 620 Temple Ct., Atlanta, Engineer-in-Charge.

Sparta, Ga.—City will receive bids at once for construction of water works.—John D. Walker, Mayor; W. H. Stansell, Clerk.

Swainsboro, Ga.—Citizens will vote April 17 on \$10,000 bonds for installing water works and electric lights.

Columbus, Ind.—Engineer has been employed to prepare plans for installation of modern filtration plant.

Kendallville, Ind.—Council has decided to extend water mains at cost of \$2,134.95.

Seneca, Kan.—Plans for increasing water supply have been completed; bids will be asked April 7; amount of bond issue \$15,000.—Burns & McDonnell, 823 Scarritt Bldg., Kansas City, Mo., Consulting Engineers.

Dawson Springs, Ky.—J. W. Holmes, Superintendent of water plant, Paducah, has made survey of city and will prepare plans for water works; gravity reservoir is to be located on hill southeast of city; water will be pumped into reservoir from three wells on hill; about 10,000 ft. of mains are to be laid; cost \$12,000 to \$15,000.

Baltimore, Md.—Water Board has approved plans for proposed equipment of Mount Royal pumping station; cost \$175,000.—Walter M. Quick, Water Engineer.

Amherst, Mass.—Plans are being prepared for extension of the mains of the Amherst Water Co. to village of South Amherst via Shays st.

Longmeadow, Mass.—Citizens have voted \$9,000 loan for enlarging water works.

Clio, Mich.—Council has asked estimates for installation of water works.

Duluth, Minn.—City will at once ask bids for \$200,000 water and light bonds.

Duluth, Minn.—Water and Light Department is planning to install miles of water and gas mains during year.

Biloxi, Mass.—Superintendent of Water Works E. L. Castanea has recommended installation of 85 hydrants, 13,000 ft. of 4-in., 4,300 ft. of 6-in. and 1,800 ft. of 8-in. pipe; cost about \$60,000, minus cost of proposed pumping station improvements.

Culbertson, Mont.—Thomas S. Shepard, Engineer, Denver, Col., has been elected to advise city regarding the installation of municipal water works system.

Lewistown, Mont.—Citizens have voted \$100,000 bonds for rebuilding water works system.

Pembroke, N. H.—Citizens have appointed committee, Rufus B. Robinson, chairman, to investigate feasibility and cost of constructing water works.

Trenton, N. J.—Water Department has practically completed arrangements for immediate installation of temporary purification plant to be put in actual service before end of May.

Holland Patent, N. Y.—Village has voted \$4,000 bonds to install 8-in. pipe in place of present 4-in. water mains from pumping station, distance 1,650 ft.

Medina, N. Y.—Citizens have defeated proposition to expend \$25,000 to install water works system.

Mount Morris, N. Y.—Map of course of pipe line from springs between Oakland and Hunt, which will furnish water for proposed water system, has been completed by Engineers Witmer & Brown; bids will soon be asked.

Newark, N. Y.—Citizens have voted to raise \$5,900 for water works equipment and \$2,500 to extend water mains.

Newport, N. Y.—Village has voted \$15,000 bonds to improve water system.

Pleasantville, N. Y.—Citizens have voted to spend \$3,500 on extension of water system.—Chas. Hoyt, Village President.

Tarrytown, N. Y.—Citizens have voted \$70,000 bonds to enlarge water supply.

Wolcott, N. Y.—Citizens have voted to install water works.

Thomasville, N. C.—Board of Aldermen will ask new bids for \$75,000 water works and sewerage bonds.

Niles, O.—Engineers Burgess & Long, Columbus, have submitted plans for installation of proposed filtration plant.

South Charleston, O.—Citizens will vote May 2 on \$22,000 bonds for water works.

Sapulpa, Okla.—Plans are being prepared for new water works plant; bids will be asked some time in April; estimated cost \$260,000.—Burns & McDonnell, 823 Scarritt Bldg., Kansas City, Mo., Consulting Engineers.

Newport, Tenn.—Citizens will vote April 29 on bonds for installation of system of water works.

Bartlesville, Okla.—Citizens will vote April 25 on bonds for furnishing city with adequate supply of pure water.

Portland, Ore.—Extensions to city water system aggregating \$332,000 have been ordered laid by Water Board.

Glen Rock, Pa.—Citizens will vote April 11 on \$8,000 loan to improve water supply.

Eagle Lake, Tex.—Citizens will vote on \$30,000 bonds for construction of water works and sewerage system.

Roscoe, Tex.—Citizens have voted bonds for water works.

Spokane, Wash.—Water Engineer Walter Lindsay will recommend installation of proposed high-pressure water system in downtown section; plans prepared; cost \$150,000.

Superior, Wis.—Superior Water, Light and Power Co. is planning to enlarge pumping station in east end, install reservoir and enlarge mains.

Moorcroft, Wyo.—Plans have been completed by Burns & McDonnell, Consulting Engineers, 823 Scarritt Bldg., Kansas City, Mo., for water works improvements costing \$15,000; bids will be asked in May.

CONTRACTS AWARDED

Chicago, Ill.—To H. Kramer & Co., 730 S. Canal st., for furnishing and delivering to the Water Department shops, 2352 S. Ashland ave., 12,000 lbs. ingot copper, \$13.75 per cwt., and 12,000 lbs. copper trolley wire \$13.30 per cwt.; to Gardiner Metal Co., 1374 W. Lake st., for furnishing and delivering 200 tons pig lead to City Water Department, \$4.65 per cwt.; furnishing 2,300 tons, 36-in., and 1,000 tons, 30-in. c.-i. water pipe to United States Cast Iron Pipe and Foundry Co., Rookery Bldg., \$23.75 per ton; furnishing and delivering 50,000 lbs. No. 1 red scrap brass to the Water Department repair shops, 2352 S. Ashland ave., to H. Kramer & Co., 730 S. Canal st., 11½¢ per lb.; furnishing and delivering to the Water Department approximately 15 tons lead pipe, \$5.04 per cwt., to Gardiner Metal Co., 1374 W. Lake st.; furnishing and delivering 9 36-in. gate valves to the Roseland pumping station, 104th st. and C. & W. I. Ry., to the Ludlow Valve Mfg. Co., 217 La Salle st., \$710 each; furnishing and erecting smoke flues for the Roseland pumping station, to John Mohr & Sons, 349 W. Illinois st., \$4,558; furnishing and delivering cotton waste to various pumping stations to Crerar, Adams & Co., 10.5¢ per lb.; furnishing c.-i. water pipe of various sizes to city, to United States Cast Iron Pipe and Foundry Co., The Rookery, \$23.85 per ton; total \$119,000; taking borings in Lake Michigan to the Great Lakes Dredge and Dock Co., Tacoma Bldg., \$5 per lin. ft.; furnishing and delivering gate valves to Rensselaer Valve Co., 98 Jackson Blvd., Chicago, six 36-in., \$440; four 30-in., \$165; five 20-in., \$90; ten 16-in., \$52; furnishing tile pipe to the Water Department to Wm. E. Dee & Co., 108 La Salle st., 30,000 lin. ft. 4-in., 3.2-5¢ per ft.; 600 lin. ft. 6-in., 5¢; 600 ft. 9-in., 10¢.

Lena, Ill.—By Village Board, to the Lena Electric Light and Power Co. for pumping of water to supply the water works; contract is for a period of 10 years, \$1,560 per year, company to install new pump, village to maintain tank and line of water mains.

Hoisington, Kan.—Furnishing material and improving water works, by Rollins & Westover, Beals Bldg., Kansas City, Mo., engineers; for two 75-gal. per min. deep well pumps and one 500-gal. per min. duplex pump, to the Platt Iron Works, Dayton, O., \$2,150; twenty-four 4-in. hydrants, twenty-one 4-in. valves and six 6-in. valves, to The Ludlow Valve Co., Troy, N. Y., \$928; wood pipe, to Wyckoff & Son Co., Louisiana, \$1,300.

St. Charles, Mich.—Constructing water works and an electric light plant from plans of Geo. C. and Arthur M. Morgan, 169 Jackson Blvd., Chicago, Ill.; To Holmes, Pyott & Co., Chicago, structural steel for job, \$255; Federal Cement Tile Co., Chicago, Ill., cement tile roofing laid, \$532; Coon De Visser Co., Detroit, tubular boilers and breeching, \$1,490; Platt Iron Works, Dayton, O., w.-i. pipe suction and intake, \$526; Geo. B. Limbert & Co., Chicago, Ill., pumping machinery and heater, \$340; Ridgway Dynamo and Engine Co., Ridgway, Pa., engine and generator, etc., \$2,390; Ft. Wayne Electric Co., Ft. Wayne, Ind., arc lamps, etc., \$720; Electric Appliance Co., Chicago, Ill., transformers, wire, etc.; Michigan Pipe Co., Bay City, pipe and specials, bid, 8-in., 62½¢; 6-in., 54½¢; 4-in., 40½¢, and specials, 4¢ per lb. and Chapman Valve Mfg. Co., Chicago, Ill., hydrants and valves.

Fairbury, Neb.—To Marshall Bros., Las Animas, Col., by the city, for construction of extensions to water works system and electric light plant, \$9,778.

Sanford, N. C.—Constructing standpipe, 100 ft. high, 20 ft. in diameter, capacity 236,000 gals., to S. Coffield & Sons, Atlanta, Ga.

Canton, O.—To the C. N. Carpenter Supply Co., city, for furnishing c.-i. pipe for year, at \$30 per ton; to Canton Culvert Co., only bidder, for contract for furnishing corrugated pipe; size of pipe runs from 8 to 72 inches.

Troy, O.—Water mains from intersection of Water and Adams sts. to County In-

firmery: To Jas. B. Clow & Sons, Chicago, Ill., for material, \$3,995, and to U. S. Constr. Co., of Columbus, O., for labor, \$2,298.

Dallas, Tex.—To the United States Cast Iron Pipe and Foundry Co. for 4,800 ft. of 36-in. pipe for the water works department, \$25.70 per ton, cost \$24,158; construction of concrete foundation for pumping engines at White Rock station, to the Fred A. Jones Co. at \$1,255.50; other bidders were the Hughes-O'Rourke Construction Co., \$1,383.75; Dallas Paving Co., \$1,620.

Watertown, Wis.—Drilling well on west side of river, to F. M. McCarthy, Minneapolis, Minn., \$2,866.25; other bidders: Swensen Artesian Well Co., Minneapolis, \$4,496.50; W. H. Carter Contracting Co., Chicago, \$4,192.50; E. A. Mendenhall & Son, Watertown, \$3,053.75; laying pipe line across river and connecting with reservoir and pumps, to Otto Biefeld & Co., \$2,885; other bidders: E. L. Bartlett, \$2,900; F. E. Kaminski, \$2,950.

Lethbridge, Alta., Can.—To Lethbridge Iron Works Co., for supplying manhole covers, \$3.20 per cwt., delivered anywhere in Lethbridge; Canadian Iron Corporation bid \$3.10 f. o. b. Lethbridge.

Winnipeg, Man., Can.—To I. Benoit, St. Boniface, Man., for installing 1,000,000-gal. reservoir, \$32,330.

BIDS RECEIVED

Boston, Mass.—Furnishing supplies: 8,000 lbs., more or less, No. 1 composition cast-ings, 30,000 lbs., more or less, No. 2 composition castings, 3,500 lbs., more or less, No. 3 composition castings; Essex Brass Foundry Co., Cambridge, 20¾¢, 18¾¢, and 14¢; J. H. McCafferty & Co., 434 Harrison ave., 22½¢, 21½¢, and 14¢; all per lb.; furnishing No. 1 castings: 72,000 lbs. curves, 88,000 lbs. sleeves, 100,000 lbs. gates, 119,000 lbs. hydrants, 17,000 lbs. hydrant posts, 115,000 lbs. shoes, 167,000 lbs. branches, 26,000 lbs. reducers, 12,000 lbs. caps, 43,000 lbs. offsets, 200,000 lbs. No. 2 iron castings: Mechanic Iron Foundry, No. 1, 2.7¢ per lb.; No. 2, 2.35¢; Davis & Farnum Foundry, 2.7¢, and 2.45¢; Foxboro Foundry, 2.84¢ and 2.24¢.

Minneapolis, Minn.—Furnishing 175 double steamer hydrants: James F. Clow & Sons, Chicago, Ill., Eddy, \$39 f. o. b. Minneapolis, 700 lbs.; Chickasaw Iron Works, Minneapolis, without frost jackets, \$46.85 f. o. b. Minneapolis; with frost jackets, \$53.50 f. o. b. Minneapolis, 1,200 lbs.; Darling Pump and Mfg. Co., Williamsport, Pa., \$40 f. o. b. Minneapolis, 800 lbs.; Rensselaer Valve Co., Chicago, Ill., without jackets, \$39.25 f. o. b. Minneapolis, 795 lbs.; Columbian Iron Works, Chattanooga, Tenn., \$35.80 and \$31.85 f. o. b. Chattanooga, 800 lbs.; Florence Iron Works, Philadelphia, Pa., with jackets, \$36; without jackets, \$24 f. o. b. Minneapolis, 982 lbs.; Kennedy Valve Co., Elmira, N. Y., \$45.74 and \$43 f. o. b. Elmira, 740 lbs.

New Brighton, S. I., N. Y.—Water improvements: (a) furnishing and driving wells, furnishing, delivering and laying suction mains and appurtenances in Southfield Blvd., between Grant City and Old Town Rd.; (b) same work in Southfield Blvd., between Grant City and Whitlock; Grant Rohrer, 299 Bway, N. Y. City, (a) \$31,963, (b) \$31,963; Phoenix Constr. Co., 41 Park Row, N. Y. City, (a) \$29,260, (b) \$30,360; D. Bonacci, (a) \$44,436; (b) \$45,276.

Dallas, Tex.—Laying the concrete foundation for pumping engine at White Rock pumping station: Hughes-O'Rourke Construction Co., \$6.75 per cu. yd., with earth excavation at 35¢, and rock excavation \$3.50; Dallas Paving Co., \$7.50 per cu. yd. for concrete, \$4.50 for rock excavation; Fred A. Jones Co., \$7.40 per cu. yd. for concrete, \$1.90 for rock excavation.

LIGHTING AND POWER

Birmingham, Ala.—Board of Revenue has issued order granting, in so far as Board has authority, right to the Birmingham Railway, Light and Power Co. to lay gas mains in all streets, avenues, alleys and public places in survey of Corey outside limits of the city of Birmingham, and along 'Possum Valley road from southern boundary of survey to offices of American Steel and Wire Co.

Scranton, Ark.—A. P. Kincaide, Paris, Ark., will ask Council for electric light franchise.

Harrisburg, Ark.—Morris Hayutin has decided to improve Harrisburg Electric Light & Power Co.'s plant, lately purchased.

Morgan Hill, Cal.—Board of Trustees has passed ordinance granting to the Coast Counties Light and Power Co. right to erect, maintain and operate electric transmitting system.

Newport Beach, Cal.—Citizens will soon vote on \$55,000 bonds for electric light plant; if carried the city may take over the present plant and enlarge it, or it may construct entirely new plant. L. S. Wilkinson, City Clerk.

Denver, Col.—Central Colorado Power Co. is planning extensions of its transmission lines that will cover practically all central portion of State; cost about \$350,000. C. A. Fitch, 30 Church st., New York, N. Y., Purchasing Agent.

Gunnison, Col.—Plans and specifications have been completed for lighting and water works improvements, including a 215-h.p. water power development on the Gunnison River; estimated cost \$90,000; bids will be asked in May.—Burns & McDonnell, 823 Scarritt Bldg., Kansas City, Mo., Consulting Engineers.

South Jacksonville, Fla.—Citizens will vote April 6 on \$60,000 bonds to install electric lights and sewerage system.

Colquitt, Ga.—Citizens have voted \$7,500 bonds for erection and equipment of electric light plant.

Oglethorpe, Ga.—Citizens will vote April 12 on \$18,000 bonds for construction of electric light plant and water works.

Swainsboro, Ga.—Citizens will vote April 17 on \$40,000 bonds to install electric lights and water works.

Garrett, Ind.—Council is considering enlargement of municipal electric light plant.

Richmond, Ind.—Council has endorsed bill for ordinance appropriating \$10,000 for purchase of engine for municipal electric light and power plant; engine will be purchased as quickly as possible.

Sedan, Kan.—Bids will be received about May 1 for construction of an electric light plant from plans of N. B. Wall, of Caney; cost, about \$20,000. C. D. Inglesfield, owner of the Sedan Ice, Light & Power Co.

Sanford, Me.—Town has voted to raise \$2,550 to install 50 new lights.

Rockland, Mass.—Committee has been appointed to consider advisability of establishing municipal electric light plant.

Westford, Mass.—Town will enter into the contract for lighting of streets in village of Graniteville, Forge Village, Westford Centre and Brookside with electricity; \$12,000 voted; Lowell Electric Light Co. has submitted figures.—John P. Abbott, Chairman Committee.

Duluth, Minn.—City will at once ask bids for \$200,000 light and water bonds.

Vincetown, N. J.—Water Co. is considering proposition to install dynamo for lighting town with electricity.

Las Cruces, N. M.—Board of Town Trustees has granted Las Cruces Electric Light and Ice Co. franchise to construct and maintain electric lighting and power system.

Newburgh, N. Y.—Newburgh Light, Heat and Power Co. has decided to build two transformer houses, one at Marlborough and the other in Balmaine.

Richville, N. Y.—Village has voted to light streets with electricity.

Saranac Lake, N. Y.—Citizens have voted \$5,000 to light public streets during year.

Solvay, N. Y.—Citizens have granted franchise to Syracuse Lighting Co. to lay gas mains in Streets.—F. L. Worth, Village President.

Waterville, N. Y.—Village has voted to raise \$1,023 for extra street lighting.

El Reno, Okla.—Plans have been completed by Burns & McDonnell, Consulting Engineers, 823 Scarritt Bldg., Kansas City, Mo., for new power plant and water works improvements; bids will be asked some time in April; estimated cost \$65,000.

Altoona, Pa.—Council has passed ordinance granting People's Natural Gas Co., Pittsburg, franchise to lay natural gas lines.

Royersford, Pa.—Installation of municipal electric light plant is being considered.

Providence, R. I.—Board of Aldermen has adopted resolution for putting fire alarm telegraph wires underground and seeking authority to issue \$40,000 for that purpose.

Edgefield, S. C.—City is considering election on \$15,000 of bonds for construction of electric light plant; Mr. Cox, proprietor of electric light plant, Johnston, has submitted proposition to Town Council to enlarge plant and transmit electricity to Edgefield.

Trenton, Tenn.—Citizens will vote on \$22,000 bonds; \$9,300 is to be used for purchase of plant of Keenan, Wade & Wade and balance for rebuilding of plant.

Crystal City, Tex.—E. C. Robinson, St. Louis, Mo., is considering installation of electric light and power plant.

Luling, Tex.—Franchise has been granted to Luling Electric Light and Power Co. to construct, maintain and operate electric light plant for term of 20 years.

Graham, Va.—Council has granted franchise to J. Elliott Hall, Bluefield, W. Va., to construct plant and furnish city with artificial gas.

Basin, Wyo.—Plans are being prepared by Burns & McDonnell, Engineers, 823 Scarritt Bldg., Kansas City, Mo., for lighting, water works and sewer improvements; estimated cost \$75,000; bids will be asked in April.

Renfrew, Ont., Can.—Council has decided to proceed with construction of municipal power plant from plans prepared by J. B. McKee, C. E., Ottawa; estimated cost \$100,000.

Vancouver, B. C., Can.—Vancouver Gas Co. is having plans prepared for two producers and storage tanks; cost between \$400,000 and \$500,000.

CONTRACTS AWARDED

Albertville, Ala.—By Council for the electric lights, to J. B. McGrady Co., Atlanta; engine has been ordered; more than six miles of wiring in all.

Bridgeport, Conn.—By Lamp Committee, five-year contract, to American Street Lighting Co., Baltimore, to supply city with 600 or more gas or naphtha street lights at rate of \$25 per light per year.

Columbus, Ga.—To B. H. Hardaway, city by North Georgia Power Co., to build dam at Tallulah Falls, on Tallulah River.

Chicago, Ill.—By the West Chicago Park Commissioners on March 7, for furnishing and installing electric cables and connecting cables with electric substation in Garfield Park to Safety Insulated Wire and Cable Co., about \$11,895.

Logansport, Ind.—Furnishing municipal lighting plant, two 250-hp water tube boilers, coal and ash conveyors for all the boilers, new piping and the resetting and refacing of old boilers, to S. Freeman & Sons Co., Racine, Wis., \$26,833; company at once sublet to T. H. Sullivan, city, piping contract, \$7,490; to Frank Medland, city, for erection of the 225-ft. stack, \$7,490.

Richmond, Ind.—Furnishing transformers for municipal light plant for ensuing year, to General Electric Co.; engine, to Hamilton Corliss Engine Co., Hamilton, O., \$8,250.

Washington, Pa.—Furnishing light for 10 years, to Washington Electric Light and Power Co.

Coleman, Tex.—Installing additional machinery in electric light plant, to Buggs, Weaver & Co., Dallas.

Calgary, Alta., Can.—Furnishing about 200 ornamental lampposts each having five globes, to Canadian Equipment Co. and the Canada Foundry Co., \$11,400.

Vancouver, B. C., Can.—To Canadian General Electric Co. for 2,000 tungsten lamps for Granville standards, \$1,250.

Winnipeg, Man., Can.—To H. B. Camp, Chicago, for conduits, \$7.10 per duct ft.; condition, to G. M. Gest, Montreal, Que., \$36,000.

FIRE EQUIPMENT

Los Angeles, Cal.—Special Commission has estimated cost of installing satisfactory police and fire alarm system at \$102,505.—T. B. Comstock, Engineer Board of Public Utilities.

Oakland, Cal.—Finance Committee has recommended \$10,000 appropriation for erection of fire house in vicinity of 40th st. and San Pablo ave.

Norwich, Conn.—National Board of Fire Underwriters has recommended purchase of three auto combination hose wagons; 900-gal. reciprocating engine; auto for chief; rubber tires for all apparatus; equipping aerial truck with 75 or 80-ft. quick-raising ladder; providing for at least one reserve hose wagon; purchase of 600 ft. of 3-in. hose; erection of hose house and minor equipment, including installation of 15 fire alarm boxes.

Teluride, Col.—Mayor King has recommended erection of fire station and purchase of auto apparatus.

St. Petersburg, Fla.—City has decided to erect fire station at 3d st. and 3d ave. South.

Chicago, Ill.—Fire department will purchase 40,000 ft. of fire hose, 18 steam fire engines and 100 marine torch light holders with 1,000 charges, also rubber tires for apparatus; bids are asked.

Terre Haute, Ind.—National Board of Fire Commissioners has recommended equipping Ladder Co. No. 1 with 65 ft. quick-raising aerial truck with ladder pipe and plain hose wagon with 25-gal. chemical tank and 250 ft. of chemical hose; also purchase of 2,000 ft. of hose annually.

Haerstown, Md.—First Hose Fire Co. is considering erection of two-story brick fire house.

Franklin, Mass.—Special Committee will recommend erection of combined fire house and town hall on Central st.

Gloucester, Mass.—Alderman Montgomery and Fire Chief Crowe will secure prices on auto chemical combination wagon.

Groveland, Mass.—Town has voted \$115 appropriation to purchase 400 ft. of hose.

South Frammingham, Mass.—Town will build \$20,000 fire station and purchase auto chemical engine for \$2,000 and auto combination wagon for \$5,500.

Pewamo, Mich.—Village Council has voted to purchase chemical fire engine with capacity of 90 gallons.

St. Paul, Minn.—Fire Board will ask for bids for rebuilding one of present engines and change it into motor driven steamer.

Manchester, N. H.—Aldermen have voted to purchase another flying squadron for \$5,500 instead of building \$50,000 fire station.

Milford, N. H.—Town has voted to install modern fire alarm system.

Collingwood, N. J.—Fund of \$500 is being raised for purchase of needed hose and ladders.

Bogota, N. J.—Citizens have voted to install fire alarm system at cost of \$2,000.

Perth Amboy, N. J.—Fire Chief T. E. Anderson has recommended purchase of rubber-tired combination hose and chemical wagon and number of Peerless automatic head protectors.

Ridgefield Park, N. J.—Village Trustees have decided to install fire alarm system at once.—Trustee Eucker, Chairman Special Committee.

Las Cruces, N. M.—Las Cruces Volunteer Fire Company has decided to purchase shirts, caps, belts and badges for each of members; committee composed of Joe Lowe, Dave Ames, Frank Brio and Frank Islas has been appointed to secure articles.

Clayville, N. Y.—Citizens have defeated proposition to erect engine house.

Clinton, N. Y.—Citizens have voted to purchase \$800 hook and ladder truck.

Honeoye Falls, N. Y.—Citizens have defeated proposition to raise \$1,000 for installing fire alarm system.

Madison, N. Y.—Citizens have voted to purchase chemical engine.

Matteawan, N. Y.—Citizens have voted \$5,000 for auto fire engine for Beacon Engine Co.

Mamaroneck, N. Y.—Citizens have voted \$12,500 bonds to erect fire house.—Dr. John F. Hunter, Village President.

North Tarrytown, N. Y.—Citizens have voted \$2,500 appropriation for auto fire engine for Rockefeller's fire company.

Pelham Manor, N. Y.—Citizens have defeated proposition calling for \$10,000 expenditure for auto fire truck.

Port Jervis, N. Y.—Borough will purchase 1,000 ft. of hose. L. W. Woolsey, Chairman Fire Committee.

Potsdam, N. Y.—Citizens have voted \$500 for purchase of hose.

Pulaski, N. Y.—Citizens have voted \$500 for purchase of fire alarm bell and to repair tower of engine house; also \$500 for cleaning water reservoir.

Rochester, N. Y.—Board of Contract and Supply has directed Secretary Pifer to advertise for bids for 5,000 ft. of eight conductor cable and 5,000 ft. of four conductor cable for fire alarm telegraph.

Sea Cliff, L. I., N. Y.—Citizens have voted bonds to purchase steam fire engine.

St. Johnsville, N. Y.—Citizens have voted \$500 to install fire alarm system.—Dr. Geo. W. Beebe, Village President.

Seneca Falls, N. Y.—Citizens have defeated proposition to purchase \$1,600 hose wagon.

Tarrytown, N. Y.—Citizens have voted to purchase \$5,500 auto combination fire apparatus for Washington Engine Co.

PROPOSALS

STREET PAVING

Columbia, S. C.

Sealed proposals will be received until 12 m., April 11, 1911, by the undersigned or the City Council for the City of Columbia, South Carolina, for the paving of six (6) city blocks or more, not exceeding twenty-five (25) city blocks. Each city block will average about 3,150 square yards of paving and 881 lineal feet of steel bound concrete curbing, together with the extension of concrete sidewalks and vitrified pipe drains as may be found necessary.

Bids will be received for paving with creosoted wood paving block, bitulithic pavement, bituminous concrete pavement and vitrified paving block on a five (5) inch concrete foundation, but the kind and amount of each paving to be used is to be decided by the City Council after the proposals are submitted.

Samples of vitrified block and wood block properly labeled must be submitted before April 10, 1911.

Each tender must be accompanied by a certified check drawn to the order of the Treasurer of the City of Columbia, S. C., or New York draft to the amount of five hundred dollars (\$500.00), which will be subject to forfeiture in case of failure on the part of the Contractor to enter into a written contract and furnish a bond with approved sureties in the sum of one-half of the amount of contract, within ten days after being called upon to do so.

Specifications and all available information will be furnished on application to this office.

The right to reject any or all tenders and to let the work as a whole or in parts is reserved.

JOHN McNEAL,
City Engineer.

R. C. KEENAN,
Council Supt. of Streets.
Columbia, S. C., Mar. 25, 1911.

SEWERS AND DISPOSAL WORKS

Easton, Md.

Sealed proposals will be received at the rooms of the Sewer Commission, Easton, Maryland, until twelve (12) o'clock m., on the fifteenth (15th) day of April, 1911, for furnishing all materials and doing all work necessary for the complete construction of about six miles of pipe sewers, from eight (8) to fifteen (15) inches in diameter, with Y branches, manholes, flush tanks and other necessary appurtenances, and of two sewage disposal works, including the necessary piping, grading, etc.

Plans may be seen and specifications and forms of proposal obtained at the office of the Mayor, Easton, Md., or at the office of Clyde Potts, 30 Church St., New York City, and a full set of blue prints will be forwarded to any applicant, express prepaid, upon receipt of five (\$5) dollars.

Each bid must be accompanied by a certified check on a solvent bank for three thousand (\$3,000) dollars. The Sewer Commission reserves the right to reject any or all bids, to waive any informality in the bids received, and to accept any bid which it deems to be most favorable to the interests of the Town of Easton. Bids obviously unbalanced will be rejected without consideration.

MARTIN M. HIGGINS,
President of Sewer Commission.
T. HUGHLETT HENRY,
Secretary of Sewer Commission.
(3129)

PROPOSALS

STREET LIGHTING

Omaha, Neb.

Sealed proposals are invited and will be received by the City Clerk of the City of Omaha for street lighting with incandescent street lamps, according to specifications on file in the office of the City Clerk and the Gas Commissioner of said city, such bids to be for lighting, extinguishing, cleaning, repairing and maintaining, and painting posts once a year, either separately or combined, for a period of three years, and for a period of five years, as follows:

Equipment, exclusive of lighting, extinguishing, cleaning, repairing and painting, price per lamp per year.

Lighting, including extinguishing, cleaning, repairing and painting, price per lamp per year.

Use of equipment, including lighting, extinguishing, cleaning, repairing and painting, price per lamp per year.

Gas, price per thousand cubic feet, amount to be determined either by average of meters on one per cent of lamp posts, or by averaging the consumption from rate found in one per cent of burners tested in the laboratory of the Gas Commissioner, or determined in a manner satisfactory to the Gas Commissioner.

Use of equipment, including lighting, extinguishing, cleaning, repairing and painting, together with gas, price per lamp per year.

Gas, including lighting, extinguishing and cleaning.

To avoid any misunderstanding as to the intent of the city, any bidder may apply to the Gas Commissioner for information, whose rulings will all be made in writing.

Each bid must be accompanied by a certified check made payable to the city of Omaha in the sum of \$200.00 as a guarantee that the bidder will conform to his proposal in case his bid shall be accepted.

Bids must be submitted in sealed envelopes marked "Proposal for Gas Street Lighting," and addressed to Dan. B. Butler, City Clerk of the city of Omaha, and must be on file in his office on or before April 11, 1911, at 8 o'clock p. m.

The city reserves the right to reject any and all bids.

DAN. B. BUTLER,
City Clerk.
Omaha, Nebraska, March 22, 1911.

WATER WORKS IMPROVEMENTS

Ada, Okla.

Sealed proposals will be received by the City Clerk of Ada, Okla., at his office in the City Hall, until 8 o'clock, P. M., April 10, 1911, for the furnishing of pipe and machinery to be used in the extension and improvement of the water-works system of Ada.

Bids will be opened before the City Council the same evening and bidders are invited to be present and to submit bids on the following items:

For the pipe required for the construction of approximately 66,000 linear feet of 12-inch pipe line, either of steel or cast iron.

If cast iron pipe is used the amount required will be about as follows: Class "B" pipe, 246 tons; Class "C" pipe, 2,062 tons; Class "D" pipe, 750 tons; total, 3,058 tons.

If steel pipe is used, 66,000 linear feet of 12-inch O. D. Converse joint pipe will be required.

Bids will also be received on 3,000 linear feet of steel pipe, 3/16 inch thick and 30 inches in diameter.

PROPOSALS

Also on cast iron pipe for extensions the city mains, all class "B," approximately as follows: 12-inch pipe, 135 tons; 10-inch pipe, 124 tons; 8-inch pipe, 135 tons; 6-inch pipe, 142 tons; total, 464 tons.

For special castings, about 15,000 pounds. For furnishing and erecting on foundations to be prepared by the city turbine pumping units, each unit to consist of one horizontal turbine water wheel, directly connected to a multi-stage centrifugal pump, each unit to have a capacity of 6 gallons per minute against a total head of 185 feet.

Plans, specifications, form of contract and proposal and full information may be obtained from the Consulting Engineer Goodwin & Harper, 920 Scarritt Block, Kansas City, Mo.

Each proposal must be accompanied by a certified check of not less than 5 per cent of the amount bid, made payable to the City Treasurer of Ada, Okla., as a guarantee that the bidder receiving the award will enter into contract with the city and furnish satisfactory bond within 10 days after the contract is awarded.

The city reserves the right to reject any or all bids, to waive any informality as to award the contracts as may be deemed to be the best interests of the city.

W. B. JONES,
City Clerk
(13 and 14)

BRICK PAVING

Dublin, Ga.

Sealed bids will be received until noon April 18, 1911, by the Mayor and Council of the City of Dublin, Ga., for furnishing material and labor necessary to pave approximately 6,000 square yards of street with vitrified brick.

Plans and specifications, with blank proposal forms, may be seen at the Office of the City Clerk, Dublin, Ga.

The City reserves the right to reject any and all bids.

A. P. HILTON,
City Clerk
M. J. GUYTON,
City Engineer

PEEKSKILL FILTERS PARTLY ROOFED OVER

WATER FILTRATION AT PEEKSKILL

Covered Slow Sand Filters and Aerator and Covered Filtered Water Reservoir—Details and Cost of Construction—Results of Treatment—Why Purification Was Necessary—Reasons for Adopting Slow Sand Filtration

THE water supply of Peekskill, N. Y., is taken from Peekskill Hollow creek, which has a watershed area above the intake of about 46 square miles. The main stream has a length of about 15 miles and flows southwesterly through a long narrow valley into the Hudson river. For the most part the slopes are quite steep and the run-off is naturally rapid. There are, however, a few tributary streams which drain some more or less swampy sections. The works for utilizing this supply were built in 1876 from plans drawn by the late Chas. E. Fowler. They consisted of a crib intake dam and a wooden flume leading to a pumping station, where the water is lifted through two cast-iron force mains 4,000 feet long, one 12 inches and one 20 inches, about 357 feet to a reservoir. This reservoir has a capacity above the level of the main outlet pipe of about twenty million gallons. From this reservoir two mains lead to the city

—a new 16-inch main at the southwest end taking water at distances of 4 and 12 feet below the surface, and the old 12-inch main on the northwest side taking water at a point 4 feet above the bottom. This reservoir was constructed in a natural basin, the site having been thoroughly grubbed and cleaned of organic matter and the sides riprapped.

In 1900 the population of Peekskill as obtained by the Census Bureau was 10,358, which had increased by 1905 to 13,200. The per capita consumption in 1900 was about 70 gallons which had been increased to about double that in 1907, owing largely to the use of about 500,000 gallons daily by the new works of the Fleischmann Company. In 1907, Mr. Geo. C. Whipple was requested by the water commissioners to examine the plant in all its parts, with especial reference to methods of purifying the water. The water supply used was naturally

an excellent one. The water was quite clear except for short periods after rains, the color was low, the amount of iron was too small to be troublesome. The water was comparatively soft and the taste was satisfactory except occasionally when algae growths in the reservoir gave a little trouble.

Until a short time before Mr. Whipple's investigation the sanitary quality of the water had been fairly satisfactory, and the typhoid death-rate of the village had been low. But in January, 1908, an outbreak of typhoid fever occurred in the village, which was apparently due to the water supply. This led to an inspection of the watershed which brought to light many sources of contamination and emphasized the need of taking extra precaution against infection from the camps of laborers at that time employed on the New York aqueduct where it crossed the Peekskill Hollow creek about 1½ miles above the intake. Besides these, a number of houses along the creek were found to contribute to the danger of contamination. The typhoid epidemic referred to was but a brief one, and the Peekskill water commissioners deserve credit for taking the definite steps which they did at this first intimation of danger.

Mr. Whipple considered both slow and rapid sand filtration and also, at the request of the commissioners, the use of ozone for purifying water. He considered that the last named had not been developed to the point where it could be considered practical for such a plant. Comparing the other two he reported as follows:

Sand filtration is the best method for purifying the water of Peekskill Hollow creek. This water, as has been said, is comparatively clear and has but little odor. There is, therefore, no necessity for adding chemicals to clarify it or to decolorize it. It is better for many reasons to avoid the use of chemicals when they are not necessary. The use of alum changes some of the carbonates in the water to sulphates, that is, it changes some of the temporary hardness to permanent hardness. This is a matter which affects the ordinary householder little or not at all, but it tends to make the water somewhat less suitable for use in boilers. In some instances where alum has been used more or less trouble has been experienced from iron rust in the hot water pipes, which has occasioned complaint on the part of the consumers, especially in connection with the use of the water for washing.

A sand filter is less subject to sudden irregularities than a mechanical filter on account of the lower rates at which it is operated. The rates used in mechanical filters are twenty to fifty times as fast as those of a sand filter, and any irregularities in the operation of a mechanical filter more quickly affect the quality of effluent. Mechanical filters, therefore, require closer watching, with a man continually in attendance and with a chemist in charge of the works. The efficiency of such a filter is wholly dependent upon the constant, faithful application of the coagulant. If the supply should be suddenly stopped or even if it should be applied in too small quantities the quality of the effluent would deteriorate and harm might result. If, on the other hand, too large quantities of alum were used there would be a corresponding waste of money and there might even be danger that undecomposed alum would get into the filtered water, which is, of course, highly undesirable.

Sand filters also require watching, but as they operate at a comparatively slow rate there is far less chance of sudden derangements of the process. Analyses of the water are not needed as frequently, and in the case of such a plant as that required for Peekskill it would not be necessary to employ a permanent chemist.

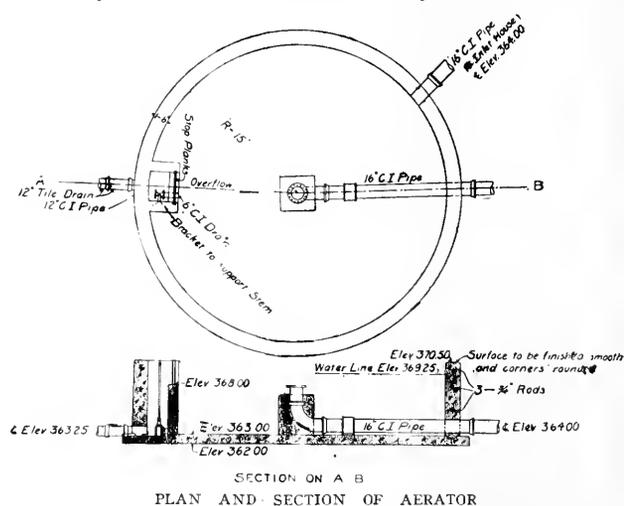

Finally, there are certain local conditions in Peekskill that make a mechanical filter less desirable than a sand filter. A mechanical filter requires the use of more "head" than a sand filter. If such a plant were placed at the pumping station there would be an additional cost for pumping, while if placed on the hill below the reservoir there would be a greater loss of pressure in the city. Alum treated water is more subject to deterioration from algae growths, if stored in open reservoirs, than a sand filtered water.

Sand filters are usually a little more expensive to construct, but are much cheaper to operate than mechanical filters.

Several locations for the plant were considered, but the best was thought to be a hill just below the reservoir, a part of which rose about 10 feet above the spillway level. As constructed, the plant was located 350 feet from the reservoir, the surface of the sand beds being about 10 feet lower than

(the spillway level. By locating the filters in this way no pumping is required, and the pressure in the village is reduced only about 15 feet, which loss in the head is of little moment. This permits the reservoir to act as a sedimentation basin. The water flows by gravity from it to the filters, advantage being taken of the 10-foot fall to aerate the water in a fountain before passing it to the filters; the object of the fountain being to get rid of any bad odors due to algae or other causes, and to put it into the best condition for filtration. Four filter beds are provided, and a pure water reservoir which holds sufficient filtered water to take care of hourly fluctuations in consumption and furnish an ample supply in case of fire; its capacity being about one million gallons. This pure water reservoir is connected with both the 16-inch and 12-inch main leading to the village. There is a by-pass around the reservoir consisting of a 16-inch pipe which connects the 12-inch and 20-inch rising mains with the 16-inch outlet pipe above the filters; the object being to make it possible to empty the reservoir for the purpose of cleaning or repairing it. The filter plant is so arranged that it can easily be doubled in capacity when the increasing consumption requires this. The site selected was on the side of the hill, there being a fall of about 15 feet in the 200-foot width of the site occupied by the beds, which required excavation and fill in grading for construction.

The estimated cost of the covered sand filter, aerator, regulating house, sand washer and all appurtenances was \$56,000; and this part of the plant was actually constructed for about \$2,000 less than this. The estimated cost of the pure water reservoir was \$10,500, of the land \$1,500, and of changes in the piping and construction of the by-pass around the reservoir \$10,000. Bids for the plant were received in August, 1908, and the completed plant was put into operation in December, 1910. The itemized quantities included 12,000 cubic yards of earth excavation

and 1,500 cubic yards of rock; 400 cubic yards of reinforced concrete and 4,100 cubic yards of plain concrete; 1,100 cubic yards of filter gravel and 4,700 cubic yards of filter sand; and in addition, piping to the plant, tile drains, two buildings and miscellaneous appurtenances. The contract was awarded to the firm of Hinman & Sproul, whose execution of the work is highly commended by Superintendent Roake.

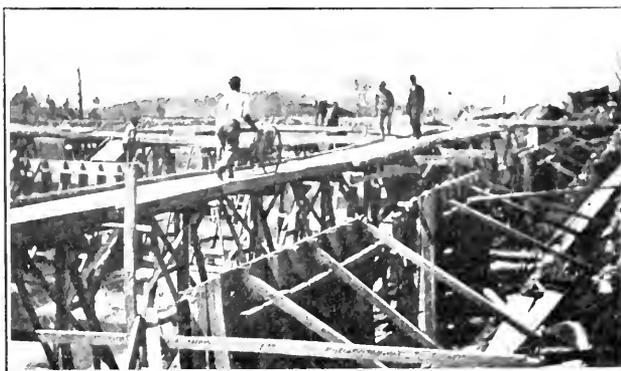

The water after leaving the reservoir flows through a 16-inch cast-iron pipe to an aerator, from which it passes to an inlet house; or it may pass directly to the inlet house without the use of the aerator. From the inlet house the water passes through a 20-inch, cast-iron raw water pipe, from which it is fed to the north side of the filters, one branch from this pipe leading to each of the four filters. The inlet corners of filters Nos. 1 and 2, and of Nos. 3 and 4 are adjacent. There is also laid from the inlet house and in the same trench as the raw water pipe a 6-inch cast-iron pressure pipe for carrying the wash water. From the south side of each filter a 12-inch cast iron pipe conducts the filtered water to the clear water reservoir, which is east of and in line with the four filter beds.

Each of these pipes is provided with a Venturi meter for measuring the discharge. There is also laid along the south side of the filter beds a line of 15-inch drain tile, from which a drain pipe is carried to each filter, these pipes being supplied with valves. There is also a branch drain carried through each of the filter partition walls, which receives the drainage from the roof of the filters through catch basins. In the middle of the rectangle formed by the four filter beds and resting upon the roofs of filters 2 and 3 is a sand court and sand washer.

The aerator consists of a circular basin 30 feet in inside diameter and 7 feet deep. The 16-inch pipe from the reservoir is brought to the center of this, beneath the floor, and rises vertically, the mouth being a few inches below the surface of the water in the aerator basin. From the aerator basin water flows through a 16-inch pipe to the inlet house, where it is discharged into a well occupying the basement of the same.

The filters are each 65 feet by 143 feet from center to center of walls. They are all covered with groined arch roofs supported by square pillars, there being 40 pillars in each filter bed. There are 27 manholes in the roof of each of the filters. The sand court, supported by the roofs of the two middle filters, is 78 feet long and 52 feet wide and is surrounded by concrete walls four feet high. The rest of the area over the filters is covered with two feet of earth. The pure water reservoir is 91 feet wide and 142 feet long from center to center of walls, and is covered with a groined roof supported by 60 square pillars.

A main drain is carried through the longer axis of each filter, this consisting of a channel four feet wide and 6 inches deep composed of concrete, the cover to the drain being a concrete slab 4 inches thick reinforced with $\frac{1}{2}$ -inch steel rods placed transversely and spaced 8 inches apart. From this main drain branch drains lead out at right angles, bisecting the spaces between the several lines of roof pillars; there therefore being eleven branch drains on each side of the main drain. These branch drains consist of half round tile with four inch radius. Around each tile was placed gravel to a depth of one foot in three grades; the lower 7 inches consisting of broken stone or gravel which had diameters from one to two inches; the next $2\frac{1}{2}$ inches having diameters of from $\frac{3}{8}$ -inch to one inch, and the top $2\frac{1}{2}$ inches varying from $\frac{3}{8}$ -inch diameter to sand. No gravel was placed within six feet of the

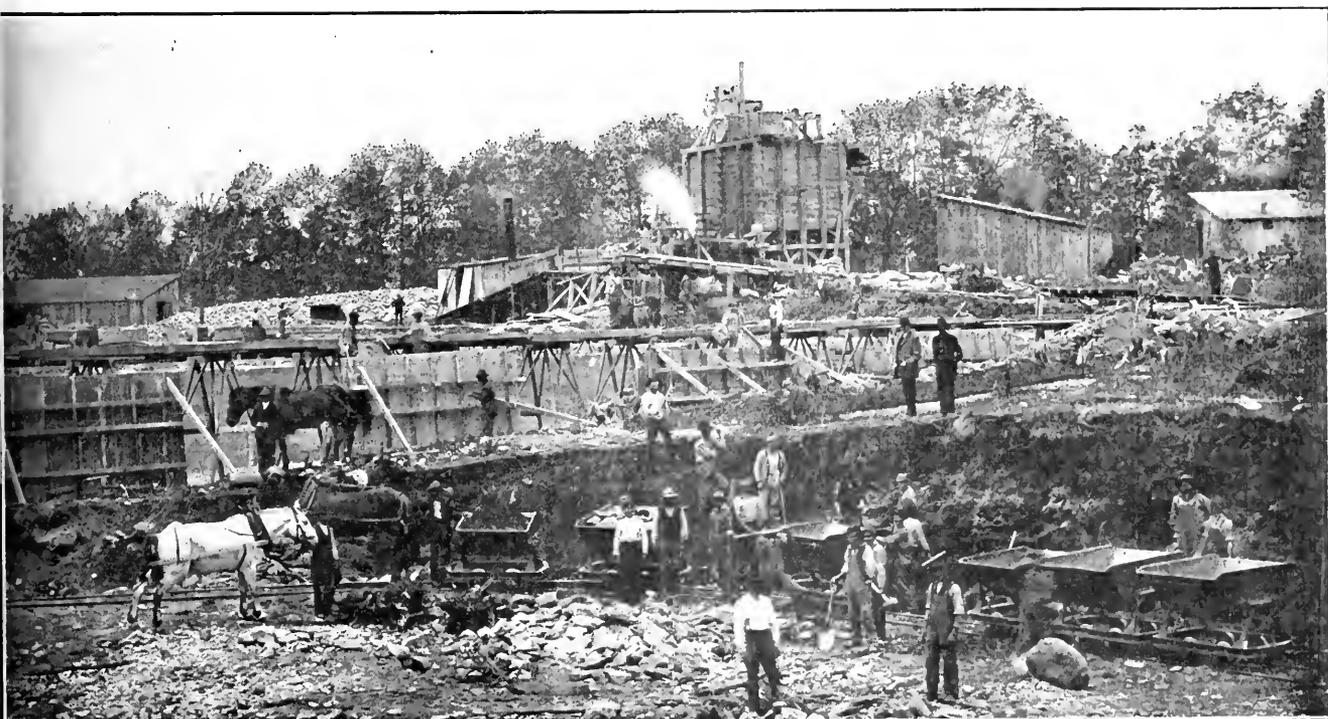

FILTER FORMS, AND RUN FOR TRANSPORTING CONCRETE BY BARROWS

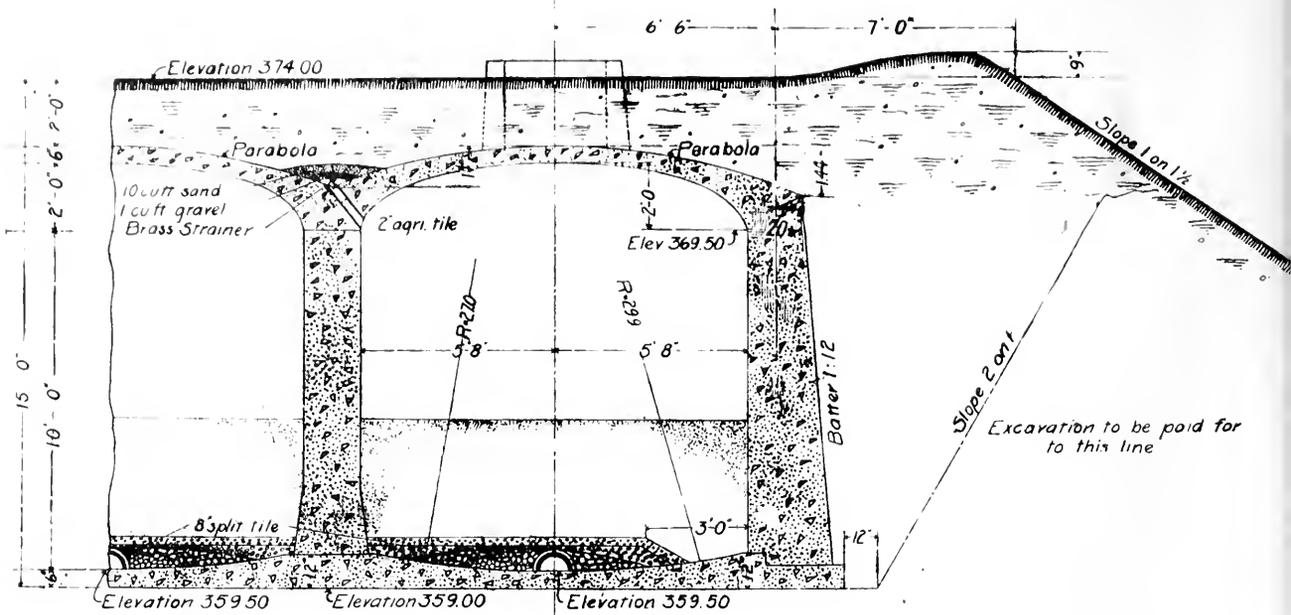

inlet chambers nor within two feet of outside or cross walls. The filter sand was placed in three layers, each about one foot thick, and was carefully placed—not dropped from a height—in order to avoid any more compacting than was necessary. The specifications for this sand called for clean sand of an effective size not less than 0.25 m.m. nor more than 0.35 m.m. and with a uniformity co-efficient of not more than 3.0. It was also specified that the sand should be free from dust and not contain more than one per cent. finer than 0.13 m.m. and be entirely free from particles over 5 m.m. in diameter; and that it should not contain more than two per cent by weight of lime and magnesia taken together and calculated as carbonates.

In constructing the main drain a groove 4 inches wide and one inch deep was left in the surface of the floor when constructing this, so as to come under each of the side walls of the drain. The slabs which compose the top of the drain were made separately in suitable lengths and set with cement mortar at all joints. The split pipe branch drains were of salt glazed pipe in two-foot lengths, laid with open joints with a space of $\frac{3}{4}$ inch between branches to allow the water to enter. The further end of each line of drains was closed by bricks piled up dry to prevent the gravel from entering.

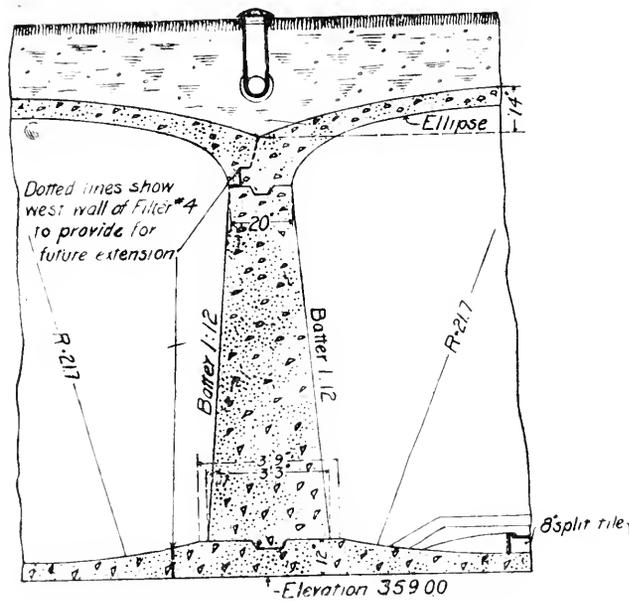

The floors of the filters were made of inverted groined arches, the drains being laid in the lowest part of the arch, where the concrete was made 6 inches thick. From this lowest

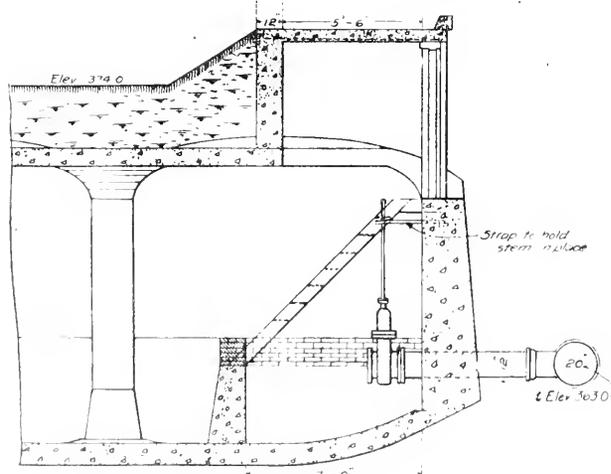

EXCAVATION FOR PEEKSKILL FILTERS

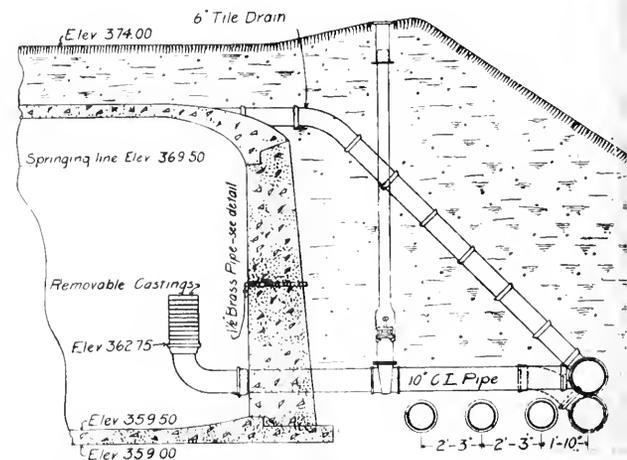

STANDARD PIER AND WALL SECTION

SECTION THROUGH DIVISION WALL

ENTRANCE TO FILTER

FILTER DRAINS

point to the springing line of the roof is 10 feet. The piers which support the roof are 20 inches square, flared at the bottom to a base 26 inches square. The distance between the piers is 13 feet from center to center. The roof arches have a rise of 24 inches and are 6 inches thick at the crown. The manholes are circular with 3 feet inside diameter and vertical walls rise 3 feet high from the inside crown of the roof and are covered by iron covers weighing approximately 220 pounds each.

The raw water enters each filter at one corner, where it is discharged into a well about 3 by 7 feet, cut out of one corner of the filter by a concrete wall. The top 12 inches of the wall being kept approximately at the same level or slightly above the general level of the sand in the filter, one course of bricks being removed from time to time as the sand is lowered by scraping the filter.

The floor of the sand court was made in two monolithic sections, each complete without any interruptions of the work from start to finish. This floor consists of 12 inches of concrete reinforced with 3/4-inch steel rods running in both directions and spaced 18 inches between centers. The surface of the floor was trowelled smooth, similar to the best sidewalk work. Through the center of the sand court were placed a series of concrete piers provided with vertical grooves in which to place a 2-inch plank by which the court can be divided into two courts of approximately equal size.

The pure water reservoir was constructed in practically the same way as the filter beds so far as the floor, piers and roof are concerned. In the southwest corner of the pure water reservoir is a regulator house, the basement of which consists of five rectangular wells, the whole forming a square 14 feet 8 inches on a side. To each of four of these wells is led one of the 12-inch pipes which receive the effluent from the four filters. The fifth chamber contains twelve 6-inch gauge tubes, three for each filter, which are connected with the Venturi meters by 3/4-inch lead-lined pipe, which are laid with a uniform rise upward from meter to gauge tube.

The inlet house is 10 by 12 feet inside dimensions. The basement serves as a well which receives the water from the aerator or reservoir, and from which it passes to the filters. Here is located the control valve for controlling the flow onto the filter beds. An 8-inch suction pipe leads from this well to the floor above where the pumps are located for supplying water under pressure for washing the filters; this water being supplied through the 6-inch pressure pipe previously referred to. This building is one story high above the ground and is furnished with a window and a door and covered with a tile roof.

In general the concrete work was built of two classes. That in the aerator walls and vaulting under the sand court, the covers for the main drains and for filter entrances contained reinforcement, and for this, and also for the piers under the sand court the concrete was mixed in the proportions of one barrel (380 pounds) of Portland cement to 8 cubic feet of sand and 14 cubic feet of ballast, both measured loosely. The concrete in the floors, walls, foundations for buildings and most other places consisted of one barrel of Portland cement to 11 cubic feet of sand and 19 cubic feet of ballast. The sand-washer box was built of concrete proportioned 1:8:8. Grooves were left in the faces of all concrete where they were left temporarily to be afterwards joined by new concrete, these grooves being formed by driving strips of wood into the concrete while yet soft. The walls of the filters were made in 13-foot lengths, the joints coming midway between the prolongations of the pier lines. The ends of these lengths were vertical and were provided with grooves, which were painted with tar to prevent the tongues in the adjacent blocks from adhering to them, these serving the purpose of expansion joints. No joints were allowed in the corners of the basins, all corners being made monolithic. Joints in the vaulting or roof arches were made on the summits half way between the piers, cutting the vaulting into a series of squares, each having a pier as a center. All of the concrete in each of these squares was placed at one time so as to produce a monolith.

The plant was put into operation in December, 1909, and has been and still is operated under the supervision of the firm

INTERIOR OF FILTER, MASONRY COMPLETED

of Hazen & Whipple, which also supervised the construction. The records of bacteria found in the raw water, clear water reservoir, effluents from each of the four filters and a tap in the city gave results as shown in the accompanying table. These show an average reduction of bacteria from 277 in the raw water to 30 in the clear water reservoir. The effluents from the several filters, however, averaged from 14 to 26 bacteria, and tap water averaged 65, apparently showing an increase of bacteria in the reservoir and the city mains. Of analyses for B. coli in the raw water, positive results were obtained in 44 per cent of the 10 c.c. samples, 22 per cent of the 1 c.c., and none of the 0.1 c.c. Analyses of the filtered water for B. coli have in every case given negative results.

The physical and chemical characteristics of the raw and filtered water are shown in the accompanying table, these being the average for more than a year's operation. The free and albuminoid ammonia are seen to have undergone a very considerable reduction. The turbidity also has been greatly reduced and the color, which has not at any time been seriously objectionable, has been somewhat lessened.

For the illustrations and part of the above information we are indebted to Mr. Lanning G. Roake, the superintendent of the water plant, including the filtration system.

MUNICIPAL BIDDING IN TORONTO

For a number of years the city of Toronto has made it a practice to bid itself, through the city engineer, on all paving contracts, and quite a considerable percentage of these have been awarded to the city as low bidder and performed by it by day labor. During the year 1909, of 371 contracts for concrete sidewalks 112 were awarded to the city engineer; although 49 of these were actually performed by the next lowest bidder at the price bid by the city engineer. In addition, the city engineer was awarded contracts for constructing 18 asphalt pavements, two asphalt block pavements, one vitrified block and two bitulithic pavements. The city engineer's bid was lowest on 30 other pavements, but these were transferred to the next lowest bidder at his request and at the engineer's bid.

In estimating the saving effected for the city by this system of having the engineer bid against contractors, there can be no question of what this was in those cases where the contract was transferred to the next lowest bidder at the reduced figure bid by the city engineer. The amount saved on the transferred contracts was \$5,317.00. Of the work done by the city engineer the actual cost to the city was in the majority of cases less than the city's bid, although in some cases it was somewhat greater than the lowest contractor's bid. On all of the sidewalk work done during 1909 the sum of the savings effected under the lowest contractors' bids was \$2,801.68, while the sum of the excesses over the lowest contractors' bids was \$323,774; leaving a net gain of \$2,507.94. On pavement work bid in by the city, similarly calculated, there was a net gain of \$1,012.45. In addition the department estimates that there was a saving of in-

spection on work done by the city amounting to \$1,914. The total saving of all kinds thus calculated totaled \$10,812. We do not know to what extent overhead charges are included in the estimates of cost, but we believe that those connected with the asphalt plant, at least, were so included. Even should overhead charges not included have equalled the estimated saving, it is probable that there was a general effect of keeping all bids down which resulted in lower prices for contract work, even when these were performed by the contractor and thus were not included in the above estimate.

It should not be assumed that equally successful results could be obtained under this system by every city. To be continually successful it is necessary that the work done by the city be conducted so economically that the difference between the cost of city work and contract work should not exceed the 10 to 20 per cent profit included in the contractors' figures. It is also necessary, if contractors are to be encouraged to continue bidding, that the engineers be held strictly accountable for the cost of competitive work done by them, including in this all fixed charges, including plant depreciation, interest, etc., with due allowance for its lying idle during winter months. Probably an ideal condition would be such judicious bidding as would result in the awarding of not more than 5 or 10 per cent of the contracts to the city engineer—just enough to produce upon the contractors a sufficient moral effect to keep their bids down to the minimum consistent with good work and fair profit, preventing combinations or other methods of maintaining high prices against the city.

TEXAS WATER WORKS DETAILS

Gathered From Nine Cities—Per Capita Consumption—Minimizing Waste—Cost of Pumping—General Lack of System for Recording Data

It is a more or less common practice for councils to send committees of their members on trips to inspect pavements, sewage disposal plants, etc., in various more or less distant cities, with the idea that the information obtained will be useful to the city in solving problems involving municipal improvements of a similar nature. It is probable that there are few such trips made in which the participants do not receive information which they can and do use to the advantage of their city. We believe, however, that the same or less money could generally be invested to better advantage by sending on a similar trip the city engineer, water works superintendent or other technical man, two of the many reasons for this being that he is better able to comprehend what he sees and to appreciate the applicability of what he learns to the local conditions of his own city, and that he is apt to remain longer in the service of the city, and consequently the information so obtained at the expense of the city will be used for a longer time to its advantage.

An illustration of such an investigation conducted by an engineer is offered by Beaumont, Tex., sending its assistant city engineer, W. E. Sampson, to study a number of the water works plants in that state and Louisiana, the reason for wishing to obtain this information being that the city contemplated the purchase and operation of the water works plant. The result of this investigation was a report which occupies eight typewritten pages, in which are presented the general conclusions from the information obtained. Accompanying this report was an appendix of several score of pages giving in detail the information obtained, with tables, etc., which were referred to in the report proper. It seems probable that the council as a whole was thus put in possession of even more data than they would have obtained had they themselves made the trip, and that the actual benefit which will be derived by the city will be greater than had the same engineer accompanied the ordinary councilmanic investigation trip, with its exchange of courtesies and side issues which use up so much

of the time, which is seldom long enough, even if it were a seriously employed, to permit acquiring a thorough understanding of the plants inspected.

Several of the facts learned and conclusions derived as a result of this inspection are of more or less general interest. The fact which was most keenly appreciated by Mr. Sampson was the lack of a uniform system, or of any system at all, for recording data in general and reporting statistics of water use. "The only city visited by me in Texas," he said, "which follows even remotely this plan (the New England Water Works Association form) is Houston. Their purchasing agent is responsible for both the buying and distribution of materials, makes a complete report monthly to the superintendent concerning materials bought and prices of same, distribution of materials, to what department and by whom, etc. In the office there is kept a record or history of every hydrant, meter, etc. The card system is used almost exclusively." Concerning one of the cities, he states: "The records of the main systems are kept in a loose style, lacking in the details of importance. Hydrants, gate valves, location of mains, etc., are shown on a map, but a more detailed record of the same is being prepared. In fact, until recently no attempt has been made to maintain a correct record of badly needed current information, and earlier data having been lost, it has been impossible to get statistics in detail. There are no records of the make, number or location of gate valves." Of another city: "Records are not kept in such a way as to make detailed data in regard to the distribution system available." Concerning Houston, however, he states: "A very strict and thorough working system is in vogue among the plant and office employees, and the system of records and tabulation of data concerning the plant is one of the most complete of any municipally operated plants visited."

One of the classes of information sought for was the per capita consumption; but the records of this he found to be of little service. "It is very clear to see that the business consumption, factories, etc., added to that of the domestic consumers, does not give just or correct data as to the per capita consumption. Small manufacturing cities, for instance, with large business consumption, will show an unusually large per capita consumption indicating perhaps a very wasteful population when in fact conditions may be just the opposite. . . . Thus it is seen that data as now generally kept give one absolutely no idea of the amount of water required for the use of a city population, and that the business consumption is entirely independent and the records, therefore, should be kept so that the data would give one some idea of what the average per capita consumption should be." The cities visited were Waco, Galveston, Houston, San Antonio, Dallas, Fort Worth and Beaumont, Tex., and Alexandria and Shreveport, La. The lowest per capita consumption found in any of these was 75 gallons at Alexandria, while the highest was 158 gallons at Waco. Alexandria meters all services and Waco only 9.6 per cent of them.

The matter of waste was given special consideration by Mr. Sampson, and the methods for minimizing the same. The most effective and generally applied remedy for this he finds to be metering and in some cases a rigid house-to-house inspection. Alexandria, while she gives due credit for low consumption to complete metering, attaches much importance to the work of regularly employed inspectors. Even in a totally metered district there are numerous ways in which water can be used without being recorded. Large meters may be by-passed, water may be taken from fire services, the meters themselves are tampered with, etc. In addition to metering all supplies Alexandria has a Venturi meter on the main supply pipe and can thus ascertain what water is lost or stolen. Concerning metering, the superintendent of the Houston plant said: "The moral influence established by general meter installation is a countable for a greater saving of water than is the actual number of meters in service. Less than 18 per cent of the total number of consumers are supplied through meters, and the saving amounts to more than 40 per cent in per capita pumping

age. Few people waste water intentionally, and most only need to realize what the small and apparently inappreciable leak amounts to and they will usually stop it voluntarily without any urging from the water department. The policy of discriminate meter setting has created an educated public and a condition which has enabled the department to cut the selling price of water from 50 cents to 15 cents per thousand gallons in less than three years' time, at the same time increasing both the gross and net revenue without deviating from the policy of self-sustenance independent from any assistance from the general taxes." That there is an offset to the reduction of waste by meters is indicated by the report of superintendent of Galveston, Tex., who states: "The installation of meters has caused a considerable increase in the operating expenses over the flat-rate system, necessitating the employment of additional labor to read meters monthly and a force to keep the meters in repair and additional expenses incurred for meter material. While the meter system has materially increased the operating expenses there has been a great saving in the consumption of water and fuel."

Most of the plants described obtain water from artesian wells, Dallas being the only one relying entirely upon surface water, Beaumont using river water and Fort Worth partly artesian and partly surface. The maximum pressure on the mains in pounds is 50 at Houston, Alexandria and Beaumont, 60 at Galveston and Waco, 70 at Dallas and 90 at Fort Worth. In several of the cities a higher pressure is given by the pumps during fires, however, this reaching 100 pounds at Alexandria, 95 at Galveston, 125 at Fort Worth and 75 at Beaumont. The maximum meter rates vary from 15 cents in Houston and Beaumont to 40 cents in Waco, while the minimum rate is $9\frac{1}{4}$ cents in Galveston, 10 cents in Dallas, 15 cents in Houston, Alexandria, Waco and Beaumont and 30 cents in Fort Worth.

An inspection of the tables in the appendix shows that the cost of pumping in the several cities varies widely. Oil is used under the boilers in Houston, Galveston, Fort Worth and Beaumont; coal slack in Waco and wood in Alexandria. The lowest cost per million gallons of water raised one foot is 5.5 cents in Beaumont and Waco, while the highest is 24 cents in Alexandria and 21.9 cents in Fort Worth. It is seen that one of the largest and one of the lowest rates were for plants burning oil, and an inspection of the data of the Beaumont and Fort Worth pumping plants does not reveal any explanation of this. At Fort Worth, where the rate was highest, the consumption per day is double that at Beaumont, the engines were normally of higher efficiency and the boilers were water-tube in both cases. The pipe friction is probably somewhat greater in the case of Fort Worth, since the number of taps per mile are 146 as against 896 in Beaumont, and the length of mains per tap consequently greater. This, however, should not be sufficient to account for more than a small percentage of the difference. Possibly a more important element in the difference is that the Fort Worth water is largely an artesian supply, and an air-lift plant is required in addition to the regular pumping plant, while Beaumont draws its water directly from the river. On the other hand, however, Waco, whose cost of pumping is no greater than that of Beaumont, obtains its supply from artesian wells, as does also Houston, where the cost of pumping is only 6.7 cents. Should a large part of the high cost in Fort Worth be due to the air-lift pumping we would have the cost of this as about three times as much per gallon as the cost of pressure pumping in Beaumont.

Among the scattered items of interest found in the report is the statement that Fort Worth has a duplicate system installed in and around the principal mercantile district to furnish fire protection and water for sprinkling and commercial purposes, which water is obtained from the river, while water for domestic use is obtained from wells. This river water is used by the railroads and many large concerns, a rate of 10 cents per thousand gallons being charged.

The Waco department receives from the city \$10,000 a year for all fire hydrant service, and 10 cents per 1,000 gallons for the water used for street sprinkling.

DEDICATION OF PLATTED STREETS

Rights Acquired by Purchasers of Lots in Streets Delineated on Maps—Platting Equivalent to Dedication—Court Rulings

By JOHN SIMPSON

WHEN an owner of land lays it out into lots, streets and squares upon a plat or map and then sells the lots according to the plat or map the purchasers acquire an interest in the streets so laid out, which, taking the narrowest view of their right, entitles them to insist upon their being kept open at least as far as the first traveled highway. As to such purchases, the making of the plat and the selling of lots with reference to it are equivalent to a dedication by which the seller is effectually bound.

The making of the plat alone would probably be of no binding effect on the owner. That might be an indication of his intent to make a dedication, but at most it could only be an offer to dedicate which could be withdrawn at any time. But when a sale is thus made, contractual relations arise between seller and purchaser in regard to the streets. While the construction of these relations is fairly harmonious there is enough difference in the language of the courts of the various jurisdictions to be noted.

In New York the later decisions would seem to restrict the right of the purchaser to an easement over the street abutting his own lot and as far as the nearest public street, and this is also the rule in Maryland. It is also the rule in England, where all that the purchasers can claim is a right-of-way over the street adjoining the respective lots and directly thence into the public highway, and not a right-of-way over all the streets marked on a plan published with the particulars of sale. Most of the United States courts, however, take a view much more favorable to the purchaser and hold that his right covers all the streets indicated upon the general plan.

In Pennsylvania it is held that a call in the deed for streets in the plan amounts to a dedication of them to the use of the purchaser as public ways and that this is so even if the streets are not yet opened. For when the proprietor of a body of land sells and conveys it in lots according to a plan which shows the lots to be on streets he must be held to have impressed upon them the irrevocable character of public streets, and not only can the purchasers of the abutting lots assert this character, but so can all other lot owners in the general plan.

In Illinois a similar view is taken. The sale and conveyance of lots in a town according to a plan imply a grant or conveyance to the purchasers that the streets and other public places indicated as such upon the plan shall be forever open to the use of the public free from all claim or interference of the proprietor inconsistent with such use. The purchasers acquire as appurtenant to their lots every easement, privilege and advantage which the plan represents as belonging to them. They are entitled to have the streets remain open for their entire width and may enjoy the obstruction of them by structures or buildings. The right passing to the purchasers is not the mere right that they may themselves use the streets or other public places, but a right vesting in them that all persons whatever as their occasion may require or invite may so use them. And some of the purchasers as against the rights of the others cannot vacate a street designated upon such a plat whether such designation was sufficient to constitute a statutory designation or not. The seller himself has been held estopped to deny the existence of the streets as shown upon the plat, although it has not been properly acknowledged.

In Indiana the decisions are to the effect that the making and recording of a plat and sales of lots as designated thereon operate as an irrevocable dedication to the public of all streets and alleys marked on such plat as far as purchasers of lots are concerned. This is also the effect of the Alabama decisions. In Wisconsin and Texas the acts of platting and selling are held to show a dedication to the public as a street, so far as

the grantee is concerned. In Louisiana the transaction is a dedication to public use and the vendee, together with the public generally has the right to use the whole width of the street. In Rhode Island, when an owner sells one or more lots, describing them by reference to a plat, he annexes to each lot a right of way in the platted streets delineated on the plan, which neither he nor his successors can afterward intercept or control; and all the owners, though not abutters, may enforce the dedication so made. North Carolina courts hold the transaction to be a dedication of the streets vesting in the purchaser of lots a right to have them kept open. The Tennessee decisions are not harmonious, some following the Pennsylvania rule and some the later New York rule. And the Maryland courts in their later decisions show a tendency to take a view of the right more favorable to the purchaser of lots.

In New Jersey, if the owner of a tract of land plats it in lots and streets by a map filed in a public depository, and sells lots on the map by a reference thereto, or by a map publicly exhibited, he thereby dedicates the streets on the map to the public. Although the acceptance by the proper public authority is also necessary in order to make the public liable for maintaining the streets in good order, the dedication may be accepted by the proper authorities at any future time and the owner is estopped to deny the dedication, private rights having meantime intervened.

In Maine it is held that where building lots are sold by reference to a plan the purchasers obtain an interest in all the streets marked upon it and the right to have them converted into public streets as soon as the public authorities can be induced to do so. And in Virginia the sale of lots in accordance with a map or plan vests in the purchaser a right to the use of the streets appearing thereon which cannot be affected by the acts of the vendor.

The generally received doctrine seems to be the reasonable one. When the vendor of a lot, part of a body of his land, sells it with special reference to a plan on which certain streets are delineated, the natural presumption is that he intends to donate these streets to the use of the general public as a means of adding to the value of the individual lots which he sells, and also that the purchaser contracts with reference to a right to have all the streets on the plan kept open as a material part of the value of his individual lot, and not merely with the understanding that he acquires an interest in the whole width of the street abutting his lot and a right of access to his property from the nearest public street.

TORONTO STREET PAVING.

In the city of Toronto there are about 25 miles of brick pavements, and there is more or less of this class of pavement laid each year. In several cases, however, where brick pavements have been down for a number of years the residents have petitioned to have them surfaced with asphalt in order to lessen the noise. The department has used for this purpose a surface consisting of one inch of binder and two inches of asphalt. The results have been appreciated by the residents and it is expected that requests for the same treatment will be received from the taxpayers on a number of brick-paved streets. This work was not necessitated by any disintegration of the brick pavements, but the abutting taxpayers have been willing to pay for it in order to diminish the noise of the passing traffic.

The municipal asphalt plant is used to maintain all asphalt pavements out of guarantee and in a measure is effective in insuring the proper maintenance of those still in guarantee. The department also uses this plant for repairing plumbers' cuts, so-called. During the year covered by the latest public report 13,414 batches of asphalt and 2,303 batches of binder were turned out. The average cost of the several items per square yard of surface laid 2 inches thick and per square yard of binder one inch thick was as follows: *Binder*: Payroll, 5/6 cent; aggregate, 83/4 cents; fuel, 1/3 cent; fixed charges,

53/3 cents; total 157/12 cents. *Surface*: Payroll, 31/2 cents; aggregate, 321/2 cents; fuel, 11/16 cents; fixed charges, 81/2 cents; total 453/3 cents. On the average one batch of surface material lays 6 square yards and one batch of binder 12 square yards. Binder is not used in making the ordinary asphalt repairs except in cases of excessive thickness. The average cost of asphalt repairs for the year, including both surface and binder where used, was 54 cents per square yard.

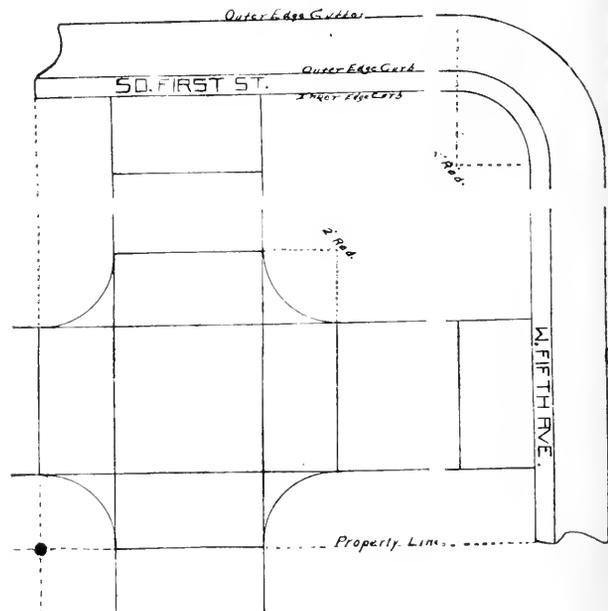

The majority of the new sidewalks are paved with cement, but a number of plank walks are still laid each year. During the year covered by this report about three-fourths of a mile of such walks were laid, most of them 4 feet wide. These cost an average of 91/2 cents a square foot. As cement walks cost only about 12 cents a square foot, and as the plank sidewalks are much less durable, ornamental and safe than the cement, we can see no argument in favor of constructing them except where it is known that the construction will be a temporary one only.

The city cleans the snow from about 400 miles of sidewalk each winter, assessing the cost against the abutting properties. The cost ordinarily averages from 31/2 to 41/2 mills per linear foot. The rate of, say, 17 cents to 22 cents for a 50-foot lot seems very low.

STREET NAMES ON CURBS

The city of Arkansas City, Kans., makes a practice of placing the street names on the top of the curb in the line of the sidewalk paving, as indicated on the accompanying drawing. The city owns a set of brass letters which are in charge of the city engineer, and these are loaned to the contractor to whom any curb and gutter work is awarded. These letters are brass, 31/2 inches high and 11/2 inches wide. With these the letters forming the street name are driven into the concrete while it is green, thus leaving the name depressed in the top face of the curb. These letters are sold by dealers in concrete workers' tools at from 15 to 25 cents each. Arkansas City has a population of about 10,000 only. In a larger place where there is considerable amount of curb construction it would probably be profitable for each contractor to own his own set of letters.

The sidewalks in Arkansas City are unusually wide, the distance from property line to curb being 20 feet. On the residence streets the pavement portion is given a standard width of 4 feet, placed 2 feet from the property line, thus leaving about 14 feet of sod space between sidewalk paving and curb. For the above information we are indebted to City Engineer J. H. Titus.

STANDARD STREET CURB, ARKANSAS CITY

STREET RAILWAY TRACKS

Preventing Low Joints and Motion of Rails — Styles of Rails — Effect of These on Pavement, Vehicular Traffic and Pounding of Cars — Concrete Beam and Slab Construction — Welding Rails

OWING to the fact that there had been considerable complaint and dissatisfaction because of the noise and jarring occasioned by the street railway cars in Trenton, N. J., the council last fall directed the city engineer to report upon the causes of this and suggest remedies. The investigation and report were made by Assistant City Engineer A. C. Gregory, which report goes very fully into the consideration of street railway tracks. The following is an abstract of it. As is natural, the point of view of the city rather than of the company it that taken in this report.

It appeared that the noise and jarring of adjacent houses was due to unevenness and instability of the track rather than to flat wheels or other defects in the rolling stock. "From the municipality's point of view there are other reasons than those of annoyance to the senses and loss in value of taxable property why cars should ride over a firm and rigid sub-foundation. It is impossible to maintain pavements such as those the city is now building adjacent to the rails. The shock at the joints, jumping up and down of the ties and vibration of the rail all tend to disintegrate the adjacent pavement and its foundation, letting into the cracks and openings thus made water and consequently frost. It is no simple matter to design and maintain asphalt, brick, or wooden block pavements adjacent to the rails when the track is in first-class condition; and economical maintenance is impossible when the track is not in good condition." "In the opinion of the writer the main trouble will be found to resolve itself into a question of rail alignment and low joints, particularly the latter." In the case of steam railroads there is similar trouble from low joints, to minimize which the maintenance gang is kept at work continually retamping under the ties. Such retamping is impossible in the case of street railways, however, on account of the paving which covers the ties and fits up close to the rails. It therefore seems necessary to prevent the gradual working of the tie into the ground, since it is impossible to apply the remedy.

The objections to such settling of the joint ties is not only the noise and uncomfortable riding, but the rails are quickly battered at the ends so as to need replacing and the rolling stock suffers and rapidly depreciates on account of the jarring. It is therefore a matter of economy for the railroad, as well as for the paving department of the city, to construct a track which will not suffer from low and movable joints; and both the passengers on the railway and the residents along the street will be much better pleased, which has a money value for the railroad company and should receive the serious consideration of the city authorities. There is still another economy to the company, in that the power required to draw a car over a track with low or movable joints is considerably greater than—in some cases more than double—the power required for traction on a new and perfect track.

As to the remedy, increasing the depth of the rail sections will help, but only partially. One of the earlier attempts at solution was the welding of joints, the argument for this being that since the joint was the weak spot, by doing away with joints altogether and securing one continuous rail this weakness would be entirely eliminated. Another attempt at solution was the furnishing of a foundation under the rails so solid that it would not yield under the most severe traffic conditions. Both of these have been adopted very widely, in some cases one or the other, in a number of cities both together.

The solid foundation used is in most cases one of concrete. There are two general systems, that of resting each rail upon a longitudinal beam, or resting the entire track upon a slab. The latter is the more common. In Sioux City, Ia., wooden ties are spaced 10 feet center to center, with 8 inches of concrete under each tie, the concrete under the tie having a 16-inch base or bearing surface on the earth below. A concrete beam 10

inches deep is placed longitudinally under the rail between the ties and has a horizontal bearing surface of 18 inches on the soil. The concrete of this beam is brought up one inch above the base of the rail, thus holding it solidly in position. The rails are prevented from spreading by tie rods spaced 5 feet apart. The street surface between the ties and beams is concreted to form a rigid foundation for the street pavement.

City Engineer F. M. Randall, of Ft. Wayne, Ind., wrote Mr. Gregory that the use of concrete beams under the rails had proved a failure in that city and that concrete slabs only are used. In this case a slab 10 inches thick is placed at sufficient depth to permit the placing on it of white oak ties which are spaced two feet apart center to center and support the rails. Concrete is filled between the ties, giving a maximum depth of 20 inches of concrete at this point, this concrete being brought up to form the foundation for the pavement. The frequency of the ties in this case would appear to indicate that they were intended to receive the load; but in the majority of instances of slab construction the ties are placed some distance apart, say 10 feet, being provided merely to hold the rails to line and grade while the concrete is being placed.

City Engineer C. H. Rust, of Toronto, stated that in that city the construction at the present time consists of a concrete foundation 12 inches thick under the entire roadbed, this concrete being put in after the rails have been brought to line and grade. Old 4½-inch rails cut in 7-foot lengths are placed under the rails with the base up, to serve as ties, being secured to the rails by clips. The concrete foundation obtains a secure grip on the ties thus formed and holds the rails rigidly in place.

A type of roadbed known as slab and beam construction is illustrated at Charlotte, N. C. Here creosoted wooden ties were placed 12 feet apart, these ties carrying chairs upon which the rails rest. After the chairs had been spiked in place the rails were brought to line and grade and the ties thoroughly tamped to hold them there during the concreting. Concrete beams 20 inches wide and 14 inches deep were placed under the rails, the concrete being brought up flush with the bottom of the rail. At the same time there was constructed, monolithic with these beams, a slab 5 inches thick spanning from one beam to the other and thus furnishing a foundation for the pavement. At intervals of 6¼ feet the rail rests on tie plates to which are riveted stirrups projecting down into the concrete to a depth of 8 inches and thus anchoring the rail securely. Tie bars also connect the rails at intervals. At Detroit, Mich., during the past year the joints have been welded and in addition a concrete slab construction has been adopted, the slab under the ties near the joints being made 3 feet thick.

Mr. Gregory's report contains the description of a number of other constructions, all varying more or less from each other in details; but the essential features are well represented by the illustrations here given.

This portion of his report he concludes with a description of the forms of construction adopted for the city of Chicago by a board of supervising engineers which represented the city and the railway companies. There are five types. Type one consists of grooved girder rails on steel ties embedded in concrete. The depth of the concrete base is increased under each rail and under each tie. This is intended for heavy traffic street. Nine miles of single track have been built, but its further use has been discontinued until further experience has been had with it. At present preference is being given to wooden tie construction on account of the greater resilience. Type two substitutes wooden ties for the steel ties of type one. It is intended for heavy traffic streets where the track can be kept closed for sufficient time to permit the concrete to set properly. Originally there was a concrete beam under each rail and the concrete was carried 6 inches thick under the ties. This re-

quired excavating trenches, which caused considerable trouble and delay, and difficulty from the caving of the trenches. Early in 1908 the design was therefore modified and the concrete bed made of uniform thickness and the ties spaced 3 feet apart. The trench for the track was excavated to a depth $21\frac{3}{8}$ inches below grade and the bottom rolled before placing the concrete. Type 3 consists of grooved girder rails on wooden ties on a broken stone ballast. This was designed for streets in the business district where the tracks could not be kept out of use for a sufficient length of time to allow a concrete base to set. The trench for receiving the track has a uniform depth of $23\frac{3}{8}$ inches below grade. This is well rolled, and 5 to 8 inches of broken stone put in place and the ties laid on this 2 feet between centers. Concrete is filled between and over the ties to a thickness of $8\frac{7}{8}$ inches, forming the pavement foundation. The fourth type, designed for use on brick paved streets in outlying districts, consists of T girder rails on a slag foundation. The trench, made 8 feet wide for single track and 8 ft. $10\frac{1}{4}$ inches for each track in double track work, is excavated $21\frac{3}{8}$ inches below grade and rolled. In this trench is laid a bed of slag 6 inches thick, which is covered with fine slag, limestone screenings, cinders, or foundry sand in sufficient quantity to fill all voids. This material is flooded and rolled with a 10-ton steam roller to give a finished thickness of 8 inches. Ties and rails are laid on this and concrete is filled in between and over the ties. Type five consists of tram-head girder rails on wooden ties and is used for macadamized streets. The trench and foundation are prepared as in type four and on this are laid the ties spaced 2 feet between centers and slag is filled between them to a depth of $4\frac{7}{8}$ inches, on which is placed a 4-inch course of $2\frac{1}{2}$ -inch limestone as the base for the macadam. In all of these types the wooden ties are treated with chloride of zinc.

In discussing welding of joints, Mr. Gregory describes the three forms, the cast weld, electrical weld and Thennit weld. In the first, molds are fastened around the rails at the joint, the inner sides of the molds being painted with linseed oil and graphite. Molten cast iron is then poured into the molds, the heat fusing the steel of the rails sufficiently to effect a true weld.

In electrical welding a steel bar is placed on each side of the rails at the joint and a heavy current of electricity passed from one bar through the rail to the other. At the point where the current is applied the metal is fused and union takes place between the bars and the rail. This process is an extremely expensive one unless a considerable number of joints are to be welded, since it requires an expensive equipment.

In Thennit welding a mold is clamped to the joints as in cast welding and is filled with a mixture of iron oxide and aluminum, chromium being sometimes added for tempering the weld. The mixture is then ignited and an intense heat results which breaks down the iron oxide causing it to give off its oxygen to the aluminum and leave molten iron which fuses the adjacent steel of the rail and results in welding. The equipment for this is inexpensive.

Correspondence with engineers in a number of cities showed that these differed as to the effectiveness of welding in preventing low joints and insuring permanently smooth track. Reports from Indianapolis, Scranton, Toronto, Buffalo, Camden and Elizabeth, N. J., were that welding was unsatisfactory, or that good results, if they had been obtained, were due rather to improved foundation. In Rochester, Detroit, Cincinnati, Minneapolis and New Brunswick, N. J., welding was reported to have given very satisfactory results. Commenting on these Mr. Gregory says: "It will be noted that with one exception (New Brunswick) those engineers who believe in the efficacy of welding in doing away with low joints are representatives of cities where a heavy concrete base also is used, which suggests that the rigid foundation may have a good deal to do with the success of the joint. There is a pretty general idea that the welding should help, but enthusiasm is not strong over its being a remedy."

While the style of rail used has less effect upon the uneven-

ness of the track than either foundation or joint, it is a matter of considerable importance to the city since the top of the rail becomes a part of the street pavement. Mr. Gregory finds that present American practice makes general use of three classes of rails—the tramhead girder rail, the Trilby or grooved girder, and the T girder rail.

The tramhead provides a comparatively wide flange which forms the bottom of the groove and on which vehicles may travel. It was supposed that this would save the pavement from being rutted along the side of the rail by wheels of wagons, but it does not seem to have been very successful in doing so, and this rail does not seem to have many advocates among either city or railway officials.

The Trilby rail presents a smooth and level surface over the entire top of the rail except a narrow groove in which the flange of the car wheel travels. It saves the adjacent pavement to a considerable extent in that wheels do not strike the pavement in crossing the track or grind it in turning out from the groove as in the case of the tramhead rail.

The T-rail is similar to that used for steam railroads except that it is made high enough to permit the ordinary depth of city pavement to be laid without interference by the ties or rail base. In his investigation Mr. Gregory found the T-rail to be particularly in favor in the West and Middle West and that it bids fair in his opinion to be used more extensively than any other. "There can be no doubt that from the standpoint of the operating company the T-rail is by far the most economical. In track construction usually the largest single item of expense is the cost of the rail. . . . It is claimed by the advocates of the T-rail that when passing over a tramhead or Trilby rail the weight of the wheel is taken largely by the side-bearing tram of the rail, rather than directly over the web of the rail, while the load on the T-rail passes directly through the center of the head and web to the base. Also it is possible to broaden and toughen the head of the T-rail to a greater degree than either of the other two; hence the wear will be longer. Moreover, when one side of the rail is worn, the rail may be turned around and used again. An objection to the tramhead and Trilby rail is that when the bearing surface becomes worn down the flange of the car wheel travels on the flange or groove of the rail and it is fit then only for scrap. The T-rail allows flangeway for any shape or style of wheel. The T-rail is also easier to handle and much more economical and easy to maintain in good condition. It is also maintained that because of some difficulty of wagons in the crossing or getting out of the tracks where T-rail is used it has a tendency to restrict vehicular traffic to the pavement, thus permitting cars to keep to their schedule and saving the time of those on the cars. By many the matter of vehicles getting out of the tracks is believed to be the principal argument against their use. When rutting occurs along the tracks this objection assumes very serious proportions, and wagons slide along the track for a good many yards before the wheels are able to mount the rail. Among the cities in which the T-rail is popular may be cited Minneapolis, Minn., Chicago, Ill., Ithaca, N. Y., Sioux City, Ia., Ft. Wayne, Ind., Indianapolis, Ind., Detroit, Mich., Scranton, Pa., Toronto, Can., Charlotte, N. C., Denver, Col. and Salt Lake City Utah." "In the report of the Committee on Way of the American Street and Interurban Railway Association, presented at their regular convention in Denver, Col., in 1909, T-rails were recommended for all classes of pavement, the width and section of the T-rail varying with the kind of pavement and the traffic to pass over it. 'For tracks constructed for heavy service in connection with deep block pavement on streets where the traffic is confined to the railway strip, or is so congested that the railway strip is continually used by vehicles (such conditions as exist only in cities of the larger class), your committee recommends the adoption of the half-grooved (or Trilby) section recommended in 1907.'"

In concluding his report Mr. Gregory states that he is of the opinion that in the city of Trenton the ties and rails should be supported on a concrete slab where the heavier traffic occurs, with 4 and in some cases 5 inches of concrete under the tie.

For ties he suggests either steel or wood, placed only at such intervals as is necessary for securing and maintaining line and surface until the concrete has set. He advises the use of the Trilby rail on all streets which have a narrow roadway carrying heavy vehicular traffic. In such streets he believes that the city is justified in consulting the safety and convenience of the traveling public in crossing the tracks and in requiring the railway company to bear the greater expense of this as compared with the T-rail.

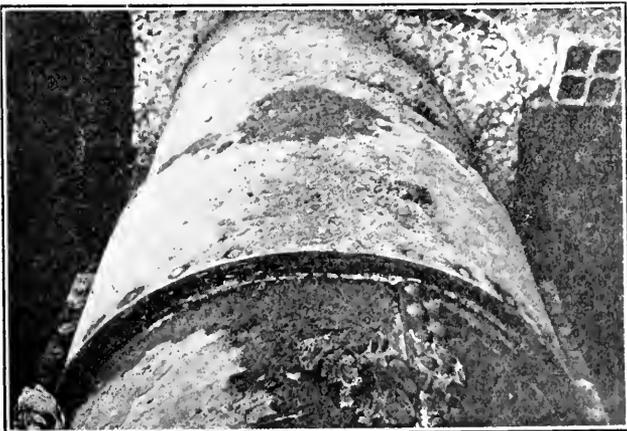

The objection to the concrete foundation, that it seems necessary to keep not only vehicular traffic but the cars themselves off the rails while the concrete is setting, is an important matter and considerable attention was paid to it in the investigation. City Engineer E. A. Fisher of Rochester considered that the concrete should be given ten days in which to set. On the other hand it was reported from Kingston, N. Y., "that with proper precautions it is not necessary to stop cars to allow concrete to set." Most cities, however, thought otherwise, Schenectady considering that this time should be not less than four days; Utica, at least one week; Syracuse, at least ten days, and longer if possible; Newark, seven days; Baltimore, three to seven days, depending on traffic conditions; Washington, 15 to 20 hours.

Where traffic conditions on the street would not permit of so long delay, the report recommends the stone ballast construction used in Chicago, in which case the rail joints should be welded, in the writer's opinion. For streets of lighter traffic it is suggested that one of the forms recommended for heavy traffic streets be modified by providing a lighter foundation. Concerning rails Mr. Gregory recommends the Trilby rail for heavy traffic streets, as stated above, but for wide streets where vehicular traffic is not especially heavy a girder T-rail is recommended, since on these streets vehicles should be encouraged to keep to the sides of the roadway to avoid delaying street cars.

REPAIRING A STEEL PIPE

In his latest published annual report the chief engineer of the Wilmington, Del., Water Department, John A. Kienle, described a somewhat novel pipe repair as follows:

About the middle of December a break occurred in our 48-in. steel distributing main at the north end of Van Buren Street bridge. This break was rather peculiar in its character, never having been recorded elsewhere where steel pipe has been used. The butt strap connecting two sections of pipe cracked between the lines of rivets, and the cause was attributed to the combined influence of settlement of the north approach to the bridge and the effects of expansion and contraction of the pipe itself. . . . As it was impossible to repair this break by using a standard 48-in. cast-iron split sleeve, it was deemed advisable to have a similar device made from $\frac{7}{8}$ -in. boiler plate. This work was done by local manufacturers in less time than patterns for a new casting could be made, and the method of using the sleeve is shown in an accompanying photograph.

REPAIR TO 48-INCH STEEL PIPE, WILMINGTON

CITY PLANNING IN AMERICAN CITIES

Width and Alignment and Grades of Streets—Location of Parks
—Size of Buildings—Control of These by City—Water
Front Development—Excess Condemnation

IN May, 1910, the Mayor of New York City appointed a Commission on Congestion of Population to study and report upon the various municipal problems connected with the congestion of population in cities. On February 28, 1911, they presented their report, which contains a most valuable amount of data and expert opinions and advice upon a number of topics, such as emigration, tenement houses, etc. Among these was a report upon the control which various large cities have over the growth and development of the street system. The data concerning this were given in the form of questions which were submitted to the cities of New York, Philadelphia, St. Louis, Boston, Baltimore, San Francisco, Cincinnati and Milwaukee, together with the replies received from each. As this is a matter which concerns city engineers and others engaged in the laying out and improvement of cities we reproduce herewith the questions and their answers in full.

SUMMARY OF THE REPLIES FROM IMPORTANT CITIES OF THE UNITED STATES REGARDING METHODS OF CITY PLANNING

Q. 1. What authority is charged with planning streets?

New York—Original plan by Borough President. Before becoming effective, approval is necessary by the Board of Estimate and Apportionment, which has jurisdiction over further changes intended by Borough President.

Philadelphia—Act of Assembly 71, Board of Surveyors, when made by direction of Select and Common Council.

St. Louis—Board of Public Improvements.

Boston—Board of Street Commissioners.

Baltimore—Topographical Survey Commission. City has adopted definite street plan, but this may be annulled by the Commission with the Mayor and City Council.

San Francisco—Board of Supervisors and Board of Public Works.

Cincinnati—No authority charged particularly with this, as all streets have to be accepted by Council.

Milwaukee—All plots must be submitted to Committee on Plots and Grades.

Q. 2. General widths of streets?

New York—Streets, 60 feet; avenues, 80 feet.

Philadelphia—Intermediate streets laid out for development of abutting property, minimum 40 feet; formerly widths of principal streets 50 feet, but recently policy is to make them from 60 to 100 feet, depending upon probable future importance as business streets or general traffic.

St. Louis—50 to 100 feet.

Boston—40 feet generally, 50 to 80 feet for more important avenues.

Baltimore—66 feet usually. A survival of old custom, based on old methods of measurements, four perches.

San Francisco—68 feet 9 inches.

Cincinnati—40 to 100 feet; 50 feet was considered an average.

Milwaukee—60 to 66, 70 and 80 ft.

Q. 3. By whom is width of street determined?

St. Louis—Board of Public Improvement.

Baltimore—Topographical Survey Commission.

San Francisco—Board of Supervisors.

Q. 4. On what grounds is width of streets determined?

St. Louis—Traffic requirements and continuity of alignment and width.

Boston—On growth of district and probable extent of use.

Q. 5. Are real estate operators permitted to develop tracts of land without sanction of City authority?

New York—Yes.

Philadelphia—Real estate operators must conform to lines and grades of streets as confirmed by Board of Surveyors.

St. Louis—Law prepared to have all plots of subdivisions approved by Board of Public Improvements. Real estate operators have found they can plot a subdivision of property laying out private streets and have plots recorded. This conflicts with the City plan.

Boston—No.

Baltimore—Owners may develop very much according to their ideas; but City cannot accept streets unless they conform

to general plan, so that non-conforming streets remain private.

Cincinnati—Yes, but streets must be accepted by Ordinance of Council.

Milwaukee—No.

Q. 6. *If not, what authority determines the development?*

Boston—Board of Street Commissioners.

San Francisco—Must, according to City Charter, submit plans to Board of Public Works and Board of Supervisors for approval.

Milwaukee—Act requiring all plots to be approved by City Council and to conform to existing streets as to width and direction.

Q. 7. *Have you experienced interference with proper junction of streets, etc., due to haphazard development by real estate operators?*

New York—Yes.

Philadelphia—Since consolidation, in 1854, we have endeavored to avoid conflicts.

St. Louis—Yes.

Boston—No.

Baltimore—Yes; often proved costly to rectify. City working on plan not only to prohibit city from accepting deeds to non-conforming streets, but also from laying water mains, sewers, providing lighting facilities or any public improvements.

San Francisco—Very little.

Cincinnati—Yes.

Milwaukee—Yes, in the early layouts.

Q. 7.a. *How have you met this difficulty?*

New York—It has often been necessary to seriously distort streets.

Philadelphia—By obtaining authority from Council for revision of a particular section or for widening or straightening an individual street.

St. Louis—By condemning triangular strips of ground to afford satisfactory street connections.

San Francisco—Traffic offsets around rectangular courses.

Cincinnati—Many met, but not overcome.

Q. 8. *What authority determines grades and composition of streets?*

New York—Treated in same way and considered part of street plan. Charter of original improvement determined by Local Board, subject to approval of Board of Estimate and Apportionment. Subsequent surface improvements within control of Borough President.

Philadelphia—Board of Surveyors determines grades. Paving is determined by Councils at recommendation of Bureau of Highways.

St. Louis—Board of Public Improvements.

Boston—Grades, Street Commission; composition, Superintendent of Streets.

Baltimore—Topographical Survey Commission determines general preliminary grades plan and City Surveyor makes actual establishment of grades.

San Francisco—Board of Supervisors.

Q. 9. *Are operators allowed to construct buildings before sewer connections are made?*

New York—Yes.

Philadelphia—Yes.

St. Louis—Yes.

Boston—Yes.

Baltimore—Yes.

San Francisco—Generally.

Cincinnati—Yes.

Q. 10. *What provision does the City make and by what authority provide main lines in anticipation of development of new districts?*

San Francisco—None in particular.

Q. 11. *What authority determines lines of transit?*

New York—Board of Estimate and Apportionment and Public Service Commission.

Philadelphia—Corporations operating the lines, with permission of Council.

St. Louis—Municipal Assembly.

Boston—Board of Street Commission and Mayor. Railroad Commission may be appealed to.

Baltimore—Board of Estimates and City Council.

San Francisco—Board of Supervisors.

Cincinnati—Council.

Q. 12. *What authority determines volume, height and proportion of lot area to be occupied by buildings other than tenements?*

New York—The Building Department.

Philadelphia—Bureau of Building Inspection.

St. Louis—Municipal Assembly.

Boston—Building Law and Building Commissioner.

Baltimore—Building Code adopted by ordinance and under supervision of Building Inspectors.

San Francisco—Board of Supervisors, by ordinance.

Cincinnati—Commissioner of Buildings.

Q. 13. *What authority determines number of stories and proportion of lot area for tenements and other dwellings?*

New York—Such control as is exercised is vested in the Tenement House Department.

St. Louis—Municipal Assembly.

Boston—Building Law, Building Commissioner.

Baltimore—Building Code.

San Francisco—Tenements, State Law; others, local ordinance.

Q. 14. *What authority determines location of parks, playgrounds, etc.?*

New York—Board of Estimate. Treatment for parks, playgrounds, open spaces, following procedure in case of plans for new street systems. Site for public buildings usually first recommended to Board by head of department interested.

Philadelphia—Councils generally, at recommendation of City Department or civic organizations interested.

St. Louis—Municipal Assembly.

Boston—Park Commission for Parks, etc.; public buildings, Public Building Department; School Committee and School House Commission for schools.

Baltimore—Parks and playgrounds, under Board of Park Commission; public buildings under no definite authority, except various boards controlling special buildings.

San Francisco—Park Commissioner and Board of Supervisors.

Cincinnati—Park Commissioners.

Q. 15. *Has any authority jurisdiction over location of factories?*

New York—No.

Philadelphia—No.

St. Louis—No.

Boston—No.

Baltimore—No, only where they may be a nuisance, when Building Inspector may refuse permit.

San Francisco—Board of Supervisors.

Cincinnati—No.

Q. 16. *What authority determines nature of the waterfront development?*

New York—Other than when controlled by Dock Department or governed by street layout, left entirely to particular interest affected.

Philadelphia—Most of waterfront owned by private interests; developed under restrictions and regulations established by Secretary of War and Department of Wharves, Docks and Ferries.

St. Louis—Board of Public Improvements.

Boston—None.

Baltimore—Harbor Board and Building Inspectors.

San Francisco—Political code of the State of California and general laws.

Cincinnati—United States Government.

Q. 17. *Any special method of determining development of adjacent area?*

New York—No. Character of development usually assumed in preparing plan, but it is often necessary to modify treatment.

Philadelphia—No authority beyond city limits.

St. Louis—No.

Boston—In outlying suburban wards (Ward 24) surveys made and plans for streets filed in office of Street Commissioner.

Baltimore—Not yet.

San Francisco—No.

Cincinnati—No.

Q. 18. *Of newly incorporated areas?*

San Francisco—No.

Cincinnati—No.

Q. 19. *Has the City the right of excess condemnation?*

New York—City is authorized to acquire such lands "as will promote public utility, comfort, health and adornment." Questionable whether this power is sufficiently broad to justify excess condemnation, as commonly understood.

St. Louis—No.

Boston—No.

Baltimore—Yes, in burnt district and entire city. Not yet in operation, though preliminary steps have been taken.

San Francisco—No.

Cincinnati—Yes.

Q. 20. *Does City acquire land for public purposes in advance?*

St. Louis—Park areas were acquired when farming lands. If developed into building lots would net substantial profit.

Control of Street Planning

One of the serious difficulties in the way of effective planning by cities is the general lack of control which American municipalities have over the subdivision of private lands. There is, it is true, a provision of some kind in most city ordinances that the streets so laid out must conform to a city plan, or the street plans be accepted by the city engineer or a council committee before construction, in default of which such streets will not be accepted as public streets by the city. But there is nothing which prevents a property owner from laying out the streets and selling lots upon them, the municipal authorities having no control until the streets are offered for acceptance as public highways; and then it is generally too late to make any change without hardship to innocent purchasers of lots facing thereon. But what is required in most of our cities is some plan by

which owners can be controlled in the development of the property and be prevented from selling lots until the proper city authorities have examined and approved of the general plan of subdividing the property, in order that it may conform to a general city plan and become a part of a consistent and carefully thought out whole.

Low Bids for Municipal Work

In a recent report of the city engineer of Toronto, Canada, appears the statement: "Excellent results have been secured in the bids received for work under contract, on account of extensive advertising, which has resulted in wide competition and a large saving to the city." A recent letter to this journal from the Chamber of Commerce of Boston says: "The new Boston charter precludes the Commissioner of Public Works from advertising, officially, for bids in any papers except those published in Boston. It is desirable that this matter should be given wide publicity, that the city may not be compelled to accept a non-competitive bid." (The matter referred to is described below.)

We quote these two statements in order to call attention to the fact that the publicity which cities are demanding that public service corporations give to their affairs is equally necessary for municipal business if the interests of the taxpayers are to be served. Not only the lowest price but frequently the best construction is obtained by insuring that information concerning a proposed contract reach every contractor prepared to perform such work.

There is probably no method used by grafting politicians for diverting public funds to their own pockets and those of their henchmen which is responsible for greater losses to the taxpayers than the awarding of contracts to favorites; and the limiting of competition by some means is essential to carrying out this scheme. Many cities are required to advertise all public work whose cost exceeds a stated minimum in papers outside of the city, generally those which are taken by contractors; and even when not required, this is done by most city officials who are really anxious to economize in municipal expenditures. In view of these facts, the restriction of advertising contained in the Boston charter seems suggestive of the influence, exerted for selfish purposes, of those who expect to profit by municipal contracts awarded with little if any real competition.

The information quoted above concerning the Boston charter constituted part of a letter requesting us to make public the fact that Boston invites bids for disposing of its garbage and other city wastes. The contract will be for a term of ten years from January 1, 1910. Bids will be publicly opened April 24, at noon. Information can be had from Commissioner of Public Works Louis K. Rourke.

We are glad to give this publicity for the benefit which we hope it will render to the taxpayers; and because we do not believe that many if any of the present municipal officials are in sympathy with the suppression of competition apparently aimed at by the clause of the charter above referred to. It seems to us, however, that there should be an effort made by the Chamber of Commerce and other citizens to have this clause repealed.

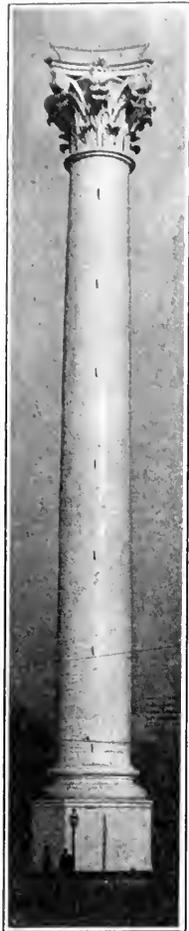

Sedimentation Tank Experiments

Preparatory to designing one of the recent sewage disposal plants of Toronto, investigations were made to determine what angle it is necessary to give the bottom of a sedimentation tank when such bottom is made sloping to concentrate the sludge, or to discharge it into a sludge tank below as in the Emscher tank. Experiments were made with a wooden tank 12 ft. 5 in. square at the top, having vertical sides for a depth of 4 feet, below which was a sloping bottom in the form of an inverted rectangular pyramid. The slope of each of the four sections of the bottom was made 30 degrees to ascertain whether the sludge would slip on that slope or not. This tank was put into service as a sewage precipitation tank, and

while so used it was found that the slopes referred to were insufficient, as the liquid had to be lowered until it reached the sludge before the latter began to slip down the inclines, and only that portion of the sludge slipped down which was above the surface of the liquid. As a result of these experiments it was decided to make the slope of the pyramidal bottom of the permanent tanks 45 degrees rather than 30 degrees.

ST. LOUIS WATER TOWER ABANDONED

THE Water Department of St. Louis has recently abandoned one of four water towers which have been in service for some time, this one having been used for 40 years as an aid in maintaining the city water pressure. The tower in question is located at Twentieth and Grand streets. It was built in 1871 by Jos. P. Kirkwood as chief engineer of the Water Department. The structure consists of an iron standpipe enclosed in a masonry tower. At first it was planned to hold the pipe in place by means of guys, but it was finally decided to enclose it in masonry which would add to the appearance as well as to the safety of the pipe.

OLD WATER TOWER
ST. LOUIS

tower has now been connected direct to the distribution system. There are three other towers still in service, but at least one of these may be abandoned in a year or so.

This tower is on one of the highest points in the city and is one of the tallest Corinthian columns in the world. It has furnished quite an attraction for tourists and will be retained as a landmark and observation tower although no longer used for its original purpose.

WASHING GRIT CHAMBER SAND

THE city of New Bedford, Mass., is preparing to construct an intercepting sewer with an outfall into Buzzards Bay. Owing to the low velocities obtainable it will be necessary to remove any sand which may enter the sewers during storm periods before it reaches the outfall in order to avoid deposits in this or in the channel near the outlet. It is generally found to be impracticable to prevent the settling out, with the sand in a grit chamber, of a considerable amount of organic matter, sufficient to create a nuisance should the sand be used for filling in near a residential district such as is found at the location of the proposed grit chamber.

The city engineer of New Bedford, Wm. F. Williams, proposes to adopt what is believed to be a somewhat new idea in meeting this condition. In reply to an inquiry from us he states that the alternatives for disposing of the sand which will collect in their proposed grit chamber are either to use it for filling near residences, to tow it to sea, or cart it to some distant point. It occurred to him that the greater part of the organic matter could be removed by passing the material through a sand washer in the same way that the sand taken from the filter bed of a water filtration system is treated.

His present purpose is to make use of an apparatus, probably the Nichols, such as is used in washing sand at the Torresdale (Philadelphia) filtration plant, Mr. Williams stating that he is satisfied that it is entirely practical to wash the material deposited in a grit chamber, passing back into the sewer the organic matter washed out, and use the sand for filling near the station without danger of its creating a nuisance.

Mr. Williams also proposes to transport the sand from the grit chambers to the washers with a sand ejector, as is done in water filter plants. He hopes that this operation can be carried on while the sewage is passing through the chamber, as this will mean a great saving in cost of pumping and should secure a better separation of the sand and organic matter. The sewage will pass through screens before entering the grit chambers, to remove paper, rags, sticks, etc.

PREFERENTIAL SYSTEM OF VOTING

THE letter printed herewith is self-explanatory. In the copy of the charter which accompanied it are found the details of the method of nominating, which are as follows: A petition of nomination must consist of not less than 25 individual certificates submitted by qualified electors, each of which certifies that he believes the person named "is especially qualified to fill the said office and is of a good moral character. I further certify that I join in this petition for the nomination of the above-named person, believing that he has not become a candidate as the nominee or representative of, or because of any promised support from, any political party or any committee or convention representing or acting for any political party." This certificate is signed under oath before a notary public. Not earlier than thirty days nor later than twenty days before the election, twenty-five or more of these certificates must be presented to the city clerk, who must then file the same if the petitions are found to be according to requirements. On the tenth day before election the clerk certifies a list of candidates nominated for the several offices and prepares ballots which contains the full list of names nominated for each office, with three columns opposite each name for indicating first, second and third choice for each office.

GRAND JUNCTION, COLO., Mar. 27, 1911.

The Municipal Journal & Engineer, New York, N. Y.,
To The Editor:

I notice mention in your issue of the 22d in regard to the manner of carrying on the election for city officers in the city of Spokane, Wash. Your article might have mentioned the fact that this plan was patterned after the system in vogue in our city. This is the so-called "Preferential System," and I think that ours was the first city in this country to adopt it.

Spokane changed from our plan to some extent, we presume to better suit their local condition. By our plan, nominations are made exactly as in Spokane except that the nominating petition specifies the office for which the candidate is placed in nomination. In our last election we had six candidates for Mayor, five for Highway Commissioner, three for Commissioner of Health and Civic Beauty, two for Commissioner of Finance and Supplies, and one for Commissioner of Water and Sewers.

This city being the first city to adopt this system, I think it only right that we should have due credit for being the pioneers in this simple and, I think, unequaled manner of getting the full expression of the voter in a municipal election.

Under separate cover I am sending you a copy of our Charter, which will explain fully this original American "Preferential System" of voting.

Very truly yours,

H. F. VORBECK,
Com. of Finance and Supplies.

NEWS OF THE MUNICIPALITIES

Current Subjects of General Interest, Under Consideration by City Councils and Department Heads—Streets, Water Works, Lighting and Sanitary Matters—Fire and Police Items—Government and Finance

ROADS AND PAVEMENTS

Paving in Allegheny County, Pennsylvania

Pittsburg, Pa.—The illustration shows the Greensburg Pike, near the county line of Allegheny County. The road is paved with brick for a distance of four miles. Eighteen miles of other roads in the county are similarly paved, most of them having been constructed in 1910. Chief Road

Courtesy Pittsburg Gazette-Times.

TYPE OF COUNTY ROAD, ALLEGHENY COUNTY, PA.

Engineer S. D. Foster receives delegations of farmers who congratulate him on the good qualities of the roads and inquire when more will be forthcoming. The brick paving costs about \$1.45 per square yard. The roads as a rule are paved 15 feet in width; there is 11 feet of graded dirt surface, and gutters complete the 30-foot width of the road.

Permanent Dustless Pavements Desired by Mayor

Newark, N. J.—In order to bring the question of permanent dustless pavements before the public and secure an opinion from property holders along whose frontage it is proposed to lay such pavements, Mayor Hinck has sent an open letter on the subject to the residents of South Mountain avenue. The residents of that street will discuss the matter, and should they be willing to have the added assessments, a request for the new improvement will be made by them to the Town Council.

Sidewalk Improvements in Tallahassee

Tallahassee, Fla.—Within the past few months more than eight miles of new sidewalks have been laid in Tallahassee. Approximately some \$35,000 have been expended in the laying of the new cement walks. And the good work still continues. There are several miles more to be laid. Tallahassee will now have among the best city streets in the State. What is most needed is sufficient appropriations by the State to keep the Capitol grounds in a good condition. What ought to be the beauty spot of the city is almost an eyesore.

Militant Women Fight Police in Paving War

Chicago, Ill.—In a hand-to-hand battle with police and laborers a score of militant women, after several of their number had been hurt, prevented the laying of pavement in the streets of West Hammond, just outside of the city, on Saturday of last week. The women had been guarding the streets, declaring that the brick being laid in the pavement was "graft bought" and not up to specifications. The contractors were obliged to call on the police and with several especially sworn deputies endeavored to dislodge the women who had camped in the street. When the women refused to leave the police tried to drive them off with clubs and a hand-to-hand conflict followed. After 15 minutes of fighting, however, the police gave it up and returned to police headquarters, where warrants were sworn out for 15 of the women.

Want School Board to Pay for Paving

York, Pa.—City officials are endeavoring to have the city school district pay for street paving in front of its properties. School buildings, like churches, are exempt from taxation and the municipality is required to pay for all highway improvements in front of non-assessable realty. It is optional with the school directors to assume the expense. Although not required by law to pay for the placing of curbing and pavements in front of the school properties, it is stated, the school board has always assumed the expense for their construction. Councilmen who appear to have been against securing additional general revenue for the city by retaining the tax rate at 8½ mills, because of the political effect, are now desirous of having the school board pay for the paving in front of the school properties. They contend that the city's funds are low and the school district could better afford to do so than the municipality.

Building Boulevard to Park

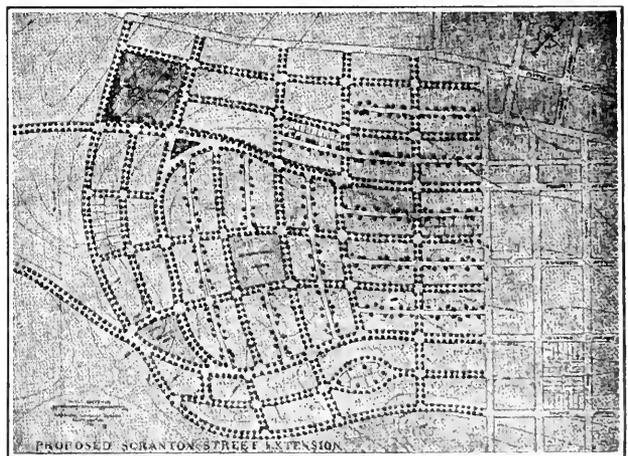

Olympia, Wash.—The city has commenced work on the boulevard leading from the city to Priest Point Park, pronounced by many to be the finest natural park on Puget Sound. It is expected that a street 30 feet wide will be completed by July 1, and it will be necessary to make one fill with the dredger now working along the waterfront.

Ordinance Protects Pavements

Louisville, Ky.—The ordinance making it unlawful to rip up a pavement by a public utility corporation before it has been down five years passed the Board of Aldermen and was signed by Mayor Head.

Proposed Street Extension Plan

Scranton, Pa.—The illustration shows a plan prepared for a proposed street extension project. The features of the

PROPOSED SCRANTON STREET EXTENSION

plans, which were prepared by John Nolen, are wide, shady streets, public parks and breathing spots. The curved streets in one section of the plan suggest one of the favorite ways of laying out residential streets in Germany.

Oyster Shells to Coat Streets of Centerville

Centerville, Md.—The Town Commissioners of this place have purchased 75,000 bushels of oyster shells, with which every street in this town will be heavily coated, after the sewer trenches have been leveled and graded. Shells make good, hard surface roads, and when covered with oil conquer the dust problem of county towns during the summer.

Ownership of Roller Pays City

Leavenworth, Kan.—Last Spring the city purchased a steam roller for use in grading and improving streets. Incidentally the machine has been the source of some revenue as it has been leased to contractors at \$10 per day

SEWERAGE AND SANITATION

Sanitary Fountains to Replace Drinking Cups

Albany, N. Y.—The Board of Education last week took the first step toward abolishing the germ-infested public drinking cup in the schools of Albany. Superintendent of School Buildings Herbert E. Bugden was instructed by the Board to install the best design of a hygienic drinking fountain in school No. 24 as an experiment.

Mount Pleasant, Utah.—The Council of this place is arranging to have three sanitary drinking fountains installed in the town for use during the summer.

New York, N. Y.—The Department of Health has issued a statement regarding the new section of the sanitary code adopted March 21, in connection with common drinking cups. The section, which takes effect October 1, says: "The use of a common drinking cup or receptacle for drinking water in any public place or in any public institution, hotel, theater, factory, public hall or public school, or in any railroad station or ferry house in the city of New York, or the furnishing of such common drinking cup or receptacle for use in any such place is hereby prohibited. As regards a substitute for the common drinking cup Commissioner Lederle says he is not recommending any device, but that either individual cups or some type of fountain in which the lips do not come in contact with the fountain itself is necessary.

Trees a Menace to Sewer System

South Bend, Ind.—Carolina poplar trees will in time ruin South Bend's sewer system, the Board of Public Works feel, and the City Board will ask the Common Council to adopt an ordinance whereby the trees may be exterminated. Action against the trees was taken in a resolution adopted by the Board last week. The Council is asked to adopt the proper ordinance at once. Members of the Board claimed the roots of the poplar trees are fast clogging drains in all parts of the city.

Progress on Baltimore's Sewage Disposal Plant

Baltimore, Md.—The present state of progress and a good idea of the completed sewage disposal plant is shown in the accompanying illustration. In the foreground are the hydrolytic tanks. In the distance, to the right, are the sprinkling filter beds. From the inlet to the tanks to the outlet on the opposite side the distance is 440 feet. The filter beds are 12 acres in area. There will be 200 sprinklers to each acre. The plant was designed and is in course of construction under the direction of Calvin W. Hendricks, Chief Engineer, Baltimore Sewerage Commission. A description of the plans of this plant was given in the MUNICIPAL JOURNAL AND ENGINEER November 24, 1909.

New Sewerage System Completed

Clearwater, Fla.—Clearwater's new sewerage system has been completed, turned over to the city and accepted. The system has been installed under expert supervision and is particularly up to date.

Will Start Work on Harbor Brook Sewer

Syracuse, N. Y.—John Young, of the Young Construction Company, plans to start work on the north section of the Harbor Brook intercepting sewer and brook improvement early next week. Concrete pipe for the sewer has been ordered and he expects that the first shipments will arrive as soon as excavation has sufficiently progressed to lay the sewer. The machinery that is to be used on the job has been secured. The sewer will be constructed before the creek improvement is undertaken. This will permit the diversion of the water from the stream to the sewer, leaving the bed dry. The brook will be deepened and the bottom lined with concrete blocks in practically the same manner as the Onondaga Creek improvement is to be carried out.

Protest Against Sewerage Measure

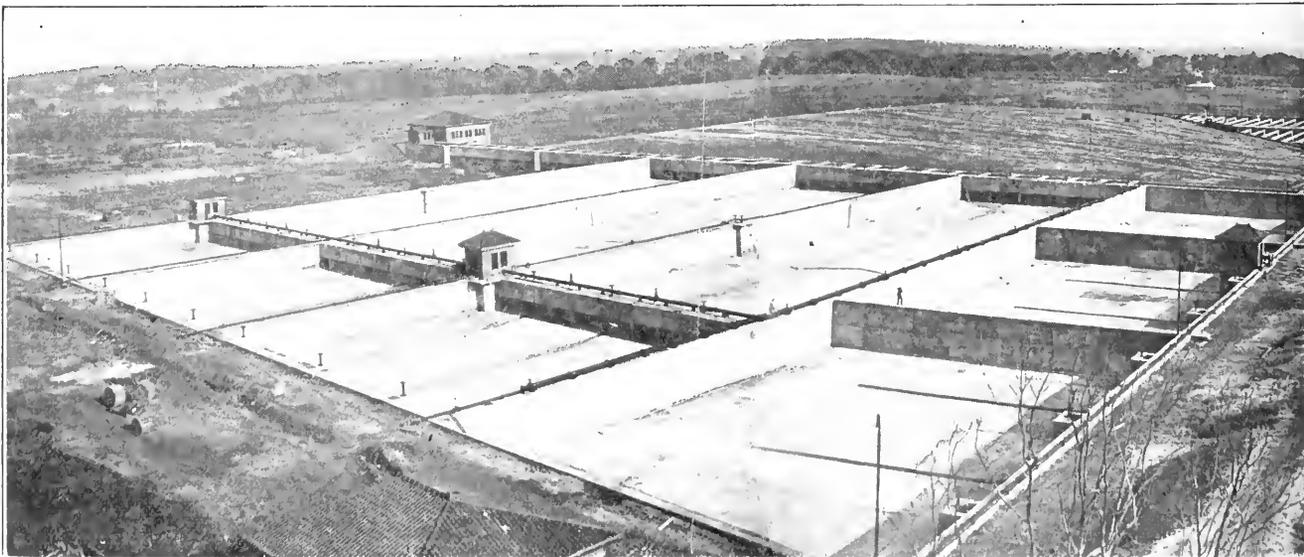

Oklahoma City, Okla.—A strong delegation of citizens of Oklahoma City, headed by Charles F. Colcord, called on the Governor and voiced vigorous protest against the sewage bill passed by the Third Legislature. The bill in question originated with Dr. J. C. Mahr, State Health Officer, and Kate Barnard, State Commissioner of Charities and Corrections. The delegation contended that the signing of the bill will cost Oklahoma County alone \$2,000,000 to \$3,000,000. The measure prohibits the dumping of sewage into streams from which drinking water of other towns and cities is drawn.

Will Oil the Waters

Marysville, Cal.—Mayor Hall has announced that the city's oil wagon will make the rounds of the city one day next week and will oil the manholes and catch basins of the sewer systems, and cover all pools of water with oil. This will be for the purpose of preventing the breeding of mosquitoes.

Chemist for St. Paul

St. Paul, Minn.—The Senate has passed Representative Perry's bill authorizing the Mayor of St. Paul to appoint a city chemist. The city chemist is to have power to inspect all gas, gas plants, gas meters, electric light plants, electric meters, electric light for public use, heat and water meters. He is also to analyze, when requested, any cement, stone, wood or other material to be used in public buildings, street paving or other public works. The city chemist is to have a salary of \$1,800, one assistant at \$1,200 and four assistants at \$1,000 each.

WATER SUPPLY

Improvements to Water System Planned

Lewiston, Mont.—It is reported that \$100,000 will be spent here this season in improvements to the water system.

Pipe Line Completed

Denison, Tex.—The pipe line to the Shawnee Creek reservoir, the city's new reservoir, has been completed and will carry water from the reservoir to Denison, a distance of four miles. The pipe line is 14 inches in diameter and follows almost a straight line. Under the supervision of Superintendent Berry of the Water Works Department of the city 50 men have been employed for 60 days in the construction work. The line is two feet underground for the greater part of the distance, but in several places it crosses ravines on concrete piers. The cost of constructing the line is close to \$35,000. In addition to this amount some \$25,000 additional will be spent in the construction of a pump house and the installation of a big pump and engine. It is estimated that the new plant will be in operation by May 15.

Laying New Water Mains

Sherman, Tex.—Superintendent Harvey McDuffie of the Water and Light Department has just completed putting down 2,800 feet of water main in the Kerr Addition, North Sherman. The crew will be moved immediately to the College Park and Frisco additions, east of Sherman, where a large amount of pipe will be put down.

Water Supply for Moorhead

Moorhead, Minn.—After working for nearly five months in an effort to find a suitable water supply for the city, A. J. Hanson has struck water at a level of 189 feet. Although this is as far as he is now directed by the City Council to go, Hanson states that he does not believe that he has as yet arrived at the right level of water, but that a few feet more would yield an abundant supply. The drill has struck a vein of gravel and Hanson is of the opinion that it is beyond this vein of gravel that pure water in abundant supply is to be found. The present well will be 20 inches inside diameter, and is but the first of a series of wells which the city intends drilling if an adequate amount of water can be found. It is the plan to do away with the present water supply from the river and to substitute one of pure artesian water.

City Will Protect Its Interest in Reservoir Site.

Oakland, Cal.—In order that Oakland's interests in the Hetch-Hetchy valley project may be protected, the finance committee of the City Council has recommended the passage of an ordinance providing for the services of two engineers to assist the Board of Engineers of the city and county of San Francisco in the preparation of the report of the department of the interior at Washington to be used at the hearing of the order to show cause now pending in that department for the revocation of the permit heretofore granted by that department for the use of the Hetch-Hetchy valley as a reservoir site. J. H. Dockweiler of Oakland and J. D. Galloway of Berkeley are named as the engineers in question, and a sum not exceeding \$4,000 will be paid them for their services by the cities of Oakland and Berkeley, the specific amounts to be based on a pro rata of the population of the cities. Mr. Dockweiler is to prepare data upon existing and further needs of water supply for the cities of Oakland, Alameda and Berkeley, and upon the possibilities of existing local sources of supply for these cities, and Mr. Galloway is to prepare data upon possibilities of reinforcing such local supplies from the Sierra Mountains and other outside sources.

Fights Water Bonds

Helena, Mont.—The third action to prevent the city of Helena from selling its water bonds was instituted in the Federal Court here last week by Senator Muffly, who is mine operator for the Broadwater Company. Muffly asserts that if the city diverts the water he will have to close his properties. He is the owner of rights subsequent to those of the city. At a recent election bonds were authorized for the purpose of installing a municipal plant.

Progress on Jacksonville Reservoir

Jacksonville, Fla.—The accompanying view shows the state of progress on the new reservoir, which is being built

JACKSONVILLE COVERED RESERVOIR UNDER CONSTRUCTION

by the Logan Concrete and Engineering Company, contractors. When completed it will hold 3,375,000 gallons of water. The area of floor and roof also, for it is of the covered type, is 70,000 square feet. The excavating, amounting to 9,000 cubic yards, was done with a drag scraper.

May Change Charter in Order to Make Water Rate

Tonawanda, N. Y.—In order to secure a large fiber plant in Tonawanda, the Common Council recently adopted a resolution whereby the city charter will be amended so that the Water Board, with the concurring action of the Common Council, may enter into a contract with any industrial concern to furnish 500 gallons or more of water per day at a rate to be agreed upon by the two city boards. Under the present charter Tonawanda cannot legally enter into a contract for a term of years to furnish water to manufacturing plants, and now that the Spalding Brothers Manufacturing Company, of Rochester, N. H., desires to locate here and get a contract for its water supply, the city is held up until the amendment is passed. Tonawanda has a surplus of water and is in position to furnish all the water that the fiber works might use. The city can grant the company its supply for one year, but no longer, at an established rate; but if the new provision of the charter is adopted the city will be in position to contract with the Spalding concern for a term of years.

Municipal Water Plant a Failure.

Gloucester City, N. J.—The operating expenses of the local water works is occupying much of the time of City Council at present. During the last few years it has clearly been proven that municipal ownership is a complete failure, according to the views taken by several members of Council, some of whom express themselves as being in favor of selling the plant with the provision that water be furnished free to the city for its fire hydrants and other public purposes. This, it is said, would furnish sufficient money to clear off half of the present public debt. Councilmen O'Hara, Barnard and Mayhugh opposed the plan to sell the plant, declaring that rates to the public would be advanced beyond all reason and that with proper management the present deficit could be converted into a balance in favor of the city. The Councilmen also declare that the expenses for repairs were ever increasing because of neglect upon the part of those in charge of the plant. It is said that with the revenue derived from the pumping station at the present time the plant should be operated successfully. The conditions will in all probability lead to an investigation. It is said many thousands of dollars of unpaid water rents are upon the city records. The Water Works Committee of City Council has been instructed to require a more stringent enforcement of the rules under which the plant is operated in the future in order to bring about better conditions.

Water Rates Will Pay for Water Plant

Franklin, Pa.—That the cost of the purchase of the water works by the city of Franklin will be defrayed from the revenues derived from water rates, as understood by the people of Franklin when the plant was purchased, was made manifest at the meeting of the Common Council when the plan recommended by the Board of Water Commissioners, being practically identical with the one now in operation, was adopted by a vote of 5 to 1. The Water Board had presented an alternative plan to be used if Councils decided that the water plant would have to be paid for by direct taxation of real estate. The manner of paying for the water plant hinged on this question, which had been discussed by the people of the city for several months. City Solicitor Thomas McGough had prepared an opinion, which, while it has not been made public, is understood to have favored the original plan of having the water works pay for itself from revenues derived from the sale of water. In consequence of this opinion Common Council took the course it did.

Freewater Gets New Water Works System

Freewater, Ore.—Work is completed by Contractor Siegel Eaton of digging the city well for the new water works system. The well is 45 feet deep and 8 feet in diameter. A feature is that no surface water can flow into it as it is cemented down a depth of 15 feet. It also has a natural filter. The city is bonded for \$16,000 and the system is to be installed by May 1. The system consists of about 15,000 feet of 8, 6 and 4-inch pipe, 16 fire hydrants, the necessary gate valves and reservoir on the hill 60 x 30 and 10 feet deep, holding approximately 140,000 gallons of water. The reservoir will be 140 feet high and the triplex power pump, operated by electricity, will have a capacity of 200 gallons per minute.

Municipal Water Works Pays

El Paso, Tex.—El Paso is making money on its water works. It is now costing the city 1½ cents less to pump water for the city and other water users than it cost the International Water Company for the same purpose, and as a result the net profit on the operation of the water plant during the month of February amounted to \$3,500.38, according to a report submitted to the City Council by Superintendent Will E. Race at the regular session.

State Engineer Inspects Water Supply at Request of City

Defiance, O.—L. H. VanBuskirk, Engineer of the State Board of Health, is in the city making an inspection of the city water supply and of the sewerage. He comes at the request of the local Board of Health, which passed a resolution on February 1 requesting the State Board of Health to send a representative here for the purpose of inspecting the impure water supplied Defiance people.

Filtration Plant a Success

Bangor, Me.—The new filtration plant at the pumping station is now complete, and Prof. J. M. Caird, of Troy, N. Y., the city's consulting chemist, who has been making a series of tests at the plants relative to the new plant, reported to the Water Board that the filters fulfilled in every particular the guarantees under the contract, and recommended its acceptance.

Take Steps to Fireproof Pumping Station

Duluth, Minn.—Mayor Cullum, City Engineer McGilvray, President Shartel of the Council and representatives of the Board of Water and Light Commissioners visited the pumping station at Lakewood to inspect it with a view of determining what steps should be taken toward making it fireproof. The pumping station has been menaced by fire several times in past summers, and it is desired by the officials of the Water and Light Department to avert all danger of the plant being destroyed by fire in the future. Last summer the plant was endangered by brush and forest fires in the vicinity, and strenuous work was required to fight off the flames, which threatened it several times. Should the pump house ever take fire it is almost certain that the machinery would be so seriously injured that it would necessitate shutting off the water supply of the entire city.

STREET LIGHTING AND POWER

Struck Gas Near Beloit

Beloit, Kan.—For some days W. H. Drinkern, at the direction of a company of Beloit business men, has been boring down into the depths of the earth on the Bert Fun farm in Round Springs township. At a depth of 150 feet the drill struck a flow of gas, which blows through the water with a roar and refuses to remain underground where the mouth of the well is covered by ordinary means. Experiments were tried and all point to the fact that there is a plentiful supply of gas on hand.

Electric Light Rates Are Cut

Santa Ana, Cal.—The City Trustees have passed an ordinance fixing the electricity rate at 8 cents. This was done over the protest of R. H. Ballard, of Los Angeles, vice president and general manager of the Southern California Edison Company. Mr. Ballard declared that the reduction from the 10-cent rate would mean a loss of \$12,000 income per year for his company, which would mean that the company would operate at a loss and would receive nothing for its investment. At the present rate he says the company gets but 2.47 per cent. An official of the company stated that the company would institute suit to compel the city to give it a rate that will give the company a fair rate. The gas rate was left unchanged at \$1 per 1,000 cubic feet.

Municipal Light Plant a Success

Norwood, Mass.—Gratified citizens are discussing the showing made in the report of the Light Board on the municipal plant. A substantial reduction in the price of electricity for lighting purposes will take effect on April 1. This latter fact has attracted attention, but aside from that the report for the year ending January 31, 1911, shows that municipal ownership and management of the electric lighting, which has been in active operation for nearly four years is a success.

Gas Company Wins Against City

Independence, Kan.—The Kansas Natural Gas Company has won its fight against the city officials and citizens of Independence. In a decision announced by Federal Judge Pollock the court held, in effect, that the gas company has a right to raise the price of gas in Independence to 20 cents a thousand feet. The present rate is 5 cents a thousand feet. The fight against the higher rate began when the city enjoined the gas company from enforcing it. This suit was brought in the County Court here. After an unfavorable decision, the gas company took the case to the Federal Court.

City Lighting Plant Shows Good Profit

Niagara Falls, Ont.—Chairman W. H. Homan of the Electric Light Committee of the City Council says that the city will turn over \$10,000 net profit from the municipal electric light plant to the general fund for the year. This will materially reduce the tax rate. The customers taking electric current from the city for lighting purposes are charged 10 cents a kilowatt hour for the current, which is considerably below the price charged to other cities of Ontario and New York State. In addition there is a 10 per cent deduction if bills are paid before the 20th of the month. Furthermore there is placed at the front door of every house in which city current is used an incandescent lamp, for which no charge is made.

St. Thomas Has Hydro-Electric Power

St. Thomas, Ont.—Hydro-electric power generated at the Falls of Niagara was formally turned on in St. Thomas last week, adding another to the list of cities in this section of Canada that are now securing the cheapest power for lighting and other purposes. The event was made the occasion for a municipal celebration at which Hon. Adam Beck, originator of the hydro-electric power legislation, was the guest of honor.

Ornamentation Governs in Choice of Street Lamps

Ft. Wayne, Ind.—In arranging for the ornamental illumination of Calhoun, Berry, Main and Court streets, tungsten lamps have been chosen as being preferable to arc lights where ornamentation is to be considered above illumination.

FIRE AND POLICE

Police Signal System Given Demonstration

Carbondale, Pa.—A demonstration of a new police call system being manufactured by the Dean Electric Company, Elyria, O., was made before members of the two branches of Councils in the City Building last week. The police call box manufactured by this concern is said to contain the very latest improvements and has several features not used in the Gamewell and other police systems. Among the new features in this system which made a strong appeal to the Councilmen was an electric flashlight on the inside of the police box, which can be flashed to any beat in the city, calling the patrolman to report to headquarters by telephone. The system also includes the telephone, ambulance and patrol call, hourly reports, etc. According to the representatives, this system could be installed in this city for a small sum, probably not exceeding \$1,000 or \$2,000, and would include the necessary wiring, installation and all details connected with the system.

Auto Police Patrol Boat in Service

Fort Wayne, Ind.—Members of the Board of Safety, Mayor Grice, Police Chief Abbott and a party of newspaper men supervised the launching of the new auto patrol at Auburn and convoyed the machine to this city, where it is placed in service. The new machine was ordered from the Auburn company several months ago, after some spirited bidding for the job. It cost the city \$2,500. Arrangements are being made now to tear out the horse stalls in the police barn and make room for the police boat, which will be mounted on a pair of wheels with a tongue so that it can be hooked onto the back of the wagon and hurry-up runs made on drowning cases.

Car Demolishes Fire Engine

Cincinnati, O.—While making a run in response to an alarm from Box 528 the engine of Company 8 was struck by a northbound Sixth street car at Wade and Baymiller streets. Two of the firemen were injured and the fire engine demolished.

Fire Pump Has Been Accepted by City

Yonkers, N. Y.—Commissioner of Public Safety James J. Reming states that the new Webb automobile fire pump has been officially accepted. The company that built the machine gave the city a certain period of time—30 days—in which to try out the pump, and as it has passed all tests the automobile is now regularly being operated. The pump was the third motor car purchased for the Fire Department.

Will Add to Fire Equipment

Mason, Mich.—Council is considering the matter of adding to the rather meager equipment of fire fighting apparatus here by the purchase of the Lansing Fire Department's chemical wagon, and the proposition was discussed considerable length at the meeting last week.

Fire District Created

Lebanon, Pa.—An ordinance has been passed by the Common Council of the city creating a fire district within which none but fireproof structures may be erected, and none but combustible materials be used in alterations and repairs.

Horse Police Patrol Soon May Be Thing of the Past

Cincinnati, O.—The horse police patrol may soon be a thing of the past in Cincinnati. The proposition of abandoning the horse wagons and substituting auto patrols is being given serious consideration by Mayor Schwab, Safety Director Small and Police Chief Jackson. It is believed that five autos could do the work of the ten wagons more expeditiously and with better results. Police Chief Jackson now is gathering data from the various cities where auto patrols are in use, relative to the cost of maintenance, and if the results of his investigation should show a reasonable proportion to the cost of maintaining the patrol wagons, all probability plans will be formed to change the character of the apparatus this year. In any event, it is practically decided to equip the outlying hill top districts with autos.

GOVERNMENT AND FINANCE

Mayor to Try Cabinet Plan

St. Paul, Minn.—Mayor Keller approves the cabinet idea inaugurated by Mayor Darius Brown of Kansas City, and will endeavor to work out a similar innovation in St. Paul, although it will be along slightly different lines. In Kansas City Mayor Brown has chosen a cabinet, consisting of a number of representative citizens not directly connected with the administration, with whom he advises on matters of public import. Mayor Keller believes the city conference committee, which is composed of the heads of the various municipal boards, should act as the Mayor's cabinet in disposing of policy matters affecting the city. The conference committee now holds monthly meetings, the principal proceedings being to file monthly reports and adjourn. The Mayor suggests the hour of meeting be changed from noon to 4 p. m., and the department and board heads devote some of the time of the meeting to consideration of important matters of policy. He believes the board heads, who are familiar with the workings of their departments, will be able to advise with the executive regarding the disposition of many important matters of policy. If the cabinet idea is carried out, and members of the conference committee apparently approve of it, it also will be arranged so the Mayor can call special meetings of the cabinet should occasion require.

City Departments Will Work Together in Future

Duluth, Minn.—Henceforth the City Engineering Department, the Board of Public Works and the Water and Light Departments will work hand in hand in all public improvements. The question of complete harmony between these three branches of the city government was settled at the regular meeting of the conference committee, consisting of the heads of the various departments and boards, held at the office of Mayor M. B. Cullum. Hereafter meetings will be called by the City Engineer, to be attended by himself and representatives of the Water and Light Department and the Board of Public Works. They will take up the various improvements which are contemplated from time to time, discussing them thoroughly with a view that no energy may be wasted. It will often happen that either two or all of the departments have work in the same streets, avenues or alleys, and that by combining their plans they will be able to make considerable savings in time as well as in money. It is expected that the city will greatly benefit in that precautions will be taken to prevent damage to the streets and to see that after any work is done on them by any one they will be left in as good shape as they were before being torn up. It was agreed, however, that each department shall find out for itself if there are any obstructions in the streets. For example, if the Water and Light Department is going to lay water or gas pipes it will find out for itself if there are already any other pipes there.

Fear City May Lose Taxes

Wilmington, Del.—Members of the city departments are agitated because of the failure of the Legislature to pass a law legalizing all the acts of the present City Council. They claim that, as the present assessment of city property was made by an illegal body, if a taxpayer should raise the issue the city would be unable to collect taxes. The Republican leaders prevented the House from passing Representative Gormley's bill on the ground that it would have made all the acts of Council legal, and they did not wish this to be done.

Higher License for Drink Stands

Bessemer, Ala.—Another live wire was sprung at the City Council meeting last week with reference to the regulation of soft drink stands. Considerable discussion was had, participated in by Mayor Lewis and almost every Alderman on the Board. The provisions of the Fuller bill were criticised as a means of raising revenue and the Mayor expressed the opinion that a better plan would be to raise the license of the soft drink stands. After much wrangling the license was raised from \$30 a year to \$200 by a vote of 5 to 3.

STREET CLEANING AND REFUSE DISPOSAL

Municipal Spring Cleaning Under Various Plans.

Norfolk, Va.—The Board of Control has declared the annual cleaning days and is now having printed many thousand circulars to be distributed in the city informing of the dates and of the fact that if any man's premises be found by the inspection following these dates in an unsanitary condition he will be prosecuted in court. In previous years three days have been the usual duration of the cleaning season, but Health Commissioner Schenck will take more time for it. Upon the Health Commissioner's recommendation the Board of Control has named nine days—three for the Ninth Ward, three for the Tenth and three for other wards of the city. The dates are as follows: Ninth Ward, April 11, 12 and 13; Tenth Ward, April 18, 19 and 20; other wards, April 25, 26 and 27.

Wenatchee, Wash.—Monday, April 3, has been named by Mayor A. C. Dallach as "clean-up day" in Wenatchee. This action was taken as the result of a report made to the City Council last week by the Wenatchee Commercial Club committee on civil improvement, the report embodying the request that the Mayor appoint such day for all yards and premises to be cleaned up as a protection against typhoid and other prevalent diseases.

Duluth, Minn.—West Duluth streets will get their annual spring cleaning this week. A. J. Meldahl, who represents West Duluth on the Board of Public Works, says that a crew of men will be assigned to the work and that Ramsey street, Central and Grand avenues will be thoroughly cleaned of the refuse which has collected during the winter months. The other streets will also be looked after.

Lansing, Mich.—A general clean-up day will be inaugurated next month, the exact date of which has not been set by the Mayor. At that time there will be a concerted movement by all property owners to remove ash heaps, rake lawns and in other ways make their premises as sightly as possible.

Clinton, Ia.—The alleys of the city must be thoroughly cleaned between the present time and the 15th of April. So says Chief of Police T. J. Hudson, in a notice to abutting property owners printed in these columns. The annual Spring cleaning of the alleys has thus been ordered, and Clinton property owners who fail to take advantage of the time given in which to clean their own alleys will be taxed with the cost of the work, which will be done under the direction of the street commissioners.

Niagara Falls, N. Y.—A step toward the transforming of Niagara Falls into a city beautiful will be taken by Mayor Philip J. Keller within a few days. He will issue a proclamation calling upon the citizens to clean their premises on a day to be fixed later. His idea is that a general cleaning up throughout the city will both give the city a better appearance and induce the citizens to show more civic pride in keeping their premises neat and clean. The date to be selected by Mayor Keller for the cleaning will be early in April.

Amendment to Provide for Garbage Gathering

Portland, Ore.—City Attorney Grant has been directed by the Health and Police Committee of the Council to prepare a charter amendment to be presented to the voters at the next municipal election providing for the installation of a municipal garbage gathering system. The bill will provide that bonds to the amount of \$75,000 shall be issued for the purchase of horses, wagons and harness and the erection of barns. Authority is given the Council to fix such charges for the collection as it deems advisable and make any other rules governing the collection of the garbage which will be found necessary in installing the proposed system.

Public Subscription Provides for Street Sprinkling

Texarkana, Tex.—Five hundred and fifty dollars has been subscribed by public-spirited citizens with which to purchase an oil and water sprinkler, and in addition to this amount the business people have pledged monthly contributions aggregating \$113.50 which will be used in paying the wages of a driver, buying oil and paying for water whenever the amount used exceeds the amount that the city will contribute.

RAPID TRANSIT

School Car Line Franchise Asked

Santa Monica, Cal.—Plans for a street car line to the site of the new high school on Prospect hill has found definite form in a recommendation of the street and bridge committee to the City Council to grant the Los Angeles Pacific franchise from Montana avenue north to San Vicente boulevard and south to the city limits. The southerly section of the proposed route will take the car line directly to the high school grounds. While making this recommendation the committee advises that the franchise of the company on Seventh street from Montana to San Vicente boulevard be forfeited. It is stated that the change will be acceptable to the Los Angeles Pacific Company and that the route along Eighth street is consistent with their purposes. It will afford the traveling public a crosstown line from the northerly to the southerly city limits.

Would Extend Car Transfers

Louisville, Ky.—An ordinance providing for a system of general street railway transfers was introduced in the lower board of the General Council at the meeting of the body last week by Thomas J. Garvey and was referred to the Committee on Railroads. Should the ordinance be enacted the Louisville Railway Company will be required to give transfers to any line for one continuous journey in the same general direction, and should another railway company be granted a franchise in Louisville passengers may transfer from the cars of one company to the cars of another going in the same general direction without paying additional fare. The measure is considered a far-reaching one and will be given careful consideration, it is said.

Trolley Extensions Planned

Petersburg, Va.—Superintendent of Railways Buchanan and Vice-President Sitterding of the Virginia Railway Power Company visited Petersburg for the double purpose of inspecting the routes of the proposed extension of car line to the new ball park and of looking over the proposed site of the landing of the Matoaca bridge in Fern Park. As a result of the inspection the extension of trolley is assured.

Franchise to Extend Trolley Line Refused

Sacramento, Cal.—The City Board of Trustees, by taking no action on the question, sustained the Mayor's veto of the franchise for a car line from Fifteenth and I to Twentieth and P streets, which had been applied for by the Sacramento Electric, Gas and Railway Company. President Carmichael of the Chamber of Commerce appeared to convey the sense of that organization that the Mayor's veto be sustained, unless the street railway company consented to the restrictions that its books should be examined by the city and that its standard of construction should be considerably bettered. A communication of Manager McKim was read, setting forth that the crosstown line was asked simply as a convenience to the public and would not, at best, be of any money value to the company.

Trolley Extensions in Wilmington

Wilmington, Del.—The Street and Sewer Department last week granted the Wilmington & Philadelphia Traction Company a franchise to erect poles in the city, but made provision that the company must pay 2 per cent. of its gross earnings to the city and limited the charge per kilowatt of lighting to 10 cents. The department also granted the application of the Wilmington & Southern Railway for permission to run its cars to Front and Market streets.

New Type of Street Cars for Utica

Utica, N. Y.—The Utica & Mohawk Valley Railway Company has announced that it has decided to place in service in Utica a number of pay-as-you-enter cars such as are now in use in Syracuse. The cars have been ordered from the J. G. Brill Company and are to be delivered in 100 days. They will be operated on the Genesee street line. The cars are favored by the company because they insure the collection of fares from practically all passengers whether they are a crowd or not.

MISCELLANEOUS

Schiller Park Plans Completed

Syracuse, N. Y.—Superintendent of Parks David Campbell has practically completed the design for improving Schiller Park, toward which a portion of the proceeds of the \$100,000 bond issue will be spent the coming season. An artistic arrangement of drives and walks has been laid out through the tract, which includes some forty acres of land. In front of the main entrance, which is from Third avenue, will be erected the Schiller-Goethe monument. The drives branch to the right and left, and, circling around the park, lead to what was formerly known as Round Top. Near the south end of the park will be the athletic field, which can be used for games in the summer and skating in the winter. A natural swimming pool will be near the field. The southern entrance is through Second avenue. At the east side will be a band stand with provision for seats on elevated ground. This will be located near the Elsner avenue entrance.

Plan Playgrounds for the Children

Portland, Ore.—Field Secretary L. H. Wier, of the Playground Association of America, visited Portland for a week to investigate playground conditions, and will make a close study of our playgrounds and make recommendations and suggestions for their betterment.

Cohoes, N. Y.—The movement for public playgrounds for children has invaded Cohoes, and the Saturday Club, composed of leading women of the city, are agitating plans to convert Brotherhood Athletic Park, in the western section, to a place of recreation for the juveniles. It is possible that the tentative plans will materialize this Summer. It is understood that the lessees of the park are willing to transfer the lease to the city authorities. A few changes would transform the property into an ideal playground. In the large grove at the southern end of the grounds there are swings and a fine club house that easily could be changed to a gymnasium. There is a large baseball field and one of the plans is the organization of a public schools' athletic league, such as now exists in Troy.

Tacoma, Wash.—The Tacoma Playground Association plans to maintain at least five playground points, under competent supervision, during the Summer months at an estimated expense of \$1,600. It is planned to place the work in the hands of a corps of four men and four women specially trained to teach educational play. These play centers will probably be located in Lincoln Park, McKinley Park, Wright Park, Point Defiance Park and South Tacoma.

Portsmouth, Va.—The lot known as the old Orphan Asylum lot on Swimming Point, the temporary use of which was secured by the Civic Club last year, has been put in good shape for a boys' playground and athletic park. This lot was in bad condition when the league took it in hand, but it has been much improved by plowing, harrowing, filling and finally by rolling with the street steam roller, the last process by courtesy of the street committee. The Boy Scouts, under the direction of Rev. A. C. Thomson, are putting up backstops and high wire fences for the protection of the residents' premises. The league hopes to have installed on the apparatus for the various games and sports that will go on there. It is hoped to make this playground a most beneficial force in the lives of the boys of the city.

City Council Will Open War on Users of Incorrect Scales

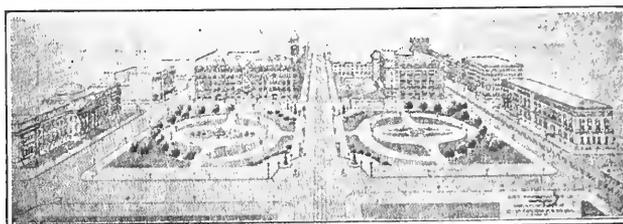

Des Moines, Ia.—Aroused to action by the report of a government inspector that the citizens of Des Moines are being victimized by short weight scales members of the council are drafting a stringent ordinance which will make the use of intentionally altered scales an offense punishable with a heavy fine. The members of the Council were amazed at the findings of the inspector. They believe that the present city ordinances do not provide a satisfactory means of prosecuting alleged users of deceptive scales. The new ordinance will be drafted with the thought in mind of warding against the practices of unscrupulous dealers, if such are to be found in the city. The federal government is not vested with authority to go any further than to call the attention of the city officials to the alleged fraudulent practices. But the councilmen will receive a report of the inspector from Washington, it is said.

Park System Planned for Billings

Billings, Mont.—Steps toward making Billings a "city beautiful" are indicated in the naming by Governor Norris of members of the Board of Park Commissioners under whose direction a system of parks will be laid out and the city generally improved to make it more attractive. The appointments by the Governor were made in conformity with a section of the State law which provides for the creation of a park commission in cities of the first class. The board is composed of six members, who serve without pay. They have absolute charge of all matters pertaining to parking and are authorized to expend whatever money is required in carrying out the work, and to supply the finances if it is necessary to create a park fund by making a fixed levy on all taxable property. Just what this will be remains to be determined by the Council, but it has been suggested that about one mill on each dollar of the city's assessable wealth will provide a fund sufficient to do considerable work of improvement. Already the city is the owner of two sites where parks can be established.

Plans for Omaha Civic Center Prepared by City Engineer

Omaha, Neb.—The illustration shows the tentative plan drawn up by City Engineer Craig for a civic center. It con-

TENTATIVE PLAN, OMAHA CIVIC CENTER

emplates the acquisition of two blocks of property at a cost of \$1,000,000 and the erection of suitable buildings.

Citizens Donate a Playground

Orange, N. J.—A number of citizens have agreed to pay for the tract of land facing Central avenue, which has been selected as a proper place for a rendezvous for the children of the city, equip it and turn it over to the city free of all encumbrances, providing the city will maintain the field in the future. The offer will probably be accepted.

Mayor Wants Benches Removed from Square

Norfolk, Va.—If the Board of Control adopts the recommendation of Mayor Riddick, loafing in City Hall square will be less attractive in the Winter when the ground is cold and the grass frostbitten. In a letter to the Board of Control recently the Mayor pronounced the benches in City Hall square a nuisance because they are used mostly, said he, by undesirable characters. He suggested that the benches should be removed. The controllers made the Mayor's letter public, but gave no intimation of their intention.

New Court House Is Dynamited in Omaha

Omaha, Neb.—Two explosions in the basement of the new million dollar court house at Eighteenth and Farnum streets created considerable excitement and brought out the police reserves. Windows were shattered in buildings two blocks away and considerable damage was done. Two floors of the basement were torn loose and the interior retaining wall was badly damaged, but the stone walls of the uncompleted building were not injured so far as could be observed. The police believe the explosion resulted from dynamite placed in the interior of the uncompleted building. A short piece of fuse was found in an adjoining part of the basement in the vicinity of where the explosion occurred.

Ordinance Governing Billboards and Signs

Grand Rapids, Mich.—The ordinance governing the licensing of billboards has been passed by the Council. It provides that the owners of all billboards pay a license fee of \$100. The ordinance, it is thought, will do away with many alleged unsightly signs and billboards that appear on the sides of buildings. The city will also have the power to abate any billboard.

Park Commission Accepts Gift of Park

Louisville, Ky.—The Louisville Park Commission, in session at its headquarters on the sixth floor of the Columbia Building, accepted as a gift from the Ballard family fourteen acres of land on the Ashbottom road, just outside of the city limits. This land was recently purchased by Charles T. Ballard, S. Thruston Ballard and Roger Ballard Thruston, it has been stated, for the purpose of making a gift of it to the city for use as a public park. The Park Commission accepted it to-day with a vote of thanks to the Ballards. It will be known as Churchill Park, this being the name of the old cemetery, which is to be included within the limits of the new park. Gen. John B. Castleman, president of the Park Commission, stated to-day that there would be no action at the present time to improve the park. It is stated that it is the desire of the Ballards that the city may not feel under obligation to attempt to improve the tract until it is able to do so.

Expert Advises on City Improvement Plan

St. Paul, Minn.—John Nolen, the landscape architect, who is directing the preparation of the St. Paul city plan, under the joint auspices of the Council's City Plan Commission and the City Club, is in St. Paul for the purpose of going over the plans with his assistant, A. C. Comey. The draft of a city plan, covering a district from the new cathedral to the Union Station and from the Capitol to Irvine Park, is practically completed. There are some minor details to be worked out after the inspection to be made of this district by Mr. Nolen. The draft of the plan, however, will not be made public until some time in April.

Labor Unions Not Recognized by City

Spokane, Wash.—On a clean-cut issue involving the question of recognizing labor unions or not the city commissioners this morning indicated that the new administration's policy will be the "open shop." By a vote of two to two, Commissioner Fasset being absent, the commissioners killed a resolution by Coates, labor member, providing for the use of the union label on the City Official Gazette. The vote was: Nay—Hayden and Hindley; aye—Coates and Fairley. Commissioner Coates forced the question, his resolution being unexpected, and the matter not having been discussed by the commissioners in conference.

Good Building Clay Found at Corpus

Corpus Christi, Tex.—The test which has been made here of the clays in the vicinity of this city has turned out to be an unqualified success. It has been found that the clay will produce a building brick of the first quality. Preliminary steps have already been taken looking to the establishment of a brick making plant here. In view of the fact that between 5,000,000 and 10,000,000 brick will be required to carry out the building plans of the ensuing year in this city it is evident that a big saving will be effected by the establishment of a source of supply in the city.

Mayor to Run Official Pawnshop

Poughkeepsie, N. Y.—Poughkeepsie is soon to have an "official uncle." Mayor John K. Sague announced to-day that he is planning to open a municipal pawnshop for the convenience of the city's unfortunates in time of stress.

To Plant 100,000 Trees

Kansas City, Mo.—More than 100,000 trees will be planted in Kansas City April 7, Arbor Day. Every school pupil in the public and private schools will be expected to plant several trees, and for that purpose 100,000 catalpa trees will be distributed at the different schools. These trees are a gift. It is expected that other varieties also will be given.

Electrocution and Parole System Advised

Nashville, Tenn.—The joint committee of the Legislature on amendments to the criminal laws have adopted two bills. One of these provides for the electrocution instead of hanging of all condemned felons, the electrocution to take place at the main prison. The second bill provides for the parole system. The bill creates a parole board composed of the Governor, chairman of the prison commission and warden of the penitentiary. Paroles may be granted after the prisoner has served one-third of his sentence.

City Commissioners Plan Important Reforms

Spokane, Wash.—Indulging for the first time since the election in an open discussion of public matters on the floor of the Council chamber, the city commissioners this morning outlined their policy on two important matters. An attempt will be made to revolutionize the system of purchasing supplies and materials to economize, and each commissioner declared for a strict enforcement of penalties against contractors and bidders for failure to consummate agreements with the city. This latter is hardly short of an upheaval at the City Hall. For years a penalty has never been enforced against a contractor for delay in public improvements. The system of holding the certified checks and bonds of bidders on improvement work and supplies has become mere form and bidders have frequently withdrawn their proposals and refused to enter into contracts after bids and received their certified checks back. The matter came before the commissioners on a report of the purchasing agent, who had been placed in a tangle by the old board of public works over a contract for hydrants with the American Brass Company. The company had bid \$65 each on supplying the city with thirty fire hydrants, had been awarded the contract by the old board and after sixty days refused to sign the agreement, asking for the return of the certified check, amounting to \$500, which accompanied the bid. The purchasing agent wanted to know if the commissioner would return or forfeit the check. Each commissioner pressed himself in favor of forfeiting the check if it had been put to any loss. On the showing of John Gifford, however, that the Board of Public Works had forced to enter into the contract against his recommendation that the city had been put to no financial loss it was decided to return the check in this case. "I want it understood, however, that we are not establishing any precedent," Commissioner Hayden before the vote was taken. Commissioners Hayden, Hindley and Coates each declared from now on delays and loss to the city by reason of contractors failing to live up to agreements would have to be paid for by the contractors. On the matter of purchasing materials and supplies the commissioners and purchasing agent are to get together at once. Commissioners Coates and Hayden made it plain that in the future an attempt would be made to buy in much larger quantities in order to get a saving in price. To this end the several city departments are to combine their wants and hand their requirements to the purchasing agent as far in advance as possible.

Anti-Treating Law Is Adopted

Tacoma, Wash.—The anti-treating ordinance passed by the Municipal Commission in December and referred to voters of the city carried last week by a majority of over 2,700 votes. It was the first referendum election in Tacoma under the new city charter. A heavy vote was cast for the special election, about 66 per cent. of the total registration of 21,587 voters casting ballots. Women displayed an active interest in the election. Many said they had voted against the ordinance because they regarded it as a political scham rather than a sincere desire to better conditions. Some of them were much displeased to learn that it had carried the majority it received. Election officials also stated that a large number of those people active in the recall campaign against the present Municipal Commission had nevertheless voted in favor of the anti-treating ordinance, although not less determined to oust the commission.

May Utilize Sidewalks

Ogden, Utah.—As the result of a vigorous protest by numerous merchants of the city, the authorities have decided to allow two feet of space on the sidewalks to be used for display purposes. For a week or more the police have been enforcing the ordinance which states that the chief of police shall keep the sidewalks clear of all obstructions. Chief Police T. E. Browning has discovered, however, that there is another ordinance which deals with the matter in a different manner, merchants being allowed to utilize two feet of space in front of their places of business. The law department of the City Council has decided to allow the business houses the privileges mentioned in the ordinance with the understanding that displays will be kept well within the distance prescribed.

LEGAL NEWS

A Summary and Notes of Recent Decisions—Rulings of Interest to Municipalities

Public Water Supply—Private Consumers—Injunction

Childs vs. City of Columbia.—Under Constitution enabling cities to acquire and operate water works to supply individuals for reasonable compensation, and Civil Code 1902 providing that municipal water works shall be for the use of the city and its citizens, and the Act of February 25, 1907, allowing a municipality to supply non-residents upon such terms as may be fixed by contract between the city and the consumer, a city operating water works does not assume towards a non-resident the relation and duties of a public service corporation, but the city is only bound by the contracts made. Where a complaint seeking to enjoin a city from a violation of its contract to furnish water to complainant alleges a contract indefinite in its terms as to price and duration, and does not allege that complainant was bound to take or the city to furnish water for any specified time, the complainant is not entitled to an injunction against the city after notice by the city of its election to terminate the contract.—Supreme Court of South Carolina, 70 S. E. R., 297.

Municipal Corporation Defined

Ex parte Simmons.—A municipal corporation in its historical and proper sense is the incorporation by the authority of the government of the inhabitants of a particular place or district and authorizing them in their corporate capacity to exercise subordinate specified powers to legislation and regulation with respect to their local and internal concerns. This power of local government is the distinctive purpose and the distinguishing feature of a municipal corporation proper.—Criminal Court of Appeals of Oklahoma, 112 P. R., 951.

Assessment—Due Process of Law

City and County of Denver et al vs. State Inv. Co. et al.—Denver City Charter 1893, which expressly requires that landowners affected by a street improvement be given opportunity to complain of a proposed assessment, impliedly requires notice of the specific time of the hearing, and hence is not invalid as a deprivation of property without due process of law, as failing to make adequate provision for hearing objections. A taxpayer's offer, on suing to restrain an illegal street improvement assessment, to pay any part properly chargeable against him and to do equity, and subsequent payment into court of the full amount which could be justly established against him, were sufficient as a basis for equitable relief.—Supreme Court of Colorado, 112 P. R., 789.

Eminent Domain—Municipal Water Works.

Lavelle et al. vs. Town of Julesburg.—In a condemnation proceeding by a town under Revised Statutes, 1908, to condemn property for water works, a mere denial that the purpose for which the land was sought to be taken was public or that the town had power to condemn, did not raise a question of law or fact respecting a public use or the town's power in the premises.—Supreme Court of Colorado, 112 P. R., 774.

Pedlers—Power to Tax

Massey vs. City of Columbus.—The power to require truck farmers, selling their products at wholesale, to pay market fees during market hours is included in the powers conferred by the charter of the city of Columbus, and the same is true as to the right of the city to require market fees of retail dealers on such articles as are usually sold at a market house. The municipal ordinances providing for the exercise of these powers are reasonable regulations. It was clearly the intention of the Legislature in the charter granted the city of Columbus to allow that city to maintain a city market under such proper regulations as would make it a successful municipal enterprise, at once a source of public revenue and a means by which public inspection of such merchandise would be possible and a healthful competition promoted.—Court of Appeals of Georgia, 70 S. E. R., 263.
